By separation also it will be the easier to keep the chick free from mites and lice. If they are allowed to be fed on by these parasites, no method of feeding will give good results. I have seen many half-grown chicks so covered with body lice that they made little growth, though highly fed, and I have seen such chicks killed by lice. Mites in the nests and in the sleeping places of the chicks will often be the cause of retarded growth, without the owner suspecting it. A thorough search will often be required to discover these insects, as they do not remain on the chicks in the daytime.

After that precaution is taken, feed large quantities of meat meal, say one part in six of the whole ration. This will give a remarkabl growth and will decrease the time b several weeks between the hatchin period and the laying period.

It is probable that meat fed fro any other source is as good if groun bone is fed with it. The only differ ence is that when a person has a lo of meat meal on hand he is likely t feed it in the proper amount eac day; while if he has to depend o meat secured at the butcher shop, h is likely to soon get out of the habi of feeding it or at least of becomin very irregular about feeding it.

Young chicks need grit as cer tainly as do larger fowls, and this i sometimes not given them. Espe cially is this true if they are kept confined, as it may be necessary t do. The commercial grits will be found profitable if other grits can not be secured without cost.

Lime in some form should be sup plied. Old plaster will do, bu ground bone is better, as that also provides the lime for the rapidly developing bones and at the same time gives a good lot of phosphorus and nitrogen, which go to harden and make firm the bony structure and also aid in muscle making.—G.

A COUGHING HORSE

Can be easily and quickly cured by using Frazier's Distemper Cure. This much the Binkley Medical Company, Nappanee, Ind. that makes this remedy, stands ready to guarantee. For all such troubles as distemper, influenza, pinkeye, catarrhal fever, shipping fever, colds and all nose and throat diseases, it is guaranteed to be a positive cure and preventive. Price, 50 cents and $1.00 per bottle. If your druggist will not supply you, the above firm will prepay charges on direct orders.

Magnificent Subscription Premium.

The National Farmer Hat.

The sizes are from 6 5-8 to 7 1-2. They are hats suitable for men or boys. They are of good material. well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color.

Subscription Blank

To be Filled Out if Order is Given.

Swine Production in Louisiana.

The following experiments were conducted by Mr. S. E. McClendon at the Experiment Station, Baton Rouge, La., and give some reasons why the Southern States should be able to ship a surplus of hogs to market.

Value of Oat Pasture.

On September 28th, 1907, two and one-half acres were planted in oats for a grazing experiment. October 29th, seven Poland-China pigs, weighing in total 276 pounds, were put on this plat and were given no feed but the green oats during the winter. February 17th, 1908, the pigs weighed in total 568 pounds. There was an average gain of .37 pound per day per pig, for 110 days.

From October 29th to January 1st, forty-five head of sheep were pastured on the two-and-one-half-acre plot. Of this number, eight ewes and nine lambs were pastured continuously thereafter until February 17th, at which date the lambs averaged sixty-eight days and weighed 35.5 pounds.

Allowing six cents per pound gained by the pigs and five cents per pound for the lambs, there is a return of $13.40 per acre, plus the pasturage of sheep not considered in the estimate, as a return on the land from September 28th to February 17th. It is estimated that $6.00 per acre is a liberal allowance for cost of plowing the land and sowing the oats.

Sweet Potatoes as Hog Feed.

July 11th, 1906, four-tenths of an acre was planted in sweet potatoes for hog grazing. In the fall a small area was dug for estimating the yield. The result indicated a probable yield of 320 bushels per acre. November 17th, twenty-one head of pigs and hogs were allowed access to the potatoes from a Bermuda pasture. December 6th, the potatoes were about exhausted. In this time the hogs had gained a total of 490 pounds. Pork was selling at the time for six cents, or the value of the gain was $29.90. At the same rate an acre of potatoes would produce $73.50 worth of pork, and the land would be ready for a winter or spring crop.

At this writing, fifteen head of hogs, average weight about 140 pounds, are on experiment, eating sweet potatoes, which they root for as desired, and are fed forty pounds of a mixture of cotton-seed meal (one part) and rice polish (four parts). In thirty days, to date, the hogs have averaged two pounds gain each per day.

Stock Beets For Hogs.

During April and May, 1908, pigs were fed on stock beets sown the previous fall. The results showed that $69.72 worth of pork could be produced from beets raised on an acre of land.

Stock Beets and Corn Meal.

April 4th, 1908, nine pigs, weighing 720 pounds, were placed on an experiment, and fed till June 22d on corn meal and stock beets. The pigs gained during this time 500 pounds. They consumed $12 worth of meal and approximately five tons of beets, or the product of about one-fifth of an acre. Should we allow $8.00 for the care of the pigs, we yet have a return of $2.00 per ton for the beets. Good land well cultivated should produce thirty tons of beets per acre, if the season is favorable. In North Louisiana the result will not be so good, as the lower temperature during the winter retards the growth of the beets.

February 4th to March 1st, 1908, twelve pigs, weighing in total 962 pounds, were fed twice per day what rice polish they would consume. They made an average daily gain of 1.7 pounds. They consumed during the period $23.85 worth of polish. The price of hogs at the time was 5½ cents per pound, so the gain in weight was worth $27.94, leaving $4.09 for the labor and profit.

Peanuts For Hogs.

Peanuts make most excellent forage for hogs. The Arkansas Station produced 313 pounds of pork from one-quarter of an acre of peanuts, while the same area in corn produced 109 pounds of pork. The Alabama Station found that hogs made cheaper gains, pasturing on peanuts than on cowpeas, sweet potatoes or sorghum.

During 1908, at the North Louisiana Experiment Station, a plot of Spanish peanuts with rows 3½ feet apart produced at the rate of 89 bushels of peas and 2,520 pounds of hay per acre. The Virginia peanut produced at the rate of 81 bushels of peas and 3,120 pounds of hay per acre. Imported nuts secured from the United States Department of Agriculture bearing No. 16,943, produced at the rate of 76 bushels of peas and 2,280 pounds of hay per acre. No. 16,484 produced at the rate of 107 bushels of peas and 2,640 pounds of hay per acre. No. 16,488 produced at the rate of 79 bushels of peas and 3,120 pounds of hay per acre. Other varieties produced excellent results, but accurate data was not obtained. A bushel of peanuts weighs 22 pounds.

The following succession of crops is recommended:

Sow oats the latter part of September for fall and winter grazing, counting about fifteen or twenty head of hogs per acre. Sow red clover or crimson clover in October to be pastured after the oats, late in January and through late February, March and April. Sow sorghum in early March to which transfer hogs from clover. After harvesting oats, plant Mexican June corn and cowpeas in a portion of the land, peanuts and sweet potatoes. Use the corn and a portion in peanuts and potatoes for finishing off the hogs for market or slaughter at home.

This is practically the succession used in the Schuler method of raising hogs practiced successfully for years by Col. Charles Schuler, now Commissioner of Agriculture, on his farm in De Soto Parish, La.

Cold-storage Eggs.

In answer to a correspondent, we desire to say that we consider the cold-storage plants as being of great value to all poultry raisers. The eggs come out of storage almost, if not quite, as good as when they are put in. The purchase of eggs for preserving in cold storage in times of abundance saves the market from absolute demoralization, and when they come out of storage again it is because the market is not glutted and there is a chance to sell them. It happens sometimes that there is no profit in storing eggs, but the egg buyer finds that out some time after he bought the eggs. As a rule, there is some profit in storing eggs, but a man must be on the market all the time to get any good out of such an investment. He must buy when prices are low and sell when the market is higher. The man who buys eggs in order to store them is dealing in futures, is generally a dealer in eggs, and in this case is speculating in futures, or, as some people would say, gambling in futures. There is no business in this world that does not contain elements of risk, and wherever there is a risk it can be called gambling.

Much is said about cold-storage eggs being sold for fresh eggs. This is 80 per cent. nonsense. All trade runs in a groove. The highest-price trade gets the few strictly fresh eggs that arrive in market. The storage eggs go largely to large consumers, who know exactly what they are getting, and to a class of trade that never did pay and never can pay over 25 cents a dozen for eggs. The idea that large numbers of eggs can be sold at 40 and 50 cents a dozen is all a mistake. As eggs advance in price the demand drops off. Saloons use large numbers of eggs when they are cheap and cut them out when they are high. Restaurants add 5 cents to an order containing eggs, and then the demand drops off; boarding houses buy a dozen instead of a case, when eggs are high. It runs so through the trade. The strictly fresh-egg trade is limited to a fraction of the total. An egg that takes a month to get from the hen to the breakfast table is not fresh, and yet it sells well if it looks good and tastes good. In cool weather they are good, but if the date was stamped on the egg it would be placed at a disadvantage. The egg trade has been growing and growing and increasing and increasing, and we are in favor of letting it alone in the interest of all hands who own the egg from the time it is laid until the time it is eaten.

"I wish that I had bought Amatite Roofing It needs no Painting."

WHY should you buy a roofing that needs to be *painted* every little while to keep it tight, when for the same money or less, you can buy Amatite which needs no painting?

Amatite is waterproofed with Coal Tar Pitch—*the greatest waterproofing material known*. Water can't get through it. It gives the kind of protection that only the ideal roof can give.

The outer surface is composed of *real mineral matter*, which makes painting unnecessary.

Can you imagine a better combination for a good, serviceable, economical roofing than *coal tar pitch* and a *real mineral wearing surface?*

With an Amatite Roof on your buildings you *end* your roofing troubles. When you buy a roofing that requires frequent painting you *begin* them.

Smooth surfaced roofings that require painting are a nuisance and an expense. When you buy them, you buy trouble—not protection.

FREE SAMPLE

We should like to send you a sample of Amatite so that you can look it over. We know that anyone who will examine the proposition will buy Amatite ten times out of ten. We should be glad to send you this sample and booklet immediately. Write to nearest office.

BARRETT MANUFACTURING COMPANY

New York Chicago Philadelphia Boston St. Louis Cleveland
Pittsburg Cincinnati Kansas City Minneapolis New Orleans London, Eng.

The De Laval Monthly.

This is published by the De Laval Separator Company, 165 Broadway, New York. It is in the interest of the De Laval Cream Separator Company, and it contains considerable information relating to dairying. Several fine articles appear in the March number. The company will be glad to send a copy to any reader of The National Farmer and Stock Grower.

TRUE TO TRAINING.

Generous Lady—"Here, my little boy. I know you are hungry for a box of these animal crackers."

Boy—"Much obliged, lady; but my folks is vegetarians."—Judge.

15 cents a rod buys a 22 inch hog fence. Other heights very low in price. See Kitselman Bros. ad in this paper and write them for free catalogue.

THE SPIRIT OF THE LAW.

Judge—"You are charged with being the leader of an organized band of pickpockets."

Prisoner—"Well, yer'll have to impose a fine on de Corporation den, yer know; yer can't punish me personally!"—Puck.

Plowing Clover Under.

A Vermillion county, Illinois, correspondent writes: "I have a piece of land, of average fertility,but I do not get over forty to forty-five bushels of corn per acre. This land does not work up very well. How would it do to sow it to clover next season and plow under the whole crop for a year or two?"

I will repeat the advice that I have given many times in these columns. Any farmer can increase the humus and nitrogen in his soils by growing clover and either turning it under or feeding it on the farm and then hauling out the manure. Best results are got from clover on lands before they are too far exhausted. It is a big mistake to remove crop after crop until one's land is not strong enough to produce a decent crop, and then expect clover to restore it to virgin fertility within one or two years. We know that clover will leave land in better condition than it was before the clover was sown, also better fertilized, especially in nitrogen, and when plowed under it returns the potash and phosphoric acid to the soil which it has taken up.

One year's growth of a good stand of clover will add about 170 pounds of nitrogen to the soil, per acre. This, of course, is the total amount contained in the leaves, stems and roots. When the entire crop is turned under the value of the nitrogen, at, say, 15 cents a pound, would be about $25. From this it will be seen that clover can be plowed under, with profit, even on corn lands in Central Illinois.

Aside from the nitrogen value of clover, the stems and roots will materially increase the humus in these soils. On many corn farms in Central Illinois soils are badly deficient in humus, and without it big crops cannot be grown.—L. C. Brown.

The Chatham Fanning Mill.

The makers of the Chatham Fanning Mill are very generous in their dealings, and on page 7 of this paper offer to send one machine on thirty-days' free trial to any farm. The Chatham Fanning Mill is a seed grader and cleaner. It will separate buckhorn from clover, barn grass from millet, red top from timothy, wild or tame oats from wheat, or any kind of weed seeds from any kinds of grain or seed, that from its nature is not impossible. We advise our readers to write for catalogue and prices, addressing Manson Campbell Company at Detroit, Mich., or at Kansas City Mo.

Wheat Growing in Canada.

The Canadian Government appears to be determined to place first-class farmers on first-class wheat land. Manitoba, Saskatchewan and Alberta, the central provinces of Canada, are to become the bread basket of the world. The extent of Canada is startling and the amount of rich land is enormous. The first thought of Canada is that it is a bleak and dreary country, but this is altogether wrong. The Canadian winters are as enjoyable as the summers, and there are no more hardships connected with Canadian agriculture than there are by farming in Iowa, Nebraska and South Dakota. So many farmers from the United States have gone to Canada in recent years that every second man in Manitoba hails from the United States. Whether it will end by Uncle Sam annexing Canada or Canada annexing the United States, it is quite certain that the American people are getting some of the free pre-emptions and more of the rich wheat lands at $3.00 per acre than any other class of settlers or immigrants. The particulars concerning Canadian lands can be had from the authorized agents, J. S. Crawford, 125 West Ninth street, Kansas City, Mo., or C. J. Broughton, 412 Merchants Loan and Trust Building, Chicago, Ill.

Dip Your Sheep

In Cooper's Dip. Used on 250,000,000 sheep annually. It increases quality and quantity of the wool and improves appearance and condition of the fleece. See advertisement in this issue.

Prices of Stock Peas.

On June 1st, at St. Louis, Whippoorwill stock peas were selling at $1.45 to $1.55 per bushel, and other sorts at $1.10 to $1.40. Sales included one car-load Whippoorwill at $1.55;. nineteen sacks at $1.50; eighteen sacks at $1.40; and twenty-two sacks at $1.41. Four sacks mixed peas sold at $1.15 per bushel.

The Potato Market.

On June 1st, at St. Louis, sixty sacks Michigan Rurals sold at 96 cents a bushel; 126 sacks at 98 cents; sixty sacks of New York Carmen at $1.00 per bushel, all including delivery; and 100 sacks of Rurals sold at 94 cents on track. New potatoes sold as follows: Sacked Triumphs at $1.30 to $1.35 per bushel, delivered; white at $1.15 to $1.20 per bushel, delivered; local lot Triumphs at $1.30 to $1.35 per bushel; $3.25 for small barrels and $3.50 to $3.75 for large barrels.

Sweet Potatoes.

At St. Louis, June 1st, home-grown sweet potatoes, red and yellow Nansemond, sold at $1.00 per bushel, loose, from farmers' wagons. On account of their poor keeping qualities, Southern Yams are not quoted on the market.

Feeding Oats From Sheaf.

A correspondent in Clay county, Illinois, writes: "We do not grow many oats here, and usually we feed the whole crop. What do you think about cutting the crop rather green and feeding it out of the sheaf?"

For sheaf feeding, when the straw is as much thought of as the grain, one should be as particular about the stage at harvesting as he would about putting up hay. For the nicest feed, cut the oats when the grain is in the milk stage, and cure them as well as you would any other hay. When cut at this stage, a ton of hay contains about two-thirds as much protein as a ton of good clover hay. Make small sheaves and stand them in shocks for three or four days. As soon as they are well cured, haul into the barn or put up in well-made stacks. Like good hay, the value of oats, when put up in sheaf, depends on quick work and dry weather. Damp sheaves mean musty feed. Handle the crop as carefully as you do your clover and your oats will furnish a large amount of good fall and winter feed. —L. C. Brown.

Handling the Barley Crop.

A correspondent in Lake county, Illinois, writes: "I have in this season twelve acres of Oderbrucker barley. I have never grown barley before and do not know much about it. Where is the best market for it, and can it be handled like oats or wheat?"

Probably the best market for Oderbrucker barley just now is Milwaukee. This barley is thought very highly of by brewers, and for the last two seasons it has sold at top prices. For malting purposes barley should not be cut before it is dead ripe. It is important that all the grain be in the same stage of ripeness, so that it will germinate evenly. Every grain should be dead ripe, so it is best to let it stand as long as possible. It should be cured out thoroughly in shock, if it is to be stacked; or, if thrashed out of shock, it should be worked over frequently so that it will not burn in the bin. When barley is grown for feeding purposes at home, it is better to cut it before it gets dead ripe, for then the grain will not shatter so much.—L. C. Brown.

Congressional Fame.

"What is your member of Congress noted for?"

"Well," answered Farmer Corntossel, "around here he's mostly noted for arguments that won't go down and seeds that won't come up." —Washington Star.

SPORTSMEN, ATTENTION!

Stevens Rifle and Pistol Telescopes are more and more coming to be recognized by sportsmen as indispensable in hunting and target practice, and the leading shooting organizations are now permitting their use in rifle tournaments.

As the Stevens telescope can be fitted to any make of rifle by means of the Stevens telescope mounts, all sportsmen, no matter what make of rifle they shoot, should write for the new illustrated and descriptive catalogue of the new and improved accessories now furnished by the Stevens Company. The old "Favorite" top mount has been improved by new attachments which make it perfectly rigid under all conditions, so that it is now an entirely reliable mount for a low price. The company's new "Ideal Detachable" mount is the best thing ever produced along this line. It admits of attaching a telescope to, or removing it quickly from, a rifle barrel, in a few seconds, as often as desired and with perfect accuracy; is absolutely simple in application and admits of the finest adjustment for both elevation and windage.

The Stevens company has just perfected a new Side Mount for high-power repeating rifles which will stand any amount of shooting with heavy charges without getting out of perfectly accurate adjustment. This old-established house is too well known to need our endorsement; nevertheless we advise everyone who shoots a rifle to write for the Telescope Accessories Catalogue just issued by the J. Stevens Arms and Tool Company, Chicopee Falls, Mass. It is filled with information every rifle man should have.

RED-BLOODED EXERCISE.

America is becoming too prone to sit back in contented admiration and watch the trained few engage in games of strength and skill.

Exercise should be by the people and not for the people. As a means of exercise nothing embraces so much of pleasure and exhilaration as cycling. Every muscle, every nerve, every faculty is spurred to healthful activity.

And best of all, this exercise is in the open, where each deep breath of air fills the lungs with the sweetest and purest of all health tonics—oxygen.

Bicycles have been wonderfully improved even within the past five years. It is surprising what a fine wheel a few dollars will now buy.

We never realized this so fully as we do after looking through the latest catalog of the Mead Cycle Company of Chicago.

If you are interested in bicycles or if you feel the need of this sort of red-blooded exercise, write this company for a copy of their catalog. They will gladly send it and a wheel, too, for ten-days' free trial if you wish. Address, Mead Cycle Co., Dept D 138, Chicago, Ill.

EXPLAINED.

"How do the milliners manage to get out these enormous Easter hats on time?"

"Modern construction methods account for it. The steel framework is erected first, and then the trimmers can work on every story independently."—Louisville Courier-Journal.

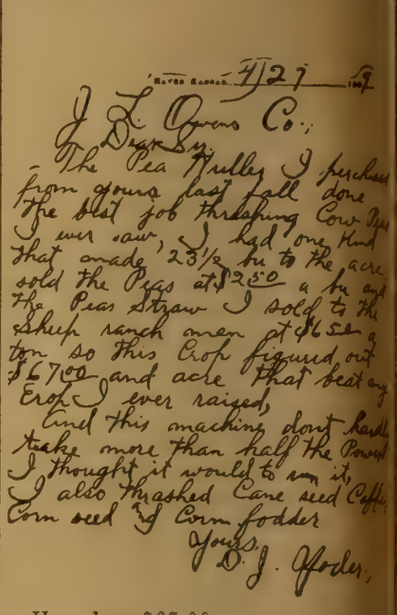
"America! half brother of the world!
With something good and bad of every land."

—Bailey.

Pea and Bean Profits Looked Good to Mr. Yoder.

We reproduce here a letter received by the J. L. Owens Company from one of the users of Owens Threshers in Kansas. This letter speaks volumes for the efficiency of the Owens Beans and Pea Thresher

DAVID. J. YODER.
RURAL ROUTE No. 2.



Rural Route No. 2 7/27 1907
J. L. Owens Co.;
Dear Sir,
The Pea Thrasher I purchased from you last fall does the best job threshing Cow Peas ever saw, I had one that made 23½ bu to the acre sold the Peas at $2.50 a bu and the Peas Straw I sold to the sheep ranch men at $6.00 a ton so this Crop figured out $67.00 and acre that beat any Crop I ever raised,
and this machine don't hardly take more than half the Power I thought it would to run it,
I also thrashed Cane seed Coffee Corn seed & Corn fodder
Yours
D. J. Yoder,

How does $67.00 per acre compare with your profits from peas and beans, and, if you do not grow any of these crops, how do such profits look to you?

You should learn particulars about the "Owens" Threshers that produce such results, and the J. L. Owens Company will be glad to send you their free book, illustrating and describing the "Owens" Threshers. This book also gives some of the most valuable information you can get on the growing and cultivation of peas and beans.

Address, J. L. Owens Company, 679 Superior street, Minneapolis, Minn., for a free copy.

I WILL MAKE YOU PROSPEROUS

If you are honest and ambitious write me today. No matter where you live or what your occupation, I will teach you the Real Estate business by mail; appoint you Special Representative of my Company in your locality, start you in a profitable business of your own, and help you make big money at once

Unusual opportunity for men without capital to become independent for life. Valuable Book and full particulars FREE. Write today.

NATIONAL CO-OPERATIVE REALTY CO.

E. R. MARDEN, President

90 Marden Building, Washington, D. C.

FOR THE FRUIT GROWER.

Someone in the family ought to be a fruit grower; and yet it is very hard to interest the stockman in fruits. We will do our best, however, by placing a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and one of the best authorities on the subject. There are 134 pages, written with special reference to the growing of fruits for the home and the market. We will send the book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 55 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The incubator-buying season is not yet over, and our readers are not yet in possession of all the incubator catalogues. One of the best is issued by the Belle City Incubator Company. It is called "Hatching Facts," and in it Mr. J. V. Rohan tells how to start right and to keep right in the poultry business. The whole book is written in simple, straightforward style. Every word is easy to understand, and, best of all, he tells you how he saves you $4.00 on the famous Belle City Incubator and Brooder. Be sure to get this book. Simply say on a postal card: "Send me your 'Hatching Facts.'" Address the postal personally to Mr. J. V. Rohan, President Belle City Incubator Company, Box 74, Racine, Wis.

A Splendid Dairy Edition.

The May issue of the Dairy Bulletin, published by the Vermont Farm Machine Company, to make better known the merits of the U. S. Cream Separator, is an unusually interesting and informative publication. Besides being well illustrated with half-tone engravings there are several well-written articles that will appeal to every farmer and dairyman (owners of Guernseys will be particularly interested in this issue), besides complete descriptions of the various models of U. S. Separators. A copy of this publication may be obtained free for a post card request by addressing the Vermont Farm Machine Company, Box 125, Bellows Falls, Vt.

Starting Celery Seed.

Celery is a crop that is to be transplanted. The plants must be started in a seed-bed and there cared for until they are large enough to be transplanted either into a temporary bed or to the field. Celery seed is very small, light, and slow to germinate, taking about two to three weeks to come up, and for these reasons great precautions are necessary in starting the plants. Methods employed for starting cabbage, onion or tomato seed would, in many cases, prove failures with celery. Very few other vegetables require such careful and constant attention to the seed-bed, and this is particularly true in this climate.

The seedlings, as they germinate, are delicate, and it takes a few days before they are strong enough to withstand any neglect of the seed-bed. During this time one must not forget to water the little plants regularly, or else our hot sun and drying winds will cause many of the delicate seedlings to die.

The seed-bed should be well prepared. The soil for the seed-bed should be about three-fourths of good, rich loam and one-fourth well-rotted and sifted manure. Do not use manure that is liable to heat. Mix the soil and manure thoroughly, rake it to a clean, even surface, wet it, and then roll or pack it down. As soon as it is dry enough, drill the seed in as shallow as possible. Sometimes the seed is sown broadcast and thinly covered. While this way may give a good germination, if the seed-bed is properly taken care of the drill method is preferable.

Mark off the rows one-fourth to one-half inch deep every three inches, and plant the seed fairly thick. One ounce of seed should be enough for a frame or seed-bed 6x8 feet. Cover the seed from one-fourth to one-half inch deep with the finest soil possible. Immediately after the seed is planted the bed is watered, care being taken not to wash the seed out. From this time on a careful management of the seed-bed is necessary, remembering that the surface soil must not be allowed to become too dry and hard. To keep the soil from baking, it should be watered at regular intervals. The frequency of the watering of the seed-bed will depend largely on whether it is exposed to our hot suns and drying spring winds. If the seed-bed is open, it is advisable to have it in a place where it can be sprinkled every evening, if necessary. While the ideal seed-bed is one that is open or unprotected, better results in germination, and with less care, can be had here when some kind of a covering is used. Boards, straw mats, cloth, gunny sacks and glass can be used to prevent evaporation and to keep the soil from baking. All of these materials have been used at the Station on the seed-bed. In each case the results in germination have been quite satisfactory, but the stand has been more uniform from the beds covered with white cotton cloth. The beds covered with glazed sash may have to be watered every two days, and, when the days are very hot and windy, every day. Beds covered with cloth may be watered every three or four days.

In covering the beds with white cotton cloth it is generally better to have the seed-bed made in such a way that there will be a three to six-inch space between the covering and the soil. Beds made in the form of a cold-frame are very satisfactory. If lumber cannot be had, the border on the side can be raised to the necessary height.

It is advisable in using the cloth cover to stretch the cloth over a light frame made from inch lumber. The frames can be made 3x6 feet or larger. Such cloth-covered frames are easily handled, and when placed over the seed-bed the wind does not move them around. As soon as the seedlings are well started, the covering can be removed. If left too long, the plants tend to grow too tall and spindling.

After the plants are well up the seed-bed can be irrigated, if so desired. It is very important to have the celery plants as stocky as possible for transplanting. Stocky plants may be secured in two ways. They may be transplanted from the seed-bed to a temporary bed and from there to the field, or they may be thinned in the seed-bed and sheared off when they become too tall. The plants may be cut back a third or a half of their growth.

An ounce of seed should give from 5,000 to 6,000 good plants after allowing for a very large loss. Five to eight ounces of seed should produce enough plants for an acre.

The seed for winter celery should be started as soon as possible. Right now is the time. Do not delay the starting of the young plants.—Fabian Garcia, New Mexico College of Agriculture.

Protection Against Fire.

The Manufacturers of Amatite, the best known of the mineral surfaced roofings, received the following letter from Hot Springs, Arkansas: "Dear Sirs:

I want twenty more squares of Amatite and I will tell you why.

I had a house gutted by fire three weeks ago, and it was covered with Arkansas shingles, thin shingles and a rubber roofing. One kitchen was covered with Amatite, and it seemed to be the only fire-resisting roofing on the house. All of the other roofing was entirely destroyed. After the fire was put out, the Amatite roofing was standing with the exception of some places where the sheathing had torn out and broken holes through it. In fact, the major part of the Amatite would have turned water after the fire.

As I am going to rebuild, I want enough Amatite to cover the entire house. Yours Respectfully.

G. F. MALDING."

If any of our readers are not familiar with Amatite they should send and get a sample at once. This roofing needs no painting and is fire-retardent as well. Address the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, or New Orleans.

ROBBED BY FLIES!

Few people realize to what extent they are being robbed by flies, and yet it is a fact that these apparently insignificant insects are each year robbing the farmer, the dairyman and the stockmen of the country of millions of dollars.

You are perhaps spending money for special feed for your stock, so that your cows will give more milk and your horses do more work, and then you let them be so pestered by flies that they simply cannot properly digest their food. You turn your cows out to pasture where the flies and other insects annoy them almost past endurance, and then you wonder why they give less milk than they ought to. Your horses fret and stamp in the stable from the flies and kick and bruise themselves against their stalls and then when you take them out to work wonder why you can't get half the work out of them you should.

It is a well-known fact that animals tire themselves and injure limb, hoof and muscle more by stamping than they do by work.

And it is all the pesky fly's fault! People are beginning to awaken to the fact that this means an actual money loss to them and are taking steps to protect their stock. There is an excellent preparation on the market for just this purpose, called Shoo-Fly, and, as its name implies, it keeps off every fly and insect. A few-cents' worth sprayed on your stock each day and they will begin to put on flesh right away. Your cows will give more milk and your horses do more work.

Those of our readers who have not yet realized the value of protecting their stock can learn all about this excellent preparation by writing to the Shoo-Fly Manufacturing Company, 1305 North 10th street, Philadelphia, who will gladly send them a free booklet and testimonials on request. We suggest that you write for it to-day.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock (clothing dealer), 890 Carrier Building, East Hampton, Conn., says if any reader afflicted with a kidney or bladder trouble will write to him he will direct them to the splendid home remedy he so successfully used. He is glad to do this, and does not wish you to send him money.

A SURE SIGN.

A Wilmington woman recently reached the conclusion that the attachment of a certain policeman for her cook must be investigated, lest it prove disastrous to domestic discipline.

"Do you think he means business, Mary?" she asked.

"I think so, mum," said Mary. "He's begun to complain about my cookin', mum."—Harper's Weekly.

Salesmen Wanted

Traveling Salesmen earn from $1,000 to $10,000 a year and expenses. Over 600,000 employed in the United States, and Canada. The demand for good Salesmen always exceeds the supply. We will teach you to be an expert Salesman by mail in eight weeks and our **FREE EMPLOYMENT BUREAU** will assist you to secure a good position. We received calls for Salesmen from over 3,000 firms last year. Over 1,000 graduates secured good positions. Many who formerly earned $25 to $75 a month have since earned from $100 to $500 a month and expenses. Hundreds of good positions open for the fall rush. If you want to secure one of them or increase your earnings our free book *"A Knight of the Grip"* will show you how. Write or call for it today. Address nearest office.

Dept. 237 National Salesmen's Training Association,
Chicago, New York, Kansas City, Minneapolis, San Francisco.

The Twice-a-Week GLOBE-DEMOCRAT

is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Republican newspaper in the United States. It is published at $1.00 per year, and is worth the price.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

On account of the interest in the present political campaign we are able to combine both of these papers fer the price of one.

SEND US ONE DOLLAR

and we will mail to your address **The St. Louis Globe-Democrat Twice-a-Week Edition** for one year; also **The National Farmer and Stock Grower** for three years.

Address,

EVANS SUBSCRIPTION AGENCY,
3552 Vista avenue, - St. Louis, Mo.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening,** postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

In London, England, the price of a loaf of bread is 3½ cents a pound, made from Manitoba flour. In St. Louis the price for less-than-a-pound loaf, made from Missouri flour, is 5 cents a pound.

"Measure our mind's height by the shade it casts."—Browning.

ADVANTAGES OF SILAGE.

Corn Silage the Cheapest For Dairy Cattle, Also For Fattening Beef.

Of the various feeds which are the most palatable, corn silage is without doubt the cheapest and most effective to add to the ration. It is a valuable feed for dairy and beef cattle and also for horses, calves and sheep. Many of the leading Wisconsin farmers find that silage can be handled as cheap, if not cheaper, than the corn crop can be handlled in the usual manner. Silage furnishes a succulent feed with very little waste, and is always ready to use.

In combination with alfalfa or clover, with a mixture of corn or barley for grain, silage furnishes an especially good ration, all grown on the farm and cheaper than mill feeds. The importance of palatability cannot be overestimated, as it increases the amount of feed eaten, and, when properly assimilated, the more the animal eats the larger product it will return.

Silage Saves Space.

A ton of mixed hay occupies 400 cubic feet of space, and eight tons of corn silage can be put in the same amount of room. The ton of mixed hay contains about 960 pounds of digestible dry matter, while eight tons of silage contain 2,560 pounds of dry matter. This one point of the economical storage of the corn crop, when put up in the form of silage, is worthy of attention where a large number of animals are fed.

The cost of handling the corn crop in the form of silage is less than when any other method is used. One of the leading Wisconsin farmers reports that it cost him $0.50 to $0.60 per ton, or $7.00 per acre, to put his corn crop into the silo. The same area of corn would yield about 150 baskets, which would cost him $8.00 for husking, while the cost of cutting, stacking, shredding and grinding would be about double what it costs to put the same crop into the silo.

Useful in Dry Summers.

The advantages of summer feeding of silage, particularly during periods of drouth, are fuly appreciated by those who have tried it. During the latter part of the past summer, Wisconsin suffered a severe drouth, and corn silage was fed to the University dairy herd. The flow of milk was never kept up so well during the summer as it was by the use of this silage. The summer silo is sure to become a more important factor in successful dairying.

The use of silage for fattening beef cattle has been tested at a number of Experiment Stations and by stockmen with excellent results. In experiments conducted by the writer in 1904, it was found that silage-fed steers sold at $4.95 per 100 pounds, while those fed no silage brought only $4.70 per 100 pounds, a gain of 25 cents in favor of the silage-fed animals. It was found that for every 100 pounds of gain 471 pounds of silage fed saved 18 pounds of grain and 156 pounds of alfalfa.

In these tests silage was fed in connection with alfalfa, hay, corn chop, Kaffir-corn chop and cotton-seed meal. The average soil, in unusual seasons, will produce twelve to fifteen tons of green corn per acre. Even with a yield of ten tons per acre, there is an income, according to this experiment, of about $33 per acre.

The financial statement of this experiment showed that the silage-fed steers made a profit of $4.10 per head, while the same grade of steers fed on the same feed except silage lost $1.47 per head. More silos should be built for summer use, and this is the time to plan for the crop. —Prof. D. H. Otis, University of Wisconsin.

INTERNATIONAL LIVE STOCK EXPOSITION.

Classification Meeting of the Board of Directors.

The spring or classification meeting of the Board of Directors of the International Live Stock Exposition was held in the rooms of the Saddle and Sirloin Club, May 14th, 1909. There was a full attendance of the Board.

Numerous communications were read, which gave evidence of the fact that the management will have no difficulty in gaining the support and co-operation of those prominent in connection with the live stock industry to make the tenth anniversary of this epoch-making series of events the greatest in the history of the "International."

Cattle.

Practically all the cattle associations reported that they had set aside increased sums to be paid out in special prizes at the coming show.

The Red Polled cattle were given a senior and junior clasification, the same as the other breeds.

Many enthusiastic and appreciative breeders offered trophies and special cash prizes in addition to those put up by the various associations.

It was decided that a "Sifting Committee" be appointed to inspect car-loads of feeder cattle in an effort to bring the feeder division to that high standard of excellence maintained in the fat-cattle division through the same medium.

A most important concession was made in favor of exhibitors entering cattle from the Southwestern District, who will, in future, be permitted to feed cotton-seed hulls and cotton-seed cake on grass.

Sheep.

In connection with the sheep classification, it was decided to place all breeds on the same footing, giving them a uniform classification for breeding sheep covering an amount of $150, and to give to those breeds whose associations offer $150 or more in "specials" an additional $75. The classification for fat sheep is to remain the same as it was in the past.

Breeding Hogs at the "International."

The matter of working out a classification for breeding hogs to be shown at the coming "International" was referred to a committee consisting of A. J. Lovejoy, R. B. Ogilvie and B. H. Heide, who will meet in the near future. The same liberal awards offered for barrows exhibited at the "International" will continue to be offered as in the past.

Horse Department.

All the various horse associations proved themselves even more liberal in their offerings of special prizes to be competed for at the 1909 "International" than they were in the past. It is evident that they appreciate the importance of this Exposition, and it is also clear that it is their desire to make the tenth anniversary of the International Live Stock Exposition not only a memorable one, but that it is also their intention to offer breeders every inducement to bring out the strongest possible exhibits of horses of all breeds.

The Clydesdale Association gave the strongest evidence of this, nearly doubling their appropriation of former years for the coming event.

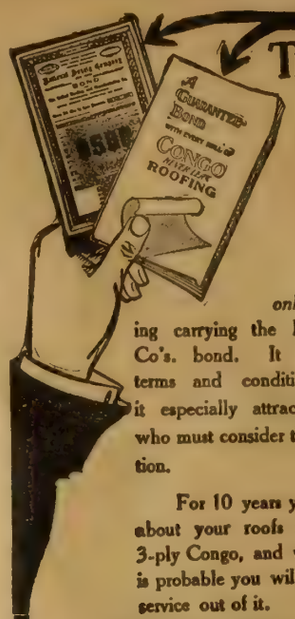
A number of the Directors present reported that the two-weeks'-show proposition was rapidly gaining greater favor with the breeders and exhibitors, since many of the latter were able to trace back profitable sales as a result of their showing during the second week of the Exposition last year.

The fact that the National Horse Show Association of New York is now seriously considering a classification for draft horses in connection with their show is also clearly attributable to the fact that a number of the Directors of this Horse Show were in attendance at the 1908 "International."

Two-weeks' Show.

Although the Exposition will again extend into the second week as in 1908, it was left optional with the exhibitors of cattle, hogs and sheep to allow their stock to remain or return at the close of the first week.

It was reported that a number of the leading exhibitors of cattle, hogs and sheep were exceedingly anxious to be permitted to exhibit during the second week of the Exposition, and it was therefore decided to give all who saw fit to do so an opportunity to show their stock during the second week.



THE GUARANTEED ROOFING

CONGO

A SURETY BOND with every roll

Congo is the *only* Ready Roofing carrying the National Surety Co's. bond. It carries with it terms and conditions that make it especially attractive to anyone who must consider the roofing question.

For 10 years you can rest easy about your roofs if covered with 3-ply Congo, and we know that it is probable you will get *even longer* service out of it.

The Surety Company is issuing these bonds, and back of them is their *two million dollars of assets.* It is a matter of keen satisfaction to us that they were willing to stand behind Congo Roofing.

You are immune from any responsibility other than giving the roofing ordinary care.

Write to-day for samples of Congo and full information.

Remember, that with *every* roll of Congo you get a genuine Surety Bond.

THE DOMESTIC SHEEP.

There is one modern writer on Sheep industry who has made his mark. It is Dr. Henry Stewart. He has written a book entitled **The Domestic Sheep.** It is up-to-date in every particular. There are 384 pages, and besides going into the subject in a practical way there are illustrations of every breed and every subject belonging to the industry. For $1.50 we will send **The National Farmer and Stock Grower** for one year and one copy of **The Domestic Sheep.** This is the time to study the sheep business. There is money in it. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Feeding Lambs Silage.

Prof. W. C. Coffey, of the Sheep Department of the Illinois Experiment Station, fed a load of lambs and marketed them at Chicago during the last week in April. When marketed they averaged 93 pounds and were shorn before shipment. They were sold by Clay, Robinson & Co. at $7.25 per 100 pounds.

The entire lot averaged a gain of 6¼ pounds per lamb in 105 days, at cost of 5¼ cents a pound. That is figuring corn at 56 cents a bushel, silage at $4.00 per ton and clover hay at $6.00 per ton. Probably the Greece has yet to be considered in the Irish result.

The experiment was conducted for the purpose of studying the value of silage as feed for sheep, and the lot in which the average cost of gain was the least was fed 1.18 pounds of shelled corn a day, 1.98 pounds of corn silage, and 0.77 pound of clover hay. When we obtain the complete bulletin we will go over this again.

SHEEP FARMING IN MISSOURI.

Timely Bulletin Issued by the State Board of Agriculture.

Missouri farmers who are interested in the subject of sheep raising, and all ought to be, will be particularly pleased with a bulletin issued by the State Board of Agriculture entitled "Sheep Raising in Missouri." It is a booklet of thirty-eight pages. It commences with a picture of a fine Collie dog as the guardian of the flock, and throughout the pamphlet there are many elegant and lifelike engravings of sheep and lambs. The first article is by Prof. W. B. Mumford, who is master of the subject. He speaks of the sheeep farmer, and he goes into the subject of breeding and feeding and the different systems of sheep management. He gives the crop system rotation for small farms handling sheep, including instructions for lambing. When one is through reading this article there is a sense of satisfaction that all the practical and essential elements of sheep husbandry have been explained. We usually copy Prof. Mumford's articles in The National Farmer and Stock Grower, but this one we will advise sheep raisers to send for and read themselves, as it is published for free distribution.

There is also an article on "Flock Management" by Edwin R. Stroeter, of Kearney, Mo., who was formerly a student of the Missouri Agricultural College; and last, but not least, is an article on "The Winter Lamb" by Prof. E. A. Trowbridge, Instructor in Animal Industry at the University of Missouri.

We like these articles which feed the mind and give one confidence that each man knows what he is writing about; and, furthermore, that he is placing the subject before you so that you can get the benefit of the knowledge he has acquired.

This bulletin applies distinctly to Missouri, and equally well to Arkansas and Oklahoma, where there are openings for profitable sheep farms by the thousand. We advise those who really wish to become posted in regard to sheep husbandry to write to George B. Ellis, Secretary, Columbia, Mo., and ask for a copy of the bulletin entitled "Sheep Farming in Missouri."

In this connection we desire to say that the present era of sheep prosperity is largely due to the energy, activity and competition existing at the St. Louis National Stock Yards and the buoyancy of the St. Louis wool market. There was a time when the wool trade was extremely dull, and it was St. Louis that broke the combination and started the upward movement. It was the St. Louis market that gave life and vigor to the demand for early lambs. The St. Louis market will bear investigating and it will compare most favorably with any sheep market on the Atlantic Coast and easily surpass all the Western markets.

Goats as Brush Cleaners.

"Our Kansas City house broke all records on May 18th, as far as goat purchases are concerned, by filling orders in one day for ten cars. These goats were Angoras, and were purchased on orders sent to our house there by farmers who wish to use them in cleaning off brush, a purpose for which these goats are becoming very popular. Following is a list of towns to which the goats were shipped and numbers of head sent: Casey, Ia., 134 head; Orient, Ia., 148; Hillsboro, Ill., 149; Raymond, Ill., 265; Mt. Sterling, Ill., 140; Jaggard, Kas., 841; Wilcox, Mo., 275; Vandalia, Mo., 140. Total, 2,092 head."—Clay, Robinson & Co.'s Live Stock Report.

$460.00 in Gold For 46 Ears of Corn.

$10.00 is a very nice price to get for an ear of corn, but every farmer in the land has an opportunity to get that much for one ear of corn. In order to stimulate the production of corn, one of our advertisers offers $10.00 in gold for the best ear of corn, any variety, grown in each state and delivered to him before December 1, 1909. There will be one $10.00 gold piece awarded in every one of the forty-six states in the Union, in which there shall be ten or more contestants.

Outside of the prize features there is need of the farmers growing more corn to feed more animals, for the demand for meats and dairy products is growing rapidly, and by selling these products rather than grain their land will triple in value. Improved agriculture, improved pedigreed seed corn and improved conditions of horses and cows, all go hand in hand, and the progresive, far-seeing farmer reaps the benefit.

Full particulars about the prize offer can be had by writing a postal card or letter to the Shoo-Fly Manufacturing Company, 1305 North Tenth street, Philadelphia. The names and addresses of the successful contestants will be published by us in December or as soon thereafter as the awards are made. It will readily be seen that the prize winners in this contest will in this way find a ready sale for all their seed corn grown.

THE GENUINE MEXICAN
Resurrection Plant.

One of the Greatest Marvels of the Plant World.

The Mexican Resurrection Plant is one of the most wonderful novelties in the vegetable kingdom. It possesses the strange power of turning in a few minutes from an apparently dead, lifeless, dry herb to a beautiful living plant.

The Resurrection Plant grows in the wilds of the mountains of Mexico. It is called by the Mexicans the "siempre viva," which means about the same as our English word everlasting. This is because, although it frequently seems to be entirely dead, it quickly revives when it receives moisture.

Apparently Dead.

A Beautiful Living Plant.

It is a wonderful sight to see the marvelous transformation of the surfaces of rocks on which this plant grows during the summer season. In its normal condition in its hot, dry native country the Resurrection Plant is in a dormant state, for little rain ever falls. The traveler will see large surfaces of rock completely covered with what apparently are dried-up, dead, worthless, fern-like plants curled into a sort of a ball, the leaves brittle and dry as dust. If a summer thunderstorm comes up, there is an immediate transformation, which looks more like a miracle than a process of nature. Within a few minutes after the rain has begun to fall, the thousands of apparently dead plants on the rocks begin to open. Little by little the dry, brittle leaves of the plants seem to be imbued with life and gradually unfurl. Within a very short time—half an hour or thereabouts—the whole surface of the rock is covered with beautiful fern-like plants of a rich dark green color. As soon as the sun has dried up the rain, the plants dry up again to their former comparatively lifeless condition. This process of coming to life and apparently dying is repeated indefinitely with each rain that comes on.

Gathered at the right season and properly treated, the Mexican Resurrection Plant will retain these marvelous qualities indefinitely. Placed in a saucer of water, a plant will revive within a very few minutes, and shortly turns into a beautiful dark green, fern-like living plant. At any time it may be taken out of the water, put in a dry place on a shelf, and it will curl up into its dry or dormant condition, and can be kept for an indefinite length of time. The plant will last for years. It requires no soil, no nourishment, no attention, other than to put it in a saucer of water whenever it is desired to revive it.

The process of "resurrection" or coming to life which this plant goes through is so rapid that it is an excellent article for use at parties and similar occasions, as the change that takes place within a few minutes seems, to one who has never seen it before, more like an act of magic or a miracle than anything else.

We have adopted the Resurrection Plant as a subscription premium to the Universal Magazine. The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the Universal Magazine and we will mail you one of these genuine Resurrection Plants as a free premium. Address,

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Last Year's Cotton Crop.

According to the latest census bulletin, the finally revised figures for the cotton crop of 1908, expressed in equivalent 500-pound bales and including linters, show a total production of 13,87,306 bales. This represents an increase over 1907 of 2,211,845 bales, or 19.4 per cent. It is the third largest crop ever produced, being exceeded only by the crops of 1904 and 1906, and is 978,751 bales larger than the average crop of the last five years.

COOPER'S POWDER DIP

Used Annually on 250,000,000 Sheep

For 65 years the world's standard Dip. One dipping kills ticks, lice and nits. Increases quantity and quality of wool. Improves appearance and condition of flock. If dealer can't supply you, send $1.75 for $2.00 (100 gallons) packet to Meyer Bros. Drug Co., St. Louis, Mo., or Wm. Cooper & Nephews, 177 Illinois St., Chicago

Pithy Advice For the Newly-wed.

Remember that, though at times dark clouds may momentarily obscure your happiness, the sun will soon shine through the gloom, and all will be radiant again.

Live well within your income, and every year put by something for the rainy days, which, sooner or later, are bound to come.

Try and correct your own individual faults, instead of wondering at the size and number of each other's.

Be perfectly frank and loyal in all your thoughts, words and deeds, and let nothing have power to make mischief between you.

Never have a second quarrel, by never having a first.

Make much of your respective mothers-in-law, and try your hardest to get on well with all your new relations.

Take for your motto that golden rule of married life—to bear and forbear.

Resolutely resolve always to stand shoulder to shoulder in the battle of life, for union is strength.

Never do things, however much you would like to, that you know are against the wishes of the other, and, above all, never try to deceive or have secrets from each other.

Keep a sharp lookout for the "little rift within the lute," which will change the music of the domestic duet from the glorious major to the mournful minor key.

If your marriage is a failure, let nobody but yourselves be aware of the sorrowful fact. — The Family Doctor.

Digestive Disorders in Warm Weather.

The death rate from acute disorders of the digestive organs is so markedly increased among infants and young children during the summer that it is the imperative duty of all having the care of children to become acquainted with the causes of these diseases and how to prevent them.

Every organ is endowed with the power of self-protection in proportion to the organic soundness of its structure and the perfection of its functions. The digestive fluids are all antiseptics; and, when in health, either destroy or prevent the multiplication of disease germs.

The saliva, gastric juice, pancreatic fluid, intestinal juice, and bile, all do their best to destroy the dangerous living organisms entering the alimentary canal. But they are liable to be overpowered by the inroads of more enemies than they can destroy, or, abused and crippled by overwork in digesting food improper in quality and quantity, to become so depraved and weakened in their action as partially or entirely to lose the power to prevent disease.

In warm weather disease germs grow rapidly, finding in the increased amount of decaying organic matter a good soil in which to flourish.

The universal custom of allowing children to form the habit of eating and drinking at all times and in all places, regardless of the kind, quantity or quality of food or drink, has cost many lives—just how many no statistics will ever be able to determine.

Were all children, and grown people, too, taught regular habits of eating and drinking, and did those caring for children understand the importance of clean food and drink, and how to secure them, diarrhoea, cholera infantum, cholera morbus, dysentery, and the more grave disorders of cholera and typhoid fever, would soon be, to a great extent, stamped out.

The precaution of instructing children and youth to form the habit of controlling thirst when the water supply is likely to be infected, or when traveling, is also important. Desire for drink is much increased or decreased by the kind of food eaten. —The Family Doctor.

To Keep Light Dresses Clean.

Magnesia may be obtained either in powder or in square cakes, and it is very effective in cleaning laces and delicate fabrics. Sift or rub it on the parts to be cleaned, and lay them away in a box or drawer where they will be undisturbed for a day or so, and then shake them out. It is a very good plan to apply the magnesia in this way when putting away party dresses that have become slightly soiled. The magnesia absorbs the dust, and when you take the dresses out to wear them the next time, they will be fresh and dainty. The magnesia is also effective, when applied in the same way, for removing grease spots.—Woman's Home Companion for June.

Marriage as a Business Proposition.

A unique plan for putting married life on a business basis is outlined in the Woman's Home Companion for June. Says this magazine:

"The first matter to consider is the amount of assets available. This, of course, amounts to exactly what the outside world considers the services of the producing partner to be worth. This income must be divided to meet the various expenses of the business under a general classification as follows:

"**First. General Operating Expense.** This is the most important department of all, and includes food, servants, fuel, light, rent (or interest and taxes).

"**Second. Sinking Fund.** This is also a most important account, and should not for any reason be overlooked. Upon it depends absolutely the prosperity of the firm through periods of financial depression. It includes savings-bank deposits and life-insurance premiums.

"**Third. Repairs and Depreciation.** This is often considered a part of the Operating Expense, but it is better kept separate. It includes depreciation of the plant, and on equipment, such as dishes, cooking utensils, furniture, bed and table linen.

"**Fourth. The Contingent Fund.** This includes church dues, charities, theater tickets, telephone and books and magazines.

"**Fifth. Emergency Fund.** This includes doctor, druggist and dentist.

"In order to transact business on a sound basis, all of these funds must be considered. What remains of the capital may be divided between the partners as a salary. From their salaries the partners must pay their personal expenses of clothing and incidentals. The size of the salaries therefore depends entirely upon the economical management of the affairs of the firm. It is unwise to raise salaries at the expense of the Sinking Fund, though this is often a temptation! In case the partners feel that their salaries are not large enough, it is better to appoint an Investigating Committee to eliminate pretty graft and extravagance. They should examine carefully the Operating Expense. It is sometimes economical for a domestic firm to build its own plant, instead of hiring one, and it is often possible, by engaging in outside industry, such as kitchen gardening or poultry raising, to reduce the food expense, and save money in the Emergency Fund."

Take Hold of a Good Thing!

YOU NEED THE BEST!
YOU CAN AFFORD IT!

Grand Combination Subscription Offer.

For Only One Dollar.

THE NATIONAL FARMER AND STOCK GROWER is by long odds the best general monthly farm paper. It is full of practical information, and it is specially devoted to cattle, hogs, sheep, goats, horses and mules, jacks and jennets, dairy, etc. There are other good Farm Papers, but THIS IS THE BEST.

THE NATIONAL FRUIT GROWER is another first-class monthly paper. Fruit growing is a specialty and has its special publication. THE NATIONAL FRUIT GROWER is a splendid paper; it contains excellent illustrations, correct descriptions, up-to-date methods. There are other good Fruit Papers, but THIS IS THE BEST.

THE RELIABLE POULTRY JOURNAL is another first-class publication. Poultry raising is a specialty and has its special publications. THE RELIABLE POULTRY JOURNAL is all that any poultry raiser needs. It is splendid in every department. There are other good Poultry Publications, BUT THIS IS THE BEST.

THE UNIVERSAL MAGAZINE. This is another splendid paper. It is for the family. Nice reading, interesting and instructive literature, good counsel, excellent poetry, fashions and patterns. It is a nice, clean publication of thirty-two pages, three columns to the page. There are many Family Publications, and in its class THIS IS THE BEST.

The subscription price of these four publications is $1.75 per year, but we have made arrangements whereby we will send all four of these first-class papers for $1.00 per year.

Send your orders at once. This is a low price for a Grand Summer Subscription Campaign. Address,

For Cleaning Wall-paper.

To clean wall-paper, use the following recipe: Ten cents' worth of liquid ammonia, ten cents' worth of oil of sassafras, one teaspoonful (even full) of soda, two teaspoonfuls (even full) of salt and one quart of cold water. Mix the cold water with the ingredients, then add white flour until it is thick enough to drop from a spoon. Put in a covered pail, set in a kettle of boiling water and cook until done, stirring often. If it does not stick to the hands when cool, it is done. Remove from the pail and divide into "loaves," working each piece a while in the hand. Take out only what is needed, leaving the rest covered in the pail, to prevent the ammonia from evaporating. Rub the wall with a loaf, working the dirt into the dough. When very dirty, exchange for a clean loaf. This removes dirt and grease magically and leaves old paper as good as new when used carefully. — Woman's Home Companion for June.

Housekeeping.

The art of housekeeping is one which deserves special mention.

In Germany the daughters of the finest families are sent to someone who is competent, and who teaches them the art of housewifery; and a girl would be ashamed to be married if she was not a good housekeeper.

Housekeeping ranks as a profession as truly as any other occupation which deserves special mention.

There is a far greater demand for women who understand housekeeping than for those who are advanced in the art of dancing.

Domestic economy should be studied by all women.

Clean and sanitary houses, healthful meals, system in housework and an attractive and cheerful home can do more to promote good health than any physician.

I want to impress upon the girls that housework is fine, honorable work, and that they should know how to do it in the easiest way, so as to make it a real pleasure.—Mary F. Rausch, Colorado Agricultural College, Fort Collins.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

"Kindness—a language which the dumb can speak and the deaf can understand."—Bovee.

Salads.

Salads are good at any time of the year, but warm weather is the time when they have a particular relish. The salad dressing is the principal thing, and with a good dressing almost any edible can be served as an appetizing salad. The tedious task of making a salad with oil, putting it in drop by drop, is a thing of the past with the majority of housewives. Here is a simple recipe for a very good mayonaise dressing. The amount of vinegar is a little less than is usually found in dressings. To our mind this adds to the taste of the dressing; others may think differently, and, if so, can increase the amount of vinegar and decrease the amount of water proportinately.

Beat well two eggs; add to them two teaspoonfuls prepared mustard, one-half teaspoonful salt, one-half teaspoonful pepper, two tablespoonfuls sugar, one tablespoonful butter, one teaspoonful flour mixed with a little water to blend smoothly, three-fourths teacupful of water and one-half cup of vinegar. Cook this in a double boiler and cook until it thickens; about fifteen minutes is the time it usually takes to boil it to the right consistency. If a double boiler is not among the kitchen utensils, try placing the mixture in a small bowl or kettle and setting this in a larger kettle containing a little water. It will serve the purpose quite as well. Allow the salad dressing to cool before using. Thin the portion to be used by beating a very little cream. For a larger quantity of the dressing, double, triple or quadruple the recipe. The dressing can be put away in Mason jars and kept for months.

With this dressing on hand a salad may be had at a moment's notice. We always try to keep a jar on our company shelf. A few of our particular favorites in the salad line are:

Chicken Salad.—For this we use left-over chicken, cutting off all the meat from the bones and chopping into small pieces. With this mix a few stalks of celery. A good proportion is about one-third part celery. Mix this all together, pour on enough of the dressing to flavor well. Placed in a salad dish which has been lined with lettuce leaves and garnished by laying a few olives, tiny cucumbers or strips of beet pickles, this makes a very pretty salad.

Combination Salad.—The green vegetables are especially good for the combination salad. Select radishes, small onions, ripe tomatoes and a few ripe strawberries. Chop all together, mix with dressing and serve on lettuce leaves.

Egg Salad.—Dice hard-boiled eggs, mix with celery chopped fine, add a few slices of beets cut fine and mix with the dressing.

Salmon Salad.—Drain the liquor from a can of salmon, pick out the skin and bones, cut in a little celery and mix with dressing. Serve this with strips of lemon. The lemon juice squeezed upon the salmon adds much to its flavor.

Lettuce and Tomato Salad.—This is an old stand-by which everyone likes. Select crisp leaves of lettuce, slice tomatoes and place upon the lettuce. Serve with the dressing.—Janet Thomas Van Osdel.

Caring For Floor Coverings.

When carpet brooms are purchased they should be thoroughly scalded and dried before being put away, and they should never be left standing brush side down. The best way to care for them is to put a screw eye in the end of the handle and hang them up by the handle, and brooms used for sweeping nice carpets should be kept clean by frequent washings.

Soot from carelessly-handled stove pipes or open chimneys can be removed by sprinkling thickly with salt. Brush the salt off as it absorbs the soot, and renew it, dampening slightly.

If ink is spilled on the carpet, wipe it up at once with absorbent cotton and pour a little sweet milk on the place, or also cover with common salt and let stand a while.

No matter how faded and darned a carpet may be, it is always presentable if clean, and an old and worn carpet can be made to look extremely well by ripping it apart and washing each breadth separately. Have a tub nearly full of hot suds, then stir in about two tablespoonfuls of borax to soften the water, then put in one width of carpet and run through the washing machine until clean, and then rinse through a very light suds with a little borax added and hang out to dry. When the carpet is dry, change the breadths from the sides to the center, where there is more wear, and if any are worn through the center, cut them apart and sew the ends together, then baste down the seams so they will lay perfectly flat.

A solution of hot soap suds and borax will remove ordinary grease stains from a carpet, and a little borax added to the water in which salt is dissolved for wiping up mattings will make it clean better and will brighten the colors.

In cleaning small rugs, hold by the sides when shaking and not by the fringed ends, or hang them over the line and beat the dust out with limber switches, and this method of cleaning is very much easier on the rug than shaking by hand, as the threads are not loosened.—M. H.

Some Fourth of July Hints.

Most everyone likes to make some little effort at suitable decoration on such a day as this. One woman who lived in the country far from stores and greenhouses managed in this way:

She invited a few friends to spend the day at her home, making a dozen in all with her own family. She sent to the city for a Denison patriotic lunch set, a roll each of red, white and blue paper, a dozen paper ice cups, a dozen eight-inch flag doilies, some red, white and blue tissue paper, a tube of glue and a roll of white passe-partout binding. She first made circles of pasteboard that just fit around the ice cups.

These were covered plainly with red crepe paper and bordered top and bottom with the white binding. Then with blue rope silk and a needle threaded with sewing silk she laced the sides to make little drums. Then circles of pasteboard were cut a little larger than the drums and a full ruffle of blue crepe paper sewed around the edge. The drums were glued upon this and the ice cups slipped inside. Sections of picture tubes were cut in five-inch lengths and bottoms covered with manila paper glued to them. Around the tops were glued inch-wide strips of manila paper, allowing half the width to extend above the tube, which was then covered with plain red tissue paper.

Little circles of thin card were cut that would just slip inside, and these were covered with the brown paper and had a bit of brown twine drawn through the center, a knot being upon the under side.

Each tube was filled with fruit drops, the top slipped in and the paper around the top pressed down to hold the circle in place. Behold! some fine imitation firecrackers.

Red, white and blue tissue paper was then cut into three and four-inch circles and each one twisted around a chocolate cream or buttercup and a dish of remarkably fat torpedoes was the result.

The flag doilies were doubled in half and half a dozen leaves of white paper placed between and tied with red and blue baby ribbon and a red programme pencil attached to each.

In these were written a number of questions which the guests were expected to write answers for, and for prizes there were two drum-shaped boxes of candy and two tiny silk flags.

Down the center of the table were three-inch strips of red and blue crepe paper, and the center piece was a large-sized toy drum with a dish filled with red geraniums, white candytuft and blue bachelor buttons.

For out-of-door amusements there were quoits, and the horse-shoes were painted either red, white or blue, and in the croquet ground small flags were tied to the arches.

A few flags were here and there around the grounds. Lemonade and iced tea were served all the time from a tiny tent made from two sheets.

There were plenty of big cushions and several hammocks, and everybody had a good time.

The dinner was served out under the trees, and there was nothing warm except tea and coffee, which were made upon a coal oil stove.

There was cold roast chicken and baked ham, potato salad, young onions, radishes and lettuce, cold bakes beans and Saratoga chips.

Vanilla ice cream, molds of Jell-o and fruit jellies, several varieties of cake, wheat bread and brown bread, beaten biscuit and cheese, cottage cheese and pickles.

Just before going home in the evening a light lunch was served. Bread and butter sandwiches, chipped beef and canned salmon and the odds and ends left from dinner.

A novel feature was the way the dishes were washed. There were three sets of numbers drawn, four to a set. The first set cleared up the table and put away the food; the second set washed the dishes; and the third set prepared the table for the lunch and put away the dishes not wanted.

The work was greatly lessened by using paper plates.—Mrs. H. L. Miller, Circle, Montana.

St. Louis Butter and Cheese.

On June 1st, creamery extras were in demand at 24 to 25 cents; firsts at 23 cents, and seconds at 21 cents; choice ladle-packed butter at 18½ to 19 cents; and country butter at 15½ to 17½ cents.

Cheese was selling as follows: Northern—Twins, 14 cents; Daisies, 14½ cents; Young Americas, 15¼ cents; Long Horns, 15½ cents; Prints, 15½ cents; Limburger, 14 to 14½ cents. Swiss—Choice, 17½ to 18 cents; No. 2, 12 to 14 cents; damaged and inferior stock, 9 cents. Brick, choice, 14½ to 15 cents.

Send No Money

Until you use it for 30 days

We mean that exactly; please take us at our word.

Simply ask us to show you the "1900" Gravity Washer. We will send it to you, freight prepaid. You pay no deposit, give no security; you are under no obligation.

Use it for 30 days; do four washings with it. Learn how it saves your labor, and how it saves your clothes.

Then, if you want it, pay a little each week, or a little each month. No hurry; just suit yourself. If you don't want it, simply send it back.

The above offer—just as we state it—is open to anyone who is responsible.

Don't you want to see a washing machine that will stand such a test as that?

The "1900" Gravity Washer

is a machine that every woman will have when she knows it. That's why we want you to see it. It does washing solely by forcing soap and water through the meshes of the clothes. No rubbing, no stirring, no paddling; no wear of any sort on the clothes. They are simply held still, while the soapy water is forced back and forth, up and down, through the meshes.

Clothes are washed perfectly clean in this way in six minutes. It does away with the tub and washboard. Makes washing almost fun. Saves all the wear of washing, which means nine-tenths of all the wear on clothes. Cuts wash bills in half.

We control this machine by patents which have cost us $50,000. So no other washer does what this does. It has built for us the largest washer business in the world.

The "1900" saves so much, and costs so little, that it is far cheaper to have it than to go without it. So send now for our New Washer Book, showing the different styles. Then tell us which you want to see, and we'll send it. Do this in justice to yourself.

A post-card with your name and address sent to us *today* brings you the book *by return mail, postpaid.*

Address—The 1900 Washer Co., 1966 Henry St., Binghamton, N. Y.

Or—if you live in Canada, write to the Canadian 1900 Washer Co., 355 Yonge St., Toronto, Ontario.

USED CAUSTIC BALSAM FOR 15 YEARS. I have used Gombault's Caustic Balsam, and kept it on hand almost all the time for 15 years, and have found it was great cattle-tonic for a great many ailments.—K. D. CARSON, Wetumka, I. T.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

TAPE-WORM Expelled alive in 60 minutes with HEAD or no charge. No fasting, no sickness, no pain. Medicine pleasant and perfectly harmless. Medicine sent to any part of the country. Large booklet containing valuable information FREE. DR. M. NEY SMITH, Specialist, Office, 814 Pine Street, ST. LOUIS, MO.

FAT reduced by a simple remedy—Sample Box, etc., mailed free to any address. Hall Chem. Co., Dept. 502, St. Louis, Mo.

BED WETTING Cured. 25c. Pkg. FREE. C. H. ROWAN, Dept. 103, London, Can.

MARRY RICH Big List of Descriptions and Photos FREE (Sealed). STANDARD COR. CLUB, Grayslake, Ill.

FREE RUPTURE CURE. Stuart's Plaster-Pads are different from the painful truss and being self-adhesive they hold the rupture in place without straps, buckles or springs—cannot slip, so cannot chafe or compress against the pelvic bone. The most obstinate cases cured in the privacy of the home. Thousands have successfully treated themselves without hindrance from work. Soft as velvet—easy to apply—inexpensive. Guaranteed in accord with National Drug Laws. Write to-day and "Trial Treatment," with interesting book will be sent FREE. Address STUART PLASTER-PAD CO., Block 57, St. Louis, Mo.

DROPSY Cured; quick relief; removes all swelling in 8 to 20 days; 30 to 60 days effects permanent cure. Trial treatment given free to sufferers; nothing fairer. For circular, testimonials and free trial treatment, write Dr. H. H. Green's Sons, Box K, Atlanta, Ga. Please mention Nat. Farmer and Stock Grower.

GREAT MONEY MAKER FOR AGENTS Sell Magnetic Combs and get rich; agents wild with success. They remove dandruff; stop falling hair; RELIEVE HEADACHE, never break. Send 25c stamp for sample. PROF. LONG, 798 Ash St., PEKIN, ILL.

$90 A MONTH, $60 Expense Allowed at start, to put out Merchandise & Grocery Catalogs. Mail order house. American Home Supply Co., Desk 5 D, Chicago, Ill

Diploma granted; positions obtained for successful students; cost within reach of all; satisfaction guaranteed; particulars free. Ontario Veterinary Correspondence School, London, Can.

Poisonous Plants Which Children Should Know.

In their wanderings about the fields and woods, children come in contact with many poisonous plants which in ignorance they may touch and even pluck and carry about with them, or, if it is a berry-bearing plant, they may pick the fruits and eat them. But when a child knows a plant to be poisonous he will shun it. For this reason he can be taught what some of the most common of these plants are. In walks through the fields any farmer can point out such to the children and warn them against anything of a suspicious nature. A safe rule to make with little ones is to teach them to put nothing in their mouths which they find abroad unless it is something with which they are perfectly familiar or unless there is a well-informed adult with them.

The fact that one person can handle a plant without becoming poisoned by it does not place that plant among the harmless plants. Some plants are poisonous to persons whose skins are particularly susceptible, while persons less so may handle the plant freely without any serious results. The writer knows a man who could handle poison ivy and other well-known poisonous plants as freely as he could the common plantain and with no more harmful results. His little daughter, on the other hand, was one of the easy victims, and even plants commonly considered harmless would poison her.

Most people know and fear the poison ivy. It can be distinguished from other vines of a somewhat similar appearance by the fact that its leaves are divided into threes instead of fives, and in the fall it bears small, greenish-white berries close to the stalk.

The poison dogwood or poison elder belongs, as does the poison ivy, to the same family. It is a pretty shrub growing from six to eighteen feet high, with leaves of a dark green divided into from seven to thirteen leaflets. It is safest to warn children against all sumacs until they are able to distinguish the poisonous from the harmless.

Monkshood, both tame and wild, is a plant noxious in every way. The pollen blown into the eyes often causes severe pain and swelling. The roots are sometimes mistaken for horse-radish and are eaten with fatal results. The monkshood grows about three feet high, its stem being erect, non-branching but profusely leafed. On its upper part is a spike of dark, blue-colored flowers, the upper petal of which is shaped like a monk's hood, and the petals on either side having hairy surfaces. The leaves are dark green and are divided into five segments.

Mountain laurel is an evergreen, and is very attractive when in flower. It grows three to four feet high, with crooked, straggling branches. Its flowers are large, pinkish red or white in color. The leaves are often poisonous to cattle, and blossoms and leaves are poisonous to some people, especially when carried long enough to become bruised in the hand.

The berries of the nightshade are what attract children in this plant. The plant is somewhat shrubby and climbing, but its stem round and hairy rather than woody. The berries are about the size of wild cherries, changing as they ripen from green to a reddish or purplish black and sometimes to a bright red. They have a rather pleasant sweetish taste. A few have been known to cause death.

Fool's or dog's parsley is a poisonous herb. The root is occasionally cooked by mistake, always with serious results. It is a familiar plant to all adults who are about a garden.

The larkspur, tame and wild, the buttercup and marsh marigold, are poisonous to some persons if carried long in the hands.—Janet Thomas Van Osdel.

AUSTEN'S
Complete Tour of the World
ON POST CARDS.

One Hundred Actual Scenes in Colors—Places of Prominence and Points of Interest in All Parts of the World.

Here are 100 new and distinct views on colored Souvenir Post Cards (no two alike), reproduced from original photographs taken in all parts of the world by noted travelers.

These reproductions are not only wonderful from a mechanical and printer's art standpoint, but are entertaining and instructive to each member of the family. The trip in this form is the most complete of any ever offered, and shows accurately only points of interest and prominence at each place.

We guarantee each and every view to be a true reproduction of genuine photographs, taken at each of the places listed below, and not a lot of pictures from any or no place with fictitious names or misleading titles.

To make this tour by rail, steamer, etc., would cost thousands of dollars and many months of hard travel.

We start on the journey at New York City, and, after touching the most interesting points in this country, jump from San Francisco to the Hawaiian Islands, thence to Japan, and, after traveling over the entire Eastern Continent, find ourselves at a point in Italy, from where we finally leave for New York City, the terminus of our delightful journey.

WHERE WE GO AND WHAT WE SEE.

New York City—Sixth Avenue Shopping District. Tomb of General Grant.
Washington, D. C.—The White House. The Inauguration.

THE MAN OUTSIDE.

A Love Story of Farm Life.

Everybody for ten miles around knew that Burt Thatcher and Minnie Davis were engaged. She was the daughter of a farmer, and he was a clerk in a village store, and both had many friends and acquaintances. The course of true love was running as smoothly as a pair of bob-sleighs in winter time, when a windmill agent came along and sold Farmer Davis a mill.

This agent was a middle-aged man, with golden whiskers and a great deal of cheek, and, as he had to direct the setting up of the mill, he was at the farm house for a couple of weeks. His attention was early attracted to Minnie, and, no matter how many wives and children he had hidden away in other localities, he posed for an old bachelor for the nonce, and uttered more words of praise and flattery in ten minutes than she had ever heard in a month before. The knowledge that she was engaged, together with a sight of the young man who was to lead her to the hymeneal altar, animated the agent with a spirit of deviltry, and he sung the praises of Minnie Davis till Burt Thatcher's jealousy was aroused and he was ready for a quarrel.

When once a young man lets his best girl understand that he is jealous of her she feels it her bounden duty to make him as uncomfortable as she can for a few weeks. Young Thatcher might as well have been jealous of Minnie's grandfather as of the windmill man, with his golden whiskers; but when he heard that the two sang hymns and played checkers together, in addition to gathering harvest apples and reading Shakespeare on the front veranda after dinner, the green-eyed monster demanded a row.

One was forthcoming. One evening the clerk drove up to Farmer Davis with his jaw "sot," and five minutes later he was saying to the girl of his heart:

"False creature, how dare you look into my eyes after the way you have carried on with that yaller-whiskered old hollyhock!"

"His whiskers are not yellow, but golden," corrected Minnie, "and he's hardly more than a young man yet."

"Ha! It must be a case of love at first sight, with the whiskers thrown in."

"I say his whiskers are golden."

"They are yaller!"

"You want to pick a quarrel!"

"You want to marry him!"

From thence on it was easy for the young man. All he had to do was to call Minnie a heartless girl, a flirt and a coquette, and add that he was glad he had found her out before it was too late. Her feelings were hurt, her indignation aroused, and she suggested that he had better look around and find some one to suit him better. Of course he drove away with flaming face and surging heart, and of course it wasn't a week before everybody heard of the row and had something to say about it.

When he had fulfilled his mission, which was to put up the best windmills on earth and tell every farmer's daughter that she was the sweetest and handsomest girl in the country, the windmill man took his pay and drove on, and his golden whiskers were hardly remembered fifteen minutes after his departure. Among the people who were surprised that he did not ask for Minnie's hand before leaving the neighborhood was Burt Thatcher. He was not only surprised, but mollified. He was not only mollified, but found himself wondering if he couldn't make it up with the girl and be restored to favor. Like many another man, he didn't appreciate a good thing until he had lost it.

The more Burt thought of those whiskers the more he was inclined to believe that the color was golden instead of "yaller," but how was he to let Minnie understand his change of feelings? He must gently crawfish the next time she visited the store to "trade," and if she showed a yielding disposition the chasm would be bridged. This decision arrived at, he had only to wait, and for a week before she called in company with her mother he had it all mapped out as to how he would receive her. His calculations received a setback, however.

"Mr. Thatcher, we want to look at some of your best table-cloths," announced the girl, as she looked him straight in the eyes, and his heart went down like a lump of lead, and he saw those golden whiskers floating in the air about him.

During the hour she was in the store Minnie remarked that it was a backward summer; that the huckleberry crop was very poor; that rain was badly needed; that she couldn't understand why shovels were down and table-cloths were up; and the uncomfortable young man could recollect fourteen different occasions when she lugged in the name of "Mr. Thatcher." He was so put out over events that he sold a 60-cent hoe to old Mr. Johnson for 28 cents, and astonished Aunt Mary Phillips by asking her 60 cents a yard for 7-cent calico. As a matter of fact, Minnie intended to do her share towards "making up" when the proper time came, but she wanted to punish the young man first.

Four weeks after the buying of the table-cloths, and without the young couple having spoken together since, Farmer Davis and wife set out one day for a ten-mile drive to Cassville, intending to be back home before dark. While they were returning they met with an accident, and it came about that Minnie found herself alone in the house when night fell. She didn't begin to get nervous until about nine o'clock, but then a call from a tramp frightened her into locking all the doors and imagining all sorts of things. The tramp had taken a cold bite and left, but knowing that she was alone, he would doubtless hang about and break into the house. Farmer Davis had a shot-gun, and that shot-gun was kept loaded with birdshot to kill owls and chicken-hawks.

When Minnie was worked up to such a nervous pitch that she imagined that every gust of wind to be the muffled footsteps of the tramp, she got down the gun and resolved to perish like a true heroine. Five minutes after this resolve was taken, some one knocked on the front door. It was the tramp, of course. Two minutes later he was at the kitchen door. Then he was heard muttering and grumbling and getting a drink of water at the well.

With her heart in her mouth and the shot-gun ready to fall from her trembling hands, the girl waited. The tramp whistled and then sat down on the door-step. Then he arose and seemed to move along to a kitchen window. His game was to raise the sash and smash the glass, and, shutting her eyes and trusting that her grave would be kept green, Minnie pointed the gun somewhere or other and pulled the trigger. There was a flash, a roar and a yell. Scared as she was, she detected something familiar in the tones of the yell, and when her name was shouted she opened the door to admit Burt Thatcher. He had not only heard of the accident that detained her parents, but had made use of it to drive out to the farm house and tell the girl how sorry he was for making a chump of himself. He was not at the window when the shot was fired, but walking away from it. Most of the charge went wild, but about a dozen of the little pellets peppered his shoulders and quickened his longing to kiss and make up. Minnie opened the door to speak his name and fall into his arms, and most of the shot had worked out and the marriage day been set when the old folks reached home, and the mother elevated her hands and rolled up her eyes as she exclaimed:

"For the land's sakes, but how things do come about in this 'ere world of ours!"—John Fischer.

Standard Calicoes

Our grandmothers wore **Simpson-Eddystone Silver Grey** cotton prints. Our mothers are wearing them today. Ask them about quality—how they wear and hold their color. Let them show you the neat stylish patterns.

Quality was paramount in grandmother's time. The same today in Simpson-Eddystone Prints.

Standard for over 65 years.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't them write us his name. We'll help him supply you. Don't accept substitutes and imitations.

EDDYSTONE PRINTS

Founded 1842

Liberation For the Home Seamstress.

The time was when women were necessarily slaves to the needle. Every article of wearing apparel for women and children and many for men had to be made at home. Even the patterns were mostly home-made or copied from some neighbor. Now the day has come when every article of wearing apparel can be purchased at a reasonable price and made in enough styles to please the most fastidious.

If a woman is discriminating in this matter she will know just what to buy ready-made to advantage and what to make herself. Unless a woman is a skilled dressmaker or tailoress, with all the facilities for heavy pressing, she will do better to buy her cloth skirts and suits. At a very reasonable price a suit of good quality can be purchased which will do for service for two seasons. Petticoats, in both dark and light colors, and night robes, can be purchased almost cheaper than they can be made at home. Children's every-day dresses and blouses, men's overalls and jumpers, can all be purchased more cheaply than a woman can make them, considering, of course, that her time is of value.

With this heavier sewing out of the way there is time left to give to dainty waists and little extras that may cost too much for a moderate purse unless made at home. There is immense satisfaction in picking up a pretty piece of silk or fine linen at a bargain and making it up into a dainty waist at a cost of almost nothing. Beautiful waists can be purchased ready-made, but here is one of the articles on which a woman saves if she can do the dainty work herself and if she can afford to give the time without undermining her health. The exquisite collars and jabots, which add so much to the finishing touches of a garment, can be made for next to nothing at home; but to get anything really fine in the ready-made, a high price must be paid. At her own machine the home seamstress can also use up odds and ends and work them into something worth while. Here, too, she can do the slight remodeling of sleeves and collar, which make a last year's garment look up-to-date, and she can make over large garments into clothes for the little ones.

The day has not come when the woman of moderate means can afford to wholly desert her sewing room, but the day has come when she should give to the houses that are offering to her at very reasonable prices what she has neither the skill nor the strength to make in as pleasing a way as these same firms can do for a very moderate sum of money.—Janet Thomas Van Osdel.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Girl's Box Plaited Dress.

No. 6320.—Box plaited dresses made with the body portions and skirts in one are among the smartest that the little girls can wear. This model can be treated in several ways and really becomes three in place of one. It can be made with the sailor collar and shield, as illustrated, or it can be made with the square Dutch neck, or it can be made high with a standing collar, and it is equally available for all three styles. The sleeves, too, can be long or short. White linen with bands of rose color is the material illustrated, and linen is admirable for just such dresses as this, but there are a great many other materials that are equally in style; indeed, almost every simple material can be treated after one style or the other. For the thinner fabrics, such as lawn or batiste, the dress without the sailor collar may be preferred, while made as illustrated it is perfectly suited to poplin, linen, chambray and everything of a similar sort.

The dress is made with fronts and back and is laid in box plaits that give long and becoming lines, while the fullness is held in place by means of a belt. When the sailor collar is used, the neck is cut out to indicate depth and the collar joined to its edge, the shield being arranged under it. When square neck is used, the edge is simply finished with bands of trimming, and when high neck is used, the standing collar is joined to it. The long sleeves are tucked at their lower edges, but the short ones are simply gathered into bands.

The quantity of material required for the medium size (eight years) is 5¼ yards 24, 4⅛ yards 32, or 3¼ yards 44 inches wide, with ½ yard 27 inches wide for the bands.

The Pattern 6320 is cut in sizes for girls of four, six, eight and ten years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Blouse With Dutch Collar.

No. 6326.—The blouse that is closed at the front, yet is not a plain shirt waist, is one which every woman finds desirable. This model allows a choice of the new long, close-fitting sleeves and of slightly fuller ones in three-quarter length, and also includes the fashionable Dutch collar. In the illustration it is shown made of handkerchief linen with collar and sleeves embroidered, but it will be found available for any seasonable material that is thin enough to be tucked successfully, and it is equally desirable for the separate blouse and for the entire gown. When utilized for the odd waist it is adapted to the pongee that is being so much used for the purpose, to messaline and similar silks, as well as to washable materials, while for the entire gown can be utilized any one of the pretty lawns, batistes and the like, or the slightly heavier chambrays, zephyrs, and the various inexpensive printed wash fabrics.

The blouse is made with fronts and back. It is tucked in extremely becoming lines, and the closing is made with buttons and buttonholes at the left of the front. The Dutch collar finishes the neck. The long sleeves are made in one piece each and fit the arms exceptionally well, but the three-quarter sleeves are slightly full and are gathered into straight cuffs.

The quantity of material required for the medium size is 4⅞ yards 21 or 24, 3¼ yards 32, or 2⅝ yards 44 inches wide to make with long sleeves; 3⅞ yards 21 or 24, 2⅞ yards 32, or 2¼ yards 44 inches wide to make with three-quarter sleeves.

The Pattern 6326 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Circular Skirt.

No. 6305.—The circular skirt made with a box plait at the back and overlapped at the front is one of the very latest developments, and is a singularly smart model,

adapted to a great many different materials. Panama cloth with trimming of satin is the combination shown, but serges are to be extensively worn, and this season there are a great many novelty suitings, shepherd's check is a favorite, and the model suits, all of these and also the linen and pongee, and all materials of the later season, equally well. It can be trimmed with either contrasting material or with braid, or the lower edge can be left plain and the lapped edges only trimmed. It can be made in round or walking length, and consequently suits both the simpler costume and the more dressy one.

The skirt is made with the two circular portions and the box plait. The right side of the front is lapped well over the left, then attached to position. The box plait is arranged over the back edges, the closing being made at the left of the back. The circular portions are fitted by means of darts at the hips, so that they are perfectly smooth.

The quantity of material required for the medium size is 7 yards 24, 6¾ yards 27, or 4¼ yards 44 or 52 inches wide, with 5¼ yards of braid. The width of the skirt at the lower edge is 3¾ yards.

The Pattern 6305 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Misses' Overdress With Guimpe.

No. 6327.—The overdress that is made in semi-Princesse style is a pronounced favorite of the season and one that is certain to gain in favor. It is practical and smart at the same time, and this one is exceptionally becoming to girlish figures. In the illustration it is made from one of the pretty inexpensive printed wash fabrics, with the scalloped edges bound with plain color, while the guimpe is of tucked muslin, but the dress is one of the available sort and can be utilized for the handsomer pongees and girlish silks as well as for the simpler washable fabrics, with the guimpe made from net or from lawn, or from any thin material which is adapted to the material chosen for the frock. The fronts are lapped one over the other, but the closing is made invisibly at the back.

The overdress consists of the blouse and skirt. The blouse is made with fronts and backs, which are tucked over the shoulders, and the skirt is gored, and the two are joined beneath the belt. The guimpe is a plain one, made with fronts and back and with long, close-fitting sleeves.

The quantity of material required for the sixteen-year size is 6⅝ yards 24 or 27, 5½ yards 32, or 4⅝ yards 44 inches wide for the overdress; 1 yard 36 inches wide with 2 yards 18 inches wide for the chemisette and sleeves for the guimpe.

The Pattern 6327 is cut in sizes for girls of fourteen and sixteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Overblouse With Short Sleeves.

No. 6317.—The overblouse continues all its vogue and is, indeed, promised indefinite popularity. It is so very generally becoming, it is so desirable from numberless points of view that it may fairly be said to have become one of the standbys of the dress.

This one can be utilized in combination with any guimpe and will be found desirable for almost any seasonable material. In the illustration pongee is finished with a band of Liberty satin and with a little trimming of soutache braid, but the overblouse is adapted both to the simple costume and to the elaborate one, and it can be made from the washable materials of every-day use quite as well as from silk, satin and the like. The little trimming portion at the front, which in this instance is braided with soutache, is susceptible of much variation. In the case of a handsome costume it could be cut from oriental embroidery or from material of a similar sort and be made to give a quite distinctive finish to the whole garment. For the edging, bands of contrasting material, braid or any preferred banding can be used.

The overblouse is made with fronts and back, the little trimming portion and short sleeves, which are cut in one piece each. There are tucks over the shoulders, and the fronts are lapped one over the other and closed invisibly. The neck edge can be cut on round or pointed outline, as liked.

The quantity of material required for the medium size is 2⅝ yards 21 or 24, 2⅛ yards 32 or 1½ yards 44 inches wide.

The Pattern 6217 is cut in sizes for a 32, 34, 36, 38 and 40-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Dress With Knickerbockers.

No. 6324.—Such a simple little dress as this one is in demand at all seasons, but especially at this time, when washable materials are in process of making. The body portion and the skirt are cut in one, simply held in place by means of a belt, and consequently laundering is a simple matter, while at the same time the dress is a becoming and attractive one. The Knickerbockers, too, make a practical and desirable feature, for they do away with the necessity for petticoats and allow that freedom and activity which should be a part of the holiday season. In the illustration cadet blue linen is finished with pearl buttons and with stitching, but there are a great many equally desirable materials. For the very simple dress madras and chambray, linen, gingham, and the still more inexpensive printed wash fabrics all are appropriate.

Either long or short sleeves can be utilized, and the long sleeves can be made in one piece and tucked at the wrists or with upper and under portions left plain, as liked.

The dress is made with fronts and back and is closed with buttons and buttonholes. When the high neck is used, the rolled-over collar is joined to the edge, and the open neck is designed to be underfaced or finished in any way that fancy may suggest.

The quantity of material required for the medium size (eight years) is 8⅛ yards 24, 6 yards 32, or 4½ yards 44 inches wide.

The Pattern 6324 is cut in sizes for children of four, six, eight and ten years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Boy's Pajamas.

No. 6323.—No sleeping garment suits the boys quite as well as the pajamas. They are comfortable and satisfactory and they are appropriate for a variety of materials. Madras and cotton cheviot are favorites, but the washable pongees are exceedingly agreeable to wear and are very generally liked, while for extreme warm weather wash silk is a real luxury. In this case, however, one of the mercerized cotton materials is finished with simple stitching.

The pajamas consist of coat and trousers. The coat is underfaced at the neck and front edges and supplied with the always convenient patch pocket, while it includes regulation sleeves. The trousers are wide enough for comfort without being overlarge, and are finished with a casing at the upper edge, to which tape is inserted to regulate the size.

The quantity of material required for the medium size (ten years) is 5⅝ yards 24 or 27, 4¼ yards 36 inches wide.

The Pattern 6323 is cut in sizes for boys of six, eight, ten, twelve and fourteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Girl's Gibson Dress.

No. 6195.—The Gibson dress is such a generally becoming one that it is not surprising its popularity should be constantly increasing. This one is made of light-weight serge finished simply and plainly, but it would be found just as satisfactory for the pretty bright plaids that little girls are wearing so much and for the washable materials that will be shown in such variety before many weeks. Among the latter, linen, madras and fine ginghams are especial favorites, and many girls wear them at all seasons.

The dress is made with fronts and back and is laid in plaits in each shoulder, the opening being made invisibly beneath one of the tucks at the left side of the front. The fullness is held in place by the belt, and the simple sleeves are gathered into straight cuffs. The collar can be made to match, or the neck can be finished with a neck band and the dress worn with separate collars of linen, as liked.

The quantity of material required for the medium size (ten years) is 5½ yards 24, 3⅞ yards 32, or 2¾ yards 44 inches wide.

The Pattern 6195 is cut in sizes for girls of six, eight, ten and twelve years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Men's Night Shirt.

No. 6203.—This simple night shirt with the slightly open neck is one in general favor. It can be made from madras, from muslin, from longcloth, nainsook and all material of the sort and also from the warmer flannelette and washable flannels and from the pongee that is so desirable for warm weather wear. It is simple yet shapely, and the making involves scarcely any labor.

The shirt is made with front and back, and the back is gathered and joined to a square yoke. The neck edge and edges of the opening are finished with a facing, and the all-essential patch pocket is arranged over the left front. The simple plain sleeves are stitched to simulate cuffs.

Th quantity of material required for the medium size is 6½ yards 27, 4½ yards 36 inches wide.

The Pattern 6203 is cut in sizes for a 34, 36, 38, 40, 42 and 44-inch breast measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Five-gored Skirt.

No. 6290.—The skirt with the panel effect makes one of the latest features of fashion and is very pretty and very generally becoming. This one, being tucked at the sides and back, is appropriate for any of the light-weight materials, but that list includes almost everything seasonable and fashionable. One of the silk and wool novelties is the material illustrated, finished only with stitching, but pongee and foulard, cashmere and wool pongee, the many pretty washable fabrics, all are appropriate, and if a more elaborate skirt is wanted, the front panel can be embroidered, or braided, or treated in some similar manner. As the skirt allows a choice of round or walking length, it is equally well adapted to the street and to the house. It extends just slightly above the natural waist line and falls in the long lines that always mean grace.

The skirt is cut in five gores, the front gore being extended to form the belt. This front gore also is cut with extensions below the stitchings, and these extensions are turned under to form plaits. The side and back gores are tucked over the hips, so losing away with all bulk at that point.

The quantity of material required for the medium size is 7⅛ yards 24 or 27, 6¾ yards 32 or 44 inches wide for walking length, 7¾ yards 24 or 27, 6⅞ yards 32 or 44 inches wide for round length when material has figure or nap; 5½ yards 44 for round length, 5 yards for walking length when material has neither figure nor nap; width of skirt at lower edge, 4¼ yards.

The Pattern 6290 is cut in sizes for a 22, 24, 26, 28, 30 and 32-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents. (If in haste, send an additional two-cent stamp for letter postage, which insures more prompt delivery.)

Five-gored Walking Skirt.

No. 6218.—The plain gored skirt is always a satisfactory one, and just now it is in the height of style. It is especially well adapted to walking, and it is especially to be commended for the street costume and for the old skirt. This one can be made with inverted plaits or habit back, and is shaped to give snug fit over the hips, with the slight flare at the lower edge that is required by the latest fashion. The side gores are fitted by means of darts, and the skirt will be found an admirable one for the heavier washable materials as well as for those of wool and silk.

The quantity of material required for the medium size is 6½ yards 24 or 27, 3¾ yards 44 or 52 inches wide. The width of the skirt at the lower edge is 3⅜ yards.

The Pattern 6218 is cut in sizes for a 22, 24, 26, 28, 30, 32 and 34-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Dress.

No. 6291.—One-piece dresses are favorites for little girls this season, and they are so simple, so childish and so becoming and so easy to launder that there is every reason for their popularity. This one is made of linen with scalloped edges, just such treatment being very fashionable just now, but the dress can be finished with plain bands or with hemmed edges, if preferred, and almost all seasonable materials are appropriate. Linen, white and colored, makes charming afternoon dresses, while chambray and the simpler inexpensive wash fabrics are admirable for morning wear, and for the remaining weeks of cool weather shepherd's check or light-weight serge would be pretty, if made in just the same way, with trimming either of contrasting material or braid.

The dress is made with fronts and back, there being only shoulder and under-arm seams. The wide collar finishes the neck, and the sleeves can be tucked at their lower edges or gathered and joined to the bands, as liked.

The quantity of material required for the medium size (eight years) is 4 yards 24, 3¾ yards 32, or 2½ yards 44 inches wide.

The Pattern 6291 is cut in sizes for girls of four, six, eight and ten years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents. (If in haste, send an additional two-cent stamp for letter postage, which insures more prompt delivery.)

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Kindly address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

A GREAT WASHING MACHINE.

Our lady patrons are advised to write to the 1900 Washer Company, 1266 Henry street, Binghamton, N. Y., for the New Washer Book and mention this paper. There are many washing machines, but this one seems to be doing business all the year round. It is sent on thirty-days' trial. See page 25.

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address, Dr. G. M. Branaman, 1264 Walnut street, Kansas City, Mo.

"Every great and commanding movement in the annals of the world is the triumph of enthusiasm."—Emerson.

A MODERN BALLONATIC.

Mary had a red balloon
All streaked with blue and white,
And flying it on gusty days
Was Mary's chief delight.

"Dear Mary, you're so awful thin,"
Her mother used to say,
"Unless you ballast that balloon,
'Twill carry you away!"

But Mary laughed her ma to scorn
And flew it more and more,
And in her innocence ne'er reck'ed
The fate that was in store.

One windy morning in July
A gust came sweeping by
And bore that gaudy red balloon
Up to the azure sky.

The string of that balloon was tied
To Mary's pinafore,
And Mary climbed the stairway, too,
And no one saw her more.

—Exchange.

THE LITTLENESS OF LOVE.

Love is just a morning glory, doomed at noon to die;
Love is only half a story, told in passing by;
Love is gold so delicate, the lightest flame might melt it.
Love's nothing! But—God help the man who's never known or felt it!

—Helen Rowland.

GRANDMAMMA'S TRANSFORMATION.

Ride-a-cock-horse to a West End snare,
To see an old lady with gilded hair,
Paint on her cheeks and a powdered nose,
A straight-front corset and frivolous clothes!
She's sixty or more—now would you suppose it?
But SHE doesn't care—for nobody knows it!

—Helen Rowland.

THE WOMAN BEHIND THE MAN.

I've been a-readin' these months past
'Bout a man behind a hoe,
An' a man behind a grip-sack
With lots o' snap an' go!

Then the man behind the engine,
An' a man behind the ball,
But one soul hain't been mentioned
That you bet can beat 'em all.

Right a-gettin' down to bedrock,
If it hadn't been fer Eve,
All the hoeing Adam ever'd done
You could put straight up your sleeve.

An' I guess that poor old Noah
Wouldn't thought it very fine
To hoe around his grapes all day
An' mosey out to dine.

An' then a-comin' right on down
To this 'ere time of ours,
You'd find the men a sorry lot
Without their right-hand bowers!

Who is it gets up with the lark,
An' cooks an' scrubs an' cleans,
While way out 'neath a spreading oak
Her man rests on his jeans?

His work can wait, but her's cannot,
An' while he hoes the corn,
She does a hundrd different things,
An' at 12 she blows the horn.

An' when at night the hoein's done,
An' he lays down to rest,
Who is it, tired and weary-worn,
Lulls the baby on her breast?

Then sews a-talkin' low to Tom.
How he must sleep an' grow,
To be a big, strong boy right soon,
So he can help paw hoe.

An' if perchance his country calls,
The man drops his hoe to go,
Who is it then picks up the tool
An' finishes out the row?

An' when, all battle-scarred and maimed,
He comes back, one arm gone,
Who is it hopes an' sings an' prays,
A-hoein' right along?

Ah! talk about your boys an' men,
An' praise 'em all yer can,
But remember, the man's behind the hoe,
An' the woman's behind the man!

—Annella S. Gilmore.

WET-WEATHER TALK.

It ain't no use to grumble and complain;
It's jest as cheap and easy to rejoice,
When God sorts out the weather and sends rain,
W'y, rain's my choice.

Men giner'ly, to all intents—
Although they're apt to grumble some—
Put in their faith in Providence,
And takes things as they come;
That is the commonality
Of men that's blessed as we be—
Else we'd call the world creation
Purt' nigh the best of the creation.

With some of us it's different,
I've said some mean that I regret it all
And didn't like the way things went
On this terrestrial ball;
But all the same the rain come wet
Rained just as hard on picnic day;
I've seen them suns scorch it
It maybe wouldn't rain a bit.

In this existence, dry and wet
Will overtake the best of men—
Some little skift o' clouds 'll shet
The sun off now an' then;
But maybe, while you're wonderin' who
You've fool-like lent you're umbrell' to
And want it—out'll pop the sun,
And you'll be glad you ain't got none.

It aggervates the farmers, too—
They's too much wet, er too much sun,
Er work er waitin' round to do
Before the plowin's done;
And maybe, like as not, the wheat,
Jest as it's lookin' hard to beat,
Will ketch the storm—and jest about
The time the corn's a-j'intin' out!

These here cyclones a-foolin' round—
And back'ard crops—and wind and rain,
And yit the corn that's wallered down
May elbow up again!
They ain't no sense, as I kin see,
In mortals sich as you an' me,
A-faultin' Nature's wise intents,
And locking horns with Providence!

It ain't no use to grumble and complain;
It's jest as cheap and easy to rejoice;
When God sorts out the weather and sends rain,
W'y, rain's my choice.

—James Whitcomb Riley.

THE AVERAGE MAN.

When it comes to a question of trusting
Yourself to the risks of the road,
When the thing is the sharing of burdens,
The lifting the heft of a load,
In the hour of peril or trial,
In the hour you meet as you can.
You may safely depend on the wisdom
And skill of the average man.

'Tis the average man and no other
Who does his plain duty each day,
The small thing his wage is for doing,
On the commonplace bit of the way.

'Tis the average man, may God bless him,
Who pilots us, still in the van,
Over land, over sea, as we travel,
Just the plan, hardy, average man.

So on through the days of existence,
All mingling in shadow and shine,
We count on the every-day hero,
Whom haply the gods may divine;
But he who wears the swarth grime of his calling,
And labors and earns as he can,
And stands at the last with the noblest,
The commonplace, average man.

—Margaret E. Sangster, in Harper's Weekly.

A GENTLE COW.

The cow loked sadly round,
Her face suffused with shame;
"For all the ills which now abound,"
Quoth she, "I'm not to blame.
"Good butter of an honest hue,
Built by a rustic dame,
The factory may hide from view,
But I am not to blame.

"The milk takes on an azure tint,
Its taste belies its name;
The cream is but a passing hint,
But I am not to blame.
"And when I am set forth as beef,
The prices they proclaim
Become a source of general grief;
But I am not to blame.

"For I have simply done my best,
And tried no crooked game;
The human beings did the rest,
And I am not to blame."

— Washington Star.

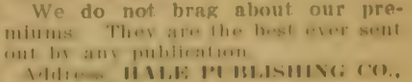
AMERICAN FLAG PREMIUM.

Every family should own an American flag, and the good and lasting flags that are of extra material and fast colors are hard to get. We have a flag of nice, soft cloth, fast colors, 2½x4 feet, a splendid flag. We are offering it as a subscription premium.

To anyone who will send us 60 cents we will send The National Farmer and Stock Grower one year. We will send one American flag by mail prepaid.

We do not brag about our premiums. They are the best ever sent out by any publication.

Address **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



"The world does not require so much to be good as it requires to be considered so."—Hannah Moore.

SELECTED POETRY.

THE WINDING ROADS.

Where do they lead—the little roads that
ramble up and down?
They wind about the valleys where the
mountains lift and frown,
With fragrant honeysuckle tangling all the
swaying trees
And rhododendron nodding in the gentle
morning breeze—
O, down the valley do they go, where all
is sweet and still,
To wind about and turn about and hide
behind the hill.

They are not as the city streets; they have
no clash and roar;
But high and high above them do the
songbirds wheel and soar,
And bordering their sides are vines that
spill their wealth of bloom
Through which the sunshine spatters like
a jewel in the gloom;
Where do they go? The little roads that
find the hidden ways
As memories that ramble down through
misty yesterdays.

Now there be many roads that run through
sunshine and through rain;
Broad highways that make thoroughfares
across the hill and plain;
But all the little byways—almost hidden by
the leaves,
That make a marvel-pattern of a thousand-
mingled weaves—
They set us wondering of where they lead
to, past the hill,
Into the mystic shadows that are tremu-
lously still.

They turn away from traveled roads where
dust clouds rise and drift;
They find the little hollows where the
sunshine seems to sift
Itself among the blossoms and the fabric
of the vines;
They wreathe themselves all lazily between
the solemn pines—
And O, we fain would follow them, would
wander on and on,
Until we knew the secret of the place where
they have gone.

Where do they lead—the little roads that
ramble in and out
And know the merry music of the brooklets
roundabout?
They hail us and they call us as we journey
swiftly by;
They flash their signals to us as upon our
way we go—
And then we fall to dreaming of a hush-
held, peaceful way
That was the little road we knew in some
fair yesterday.

—Wilbur D. Nesbit, in the Chicago Post.

NOTHIN' DOIN' THIS YEAR.

Nope, nothin' doin' this year
In the line o' boardin' trash.
Yer Uncle Lem'l has found out
The game dusn't balance the cash.
I hain't advertisin' now
Fur people to come an' stay
Wuth Cindy an' me at the old farm house—
We're shuntin' 'em all away.

You'll not hear the tootin' horn
Airly an' long an' late;
You'll not smell the smell o' the gas mer-
shine
This side o'yer uncle's gate.
You'll not watch the gulfin' ball
Wallopin' through the pane
O' glass kersmash in the winders o'
Yer uncle's hum again.

You'll not see the hammock swung
Under my trees no more,
Loaded down wuth a lot o' truck—
Ribbons an' lace galore.
Thur'll be no more ankles trim,
Kivered wuth drop-stitch hose,
Skitterin' up to the maple boughs—
Botherin' Jake's repose.

Thur'll be no more new laid eggs
An' butter that's fresh each day,
Toted up frum the cellar fur
Them folks to put away.
Thur'll be no more chicken fries
To prick up the appetite
O' them city folks galvantin' in
At all hours o' the night.

Nope, nothin' doin' this time.
Cindy an' I will take
Vacation this summer—an' give a rest
To our hired man, poor Jake!
Thur'll be no fence down
After they've gone away;
Thur'll be no pesky gas mershines
Puffin', both night an' day.

I'm tendin' farm this year,
Cindy an' Jake an' me;
Goin' to take a breathin' spell—
Needin' it, too, us three.
Never no more fur us
Motors on hill an' plain;
Never no more fur yer Uncle Lem.
City boarders again.

—Horace Seymour Keller.

THE DOCTOR'S STORY.

Mrs. Rogers lay in her bed,
Bandaged and blistered from foot to head,
Bandaged and blistered from head to toe,
Mrs. Rogers was very low.
Bottle and saucers, spoon and cup
On the table stood bravely up;
Physic of high and low degree;
Calomel, catnip, boneset tea—
Everything a body could bear,
Excepting light and water and air.
I opened the blinds; the day was bright,
And God gave Mrs. Rodgers some light.
I opened the window; the day was fair,
And God gave Mrs. Rogers some air.
Bottles and blisters, powders and pills,
Catnip, boneset, sirup and squills,
Drugs and medicines, high and low,
I threw them as far as I could throw.
"What are you doing?" my patient cried.
"Frightening death," I coolly replied.
"You are crazy!" a visitor said.
I flung a bottle at her head.
Deacon Rogers he came to me;
"Wife is coming round," said he,
"I really think she'll worry through;
She scolds me just as she used to do.
All the people have poohed and slurred—
And the neighbors had their word;
"'Twas better to perish," some of 'em say,
Than be cured in such an irregular way."
"Your wife," said I, "had God's good care,
And His remedies—light and water and air.
All the doctors, beyond a doubt,
Couldn't have cured Mrs. Rogers without."
The deacon smiled and bowed his head;
"Then your bill is nothing," he said;
"God's be the glory, as you say;
God bless you, doctor, good-day! good-day!
If ever I doctor that woman again,
I'll give her medicine made by men."

—Medical World.

LAUGH, YE FOOLS.

Shake your sides, ye laughing fools,
Shake your sides in glee;
Your mighty god, old Mammon, rules
Our land from sea to sea.

His palaces in grandeur stand,
And barred is every door;
His waving fields on every hand
Are fenced against the poor.

His favored few, in purple clad,
Disdain the suffering throng,
Though throb their hearts with pleasure glad,
They reckon not of wrong.

With silks and gold they are arrayed,
In kingly pomp they go;
No want assails to make afraid
And laugh they all at woe.

Yea, laugh, ye fools! the morrow brings
Its shadows o'er your way;
For even lords and gold-decked kings
Are puppets built of clay.

The suffering hordes in wrath arise,
They smite the tyrant sore;
While lurid flames against the skies
Leap e'en to heaven's door.

And then, ye fools, who laugh at wrongs,
Ye fools who laugh and smite;
Behold thy victims take thy thongs
And set the evil right.

—Wilson Hunt Stites.

DARBY AND JOAN.

When Darby saw the setting sun
He swung his scythe and home he run,
Sat down, drank of his quart, and said:
"My work is done, I'll go to bed."
"My work is done!" retorted Joan;
"My work is done!" your constant tone;
But helpless woman ne'er can say
"My work is done" till judgment day.
You men can sleep all night, but we
Must toil. "Whose fault is that?" quoth he.
"I know your meaning," Joan replied;
"But, sir, my tongue shall not be tied;
I will go and let you know
What work poor women have to do;
First, in the morning, though we feel
As sick as drunkards when they reel;
Yes, feel such pains in back and head
As would confine you men to bed,
We ply the brush, we wield the broom,
We air the beds and right the rooms;
The cows must next be milked—and then
We set the breakfast for the men;
Ere this is done, with whimpering cries
And bristly hair, the children rise;
These must be dressed, and dosed with rue,
And fed, and all because of you.
What next?" Here Darby scratched his head
And stole off grumbling to his bed,
And only said, as on he run:
"Zounds! Woman's clack is never done."

At early dawn, ere Phoebus rose,
Old Joan resumed her tale of woes,
When Darby thus: "I'll end the strife;
Be you the man and I the wife;
Take you the scythe and mow, while I
Will all your boastful cares supply."
"Content," quoth Joan; "give me my stint."
This Darby did, and out she went.
Old Darby rose and seized the broom
And whirled the dirt about the room;
Which having done, he scarce knew how,
He hied to milk the brindle cow.
The brindle cow whisked 'round her tail
In Darby's eyes and kicked the pail;
The clown, perplexed with grief and pain,
Swore he'd never try to milk again;
When, turning 'round, in sad amaze,
He saw his cottage in a blaze;
For as he chanced to brush the room,
In careless haste he fired the broom,
The fire at last subdued, he swore
The broom and he would meet no more.
Pressed by misfortune and perplexed,
Darby prepared for breakfast next;
But what to get he scarcely knew—
The bread was gone, the butter, too;
His hands bedaubed with paste and flour,
Old Darby labored full an hour;
But, luckless wight; thou couldst not make
The bread take form of loaf or cake.

BROMO-SELTZER

CURES

HEADACHES

10¢, 25¢, 50¢, & $1.00 Bottles.

[Please mention National Farmer and Stock Grower.]

As every door wide open stood,
In pushed the pig in quest of food;
And, stumbling onward, with her snout,
O'erturned the churn—the cream ran out.
As Darby turned the sow to beat,
The slippery cream betrayed his feet;
He caught the bread trough in his fall,
And down came Darby, trough and all;
The children, wakened by the clatter,
Start up and cry: "Oh! what's the matter?"
Old Carlo barked and Tabby mewed,
And hapless Darby bawled aloud:
"Return, my Joan, as heretofore;
I'll play the housewife's part no more;
Since now, by sad experience taught,
Compared to thine my work is naught;
Henceforth as business calls I'll take,
Content, the plow, the scythe, the rake,
And nevermore transgress the line
Our fates have marked, while thou art mine.
Then Joan, return, as heretofore;
I'll vex thy honest soul no more;
Let's each our proper task attend;
Forgive the past, and strive to mend."

—Unknown.

CHRISTMAS TIMES IN GEORGIA.

Old-time fiddler's fixin'
Fer music in the hall,
An' the women—they air willin',
So, swing yer ladies, all!

Fer it's Christmas time in Georgy,
As lively as kin be,
An' Molly's nigh the mistletoe,
An' keeps a kiss fer me!

An' come in thar, Miss Mary,
An' sweet Miss Liza Jane—
Yer lover's on his pony,
In a gallop down the lane!

Fer it's Christmas time in Georgy,
As lively as kin be,
An' Molly knows the mistletoe
Will keep a kiss fer me!

Who keers fer sleet an' snowin'?
The green has left the ground,
But still the fiddle's goin',
An' we swing the gals around!

Fer it's Christmas time in Georgy,
From hilltops to the sea,
An' Molly's nigh the mistletoe
An' keeps a kiss fer me!

—Atlanta Constitution.

WOMAN.

If by some strange mishap
She fell
Out of her mother's lap,
To dwell
Alone upon some pleasant isle, ere yet
Her gaze had ever met
The look of any man—before
Her ears had ever heard
The sound of any word—
If Fate or Fortune bore
Her, in her infancy,
And God, from day to day,
Sent succor to her, spread
Protecting hands above her head—
If she dwelt all alone,
Where winds were sweet and skies were fair,
Saw no face but her own
Enchanting face reflected where
She knelt to quaff the stream
While babyhood and childhood passed—
If ne'er
In waking hour or dream
The shadow of another's form were cast
Before her till, at last,
Possessed of woman's charms,
She turned all suddenly
To see
A man with outstretched arms,
She would, with many a wile,
Evade his fond embrace
And flee
With cruel taunts before him while
He sped in eager chase—
With Love entreating in her heart,
Still she would smile
To see him play a foolish part,
Would torture him with all a woman's art,
And then, beholding him as one who grips
Despair's cold hand, rush back to rest
In sweet contentment on his breast,
And, sighing, yield her lips.

—American Nation.

INEXPENSIVE DRESS GOODS.

I understand how expensive it usually is to provide mourning garments for a large family.

There is a way to do it, however, for a very small sum.

The Simpson-Eddystone Solid Black Prints are very inexpensive dress goods, yet they make up into beautiful serviceable dresses that will meet your needs for all occasions.

They are an intense black that will not fade. You can have at least two of these dresses for what one of ordinary material would cost you. I should think they would be just the thing.

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower, grouped in such a way that the sentiment that each flower represents is spelled out by the flowers. For example, the violets of the violet card spell "Faithfulness;" the roses

"Love;" clover, "Be Mine;" etc. Each post card is different, finished in many colors and glossed.

THE UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine, published at 25 cents a year, and the post cards can be selected as a free premum. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

WE SHIP ON APPROVAL *without a cent deposit*, prepay the freight and allow **10 DAYS FREE TRIAL.**

IT ONLY COSTS one cent to learn our *unheard of prices* and *marvelous offers* on highest grade 1900 model bicycles.

Grand Subscription Combination.

For One Dollar paid in advance we will send the National Fruit Grower, the best fruit paper; the Reliable Poultry Journal, the best poultry paper; the Universal Magazine, the best home and story paper; and The National Farmer and Stock Grower, the best monthly farm paper: Each for one full year. This is the finest combination for the subscriber. HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

COWBOYS VICTIMIZED.

We had all made the guess by the cut of
his dress an' the tenderfoot style that
he slung,
An' the way that he spun toney language
that run slick as grease from the p'int
of his tongue,
That he was a red-hotter from over the
water, a juke or a markis, or wuss,
Than that in his rank, an' we thought we
could bank on havin' some fun with
the cuss.
He talked with a drawl till his words
seemed to fall reluctant outen his
mouth,
An' the babyish stare in his eyes you would
swear showed a brain that was
stunted by drouth,
An' the boys o' the range all regarded the
strange sort o' cuss that had come
there to board
For his health as a snob, an' we put up a
job that'd lower the pride o' my lord.

He remarked that he could ride anything
that wore hide; he had rid with the
'ounds, don't ye know;
And we told him we thought we'd be able
to trot out a hoss that wa'n't
fashioned for show—
One o'' kittenish views—that'd serve to
amuse of his highness, if he was
inclined
Fur to try it a whirl, an' he smiled like a
girl, an' would ride it if we didn't
mind.
An' he went farther with an offer to bet
all the boodle that we could perduce,
That he'd ride anything we'd a notion to
bring till he toned it down tame as a
goose.
An' in manner quite rash our available cash
was flashed fur to back up our views
That we'd find him a chunk of a quick-
action bronk that'd buck him plum
outen his shoes!

We'd a mare in the herd that was reckoned
a bird, jest a bundle o' git-up-an'-git;
Half devil, half hoss, which the same is a
cross that's productive o' meanness
an' grit;
She had downed every rider that dared get
astride her, had crippled a dozen or so
Of the fellows who'd said that the hoss
wasn't bred that could give 'em the
wust of a go;
So we saddled ol' Satan, the tenderfoot
waitin' with a grin on his innercent
face,
An' we got him astraddle an' sot in the
saddle an' seed everything was in
place,
An' we bid him good-bye with a wink o' the
eye at each other, an' anxiously stood
Holdin' onto the head o' the bronk till he
said we might let 'er go, if we would.

If the heavens had fell all around that
corral an' drowned us in clouds from
the skies,
I kin tell you, by gad, that we wouldn't a
had any bigger a bunch o' surprise,
Fur he sot in his seat in the saddle as neat
as if lollin' around in a chair,
An' that broncho a-thumpin' the earth an'
a-jumpin' in spasms right up in the
air;
Lit a cigarette right in the heat o' the fight
an' grinned at the animal's jumps,
Us guys standin' there with a paralyzed
stare like a bunch o' half-idiot
chumps,
An' I'm tellin' you, boss, that he stayed with
that hoss until he got it as meek as
a calf,
An' slid it around on the hoof-battered
ground an' givin' us fellers the laugh!

Every devilish bloke in the gang had gone
broke a-backin' his honest belief
That the broncho we'd picked—that had
never been licked—'d sure bring the
stranger to grief,
An' we bellered an' swore till our lungs was
plum sore when we learned that the
schemin' young hound
Was Broncho Bill Snyder, the champion
rider, a-huntin' a snap—which he
found.

—James Barton Adams.

THE CONQUERED BANNER.

Furl that banner, for 'tis weary;
Round its staff 'tis drooping dreary—
Furl it, fold it, it is best;
For there's not a man to wave it,
And there's not a sword to save it,
And there's not one left to lave it
In the blood which heroes gave it;
And its foes now scorn and brave it;
Furl it, hide it—let it rest!

Take the banner down; 'tis tattered;
Broken is its staff and shattered;
And the valiant hosts are scattered
Over whom it floated high.
Oh! 'tis hard for us to fold it;
Hard to think there's none to hold it;
Hard to those who once unrolled it,
Now must furl it with a sigh.
Furl that banner, furl it gadly!
Once ten thousands hailed it gladly,
And ten thousands wildly, madly,
Swore it should forever wave;
Swore that foeman's sword should never
Hearts like theirs entwined dissever,
Till that flag should float forever
O'er their freedom or their grave!

Furl it! for the hands that grasped it,
And the hearts that fondly clasped it,
Cold and dead are lying low;
And that banner—it is trailing!
While around it sounds the wailing,
Of its people in their woe.

For, though conquered, they adore it!
Love the cold dead hands that bore it!
Weep for those who trailed and tore it!
But, oh! wildly they deplore it,
Now who furl and fold it so.

Furl that banner! true, 'tis gory;
Yet, 'tis wreathed around with glory,
And 'twill live in song and story,
Though its folds are in the dust;
For its fame on brightest pages,
Penned by poets and by sages,
Shall go sounding down the ages—
Furl its folds though now we must!
Furl that banner, softly, slowly!
Treat it gently—it is holy—
For it droops above the dead.
Touch it not—unfurl it never,
Let it droop there, furled forever,
For its people's hopes are dead!

—Father Abram J. Ryan.

THE SECRET OF THE SPRING WINDS.

The wind of March has the call of the sea
(O wings of the wind, do they never tire?)
It hurries the cloud and it harries the tree
With the flutter and roar of a leaping fire,
Cold and wild and eager to flee,
Is the lure to loss or to liberty,
Light of the eyes and my Heart's Desire?

The April wind has the scent of rain,
(O wings of the wind, do they never tire?)
Softly it whispers and hushes again,
Warm as the kiss of the pale sun afire,
Promise of bloom and the green of new
grain—
Is peace but the drowsy surcease of pain,
Light of the eyes and my Heart's Desire?

The wind of May tosses the petals white,
(O wings of the wind, do they never tire?)
White as the love-moon silvering the night,
Pure as the dew and the heart's new fire,
Balmy blessing and strong sweet might,
Liberty, peace, and the sure delight,
Light of the eyes and my Heart's Desire?
—Sarah King Wiley, in Harper's Magazine.

LOST DAYS.

The lost days of my life until to-day,
What were they, could I see them on the
street
Lie as they fell? Would they be ears of
wheat
Sown once for food but trodden into clay?
Or golden coins squandered and still to pay?
Or drops of blood dabbling the guilty feet?
Or such spilt water as in dreams must
cheat
The undying throats of hell, athirst alway?

I do not see them here; but after death
God knows I know the faces I shall see,
Each one a murdered self, with low last
breath,
"I am thyself—what has thou done to
me?"
"And I—and I—thyself" (lo! each one saith)
"And thou thyself to all eternity!"
—Dante Gabriel Rossetti.

I WOULD NOT LIVE ALWAY.

I would not live alway—live alway.
Oh, no. I'll not linger when bidden to go!
The days of our pilgrimage granted us here
Are enough for life's woes, full enough for
its cheer;
Would I shrink from the path which the
prophets of God,
Apostles and martyrs so joyfully trod?
Like a spirit unblest, o'er earth would I
roam,
While brethren and friends are all hastening
home?

I would not live alway; I ask not to stay
Where storm after storm rises dark o'er the
way;
Where, seeking for rest, I but hover around,
Like the patriarch's bird, and no resting is
found;
Where Hope, when she paints her gay bow
in the air,
Leaves its brilliance to fade in the night of
despair,
And Joy's fleeting angel ne'er sheds a glad
ray,
Save the gloom of the plumage that bears
him away.

I would not live alway—thus fettered by sin,
Temptation without, and corruption within;
In a moment of strength if I sever the chain,
Scarce the victory's mine ere I'm captive
again.
E'en the rapture of pardon is mingled with
fears,
And my cup of thanksgiving with penitent
tears.
The festival trump calls for jubilant songs,
But my spirit her own Miserere prolongs.

I would not live alway; no, welcome the
tomb;
Immortality's lamp burns there bright 'mid
the gloom.
There, too, is the pillow where Christ bowed
his head—
Oh, soft, soft be my slumbers on that holy
bed!
And then the glad morn soon to follow that
night,
When the sunrise of glory shall beam on my
sight,
When the full matin-song, as the sleepers
arise
To shout in the morning, shall peal through
the skies.

Who, who would live alway, away from his
God,
Away from yon heaven, that blissful abode,
Where the rivers of pleasure flow o'er the
bright plains,
And the noontide of glory eternally reigns,
Where the saints of all ages in harmony
meet,
Their Savior and brethren transported to
greet;
While the anthems of rapture unceasingly
roll,
And the smile of the Lord is the feast of
the soul?

That heavenly music! what is it I hear?
The notes of the harpers ring sweet on my
ear,
And see, soft unfolding, those portals of
gold,
The King all arrayed in his beauty behold!
Oh, give me—oh, give me the wings of a
dove!
Let me hasten my flight to those mansions
above;
Ay, 'tis now that my soul on swift pinions
would soar,
And in ecstasy bid earth adieu evermore.
—W. A. Muhlenberg.

BRONCHO JACK'S THANKSGIVING.

'Twas this time jest a year ago on this
Thanksgivin' Day,
That me an' Broncho Jack stood up an' pa
gave me away,
An' Parson Billy spoke the words that made
us man and wife,
To run as double-header team along the
trail of life.
We had a combination feast, half weddin'
dinner an'
The other half Thanksgivin', an' I tell you
it was grand,
An' everybody that was there allowed the
dance jest tuk
The cake from any ranch event that they
had ever struck.

They all kep' sayin' Jack was wild, an' some
allowed that he
Was hardy fit to share the life o' sich a gal
as me.
But I was of a reckless turn, an' tol' 'em
that I hoped
To have success in taming him when I had
got him roped.
There's quite a change of feelin' now, fur
ever sence the day
We j'ined our hands an' tuk the vows to
make a double play,
He's proved as good a husban' as a woman
ever got,
An' all the gals is jealous of the thorrer-
bred I caught.
The only thing that's rattled him was when
the Master sent
Two great big bouncin' baby twins to us;
the said event
Jest seemin' fur to break him up, him sayin'
sort of gruff,
That one sich infant music box he thought
was quite enough;
But now he's sort o' reconciled; I of'n hear
him talk
About 'em bein' pedigreed an' fancy blooded
stock,
An', though he yit holds to it that I played
it rather bold,
I know he wouldn't part with one fur twice
its weight in gold.

As we was settin' here last night a-talkin'
'bout the day
An' all that we was thankful fur, I said in
a jokin' way:
"Now tell me, honest Injun, Jack, dead
earnest an' fur fair,
If you ain't filled with gratitude a-lookin' at
that pair?"
He gazed down at the sleepin' kids a-layin'
side by side,
With what I sort o' 'magined was a look o'
daddy pride.
An' said: "They're fine as silk an' I ain't
makin' any roar,
But I am mighty thankful that there wasn't
any more!"

—James Barton Adams.

JIM'S SWEETHEART.

Mother put on her Sunday best,
Her lilac wedding gown,
And white straw bonnet neatly tied
With strings of faded brown;
We woke before the roosters crowed
And started in the dew
To see the boat race, for our Jim
Was captain of the crew.

You see, six olive branches came
To bless our honest love—
Five slumber in the churchyard green
With little stones above;
But one was left in mother's arms—
Stern death was kind to him,
The youngest of our tiny flock,
The sturdy baby, Jim.

He took it in his curly head
To want a college course;
I parted with the pasture lot
And sold the sorrel horse;
We sent him every dollar saved,
And made a seedy pair
In garments that had long outlived
Their days of useful wear.

We did not want to shame our boy,
And so kept out of sight,
Behind a row of waving flags
And fluttering kerchiefs white.
But when the slender sculls swept by
The rival crews abreast,
We both forgot our shabby clothes
And shouted with the rest.

The surging throng closed up in front;
We could not see our son,
But soon a mighty cheer went up
And told us Jim had won.
The crowd took up the college yell
And sent it to the skies,
And college colors everywhere
Shook out their brilliant dyes.

He stepped ashore, looked up and saw
His mother's wrinkled face,
And hurried to her through the ranks
Of broadcloth, silk and lace.
He never gave a single glance
Toward the pretty girls,
But kissed her on the withered lips,
And kissed her silvery curls.

His sunburnt face was glorified
With proud and happy smiles;
He did not mind because her hat
Was years behind he styles,
But led her out before his friends,
A figure quaint and prim,
In stiff, old-fashioned lilac silk—
"My sweetheart, boys," said Jim.
—Minna Irving, in Leslie's Weekly.

Care of the Skin

A clear healthy skin is a possession highly valued, and easily acquired. The one important thing is to keep the pores of the skin in a healthy condition. This can be done by the free use of HEISKELL'S MEDICINAL TOILET SOAP, a combination containing gums and herbs of well known medicinal value. It is absolutely pure, soothing, healing and cleansing in effect, does not over-stimulate the skin, but keeps its normal excretory powers in healthy condition, thus preventing or removing all blemishes such as pimples, blackheads, etc, and in their stead imparting a delicate, velvety texture to the skin. This soap in connection with HEISKELL'S OINTMENT has remedied some of the worst cases of skin disease. At druggists. SOAP, 25 CENTS. OINTMENT, 50 CENTS.

Send postal for copy of a unique booklet of general interest. JOHNSTON, HOLLOWAY & Co., 555 COMMERCE STREET, PHILADELPHIA.

CANCER CAN BE CURED.

Scores of testimonials, from persons who gladly write to those now suffering, all tell of perfect cures. My Mild Combination Treatment destroys growth and eliminates the disease from the system. **Free book,** "Cancer and Its Cure," and 125-page book of testimonials from **cured** patients in every State in the Union. No matter how serious your case, how many operations you have had, or what treatment you have taken, don't give up hope, but write at once for my books.

DR. JOHNSON REMEDY CO.,
1233 Grand Ave., Suite 103, Kansas City, Mo.

THE UNIVERSAL MAGAZINE.

This is a nice, thirty-two-page, three-column magazine, issued monthly. It contains illustrated reading matter of interest to all the family. There are nice stories, historical sketches, selected poetry, a splendid line of patterns and a number of original household articles. The subscription price is 25 cents a year, or five subscriptions for One Dollar. Anyone sending in a subscription can select as a free gift a Mascot Mirror. These are circular mirrors, 2¼ inches in diameter, and are said to bring good luck, fame and fortune. They are also of fine glass and will last a lifetime. Five subscriptions for a dollar, including five mirrors. Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

CATARRH MEDICINE FREE

If your Ears ring or roar, or your hearing is affected, if Eyes ache, water or burn, or sight is failing, if you K hock, spit, cough or have bad breath, scabs in Nose, Irritation in Bronchial Tubes, Lungs or Stomach, your name and address will bring to you **absolutely free** a 30 days course of medicine prescribed to meet your **individual** requirements and complications.

We have cured many who have tried various so-called Catarrh cures with little or no benefit, and we make you this liberal offer to introduce our splendid treatment in your section.

REMEMBER send only your symptoms, name and address. **NO MONEY** and without cost you will receive a 30 days course of medicine prescribed especially for you.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our **"Practical Barn Book"** and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid,** including one-year's subscription to this paper. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Speculative Prices For Grain.

There is no Board of Trade speculation in June grain. May deliveries being over, the next month for delivery is July. At Chicago, on June 1st, the July wheat option opened at $1.17⅞ per bushel and closed at $1.19¼. This means that anyone having wheat to sell for delivery between July 1st and July 31st, could have sold it on June 1st at these prices and deliver it later. A farmer who keeps track of the Board of Trade can form a better idea of what his crop is worth in the market than if there was no Board of Trade. According to the wheat dealers, on June 1st wheat for delivery in September is worth $1.09½ a bushel; and for delivery in December, $1.07¼. A farmer could contract his crop on this basis and when the time comes would have to deliver the goods or settle at the market price. Thus the Board of Trade can and does give a wheat grower more information than he can obtain from any other source. Corn for July delivery closed June 1st at 71⅜ cents a bushel; September, 68⅜ cents; December, 58⅝ cents. Oats for July delivery closed at 54 cents; September, 44⅛ cents; and December, 44⅜ cents.

These are Chicago figures, because Chicago is the great grain market. Any idea that a farmer may have that they deal in wind in Chicago had better be done away with. They deal in the real thing. When they buy grain for September delivery it means business, and nothing but the grain itself or the money difference will settle the trade. The editor of this paper does not speculate, does not wish to see others speculate, and yet without speculation the business of the world could not go on. Grain dealers buy grain in Chicago and deliver it in Liverpool. The delivery cannot be made in a day. Neither can it be done without the buyer or seller taking a risk. The grain business is as necessary as the clothing business, the shoe business or the grocery business.

A Question of Corn Types.

During the last ten years corn breeders have been working for "pretty" ears, something after the same fashion that Poland-China swine breeders have worked for show animals, rather than good, serviceable ones.

The results of two years of careful observation have convinced me that the finest types of corn do not always pan out the greatest amount of corn. To illustrate what I mean: I refer again to Reid's Yellow Dent, because this variety seems to have a greater number of types than any other that I am acquainted with. A McDonough county farmer, who has grown this variety for ten years, has been very careful to select a rather tough type and medium-size grain. He has invariably planted the best-finished ears he could find in his whole crop. He tells me now that for three years his yield has been going down, until last season he got scarcely fifty bushels to the acre. His land is good and he is a good farmer, but there is no question but that he has gone too far on "looks."

A Henry county farmer has gone to the other extreme. He has selected for the last three or four years the big, coarse ears for seed. His crop last year made nearly ninety bushels per acre. The seed ears which he plants would not stand much of a show at a Corn Exposition, but they certainly produce the crop. In spite of this farmer's fine crops, many would not plant this big cob, coarse-grain type. Yet, yield in bushels of corn is what we are after, and why not be sensible and select the types which are the biggest producers?—L. C. Brown.

Changing the Season For Wheat.

A Cook county, Illinois, farmer tells me he is making an experiment in North Dakota this season, of sowing a spring variety of wheat in the fall.

On May 1st, right when spring seeding was in full swing, this fall-sown wheat was three or four inches high, of good color, plenty thick-enough stand, and it appeared to be prospering. This thing has been tested many times, and I have yet to see a single field of wheat when so seeded amount to anything. The wheat sown on this North Dakota farm last fall was grown on the same land the spring previous, and is one of the known spring varieties.

I do not question but that a spring variety of wheat may be turned into a fall variety by gradually working in that direction, but it must be done by degrees.

There is something peculiar about the seasons, which we do not quite understand. A plant will lie dormant for several months, until its regular season comes around, and then it will spring forth with great vigor. Spring-sown crops have become accustomed to spring growing conditions, and the lack of those conditions, such as would be met with during the fall, would naturally work against the welfare of the plants.

It frequently happens that fall-sown grain will do well in sections where only spring-sown grain has heretofore prospered. But when it comes to changing the growing season of the plant, and, besides, subject a tender spring variety of wheat to the rigors of a hard North Dakota winter, I will have to see the threshing returns from the field before I will believe the experiment is a success.—L. C. Brown.

VEGETABLE GARDEN.

A VALUABLE TURNIP PREMIUM.

Every farmer ought to have at least one acre in turnips. The **Red Top White Globe** is an excellent variety, especially good for table use, also growing abundantly and valuable as food for stock.

The **Cow Horn Turnip** is practically the largest grower. It is a long turnip. At the Michigan Agricultural College the **Cow Horn Turnip** yielded 1,333 bushels per acre. This turnip is especially good for stock, but is good for the table also. In the Middle and Western States the main crop is sown broadcast in July and August. No one ever repented growing turnips. A pound of seed is about sufficient to sow one acre.

For one dollar we will send one pound of Turnip Seed and **The National Farmer and Stock Grower** for two years. This is a splendid offer. Take your choice.

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

The Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

The National Farmer and Stock Grower

Is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in *The National Farmer and Stock Grower*. There are thirty-two pages, four columns to the page. It is published monthly.

Anyone who sends in One Dollar to pay in advance a three-year subscription to *The National Farmer and Stock Grower* can select the *CEMENT WORKERS' HANDBOOK* as a free premium.

ADDRESS

National Farmer and Stock Grower,

3550 Vista Avenue, ST. LOUIS, MO.

A TRUE VETERINARY COLLEGE.

This is one of the best in the United States. It has grown remarkably. We remember it when it had but few students and small buildings. It has done great work in fitting young men for one of the higher occupations in life and finding good positions afterwards. Write for catalogue. Address, Dr. S. Stewart, Secretary, 1324 East 15th street, Kansas City, Mo.

A BUYER FOR EVERY HOG AT ST. LOUIS.

ST. LOUIS THE BEST HOG MARKET ON THE FACE OF THE EARTH. Competition makes the market and has increased the receipts and sales of hogs at the St. Louis National Stock Yards from 777,000 head in 1893 to 2,560,000 head in 1908. There are markets with records and markets without records, but such a record is hard to beat. Continuous, strenuous, active competition is the cause of it all. The hogs coming to St. Louis are notoriously healthy—that's one reason. There's a better butcher buying demand at St. Louis than at any other market—that's another reason. St. Louis is 280 miles nearer to the consumer than Kansas City or any other Missouri river market—that's an important reason. St. Louis has the most Eastern buying in proportion to receipts—that's a reason worth a million hogs. St. Louis is enlarging packing facilities every season—that's an important reason. St. Louis has wonderfully improved railroad service—that's a recent reason. Country shippers have a daily chance to compare St. Louis sales with sales at other markets—that's a shipper's reason. Taken collectively, the increased receipts and sales of hogs at the St. Louis National Stock Yards are due to the fact that by reason of its geographical location and superb railway outlets a hog is worth 15 to 20 cents per hundred pounds more to the buyers at St. Louis than at any of the farther Western markets. When hogs are shipped to St. Louis they are going direct towards the consumer, and that is why the buyers rally to the St. Louis market. Buyers who go to sleep at St. Louis run short of hogs. There was a time when packers used to tell their buyers to buy so many hogs and quit; then they used to tell them to buy them so much lower, and the consequence was that somebody else bought the hogs. Now the orders are: "Buy as many as you can, at the best price you can, and buy them on the market." That's how it is. Healthiest hogs in the world at St. Louis, and a buyer in sight for every hog. SHIPPERS WHO DO NOT TRY ST. LOUIS ARE WASTING THEIR LIVES AND FORTUNES.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

ST. LOUIS THE BEST MARKET FOR HANDY FAT BUTCHER CATTLE. The above is a reproduced photograph of a section of 286 head of 668-pound heifers sold at the record price of $6.90 per 100 pounds by Mr. A. J. Milton, cattle salesman for Clay, Robinson & Co., at the St. Louis National Stock Yards, to the St. Louis Dressed Beef Company. The history of this bunch of baby beef cattle is astonishing. They were originally bred and owned by E. S. Warren & Co., of Three Oaks, Mich., but their ranch on which the calves were dropped is near Bovina, in the Panhandle of Texas. They were bought, fed and prepared for market by Mr. W. H. Bowman, of Beatrice, Neb. They were slaughtered at St. Louis especially for the St. Louis trade. All this before they were fifteen months old. Altogether nine loads were sold by Clay, Robinson & Co., all at the same price, and that price the highest on record at the market for a string of cattle of this class without any being cut out. In complimenting the commission firm on the sale Mr. Bowman said that the calves weighed about 300 pounds when he bought them. He started to feed them on a light ration of corn and oil cake about December 1st, which continued until March 1st. He then full fed them on ground corn and alfalfa hay until they were marketed. These little yearlings brought $46.15 per head, and the total cost of transportation from Beatrice, Neb., for feed on the road, feed in market, yardage and commission for selling, amounted to $2.27 per head.

There is a lesson to be learned from this bunch of cattle. They were from grade Hereford and Shorthorn cows and sired by pure-bred Hereford bulls. They were about what are called three-quarter bred, being about the second cross. If these calves had been sired by grade bulls they would have probably brought two cents a pound less on the market, which would have amounted to $2,826 less on the shipment. It requires quality and fat to sell young cattle on the market. On the same day native heifers without quality and not good fat and weighing 785 pounds, were well sold at $4.60 per 100 pounds.

Failure of Bone in Animals.

In a corn-producing region there is always a tendency to so feed farm animals that they will deteriorate in quality of bone. This is due to the fact that corn is rich in starch but poor in the mineral elements that are required for the making of hard, compact, firm bone. With the rise in the price of corn there is observable a decreased feeding of corn, but still the tendency to overfeed it remains a menace, especially in the case of high-priced animals, which can be fed almost any kind of food at a profit.

Some years ago, at a Horsemen's Convention, the writer heard a hot dispute regarding the feeding of corn stalks to draft horses intended for the Chicago market. One large breeder contended that many good draft horses in the corn belt were being ruined by the feeding of corn grain as a concentrated food and corn stalks for roughage. Other horse breeders took the opposite side of the controversy and said they would feed it in spite of what the Chicago horse buyers might think of it. The first breeder retorted that this was why Chicago horse buyers preferred horses from outside the corn belt, and would not buy horses in the corn belt as long as they could get them from outside.

The general result is that the bones of such horses are rendered soft and brittle, and any accident is likely to result in a broken bone and the consequent ruin of the horse. Horses with soft bones are always avoided by buyers that are looking for horses to serve them long and well. The man that is buying to resell does not have the same interest in them, as his customers may not know whether the horses they buy have good or poor bones.

In corn-fed hogs the failure of bone is a common happening. The hind legs break under the great weight of the animals, if they are fed too much corn and given too little exercise. Often diseases that are reported to the veterinarians as paralysis of the hind legs of hogs are but the breaking down of the soft bones, because the animals have been so unscientifically fed as to give them no material out of which to make good bones.

With animals at pasture good bone is more common than with animals that are confined. The pasture grasses are rich in all the elements that make good bone. This is especially the case where the pasturage consists of blue grass. The richness of this grass in the materials required for body building is such that it is largely responsible for the excellence of the horses produced in the blue-grass region of Kentucky.

The partial failure of bone in some animals and the complete failure of the same in other animals has led breeders to pay more attention to the feeding of their animals. Foods rich in phosphorus and in nitrogen and potash must be given if the animals are to have bone that will be reliable at all times. The race horse fed on corn from colthood to maturity would develop poor bone, which might break under the tremendous strain of rapid running or trotting, and the same is true in a lesser degree of all other farm animals.

Clean Up Waste Places.

On many farms there are many odds and ends of fields which are so situated that they cannot be put into crops. These places need not lie idle, for they can be put into some kind of a side crop which will come in very nicely for winter feeding. If these places are left untilled they become the nurseries for weeds, which soon scatter over all the adjacent fields. Put in some crop which will keep the land occupied and bringing in something. Potatoes, millet or turnips will fill in nicely. In places where it is not easy to cultivate, sow meadow grass and get something out of it that way. A farmer in Ogle county, Illinois, never permits a rod of land on his farm to loaf during the summer. All the corners and by-places are filled in with something that will make winter fodder, and, when larger fields have to be resown, he uses millet and sorghum. Keep the farm clean by keeping all land occupied. If nothing better is convenient, sow some buckwheat.—L. C. Brown.

A Few Acres of Early Corn.

The value of a patch of early corn for green feeding can hardly be overestimated. It is essential that a very early variety be planted, one that will become well dented by August 15th. Most of the trouble which usually follows the first feeding of green corn is due to the corn being fed too early, before it is sufficiently matured. It should not be fed until it has passed the milk stage and has become pretty well dented. Use a very early common yellow dent, or a flint corn fed out before it becomes too hard is all right. By August 15th this crop should be ready to crowd the hogs, and it is just right for early cattle feeding. And while you are planning for some good forage crops, sow an acre or two of Early Amber cane. It turns off a big amount of feed, and it is liked by all stock; even the hogs and horses take to it readily.—L. C. Brown.

Short-straw Oats.

A Will county, Illinois, correspondent writes: "Oats are doing fine, but the early "Sixty-day" oats are not making as rank growth as the "Swedish Select." It is now about sixty days since I sowed the Sixty-day oats, and they are only about ten inches high. What really is meant by the name "Sixty-day?"

April and May have given us very favorable conditions for oat growth, and these conditions have been decidedly more favorable to the large, rank-growing varieties than to the early, short-straw varieties. "Swedish Select" is rather a rank grower, under favorable conditions; the color is dark, rich green, making a most beautiful sight after the plants become ten to twelve inches high.

The name "Sixty-day" is really a misnomer. These oats mature in about ninety days from seeding, so in fact they are ninety-day oats. The name "Sixty-day" is the one given this early variety by the Department of Agriculture and other authorities, and probably it is best to stick to it. The early oats show up to advantage in unfavorable growing seasons. They grow a short, light straw and ripen early enough to escape the scorching July weather. In Will county the conditions up to this time have been more favorable to the longer-season varieties, and with favorable weather during June, no doubt the later sorts will outyield the early ones.—L. C. Brown.

Wanted We will present you with a handsome and valuable gift in exchange for a small amount of your time.

We want information of the proposed organization of telephone companies in your part of the country, also names of farmers who contemplate putting in telephones. If you can get reliable information of this kind, write us at once. We guarantee you will be delighted with the gift we will send you.

We sell a high-grade telephone complete for $10. Anyone can install it and be in constant touch with his neighbors and the nearest town. Our telephones are used by the Government. This proves their quality.

Low wheels, wide tires; easy work, light draft. We'll sell you a set of the best steel wheels made for your old wagon. Spoke united with hub, guaranteed not to break nor work loose. Send for our catalogue and save money.

ELECTRIC WHEEL CO., Box 222, Quincy, Ill.

The Value of Carbon.

Most of us little appreciate the value of the carbon which is to be found in the air above us and in the earth beneath us and in all things that grow out of the earth. Carbon has such a multitude of forms that it is often lost sight of. The coal we burn is mostly carbon, and the burnable part of the wood we use for fuel is carbon. But so is a considerable part of the food we eat and a considerable part of the food eaten by our farm animals.

Whatever we sell off the farm consists very largely of some form of carbon combined with water. This is true of the fat in the animal and the starch in the corn as well as of the sugar in the plants we sell, especially of the sugar beet.

The beauty about carbon is that it is not a manurial element, and the sale of it from the farm does not impoverish the land. No man ever buys carbon to put on his land. It is unnecessary. Every plant that grows has leaves with texture so made that they will draw carbon from the air as a sponge draws water out of any body of water with which it comes into contact. The air contains carbon as a free gas, and it can be supplied without limit to plants. This carbon constitutes five-sixths of the edible value of most plants, and in such plants as corn is fully nine-tenths of all.

The carbon is able to change its form in accordance as it can combine with other elements. In the stoves and in the lungs of living creatures it combines with other gases and produces heat. The carbon in the stoves warms the body from without; the carbon being burned in the lungs warms the body from within. These are same principles differently applied.

On account of the great part played by carbon in our agriculture and in our economic systems we need have no fear of the fertility of the world failing. What we call the manurial elements constitute but a small percentage of the food required by anything. Most of the bulk of plants comes from carbon and water, and out of carbon and water comes the energy of the race.

The farmer that produces fat in cattle is sending to market in that fat only carbon and water. The farmer that produces starch in potatoes is sending to market in that starch only carbon and water. The farmer that is producing starch in corn is sending to market only carbon and water.

The man that grows and ships fruits to market ships mostly carbon and water, for which he obtains a big price. He can easily keep up the fertility of his acres by buying annually a small amount of the mineral fertilizers—potassium, nitrogen and phosphorus.

The man that fears that the fertility of his farm is wearing out will do well to produce crops rich in carbon rather than rich in other elements, for he will thus retain the fertility in his ground.

The man that makes butter and sells nothing else from his farm is conserving the fertility of his acres, because the small amount of mineral fertility going off in butter is so exceedingly small that it could not be appreciated in a lifetime.

Plowing Under Buckwheat.

A correspondent at Odell, Illinois, writes: "Would buckwheat be all right to sow in an orchard to plow under?"

While such a thing is sometimes done, I do not recommend it. Buckwheat will add some humus to the soil, but that is about as far as its benefits go. It does not add any nitrogen. Why use it at all? Clover is much better, and, if it is turned under when in full bloom, it will be many times more valuable than buckwheat. Clover will supply all the humus and nitrogen needed in orchard soils, and if this is helped by the use of hard wood ashes or some other form of potash, the fertility of the orchard may be kept up without much trouble. Don't plow too early. Bear in mind that the roots are the most valuable; hence get all the root growth possible before the crop is turned under.—L. C. Brown.

THE MOST IMPORTANT FARM MACHINE

THE MANURE SPREADER

Are you Saving Money, or are you Losing it by being without One?

You believe that money spent for a mowing machine or a binder is well invested. Still you use these machines only a few days in the year.

You use the hay rake, because it saves you time and labor.

These are valuable machines. They are now counted indispensable by most farmers, even though they stand unused over eleven months in the year.

But a manure spreader is a still more valuable machine. Its purpose is to keep up the fertility of the soil. It is the machine you use *all seasons*, and the one on which the real usefulness of all your other farm machines depends.

If you have not already done so, you should consider now the advisability of having an I. H. C. manure spreader on your farm.

You will have choice of three different spreaders in the I. H. C. line—the Cloverleaf, endless apron spreader, the Corn King, return apron spreader, and Kemp's 20th Century, a return apron spreader. Each of these spreaders handles the manure in all conditions perfectly and will give you long satisfactory service.

These spreaders are not ordinary. Their frames are made of air dried wood stock. They have serviceable, tractive, power-producing wheels, beaters that are unsurpassed for tearing the coarsest manure into the smallest pieces and applying it uniformly, aprons that deliver the manure to the beater with the least possible friction and in a uniform manner. Any one of these machines will, if given proper care, last a lifetime.

The labor of spreading manure is greatly lessened by using one of these I. H. C. spreaders. Not only is the labor lessened, but it is changed into agreeable work.

But the strongest reason for using an I. H. C. spreader is the increased value you get out of the manure. The best authorities agree that manure spread by an I. H. C. spreader has at least double the value of manure spread by hand.

The I. H. C. spreaders pulverize and make the manure fine, and spread it evenly over the ground just as thick or as thin as may be required. The manure is placed upon the ground in a condition that is at once available for plant life. All is washed by the first shower into the soil—none is wasted.

The good effects upon the crop are immediate and the permanent benefit to the land is greater than when the manure is spread by hand. There is no question but that land manured by an I. H. C. manure spreader will give an increased yield of two to ten bushels per acre over land where manure is spread by hand.

Consider the labor saved, the more agreeable work, the better crops, the more fertile condition of the land—is not an I. H. C. manure spreader the machine you should have?

Are you not losing money instead of saving money by being without one?

Call on the International local agent and investigate one of these machines. He will supply you with catalogs and particulars, or if you prefer write direct to the home office.

CHICAGO, U.S.A.

Curing Rank Growth of Clover.

Clover is making an abnormal growth this season. If present growing conditions continue up to hay harvest we will have a very bulky crop to handle, and one that will be difficult to cure, on account of the excess of water in the plants. Fortunate this season is the man who has a nice mixture of clover and timothy in his meadows (if the prime object is hay), for the timothy will help cure the clover. Of course, where these mixed grasses are grown, one must harvest at a time when he can get the best of each kind of grass. And with clover and timothy this stage does not mean the best one for either crop. However, put the clover first, and, if necessary, cut the crop before the timothy loses its blossoms. Clover hay when properly cured is the best of all, but when improperly cured it is the worst of all. Any method which will expel the water and leave the hay bright and sweet is all right, and each individual haymaker must be governed largely by prevailing conditions of weather. A common practice is to rake in light windrows, using the tender once or twice, and then load right from the windrows. But whatever method is used, don't crumble the leaves, and don't allow rain to fall on green-cut stuff.—L. C. Brown.

An Appreciated Compliment.

"We receive quite a number of farm journals among our list of exchanges, and we think well of them all. But there is one that we have taken a particular fancy to, and that is The National Farmer and Stock Grower, published at St. Louis, Mo., by the Hale Publishing Company. It covers the whole field of agriculture, stock raising, poultry, horticulture, and every other industry that is followed by those classes of our people. This excellent paper is published monthly for the sum of 50 cents a year, and with each subscription that is sent in now while the supply lasts, a package of very fine premium corn is mailed. Anybody can secure a sample copy by writing the publishers at St. Louis for it."—Southern Reporter, Sardis, Miss.

Ethel—"Jack simply raved over my figure and my complexion." Maud—"And is he still in the asylum?"—The Clubwoman.

Let Me Pay The Postage on My Big Free Book to You

Though it costs me 8c to mail every one of these books, yet I'll send you one free because I want you to know about my Celebrated Split Hickory Buggies made to order and direct from my factory to you at home on 30 Days' Free Road Test, guaranteed two years. Over 100,000 Split Hickory Vehicles now in use giving splendid satisfaction.

I'll Save You $26.50 on this Split Hickory Special Buggy

Big saving on over 100 other styles and full line of Harness. My 1909 Book gives description and prices on over 125 styles of Split Hickory Vehicles—tells how they are made, and why they are best to buy—shows you more Vehicles to choose from than you could see in 10 big store rooms. May I send you this book free? Will you write today? Address me personally

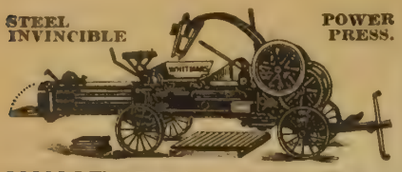
STEEL INVINCIBLE POWER PRESS.



WHITMAN BALERS

will bale more hay in less time and at less cost than any other baler ever made.

They are sold under a guarantee that **means something—a guarantee** that has behind it the oldest and largest hay press manufacturers in the world.

Every press is equipped with the very latest and best labor and time-saving devices, including self feeds and a **positive pull back without spring.**

The purchase of a hay press represents a considerable investment. Can you afford to invest your money in anything but the best? At any rate, you can't afford to buy until you know all about the Whitman presses. Send for our FREE illustrated catalogue.

WHITMAN AGRICULTURAL CO.,
6909 South Broadway,
St.Louis,Mo.

Horse Press

Minneapolis Traction Engines

Safe, durable; good steamers; strong in pulling load; reliable as to rated horsepower. We furnish firebox, direct flue and return-flue types of boilers, with simple, double or compound cylinder engines. We will make very low prices for cash or short time notes. Free catalog to interested parties on application.
Weber Implement Co., 415 North Main street, St. Louis.

THE LARGEST AND BEST LINE OF

WELL DRILLING MACHINERY in America. We have been making it for over 20 years. Do not buy until you see our New Illustrated Catalogue No. 44. Send for it now. It is FREE.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Sandwich HAY PRESSES
Combine large capacity with economy of power; simple, durable, easy and safe to feed, continuous and rapid. For horse or other power; all portable. Best money-making balers ever produced. Address:
Weber Implement Co., 415 N. Main street, St. Louis.

Keep Down Bad Weeds.

In spite of all our caution, bad weeds will creep into our fields, and about the only thing to do is to keep a constant lookout for them and prevent them from spreading. Canada thistle is creeping into many fields unsuspected. Many mistake it for sow thistle, little knowing that this is almost as bad. In cultivated or hoed crops Canada thistle may be quite easily controlled. Just keep the tops cut off, so they cannot breathe, and they will gradually succumb. But allow them to bloom and then you have an all-season's job to kill them. The reason for this is, that when these thistles have matured so that they bloom, they have stored up sufficient plant food in their roots to carry them through the next season; so, simply cutting off the tops at that stage does no good. Look out for corn cockle and wild mustard. Both of these weed seeds were plentiful in much of the seed oats brought in from the North last spring, and they should not be allowed to get a foothold. They will not show up very numerous the first season, so the safest plan is to handpick them whenever a plant is seen. —L. C. Brown.

Piling Manure Too Thickly.

While traveling in Ford county, Illinois, last week I noticed a pasture which had been nearly ruined by an overdose of manure. The accumulation of manure about the barn-yard for several years had been hauled out during the winter and dumped in large heaps about the field. For some reason or other these heaps were not properly scattered. The growth of grass around these heaps is too rank for the stock, and it is left uneaten, besides the ground between the piles shows signs of hunger and really would have been benefited by a moderate coating of the manure.

Manure is a mighty good thing. But apply it sensibly. The very fact that these heaps were not scattered this spring shows that this farmer was short of help, and for that very reason with a little forethought he could have saved considerable work. Why pile manure in heaps at all? Why not spread it, by machine or hand, as it is hauled upon the field? That ends the job, and the manure is so distributed that it will benefit the whole surface. What economy is there in scourging part of the ground by an overdose, while the rest of the field goes hungry?—L. C. Brown.

Unthrifty Timothy Fields.

A correspondent in Kankakee county, Illinois, writes: "I have a piece of timothy which I try to keep clear. The hay is baled and shipped. While this land is in pretty fair condition and produces a good quality of hay, yet I do not get enough hay from it to make it pay."

Putting aside the question whether or not it will pay to keep any land in this section of Illinois in permanent meadow, let us see what really influences the yield of hay. It is presumed that a meadow of this kind, when high-grade product is wanted, is well taken care of; that is, treated with manure or other fertilizers, so as to keep up the vigor of the soil. But the thing which is overlooked is the stage of cutting the grass. Those who strive for the best grade of timothy hay allow the crop to stand until all the seeds are developed and nearly mature. By this time the plants have but very little reserve strength; and, should hot, dry weather come on directly after the grass has been mown, the roots are exposed and have no chance to recuperate. For this reason the vital force of the plant is weakened and the result is a smaller yield the next season. Earlier cutting will insure more vigorous plants the following season.—L. C. Brown.

Don't Give Up Clover.

On account of the unfavorable conditions last season many clover fields are practically ruined, but generally the spring seeding is doing fine. Many found out the condition of the old clover fields early enough and have plowed them up and put the ground into other crops. That was a practical thing to do, for when the manure supply is not large enough to go around it is wise to have a field of clover sod to turn every year.

Don't think of giving up clover because of a freeze-out or some other calamity. Already many farms which possess ample stores of fertility fail to respond, simply because they lack that essential element — humus. Clover is the most valuable source of humus, and it will be a grave mistake to deprive land of its influence.

Many have an erroneous impression that commercial fertilizers will keep up the fertility of the land. An analysis might show that a certain field possessed all the mineral elements necessary to produce a crop, but it would not show how much was available to any given crop. Humus is the element necessary to make those fertilizers available, and it is the element most frequently lacking on many farms where legumes are not grown. It can be supplied in no other way so cheaply as by growing clover and turning it under. Keep some part of the farm in clover.—L. C. Brown.

Getting Down to Practical Work.

Some of the young men who finish their agricultural course this year will go back to the farm and grapple with the hardest problems that farmers have undertaken to work out. If these young men "make good" under these hard conditions, then agricultural schools will get a tremendous impetus for forward work.

Here is the job that a Putnam county, Illinois, boy has undertaken. He assumes this fall the complete management of 400 acres of valuable land in Mercer county. This land must be operated to show a fair interest rate on the value of the land, besides he must keep up repairs out of earnings, and at least not reduce the fertility accounts of the land. This young man has been training for four years to meet just these conditions. To increase crop yields, to keep these fields up to their full working capacity, will take precise knowledge and rare judgment. Many questions will come up weekly during the season, when an error in judgment will prove costly. If this young man can now adapt his theories and practices to meet the peculiar conditions found on this farm, then he will be a success. Will he do it? But if increased yields of crops and if soil management have been worked out only in theory, then watch out for breakers.—L.C.Brown.

On Saturday, June 26th, the first car-load of new prairie hay, grade No. 1, to reach St. Louis this season came in to the National Warehouse and Storage Company from J. F. Madison, of Big Cabin, Okla. It was sold on the floor of the Merchants' Exchange by P. P. Connor to the H. F. Meyer Hay and Grain Company. The sale price was $12.50 a ton.

More Water Than is delivered by any other style of pump and 25 to 33⅓% more water than is raised by any other pump of the same type is produced by the

"American" Centrifugal Pump

It's because the impeller is accurately machined to the casing, there is no sudden change of direction of the water in passing thru the pump, and the entire mechanical efficiency contributes directly to the raising of water. "American" Centrifugals are guaranteed rigidly. Ask for our new catalog.

STOCK CATTLE UP TO DATE.

A Few Items of Interest Concerning Stock Cattle, Showing the Cost of Transportation East and West, With St. Louis the Center Market.

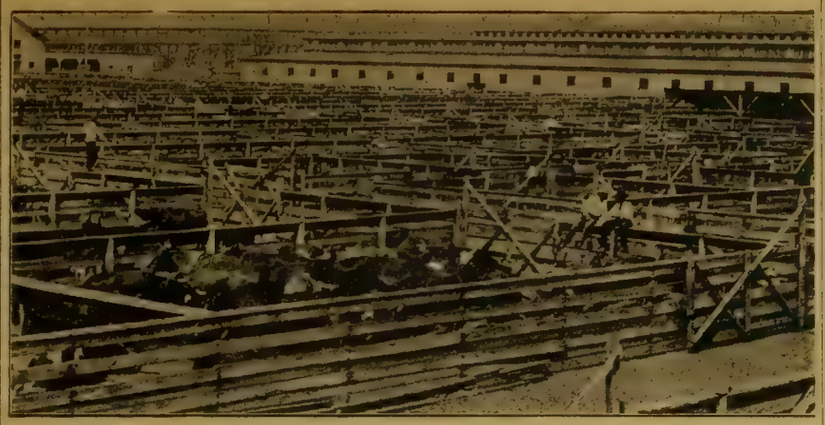
Stock and feeding cattle come from the West and the buyers come from the East. We refer to the trade in general terms and admit that there are many exceptions. The fact remains, however, that the Western stockman looks eastward for his stock cattle market, and the buyer of feeding cattle looks to the West for the supply. Generally speaking, Illinois, Indiana and Ohio are stock and feeding cattle buying states. Missouri and Kansas both buy and sell stock and feeding cattle. The stockmen of Colorado, the Panhandle of Texas and New Mexico, being in the main engaged in the raising of cattle on grass, are unable to fatten all they raise; therefore, they have to look eastward to the feeding sections for their market and to ship their cattle eastward.

In considering the stock cattle situation one naturally turns to Kansas City because of the large amount of business done there, but it does not follow that it is the most saisfactory market or the most economical clearing house for stock cattle. In our opinion, the best market for Missouri and Kansas stock cattle is St. Louis, and there is much evidence in support of our opinion. The St. Louis market is the very best point to become the great center of stock cattle distribution. It is the great point of equalization. A stockman in the middle of Missouri who ships stock cattle to be sold at Kansas City is shipping against his best interest. The stock cattle buyers of Illinois, Indiana and Ohio will have to pay a dollar a head more to get the cattle home from Kansas City than if they were bought at St. Louis for the same money; if they are feeding steers, the difference is greater. All the buyers at Kansas City are not from points east of St. Louis, but one item can be strictly relied upon, and that is, that the Illinois, Indiana, Ohio and Pennsylvania buyers can afford to pay a dollar a head more at St. Louis than Kansas City prices, and then get their purchased cattle home at less expense with less loss of time and in better condition and cheaper than if they bought at Kansas City.

A stock shipper in the middle of Missouri would not himself start for Illinois by going to Kansas City, neither should he send his cattle that way. Many Missouri shippers of stock cattle do ship to Kansas City, and if they will keep watch of the stock cattle shipments outward from Kansas City they will see that their own cattle did go to Illinois or Indiana, although they shipped them towards Kansas and Colorado.

Our theory is that the market is a meeting place, and that where stock can be concentrated, sold and distributed at the least average cost to come out the stock, that is the best market. At present the stock and feeder buyers are obliged to travel west to meet the cattle, and the cattle ought to be facing east to meet them. St. Louis is the economical trading center for buyers and sellers to meet each other half way.

In an article appearing in this paper the writer spoke of the stock cattle and feeder trade as a spontaneous movement, brought about by favorable conditions. "If railroad rates were not reasonable, this branch of trade could not have grown up or long survive; if stock yard charges were excessive, the sale of stock cattle in market would be at a great disadvantage; if commission firms did not understand their business and make intelligent purchases in the interest of their clients, there would not be so much satisfactory cattle feeding."



ST. LOUIS AN ACTIVE, OPEN MARKET, ON WHICH ALL BUYERS OR SELLERS HAVE AN EQUAL OPPORTUNITY TO GET THE BENEFIT OF ECONOMICAL SERVICE. Six-months' receipts in 1909: Cattle, 398,294; hogs, 1,337,961; sheep, 358,648; horses and mules, 60,411. The picture herewith presents a part of the quarantine cattle division, taken at the viaduct over the railroad tracks.

Under the influence of concentration at the great live stock markets the stock cattle trade is bound to grow. Little bunches of them come to market in mixed loads, and here the classes are brought together, and where apparently no actual carloads of stock cattle are received small lots are collected and sorted and classified until a goodly number of car-loads go out. If cattle can talk to one another, these stock cattle carloads must have a gay time telling each other the history of their lives.

Vandalia Stock Cattle Rates.

On the Vandalia Line, hauling eastward from St. Louis, much attention is given to the transportation of stock cattle. Under the ruling of the Illinois Railway Commission, to points in Illinois the stock cattle rate is the beef cattle rate less 25 per cent. To Effingham, exactly 100 miles from St. Louis, the stock cattle rate is 7 cents and one-tenth of a cent per 100 pounds. With thirty head of 700-pound stockers the car weight would be 21,000 pounds, and the total freight cost would be $14.91 for the car, or, say, 50 cents per head. If the stock cattle were bought at Kansas City, the rate from there to Effingham is 20 cents and one-tenth of a cent per 100 pounds, which is $42.21 per car, or about $1.41 per head. Considering the additional shrinkage on account of longer run from Kansas City, it is safe to say that St. Louis is one dollar a head nearer to the Illinois, Indiana and Ohio stocker cattle buyer than Kansas City. The stock cattle rate to Marshall, the eastern Vandalia station in Illinois, is 8 cents and one-tenth of a cent, and to Terre Haute, Indiana, 169 miles from St. Louis, there is a flat rate from St. Louis of 9 cents and 22½ cents from Kansas City. This clearly shows that an Indiana stock cattle buyer does not wish to go to Kansas City if he can get what he desires at St. Louis.

Farther out from St. Louis the rate is higher but always reasonable; to Indianapolis, 13½ cents; to Columbus, Ohio, 18 cents; to Pittsburg or Buffalo, 22½ cents. On this route are Cockeysville, Maryland, 30 cents; Carlisle, Pa., 30 cents; Allentown, Elizabeth and Chester, Pa., 31 cents.

Stock Cattle Rates on the B. & O.

On this route to Flora, 96 miles out from St. Louis, the rate is only 7 cents per 100 pounds; to Lawrenceville, 141 miles out, 7.9 cents; to Vincennes, Indiana, 10½ cents; to Washington Court House, 17½ cents; to Columbus, Ohio, 18 cents; to Zanesville, Ohio, 21 cents; to Wheeling and Pittsburg, 22½ cents; to Cumberland, Maryland, Point of Rocks, or Baltimore, 30 cents. To the middle of Ohio, where the rate is 17½ cents, it is a 36-hour run, and stock cattle, thirty to the car, 700 pounds average, 21,000 pounds for the car, do not cost over $1.30 per head for freight, bedding and feed in transit from St. Louis.

Big Four Route Rates.

On the Big Four Route in Illinois, the stock cattle rates from St. Louis vary from 5 cents per 100 pounds to nearby points to 8¼ cents to Paris, 174 miles out. To Indianapolis the rate is 13½ cents; beyond Indianapolis to Muncie, Ind., it is 15 cents; beyond Muncie to Bellefontaine, Ohio, it is 18 cents; beyond Bellefontaine to Cleveland it is 19½ cents; between Cleveland and Saybrook, Ohio, 21 cents; and to Buffalo, 22½ cents. The transportation of a load of thirty head 700-pound stock cattle from East St. Louis to one farthermost points in Ohio does not amount to over $1.60 per head, and to the Indiana line they can go for 55 cents a head.

Rates on the Wabash Railway.

Stock cattle rates on the Wabash Railway from East St. Louis to nearby points are about the same as on other roads, mileage considered. This road runs towards Chicago, and, for example, to Campus, 210 miles out from East St. Louis, the rate is 12.6 cents per 100 pounds, so that thirty head 700-pound stock cattle can be landed there from St. Louis for $26.46 for the car, or 88 cents per head. To and from Missouri points the rates are the same as beef cattle. To St. Charles, a nearby point on the Wabash, 7 cents; to Montgomery, 10½ cents; to Carrollton, Norborne and Hardin, 14¼ cents.

These figures in regard to transportation matters explain why it is that stock cattle are moved from one section to the other at moderate expense. They explain in part why it is that St. Louis is a more economical clearing house for stock cattle of Missouri and Kansas than is Kansas City. We believe it is a splendid subject for the consideration of the live stock trade, and the more it is studied the more will the advantages of St. Louis be appreciated.

During the month of May the grain movement was comparatively small, even for a time just before harvest. Fifteen leading interior markets received 40,356,191 bushels, against 57,846,956 in May, 1907, and 44,142,591 bushels in May, 1908. Nine-months' receipts were 587,256,731 bushels, against 653,757,147 in 1907, and 593,804,173 in 1908. At four Atlantic seaports, in May, 1909, were 10,896,329 bushels, against 22,132,371 in 1907 and 15,190,394 bushels in 1908. Of wheat, the May, 1909, export was 3,053,491 bushels, or about 45 per cent. below the record of May, 1908.

You'll Buy a Cream Separator

When You See the One You've Always Wanted

You know there are two styles of separators which are recognized as standard, and that other manufacturers each make one style. Each claims that his one hobby is the "only" one. Each will try to force his one style on you, whether it's what you want, need and want to pay for it or not. That is not the Empire Way.

We saw the good in both styles, if rightly designed, made of the right materials, by the right men. So here is the result of Empire inventions, Empire materials, Empire workmen and facilities, and Empire "know-how"—A quality machine for every cow owner in

The Empire Line

—The Frictionless Empire.
—The Empire Disc.

All are backed by the Empire Guaranty, as good as a Government Bond—Because we know that each is better than any other make of separator at any price.

As each style has all sizes, we offer twice as wide a choice as others. Some Empires are low in price, because one style costs less to make than the other. All are the same in quality—First Grade.

Fit your ideas, fit your capacity needs, fit your pocketbook—at headquarters—The Empire Factory.

The Empire Book Free. Gives facts, not claims, because we don't depend on one style to make a sale. It is fair and impartial. Write for it today.

Grand Subscription Combination.

For One Dollar paid in advance we will send the National Fruit Grower, Poultry Journal, the best poultry paper; the Universal Magazine, the best home and story paper; and The National Farmer and Stock Grower, the best monthly farm paper. Each for one full year. This is the finest combination for the subscriber. HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.**

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Weed Destruction in Summer.

What is a weed? Any plant out of place. Grass is a weed when it interferes with the growth of other plants of economic value. The writer knows of a row of grapevines that have been trying to grow for many years, but have made no progress, because the grass is rank and the sod thick all around them. There is but one thing that can be done to save these vines, and that is to dig out the sod with a pick, shake the grass roots free of dirt and then keep the ground stirred up to prevent the growth of grass and weeds anew.

Weeds are frequently fought in the spring and forgotten in summer. This gives them a chance to take on new life and develop for future activities. They should be kept down through the summer, which is really an easy season in which to subdue them. In the summer season the large amount of heat and limited amount of moisture help destroy the weed when once its root is torn out of the earth.

The labor of destroying weeds is greatly increased by letting the weeds grow for weeks instead of attacking them at once. The time to destroy a weed is as soon as it germinates; when it is so small that it can be hardly seen. Its root system is so minute at that time that if the soil is disturbed it cannot again come into contact with moist soil, and perishes.

The writer once visited the big Morrill orchards near Benton Harbor, Mich. It was in early summer, and the men were at work with weeders in the orchards. In the hundreds of acres of orchards, not a weed was in sight. But the work of disturbing the soil was carried on with great rapidity. The weeders were pulled by the horses rapidly over the ground. The teeth seemed to go into the soil but an inch, but they went into soil that had in it no sign of a weed. They left a dust mulch behind in which it was impossible for any weed seed to get a start. Doing the work in that way it was a cheap process, as no hand work had to be done. The soil yielded food only for the orchard trees, and none of it went to the weeds.

The summer destruction of weeds is in one respect more important than in the spring. This is because the lack of moisture makes it necessary for the economic plants to have all of it. The weeds rob the plants of the moisture necessary for their development, and in this way not infrequently do more damage to the plants than in the spring, when the supply of moisture is enough to satisfy both weeds and economic plants.

In the destruction of weeds in summer time it should be remembered that it is not desirable to stir the soil deeply unless the weeds have obtained a large growth. In case the soil is stirred deeply damage is almost sure to result to the crop being grown. This is another reason why weeds should be attacked in time, and not be left to a development requiring a deep cultivation to destroy them. In case they have grown large, it is better to resort to a certain amount of hand work rather than damage the crop by too deep cultivation of the soil.

Reclaiming Marsh Land.

There is at the present time great interest being shown in the reclamation of marsh land, and even of submerged land. The farmers are awakening to the great value of the wet lands when these lands have been thoroughly drained. They have begun to find out that the reclaimed lands need but a little treatment with lime and other things to render them exceedingly productive. On some of them a small application of potash works wonders.

The movement has reached into the cities and fired the commercial interests. They see in these lands a great opportunity for speculation. In many cases speculators are securing large stretches of wet land and are draining them on an immense scale. As far south as Louisiana the movement has become potential, and hundreds of thousands of acres of land near New Orleans are now being drained, even though great levees have to be built and the land reclaimed from the domain of navigable water.

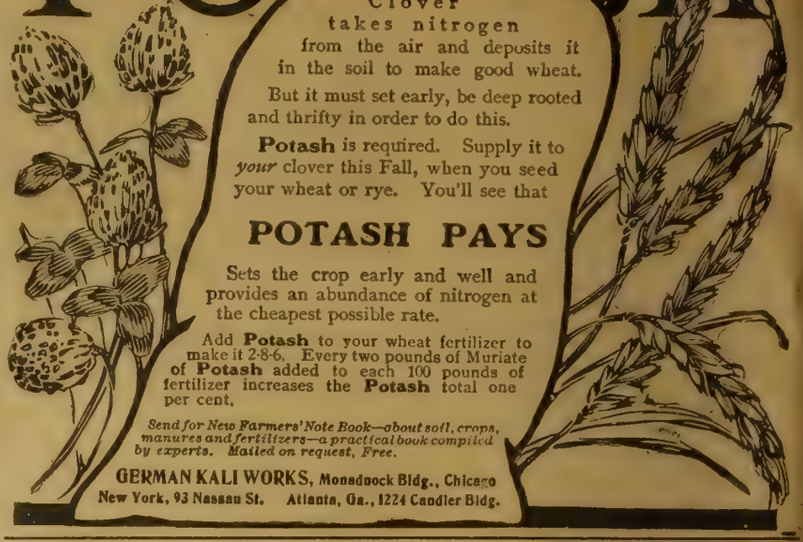
In Florida the interest in wet lands has reached the government, and the state authorities are hoping to make all the swamps of that state cultivated land. In one locality the state has under way great drainage operations calculated to draw the water from a million acres of land. But this is only a beginning, as other millions of acres are to be treated in the same way.

In the reclaiming of the marsh lands, many other benefits are to result besides the mere securing of the land for agricultural purposes. One of these is the changing of the condition of the shores of many shallow lakes, which shores are now so reedy, weedy, muddy and shallow as to render the lakes unusable for purposes of pleasure or residence. All the lands along the margins and under the shallow water are to be drained and the lakes dredged near the shore, thus piling up the dirt on the land and giving a more abrupt shore line, which can be made into sodded land and beach and become attractive for residences and other establishments.

One great good that is to come from the reclaiming of all these wet lands is the abolishing of the mosquito, which must have such lands for its breeding places. With the mosquito will go some of our most deadly diseases, including yellow fever and malarial fever. The mosquito nuisance will also be greatly reduced, and with it the necessity for the use of many screens. It is perhaps possible to eliminate altogether the presence of the particular variety of mosquito that is the carrier of disease germs.

The reclaiming of the marsh land has been greatly stimulated by the study of soil and soil needs. It was formerly supposed that much of the marsh land area was worthless and would not produce crops if reclaimed. In most cases it has now been shown that only a single element of fertility is lacking, and that this can be supplied at a very low cost. We have known an application of $3.00 worth of potash on such land to increase the yield of corn from five bushels per acre to seventy bushels per acre.

POTASH



Clover takes nitrogen from the air and deposits it in the soil to make good wheat.

But it must set early, be deep rooted and thrifty in order to do this.

Potash is required. Supply it to *your* clover this Fall, when you seed your wheat or rye. You'll see that

POTASH PAYS

Sets the crop early and well and provides an abundance of nitrogen at the cheapest possible rate.

Add **Potash** to your wheat fertilizer to make it 2-8-6. Every two pounds of Muriate of **Potash** added to each 100 pounds of fertilizer increases the **Potash** total one per cent.

Cutting Clover Early.

A Piatt county, Illinois, correspondent writes: "When is the best time to cut clover, when a seed crop is to follow?"

This correspondent raises a very important question, for the second crop of red clover, which is usually the seed crop, will prosper only when the first crop is taken off at the right stage. Most farmers do not cut clover until all the heads are brown. While it is easier to cure clover hay when cut at that stage, yet when a seed crop is wanted, that stage is much too late. I should put the cutting ten to fifteen days earlier, or at the time when the heads are all developed and still green. When cut at this stage of ripeness the bulk of cured hay may not be quite so great, and it will require greater pains to cure the crop than it would ripen clover, but the increase in the yield of seed will more than offset any loss in the first crop.

Early cutting is also the best means for combating the midge, which is now so troublesome in some sections of Illinois. It seems that the midges ovipost in the flowers of the first crop, so that by early cutting the green food supply of the larva is cut off.

When a seed crop is wanted, it is best to sacrifice a little on the first crop in order to secure favorable conditions for the second or seed crop.—L. C. Brown.

Sold On 15 Days' Free Trial

No More Sore Necks or Shoulders

Over 60,000 now in use by farmers—Over 4,500 dealers sell them. Always guaranteed to cure the worst galls, bruises or bunches while your horse works—15 days' trial or money back without question. Keep your horses well with

WHIPPLE HUMANE HORSE COLLARS

Now, hot weather is here, **don't use Cruel "Sweat-Pads"** and old-style, misfit collars which only make your horses' shoulders **worse**—Just **try** these collars—No risk to you—**Fit any horse**—No pressure on shoulder-blade or bones where sores come—No friction on neck or shoulders—45 sq. in. pulling surface on each shoulder, properly distributed—only 10 sq. in. on other collars. HUMANE HORSE COLLAR CO.
1636 Lowe Street, Chicago Heights, Illinois
1987 South 13th Street, Omaha, Nebraska

The first new wheat of the season was sold at Alton, June 28th, by John Kiel, who received $1.06 a bushel. He divided his load of wheat between the Stanard-Tilton and the Sparks Milling Companies, in order to take down a prize of a sack of flour offered by each mill to the farmer marketing the first load of wheat.

More Grain Profits

Pay me on time, or cash, my factory price, but be sure to **try a Chatham,** anyhow. **Clean your grain**—before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in every state each season by selling **dirty grain** is a low estimate. You are "docked" on the price because of **dirt** in every bushel. **Cleans** wheat for market. Takes oats, cockle, garlic, mustard and chess out of wheat. Cleans red clover—takes out buckhorn plantain. Cleans alsike clover and alfalfa. Cleans beans, oats, barley. Grades corn. Cleans timothy seed.

A GOOD LOAD OF NATIVE STEERS. These cattle were fed and fattened on Two Mile Prairie, in Boone county, Missouri, about four miles southeast of Columbia, by Mr. M. A. Turner, a prominent stockman. There were thirty steers in market, averaging 1,520 pounds, and were sold by the Evans-Montague Commission Company at $7.00 per 100 pounds to Isaac Ackerman, on account of Joseph Sterns, of New York City, and topped the market for heavy cattle. They were the highest-priced heavy cattle sold on the market during the week when sold. These cattle were purchased by Mr. Turner at $4.50 per 100 pounds as feeding steers, and they gained an average of two pounds a day in the feed lot. Mr. Turner owned them about six months. They were three-year-olds, grade Herefords and Shorthorns. They were fed corn, clover hay and cotton-seed meal, and represented choice cattle at this season of the year. They were loaded on Tuesday evening at Columbia, arrived in market Wednesday at 7 a. m., and were weighed up to the buyer at 9 a. m.

THREE CHOICE HEAVY NATIVE BEEF STEERS averaging 1,520 pounds in market. The picture was taken at the St. Louis National Stock Yards. The steers belonged to the load of native cattle shipped by Mr. M. A. Turner, of Columbia, Mo., and sold by the Evans-Montague Commission Company at $7.00 per 100 pounds. The intention of the photographer was to show the hind quarters, fore quarters and the head of a good steer all in one picture, and three steers were selected for this purpose. This picture presents a very good idea of strictly choice fat steers in market condition. Cattle can be better than these, but not much. Possibly they could be a grade higher in quality, and a little better finished cattle are possible, but many stockmen have never seen any better cattle.

These cattle brought $106.40 per head in market, and they cost $2.73 per head to market them. This is the total for freight, yardage, feed and commission, leaving the feeder a cash balance of $103.67 per head for his steers. The buyer of these cattle had to transport them to New York and there slaughter them for the city trade. We have gone into these particulars to show the exact results of a load of fine cattle when shipped to the St. Louis market from Central Missouri.

Clip the Oat Stubble.

It is amazing how rapidly weeds spring up in the oats stubble after the green crop has been harvested. While the oats dominate, the weeds are shaded and kept down; but as soon as they get sunshine and breathing room they make the best of the situation. By all means give the weeds a chance to sprout and grow, but don't wait until late in the fall before plowing the stubble and then imagine you have done a good job by turning under the weeds, which by that time have gone to seed. Prevent the weeds from seeding. One or two clippings with the mower will be all that is necessary, and then when plowing time comes there will be nothing to turn under but the stubble of both grain and weeds. Some kinds of weeds appear to be very comfortable amidst the oat plants, and if they are left to seed the ground, look out for weedy corn the next season. The trouble with most of us in the weed matter is, we do not do the work at the right time. The best thing to do is to keep out all weed seeds; but when they get into our fields they should be kept cut down and not allowed to mature seeds. Work during July clipping off weed heads will give us cleaner fields.—L. C. Brown.

Value of Alfalfa Hay.

The Kansas Station has tested the value of alfalfa hay for wintering cattle (cows not in milk) with the following result, nothing but alfalfa hay being fed:

Breed of Cow.	Total Gain, 243 days. Lbs.	Daily Gain. Lbs.
Holstein	285	1.17
Shorthorn	400	1.64
Hereford	371	1.52
Red Polled	361	1.48
Galloway	340	1.40

It was noted that the cows greatly improved in their appearance while being fed alfalfa.

"One of the things daughter learns long before her a, b, c's is that mother had a chance to marry better."—Exchange.

HARVEST 100% OF YOUR CORN CROP THIS YEAR AND EVERY YEAR INSTEAD OF 60%

You would soon want to quit farming if you could harvest only 60 per cent of your hay crop, for instance. But how about the corn crop?

Forty per cent of the feeding value of the corn crop is in the stalks, leaves and husks just at the time when the ears reach maturity.

If you leave the stalks standing or cut them slowly by hand the fodder is little more than woody fiber by the time the live stock gets it. You have lost practically 40 per cent of the protein, starch and sugar which the crop contained as it stood in the field, just at the time the ears began to glaze.

And none of that 40 per cent of food value goes into the ears. It is just lost—wasted. Turn over a new leaf this year. Double the value of the crop by using machines.

Using I.H.C. Machines Is The 100% Way

The right machine will give you the 100 per cent feeding value, because it will enable you to cut the entire crop just at the time when the corn plant is at its best for feeding purposes.

If you are prepared at this time with a Deering—McCormick—Milwaukee—or Osborne corn binder, you can go over the field rapidly, as fast as the team can walk, cutting and binding it into bundles, already to shock, in one operation. One man and a team is all that is necessary.

You have then confined within the stalk, all those nourishing elements which make the fodder, when properly prepared, almost equal to timothy hay for stock feeding.

Then you are ready to put this crop through the husker and shredder. A Deering, McCormick or Plano husker and shredder will husk every ear, with practically no shelling, and will cut the entire plant, stalk, pith, leaves and husks, into fine, nourishing fodder, which every head of your live stock will relish to the last shred.

Think it over—The purchase of two machines and 100 per cent of the corn crop—or hand work and 60 per cent of the crop. Talk it over with the International agent in your locality. He can give you more facts and figures than we have suggested here, and every point will show you the way to larger profits. If you want our interesting pamphlets on the subject, ask the dealer for them or write us.

INTERNATIONAL HARVESTER COMPANY OF AMERICA

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.

Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

Premiums at County Fairs.

The editor of The National Farmer and Stock Grower is always pleased to receive a request to donate a number of yearly subscriptions to be offered as premiums at County Fairs, and we consider such requests a compliment to the paper. We therefore take this method of notifying the Secretaries of all County Fairs that they are at liberty to offer ten single yearly subscriptions to The National Farmer and Stock Grower in any manner in which they see fit. This office will gladly send the papers promptly and regularly to the winners whenever we are notified to do so.

The National Farmer and Stock Grower is in favor of levying a duty on all foreign products except such as absolutely do not conflict with our own productions, and then only because we need them to help along our own industries. The idea of having to pay taxes ourselves and then admitting foreign goods tax free does not appeal to our reason.

A Good, Instructive Paper.

We seldom publish a testimonial, although we receive thousands of them. We seldom sound our own praises. We issue a publication containing thirty-two pages each month, and it amounts to a book of 384 pages issued during the year. We publish about 100 pictures of famous cattle, hogs, sheep, goats, horses and mules each year. Every picture is instructive and is accompanied with interesting reading matter. This paper is noted for good, straightforward, instructive articles. We always try to advocate that which we believe to be right. We jump to no conclusions and follow no lead until we are convinced that we are in the right direction. We are in favor of a reasonable tariff protection on all farm products, so that the import duties on imported products which go to the support of our government will at least equal the taxes that we ourselves are paying. We are in favor of the honest enforcement of all laws, and we are opposed to the enactment of unnecessary, restrictive laws for the purpose of providing offices for politicians and their relatives, thus uselessly increasing the burdens of the people. We do not pretend to publish a newspaper, but we do try to furnish the farmer information which will be found useful in the conduct of his business. The greatest favor our patrons can do for us is to recommend the paper to their friends and neighbors. The price is 50 cents a year, or three years for one dollar. Kindly read our premium offers offered by our subscription department.

A State Wheat Show is to be held at Wichita, Kas., during the week commencing September 20th, and ending September 25th. The chief interest will center upon the award of $300 in gold for the best bushel of Turkey hard wheat raised in Kansas in the season of 1909. The prize is offered by the Wichita Weekly Eagle.

THE HIGHEST-PRICED HOGS IN SIXTEEN YEARS. On June 21st, at the St. Louis National Stock Yards, a load of hogs, sixty head, consigned by Mr. G. W. Thompson, of Virden, Ill., averaged 285 pounds, and were sold at $8.35 per 100 pounds. These were the heaviest and best hogs on the market that day. The price was 15 cents higher than any other load sold for upon the market. It was also the highest-priced load sold on the market since February, 1893. The price was 15 cents per 100 pounds higher than the top at Chicago; 35 cents higher than the top at St. Joseph; 37½ cents higher than the top at Kansas City; and 50 cents higher than the top at Omaha on the day of sale. The hogs brought $23.79 per head. The load of hogs was sold on the market by Mr. F. E. Berry, Hog Salesman for Clay, Robinson & Co., and were bought by Dick Dunham, of the Watkins Landers Company on account of the Chas. Sucher Packing Company, of Dayton, Ohio.

St. Louis Live Stock Market.

We have used a large amount of space in this edition relating to the St. Louis Live Stock Market. The editor of The National Farmer and Stock Grower spends considerable time at the St. Louis National Stock Yards and derives great pleasure from his visits there. He personally reported the market every day for twelve years, and has seen the market grow until it is three times as large and important as it was when he first visited the yards, twenty-five years ago. The St. Louis market has grown upon its merits, its enterprise, the superior location and the business-like habits of the firms located at the yards. Competition never fails at St. Louis. In the darkest days, when markets are glutted and prices are declining everywhere, St. Louis resists the adverse conditions better than any other market, simply because buyers come from all over the East to their nearest and best market.

Baking Bread For Us.

A number of farmers' wives are very kindly baking bread for us in order to determine how much good light bread can be made from one hundred pounds of flour. We have received a few reports of different batches baked and we will receive more reports during the month of July. We expect to have something to say about this bread in our August edition and to go thoroughly into the subject in our September number, by which time we hope to have all the reports completed and samples ready for exhibition.

According to the St. Louis Republic, in July of the year 1822 Daniel D. Page, a miller located on Water street, near Market, St. Louis, Mo., was advertising that he would pay 50 cents a bushel for 5,000 bushels of wheat. That was the market price seventy-five years ago.

DREW—Clydesdale gelding. This is one of the wheelers of the Morris six-horse team of Clydesdales. He is the heaviest in a team that averages 2,100 pounds. He has twenty-four blue ribbons and championships to his credit in the show rings, including the gelding championships of the Royal Agricultural Show in England and the Highland Agricultural Show of Scotland. DREW is an absolute perfect specimen of a massive Clydesdale work horse.

FARM AND RANCH LANDS.

CUBA LANDS. THE BEST INVESTMENT. Lot 1.—Cattle Ranch of 1,100 acres. Magnificent location. A Ready-made Home. Lot 2.—2,400 acres, cedar, mahogany and mahuaga timber. Virgin soil. Lot 3.—Cattle Ranch of 5,300 acres, divided into five pastures. A fine house. Rich land. Royal palms. Valuable timber. Lot 4.—1,500 acres richest land in Cuba, near Cuba Central Railway. Fenced and divided. Lot 5.—6,000 acres choice land, in American section; cheap but excellent proposition; fencing; living water; fifty miles from Port of Gibard. Write for full description, Cattle Lands, Coffee Lands, Cane Lands, Tobacco Lands. Will show lands to buyers this summer. Cuba is the country of delightful homes and profitable investments. Address, **Andrews Trading Co., Gainesville, Fla.**

NEW HOMES IN FLORIDA. For reliable information write **Spawn & Benedity, Fernandina, Fla.**

Michigan.—I sell Farms in Oceana, the best county in the United States; fruit, grain and stock. Write for list. **J. D. S. Hanson,** Hart, Mich.

Central Missouri Farms.—For Stock, Grain and Grass Farms that will prove profitable as Homes and Investments, write for new list. Farms described and priced. Easy terms. Low prices. **Hamilton Realty Co.,** Fulton, Missouri.

Farms For Sale.

800-ACRE FARM.

Note what I say: It is a great bargain, well improved; it adjoins railroad station; it will grow 60 to 80 bushels of corn to the acre; it is underlaid with coal; it is in a fine locality; it is high class; it is about two hours from Kansas City, six hours from St. Louis, and twelve hours from Chicago. Price, $75 per acre, easy terms. Farms immediately adjoining are held at $100 to $175 per acre.

The finest large farm in Missouri, nearly two sections, seven miles from south city limits; R. R. station on farm.

Also 2,500 acres, fenced and cross-fenced; four good houses, eight fine barns; rich corn land. Land and improvements all in fine shape. About 1,500 acres in blue grass. $40 per acre.

Other farms for sale.

J. H. LIPSCOMB,
306 Fidelity Trust Bldg., Kansas City, Mo.

HOMESEEKERS

Come where one crop of tomatoes will pay for the land. 62 canning factories in the county. 360 cars canned tomatoes shipped last year. Fine dairy and stock country. Send for list and circulars describing a county that has been overlooked. No hail storms or hot winds. Grow most everything. Most healthy country. All good water. We can interest you. Write us your wants to-day. One price. We do business only on the square and our reputation is our reference.

WRIGHT & WATERSTRIPE,
Marshfield, Mo.

New Mexico Land for Sale. 1,000 acres on the Pecos river. Two miles on the river will make a fine cattle ranch, or can be irrigated. For particulars, address, **J. G. Clancey,** Puerto de Luna, New Mexico.

Oklahoma.—Farms for sale. LOOK! BIG OPENING OF LANDS IN OKLAHOMA. 2,000,000 acres of improved school land on forty-years' time. Also 4,000,000 acres Indian land on four-years' time. Send 25 cents for descriptive booklet to **M. N. Due,** Publisher, Dept. 31, Tecumseh, Oklahoma.

Tennessee.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

Texas.—12,000-acre ranch within eight miles of Sabinal, Uvalde county, Texas. A part fine grazing land and the balance richest agricultural soil. Will sell in 2,000-acre tracts or less. Agricultural lands average $11.00 per acre and grazing lands average $4.75. Greatest bargains in the state. For particulars address **Albert D. Evans,** National Stock Yards, Ill.

CASH FOR YOUR FARM OR BUSINESS,

No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

WE CAN SELL your property. Send description. **Northwestern Business Agency, Minneapolis, Minn.**

"The wisdom of the world has always come from the people who did not fear being called fools."—Henry F. Cope.

"They who think there is only one road to heaven usually want to put a tollgate at their station."—Henry F. Cope.

A Few Recent Letters

Written by Customers of

CLAY, ROBINSON & CO.

J. A. STOKES, Polk county, Missouri: "I was well pleased with the sale you made for me on my shipment of hogs to you."

J. E. ROBERTS, DeKalb county, Missouri: "You will get my stock when they go to market, as you have for the last eight years."

CHRIS W. BLUMHORST, Saline county, Missouri: "I have received proceeds and am well pleased with your work. You will hear from me again, as I still will feed some later on."

J. WILL SMITH, Cooper county, Missouri: "I received your letter with check, which I appreciate very much. I am very highly pleased with the way you handled my stock and am very proud of sale of my cattle. I do not think any commission company could have done better. When I have stock to ship I shall consign to you. Many thanks."

C. B. AMOS, Warren county, Kentucky: "The two cars of yearling wethers you shipped me last September did good, made an excellent growth and brought me good money."

L. E. ARMSTRONG, Warren county, Illinois: "I am well pleased with cattle sale, and don't see how you did so well for me on the kind of a market I struck."

W. C. MATHEWS, Knox county, Illinois: "I received returns from the sheep and was well pleased with same. They sold at just about where I thought they would."

F. L. ENDICOTT, Vermilion county, Illinois: "You bought 2,000 sheep for me last fall, and everything was satisfactory. I hope to do more busines with you in the future."

CHAS. E. LOCK, Jersey county, Illinois: "I wish to thank you for the satisfactory sale of the heifers. I was much better than I expected. Yours with check enclosed received. Thanks for same."

LINCOLN WATSON, DeKalb county, Illinois: "I feel well pleased with the way my cattle were sold. I know it required hard work to get the price. They made an average gain of 300 pounds, or 2 pounds a day, while I had them, and paid me 68 cents per bushel for the corn fed them. I charged the oilcake and hay fed them to the hogs."

S. L. OSBORN, Noble county, Oklahoma: "I just received your letter and check for the overcharge. I am certainly much obliged to you for the bother you have been to, as I would not have known there was anything like that if you had not looked after it for me."

ELLIS OWEN, Kay county, Oklahoma, acknowledges receipt of a refund of excess freight charges, secured on a recent shipment of stock: "Your letter advising the remittance of $14.96 to our credit here received. We thank you and appreciate very much the way you look after your customers' interests. You may be sure this kind of work will be remembered by the stockmen of the country. We wish you every success."

C. S. WURSTER, Elizabeth, Ill.: "I shipped you a load of cattle, and was well pleased with the result."

P. G. FARNSLEY, owner of the Grandview Stock Farm, Booneville, Ia.: "Received your account of sales with draft enclosed. Think you made a great, big, long sale, and away more than I expected. I know that you are top notchers. That is the reason we all like to ship to you. I want to thank you for your interest in handling my stuff and your prompt returns."

T. R. EDWARDS, Stella, Neb.: "Check for $2.95, covering overcharge by the railroad, received, for which accept thanks. I had not noticed there was an overcharge."

JOSEPH M. RAMSEY, Warren county, Illinois: "Received remittance for hogs all right. Was well pleased. Received at least 20c. per cwt. more than I expected."

L. W. THADA, Dallas county, Iowa: "You did much better than I looked for. It was not only the big prices but the big fill on the cattle. The heifers weighed 10 pounds more than at home. Thank you very much for the sale."

JOHN BRIGHT, Hancock county, Ohio: "Two loads of cattle ordered by me arrived all O. K. and in good shape. I find them a very satisfactory lot; in fact, all I could expect. Thanks to you for same."

A. R. ULRICH, Cerro Gordo county, Iowa: "Received draft for cattle, and think you do quick work, and good work, too. My cattle sold for more than I expected. Your firm is all right, and I will know who to ship to from now on."

JAMES H. FLETCHER, Sperryville, Va.: "Cattle came in good shape. They do not look like they had been shipped over fifty miles. The price and quality are O. K., and they weigh up all right. Thank you."

J. A. & J. O. FINLEY, Knox county, Illinois: "We are very much pleased with the sale of sheep. It was a much higher price than we expected. Thank you."

L. A. JACOBY, Marshall, Mo.: "I shipped you two loads of hogs, which sold at good round prices."

C. R. & Co.

LIVE STOCK COMMISSION

Opportunity

WE regard every consignment, large or small, as an **opportunity** to make a permanent customer.

In other words, we aim to handle your shipments of cattle, hogs or sheep so satisfactorily that you will feel that it is to your interest to continue to consign to us.

Our business is organized, manned and equipped with one object in view, and that is to render our customers absolutely the **best service** obtainable. Therefore it is money in your pocket to consign to us.

If you want feeding cattle or sheep, place your orders with us, and save money, trouble and time. Our expert buyers at Nine Markets are at your service.

FREE—Get Our Illustrated Weekly Market Paper

If you intend to ship stock to, or buy feeders at, any of the nine markets where we have houses, fill out the coupon, or give us the same information in a letter, and we will send you (free) our "LIVE STOCK REPORT"—a fine twelve-page illustrated (weekly) market, live stock and farm newspaper. Write us for any special information you want. Address us at whatever market you expect to ship to, or, if undecided, address our Chicago office.

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send

The National Farmer and Stock Grower for two years and we will send the book, **Profitable Dairying,** as a premium. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Holsteins For Japan.

Three head of Holstein cattle were recently sold by the Animal Husbandry Department of the College of Agriculture, University of Wisconsin, to G. I. Saito, Tokyo, Japan, who will ship them to his dairy farm in the vicinity of Tokyo. Mr. Saito is a well-known dairyman in his own country, and has been collecting choice animals in the United States to be exported. The herd purchased from the University includes a yearling bull and two two-year-old heifers. The animals exported were Maxie Netherland Johanna, 101,-029, Holstein-Friesian Herd Book (heifer), dropped December 7, 1907. Record of dam, 12,411 pounds milk, 374.34 pounds fat, 436 pounds butter at three years old. Alma's Piebe, 95,511, Holstein-Friesian Herd Book (heifer), dropped February 4, 1907. Record of dam, 14,819 pounds milk, 461 pounds fat, 537 pounds butter at five years old. Maggie Hillside DeKol, 56,131, Holstein-Friesian Herd Book (bull), dropped November 27, 1908. Record of dam, 12,921 pounds milk, 436.8 pounds fat, 509 pounds butter.

A Jersey Cow Record.

The Jersey cow, Double Time, No. 157,531, owned by the College of Agriculture of the University of Wisconsin, Madison, has just completed a year's official test, making the high record of 14,521 pounds of milk, containing 691 pounds of butter-fat, equivalent to 806 pounds of butter. The milk contained 4.76 per cent. fat on the average. The average daily grain ration for the year was 10.9 pounds. The cow was fed a mixed ration containing wheat bran, ground oats, corn meal, dry distillers' grains, oil meal and gluten feed with corn silage, sugar beets, hay and some soiling crops as roughage. During the year she made a seven-day official record of 410 pounds of milk and 20.4 pounds of butter-fat. The value of Double Time's product for the year was $209.34; cost of feed for the year at current prices was $82.38, and the profit over and above cost of feed was $126.96.

A Use For Bad Butter.

"Ma wants two pounds of butter exactly like what you sent us last. If it ain't exactly like that she won't take it," said the small boy.

The grocer turned to his numerous customers and remarked blandly: "Some people in my business don't like particular customers, but I do. It's my delight to serve them what they want. I will attend to you in a moment, little boy."

"Be sure to get the same kind," said the boy. "A lot of pa's relations is visiting at our house and ma doesn't want 'em to come again."—Tit-Bits.

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, cannot spill or tip over, will not soil or injure anything. Guaranteed effective. Of all dealers or sent prepaid for 25 cents.

Brooklyn, N. Y.

Milk Producers' Association.

Milk producers are busy at this time of year, for the reason that they are farmers also.

On Monday, June 28th, Hon. D. I. Furbeck, acting as Milk Committee, was at headquarters in St. Louis, with T. Jones and H. Strothman, of Robertsville, Mo., and they made the rounds of the city dairies and met at the office of the Secretary, Mr. Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo.. Mr. Furbeck reported that the principal dairies had agreed to pay 11 and 12 cents per gallon for June milk. The dairies differ a little in their views on milk values and it is difficult to get one to take the same view as another. One thing was determined upon at the June meeting, and it was that hereafter instead of publishing the report of the Milk Committee it would be sent privately in a letter to milk producers in good standing only.

Messrs. Jones and Strothman reported that they were paying an unreasonable freight bill on their milk shipped to the city, compared with other points on the Frisco route. With fair rates they could build up a good business for the road and for themselves, but the rate needed adjustment on a fairer basis. The officers of the association agreed to take up the matter with the proper authorities.

For the information of our readers we desire to say that in a period of ten years, beginning 1895 and ending 1904, the June price of milk averaged 10 cents a gallon, and in 1897 the price was 8½ cents.

There will be no meeting in July this year. The Milk Committee will report, and said report will be sent to members whose dues are paid up.

Dairy Calf Breeding.

At birth the calf has maconium in the stomach and intestines; therefore, the first food should be laxative in character in order to remove this before it is absorbed. Nature has provided the food suited to this purpose in the form of colostrum milk (the first milk the cow gives). It seems best to leave the calf with its mother for about two days, thus giving him a good start in life, and thereafter he should be fed as outlined in the table.

The change to skim milk should be very gradual, taking two or three weeks, so as to give the calf's stomach time to adjust itself to the new feed.

The calf should be offered ground grain just as soon as he gets through drinking his milk. To teach him to eat, the grain should be put in his mouth when he tries to suck your hand. A mixture of ground grain and bran, with milk, makes a good ration. Oil meal or flax-seed meal is not necessary when feeding skim milk. Oats contain a large quantity of fibre, which is too hard and harsh for the young calf to digest.

He should be taught to eat grain and hay up clean. This is done by not giving him more than he can eat. Feed should always be clean and fresh. He likes to pick up wisps of hay and eat them, so give him nice, fine hay—early cut second crop is best—it is more economical and palatable. Scours in calves are caused mostly by violent changes in temperature, quantity and quality of milk fed, and by infection. Therefore, the temperature of milk fed should be as near 98 degrees Fahrenheit as possible. This is very important, and milk should be sweet and fed from clean pails—not slop pails. When this is done scours do not often occur.

If scours occur, milk should be decreased one-half and water added to make the original amount. This should be done until scouring ceases. A teaspoonful of solution of formalin (one part formalin to 1,400 parts of water) to every pound of milk fed, may be added.

Feed per day for a calf at different ages:

Age..	Approx. Weight of Calf.	Whole Milk.	Sweet Skim Milk.	Grain.	Hay.
½ day..	60 lbs.	Suck.	0	0	0
1st week.....	60 lbs.	6 lbs.	0	0.	0
2d week.....	65 lbs.	4 lbs.	2	.2	.2
3d week.....	70 lbs.	3 lbs.	4	.3	.3
4th week.....	75 lbs.	1 lb.	6	.4	.4
5th week.....	80 lbs.		8	.5	.5
6th week.....	90 lbs.		9	.6	.6
9th week.....120 lbs.			12	1.0	1.0
12th week.....150 lbs.			11	1.5	1.6
15th week.....180 lbs.			10	1.8	2.2
18th week.....210 lbs.			10	2.0	2.5
21st week.....240 lbs.			8	2.5	2.5
24th week.....270 lbs.			0	2.5	8.0
27th week.....300 lbs.			0	3.0	3.0

—Carl Gaumitz, Minnesota Farmers' Institute.

A Test For Milk.

A simple and effective test to determine whether water is present in milk may be made with an ordinary knitting needle, if the needle is bright and well polished.

Dip the needle into the milk and quickly withdraw it in an upright position. If the milk contains only a small quantity of water, this will prevent even a drop of milk adhering to the needle.

Everyone who has occasion to heat milk knows how easily it may be scorched.

When this does happen, the thing to do is to quickly remove the vessel from the fire and stand it in a bowl of cold water. Put a pinch of salt into the milk and stir. It will then be found that the disagreeable burnt taste has almost, if not entirely, disappeared.—New Zealand Dairyman.

The CREAM SEPARATOR For DISCRIMINATING BUYERS

The 1909 Model United States

Among the leading breeders and discriminating dairymen the **United States Separator** is recognized as the **Best High Grade Separator made,** *and is used by them.*

We want the opportunity to demonstrate to prospective purchasers that the **United States** is **cheapest in the long run.**

It costs no more than other Separators of equal capacity. It lasts longer, gives less trouble and has far greater cash value.

It is **cheaper** in the end than Separators selling at lower prices, because there are practically no **repair bills,** because it does **better work,** because it does it **easier.**

The **United States Separator** is the closest skimming Separator made. It *Holds the World's Record* made in fifty consecutive runs on milk from ten different breeds of cattle.

United States selling agents in every dairy section **will allow free trial** to any prospective purchaser. If you do not know the address of the local agent, write us for Catalogue No **125** and your request will be promptly attended to.

VERMONT FARM MACHINE CO., Bellows Falls, Vt.

Dairy and Creamery.

It has again been decided by law that skim milk cannot be legally sold in New York City.

We understand that New York state milk producers are paying an average of $80 for good cows.

The Milk Reporter says that the New York price of milk in June was 2¼ cents a quart. The price is net at shipping stations, where there is a freight rate of 26 cents a can.

Pennsylvania reports having 1,152,000 milch cows and only 965,-000 other cattle. This looks as though Pennsylvania must have some pretty old milch cows. The supply of milch cows coming from 965,000 other cattle would not be over 250,-000 a year.

MORE MILK FROM COWS! WORK FROM HORSES!

Why buy feed and let flies rob your profits

Keep flies off your stock and they'll take on flesh. Cows give ⅓ more & richer milk, and horses do more and better work on less feed. Animals pestered by flies can't digest food. Shoo-Fly keeps off flies & insects in pasture longer than any imitation. Protect your stock by spraying

Shoo Fly The Animals Friend

Kills every fly it strikes! ½c. worth saves $ qts. milk. 1 gal. protects 3 animals a season. Cures all sores, and prevents infection. Heals from bottom without scab. Prevents itching. Nothing better for galls. Used by leading veterinarians and dairymen since 1885. Write for testimonials. Kills lice and mites where ever sprayed.

Accept no substitute. If your dealer hasn't it send his name and $1, and we'll send enough Shoo-Fly to protect 3 animals 30 days and improved 3-tube gravity sprayer. Name Exp. office. $1 refunded if animals not protected.

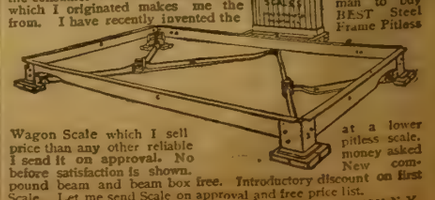
Shoo-Fly Mfg. Co., 1305 N. 10th St., Phila., Pa.

Agents wanted everywhere. Special terms. Write today.

Editor knows from experience Shoo-Fly is O. K.

This Scale on Approval

I want every man who runs a farm on business principles to let me tell him why he needs a scale and why my forty-four years experience in selling to the consumer on a free trial freight paid plan which I originated makes me the man to buy from. I have recently invented the BEST Steel Frame Pitless Wagon Scale which I sell at a lower price than any other reliable pitless scale. I send it on approval. No money asked before satisfaction is shown. New compound beam and beam box free. Introductory discount on first Scale. Let me send Scale on approval and free price list.



"JONES He Pays The Freight" 27 D St., BINGHAMTON, N.Y.

The Dessicated Milk.

The process of dessicating milk invented by L. P. Mick, of Elsie, Mich., and whose patents are assigned to the Michigan Milk and Food Products Company, is an interesting subject and may cause something of a revolution in the milk business; but dessicating or drying milk is not a new proposition. The writer remembers dessicated milk on the London, England market, which was sold in cans forty years ago. The trouble with these dried milks usually is that they require a dash of new cream to restore the original flavor of the fresh product. Malted milk, condensed milk and preserved milks are sold largely in cities, and the fresh-milk industry is not reduced thereby. Any process that will supply another outlet for milk is welcome to the farmers, and there is no telling what an hour or a day may bring forth.

Plowing Under Green Crops.

The inquiry from our Odell, Illinois, correspondent suggests a very important line of work which is essential in keeping up the fertility of our best corn lands. Soils without humus are dead soils. While humus may not be nitrogen itself, yet it is the laboratory that renders the nitrogen available to plants. Grain growing tends to exhaust the humus of our soils. So to keep these soils in good physical and mechanical condition we must be careful to keep up a constant supply of humus. Nitrogen is the most important and the most expensive element of plant food, and as humus is the storehouse or laboratory of nitrogen, its great importance is readily understood. Humus is the limiting factor in the production of many crops. So any practice which will increase the humus in our soils should be followed. We have come to understand the great value of clover as a source of humus, and from now on, as feeding stock is withdrawn from our farms, we must pay more attention to this matter.—L. C. Brown.

Moisture in Butter.

The Revenue Department takes the position that the normal moisture in butter is about 13½ per cent., and that the law requiring that there shall not be more than 16 per cent. leaves ample margin for the buttermaker.

Whether that is so or is not so, the editor of The National Farmer and Stock Grower is of the opinion that the law is neither necessary or beneficial. Water is not an adulterant, and if butter contains 16½ per cent. of moisture, it is not adulterated.

The effect of the law is such that if butter is made in Wisconsin and shipped to New York to be sold, it cannot be inspected where it is made, and it is tied up until it is sold and inspected.

Publications representing the trade in butter seem to believe that a law limiting moisture in butter is necessary, but we do not think so. A law to prevent the butter trade from reworking moisture in the butter may be necessary, but the brand of the buttermaker on a sealed package, or open examination of the butter, is all that ought to be necessary for the sale of butter. All grades of butter should take their position in market on their merits. The determination of the amount of moisture in butter is possible by experts, but it is only guesswork with a majority of the buttermakers.

We view with alarm the growing tendency to enact laws for the purpose of growing crops of public officials. We have city, state and federal laws, and city, state and national inspectors. All laws are different and many conflict. Many farmers are afraid to make butter, many commission firms are afraid to handle it, and we are drifting towards that condition which ends in a butter monopoly. It is the law-making power that is responsible, throwing so many restrictions upon trade that only the specialist and the capitalist can do business.

More About Moisture.

A press bulletin from the Wisconsin Agricultural Experiment Station says:

"The June dairy and cheese scoring exhibit just scored at the Dairy School included 103 packages of butter. Grass flavor was noticed in almost all of the butter, and old, stale cream and greasy flavors were also very prominent. One-third of the buttermakers used no color this month, since the fresh grass colors the butter highly. Several exhibitors scored their butter at the factory before sending it to the exhibition, and most of these scores agreed closely with those made by judges.

"The three highest scores in butter were: Marine Johnson, Cedarburg, 94.66; F. E. Raven, Bloomer, 94.50; and O. J. Groth, Cedarburg, 94.33. The highest score was 94.66; the lowest, 87.16, and the average, 91.03. The highest moisture content was 18; the lowest, 11; and the average, 13.4."

A Dane county (Wisconsin) creamery buttermaker being obliged to go away from his work, had to get a substitute for two weeks, and the innocent substitute made butter that had considerably more moisture in it than the law allowed. It was not adulterated, but when shipped to market, instead of being sold upon its merits, it had to be shipped back to the creamery at great expense because under the law it was falsely called adulterated and liable to a tax of 10 cents a pound.

Here we have innocent, honest men, without any intent of violating the law, caught by a manufactured provision, which of itself is questionable.

The average moisture in the butter at the scoring contest was 2½ per cent. less than the standard, simply because the moisture was squeezed out to be on the safe side. Two and a half per cent. is as near as the average dairy professor can get to the standard, and the average buttermaker can do no better, and it requires a chemist drawing a salary two or three times more than the average buttermaker to ascertain the exact amount of moisture after the butter is made.

The fact of the matter is that in order to keep safe under an arbitrary standard, buttermakers are losing an average of two per cent. of their product, and some of them considerably more. If the inspector was required to simply ascertain the amount of moisture in butter and stamp it on the package, it would be a different matter. To tax butter over its possible profit because it contains more than 16 per cent. of moisture is, in our opinion, one of those laws which make honest endeavor unduly difficult, laws that the makers themselves could not live up to without missing the mark by 2½ per cent.

"She said she'd marry me if I felt the same way a year from then." "Did you?" "Yes, but toward another girl."—The Tattler.

Another Infringer Nailed

SHARPLES SEPARATOR Co.

John Deere Plow Co. and Deere & Webber Co.

Sued For Infringement Of DE LAVAL DISC Cream Separator Patents

For the information and caution of all whom it may concern announcement is made that THE DE LAVAL SEPARATOR CO. has brought suit in the UNITED STATES CIRCUIT COURT against the SHARPLES SEPARATOR CO. for infringement of LETTERS PATENT NO. 743,428 by the manufacture and sale of cream separators containing DISC bowl construction covered by the claims of said letters patent.

And that similar suits have been or will be filed as quickly as possible against the JOHN DEERE PLOW CO. and the DEERE & WEBBER CO., who are jobbing such infringing SHARPLES separators to dealers in the Western States.

Attention is pertinently called in this connection to the recent hypocritical advertising tirade of the SHARPLES concern against DISC separators. We have known for some time that they were getting ready to bring out a DISC machine and thus moving up in line with more modern DE LAVAL imitators and would-be competitors. We have but now, however, been able to obtain one of these new DISC machines and the necessary evidence of infringement. The facts speak for themselves and require no further comment.

In addition to the above suits the DE LAVAL COMPANY now has infringement suits pending against the STANDARD, IOWA, PEERLESS and CLEVELAND Separator Companies and the Wm. Galloway Co., all covering the manufacture or sale of INFRINGING DISC SEPARATORS, which infringement applies equally to machines being made by different ones of these manufacturers and sold under their own and various other names by several "mail order" and other concerns, as well as to EVERY USER of any such infringing separator bought of ANY of these parties.

To avoid any possible misunderstanding and dispel the pretense of some of these concerns that their machines are similar to the DE LAVAL, it is proper that we should add that none of the patents sued upon involves the DE LAVAL "SPLIT-WING" FEEDING DEVICE or its combination with the IMPROVED DISC construction utilized in the up-to-date DE LAVAL separators and that none of the machines is in any degree equal in efficiency, all around practicability and durability to the IMPROVED DE LAVAL machines of today.

We have for years patiently stood the appropriation by would-be competitors of abandoned, discarded or patent expired DE LAVAL inventions and types of separator construction, but have now determined to put a stop to the more brazen utilization of LIVE patents.

There are STILL OTHER infringers of DE LAVAL patents who will be held accountable in due course.

McFARLANE COMMISSION COMPANY.

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY **MONDAY** IN THE YEAR.

These Monday auction sales at the St. Louis National Stock Yards are the best attended of all sales and produce the most satisfactory results for the shipper.

WE ALSO SOLICIT CONSIGNMENTS OF MULES TO BE SOLD BY THE MOST COMPETENT SALESMEN ON THE BEST MARKET IN THE COUNTRY.

JOHN A. CAMPBELL, Manager.

Write For Weekly Market Report.

McFARLANE COMMISSION COMPANY,

NATIONAL STOCK YARDS, ILL.

The Monday Horse Auction.

We have published an advertisement of the McFarlane Commission Company continuously for five years. It is a first-class, up-to-date, active, reliable commission firm for the sale of horses and mules. The horses are sold at the Monday auction under the management of Mr. Jno. A. Campbell, assisted by Mr. John K. Maxwell and Frank Maxwell. Mr. Lan B. Morris is mule salesman, and he is highly competent. This firm participates in the range horse trade, and the auctions are on every other Tuesday during the season. This firm has done great work in building up the trade in horses and mules at the St. Louis National Stock Yards. All correspondence should be addressed to the McFarlane Commission Company, National Stock Yards, Ill.

Second Range Horse Sale.

The clearing house for Western range horses is St. Louis. The sales are conducted by Campbell & Reid and the Western Sale Stables Company at the National Stock Yards. The second sale of the season was held June 29th. About 1,000 were on sale and all were sold; twenty-five mares and geldings, three colts, good flesh, 950 pounds, $60; twenty-seven mares and geldings, four colts, thin, 800 pounds, $35; nine two-year-olds, fair flesh, $34.50; twelve yearlings, $26; four mares and colts, blemished, $25; five head, blemished, $21.50; five head, blemished, 1,000 pounds, $43; twenty-five head, mares and geldings, good flesh, 1,000 pounds, $77.50; twenty-six head, mares and geldings, fat and smooth, 950 pounds, $65; six head, mares and geldings, thin, 1,200 pounds, $88; two head mares and geldings, fat and one wire-cut, $61.50; twenty-six head, two-year-olds, heavy bone, $65; twenty-one head, two-year-olds, light bone, $35.50; thirty-four head, yearlings, heavy bone, $35.50; ten head, yearlings, small, $25.50; twenty-five mares and ten colts, thin, $43; twenty mares and fifteen colts, good flesh, $58; five mules, two-year-olds, good size and bone, $84; twenty-six head, mares and geldings, thin, 800 pounds, $32; fourteen studs, 900 pounds, $31; seventeen mares and fourteen colts, thin and car-bruised, $27; fourteen yearlings, light bone, smooth, $21; thirteen yearlings, thin, $20; twenty-four head, blemished and car-bruised, $14; one gelding, 1,100 pounds, $72.50; one stud, 1,100 pounds, $55; twenty-five mares and ten colts, small and thin, $13.50; twenty-one mares and eighteen colts, mares thin, colts good, $58; nineteen mares and eighteen colts, mares thin, five mule colts, $65; twenty-eight two-year-old mules, smooth, light bone, $59.50; ten two-year-old mules, smooth, light bone, $50.50; twenty-seven head, three and four-year-old geldings, 1,100 pounds, $80; sixteen head, three and four-year-olds, mixed, 1,000 pounds, $68; twenty-three mares and twelve colts, $50.50; twenty-four head, geldings, good quality, 850 pounds, $50; thirty-one head, geldings, good quality, 900 pounds, $62; twenty-two head, mixed, mares, twos, yearlings, $45.50; twenty-eight head, two and three-year-olds, $40; four head, two and three-year-olds, $35; eighteen head, mixed, fat, 800 pounds, $40.50; eighteen head, mixed, thin, $25; twelve head, car-bruised, $18; eight head, car-bruised, $16.50; one mule, five years old, fat, 800 pounds, $87.50; thirty head, mixed, thin stuff, $25; seven head, yearlings, thin, $13.50; twenty head, mixed stuff, blemished, $16.50; twenty-eight head, yearlings and twos, smooth, breedy, $30.50; thirty-one head, yearlings and twos, smooth, breedy, $28.50; thirty-two head, yearlings and twos, thin, $25.

The next sale is announced for July 13th, and another for July 27th. Mr. J. J. Searcy is Manager of the sales. His postoffice address is National Stock Yards, Ill.

WE WILL HOLD OUR

THIRD

Range Horse Sale

TUESDAY, JULY 13,

AT

THE ST. LOUIS HORSE AND MULE MARKET

And every two weeks thereafter until the close of the season. We will hold our regular auctions throughout the summer on Tuesdays and Wednesdays. Write us for further information.

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.

Trumans' Pioneer Stud Farm, Bushnell, Ill., announces a sale of imported Shire fillies for Wednesday, August 11th, when fifty head, selected from the best studs of England, will be offered. This sale is made early in the season, so that buyers will have an opportunity to secure show yard material for the fall and winter shows. Full particulars regarding this sale will appear in these columns in later issues and applications for catalogues should be filed with Trumans' Pioneer Stud Farm, Bushnell, Ill.

Thursday Horse Auction.

Messrs. Holland & Nugent Bros. hold the horse auction at the St. Louis National Stock Yards every Thursday in the year. Mr. Holland says now that the Fourth of July has passed, we may look for more activity. The full-made horses, 1,200 pounds and upward, and ready for immediate use, are in great demand by buyers on account of Eastern orders. Southern and small horses ought not to be shipped at present, except bought at bargain-counter prices. The demand is for big horses ready to work. Mr. Ed Conway, salesman for Holland & Nugent Bros., is sustaining his high reputation. All good,desirable mules are selling at prices that ought to be satisfactory to shippers, and the mule dealers at the yards are having a fair trade and are buying all that come in, and it looks as if the trade would keep up right along during July for good, big mules and miners; in fact, all good, desirable stuff.

P. O., National Stock Yards, Ill.

St. Louis Horse Quotations.

There are a few plug horses that continue to sell at $15 to $35 per head; and strictly common Southern horses are selling at $45 to $60; a little better average class at $70 to $110. Strictly good to choice Southern horses were selling at $120 to $160. Driving horses are variously quoted at $175 to $275. Common to medium chunks were selling at $125 to $150, and good chunks at $160 to $190. Strictly choice chunks for stylish delivery horses sell at times considerably higher. Drafters of the fair class sell at $125 to $160, and good at $175 to $250. Strictly choice heavy drafters are quotable up to $325. This is on the basis of the closing market, June 30th, at the St. Louis National Stock Yards.

Mule Quotations.

In a general way, at the St. Louis National Stock Yards, 14-hand mules are quoted at $80 to $150; 14½ hands at $100 to $165; 15 hands at $125 to $200; 15½ hands at $135 to $225; 16 hands at $150 to $275. These prices are for car-loads. Select mules, in pairs, good bone, colors, substance and weight, are quotable at $500 to $700 for the pair.

Economical Horse Concentration.

Horses are bought to sell again, and it is therefore necessary in the interest of horse shippers and horse buyers that the movement be on the line of least resistance and least expense.

When it comes to the raising of horses for sale, a great majority of them are to be found west of the Mississippi river. When it comes to horse buyers and users, a great majority of them are east of the Mississippi river. The problem of the day is how to bring the horses and horse users together at least expense. The natural point for concentration and distribution of horses appears to be St. Louis, and the railway management so regard it. St. Louis is the only central market on the Mississippi river, and no matter where in the West the horses originate, if they are consigned to and sold at St. Louis the least average expense bill comes out of the price of the horse.

If horses are shipped from the West, say from Kansas, Colorado or Nebraska,, and concentrated at Kansas City and then sold to Eastern buyers, the amount that has to come out of the horse for transportation is greater than if the horses were shipped to St. Louis and then sold to Eastern buyers. The actual freight difference in some cases is $37.75 per car, and when the unnecessary handling is considered, it is safe to say that concentration and sale at St. Louis save an average of $40 per car, which, if shipped first to such markets as Kansas City, would be wasted in transportation.

In hard times a profit of $40 a car is not so bad for the shipper, and nothing has put so many horse dealers out of business as placing unnecessary expense bills against their own horses, which have to be paid in the end, and always have to come out of the price of the horse. A safe rule for horse dealers to follow is to forget the farther Western markets and to ship direct to St. Louis. We will work this out for any horse shipper if he will send us the name of his shipping point. Address, Editor National Farmer and Stock Grower, 3550 Vista Ave., St. Louis, Mo.

A Contract For Cuban Horses.

A contract has been let at the St. Louis National Stock Yards for horses to be shipped to Cuba. The contractor cannot accept gray, roan or dunn colored horses, but will take horses with brands, serviceably sound, except wire scars and splints; fair flesh. They must be broken to ride, but need not be broken to work. Ages called for, four to seven years; height, 14½ to 15¼ hands. The contractor buying in the auction ring, is paying $60 to $75 for horses under 15 hands and $85 to $100 for horses 15 hands or over. He will be in the market for thirty days.

Quarantine Cattle Prices.

At this season of the year the quarantine cattle coming to market are largely Texans coming out of of Oklahoma pastures. Fed cattle are scarce, but occasionally some arrive. The early July quotations were as follows: Prime fed steers, $6.15 to $6.50; good to choice steers, $5.40 to $6.00; medium to good steers, $4.50 to $5.40; common to medium steers, $3.25 to $4.50; good to choice heifers, $4.00 to $5.00; common to good heifers, $2.50 to $3.90; good to choice cows, $3.50 to $4.25; fair to medium cows, $3.00 to $3.50; cutters, $2.60 to $3.00; canners, $2.00 to $2.50; bulls, $3.00 to $4.25; fair to choice vealers, $5.50 to $7.00; fair to choice heavy calves, $3.75 to $5.50; common calves and yearlings, $2.00 to $3.50—all quotations being at the price stated per 100 pounds.

FIVE TO TEN THOUSAND FULL AGE MULES

—can be purchased at the— ST. LOUIS NATIONAL STOCK YARDS any business day in the year.

Many, immense, substantial, well ventilated barns contain every commercial or military grade of Mules, which can be purchased and shipped on short notice.

THE ST. LOUIS MARKET WAS ALWAYS FIRST IN THE MULE TRADE AND NOW IT IS GREATER THAN EVER.

Range Horses Suit the Boys.

D. L. Lence bought a consignment of range horses here Tuesday. He is with T. M. Treece & Co., of Williamson county, Illinois. "We run a livery stable," said Mr. Lence. "The livery business is usually dull during the summer, so I withdrew from it a short time ago to handle range horses. Our company sells quite a number of these unbroke Western ponies every year. They are turned loose in the pasture and sold just the way we buy them without being broke. There are a great many boys in the country that want horses to ride and they like to take these bronchos and have the fun of breaking them. Many of the Western ponies make good riders, and it affords an opportunity to get a good horse for $60 to $70. A few of them are sold to the farmers also. We have never had any trouble disposing of all we bought io previous years, as people seem glad of the chance to secure them."

Disposition of Draft Horses.

Thomas Kelly bought a load of range horses at the National Stock Yards and has a novel way of disposing of them. Mr. Kelly lives at Godfrey, Ill. He ships a good many native horses to the St. Louis market, buying his supplies in Illinois and Missouri. "I will first ship these range horses home which I bought," said Mr. Kelly, "and then I will start out with them and gradually work northward, selling them wherever I can get a buyer. I have always been able to dispose of a load in two weeks and make a very good profit on them. Many farmers are willing to trade their broke horses for the young rangers with a little consideration of cash. In this way I get rid of part of the ponies and take native horses in their place. I have finished selling a bunch as far as 100 miles from my starting point, but usually they are all sold before I get that far from home. What native horses I have traded for during a trip I ship back to the best horse market in the country, which we all know is at the St. Louis National Stock Yards.

Reliable Mule Specialists.

The Gillen-Heiman-Harper Mule Company at the St. Louis National Stock Yards are mule specialists, buying and selling on their own account. Mr. Adolph Heiman was the first mule dealer to establish himself at the St. Louis National Stock Yards in April, 1895, and he was soon joined by Mr. Harry Gillen from Wichita, Kas. This has resulted in the establishment of a first-class mule contracting company with a world-wide reputation for fair dealing. They sell mules for shipment all over the South, the East, and to British Columbia. They have bought and sold as many as 1,886 mules in one month, and every mule giving satisfaction. They will contract to deliver a pair, a car-load, or a full train of mules. Address, Gillen-Heiman-Harper Mule Company, National Stock Yards, Ill.

HISTORY OF AGRICULTURE.

Three Thousand Historical Items Arranged by Dates From the Earliest Times to the Year 1906 —All For 25 Cents.

The editor of The National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated, and is a handy, useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Agriculture as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Illinois Cattle at $7.15.

During the month of June, on the 15th inst., Cherry & Co., extensive cattle feeders of Macoupin county, Illinois, were represented on the market with a load of thoroughly finished steers. The sale embraced fifteen head, averaging 1,532 pounds, which sold at $7.15, straight, to the United Dressed Beef Company of New York. These cattle were from the feed lots of C. H. Hacke, of the same county, who deserves lots of credit for the finish of the cattle. Mr. Hacke is a young man, and although he has not been in the feeding game long, must be reckoned among the best feeders. These cattle were fed for eight months, having all the corn before them they could consume in addition to clover hay as roughness, while they had oil meal as a finisher.

Shires For the West.

Mr. Geo. A. Keeline, a prominent Western ranchman, has just bought eighteen Shire fillies, ranging in ages from yearlings to four years old. They were sold by Trumans' Pioneer Stud Farm and shipped to Gillette, Wyoming. This is Mr. Keeline's second car-load purchase of Shires from Trumans in six months. Messrs. Truman also sold to Mr. Geo. E. Baker, Manager for the Reynolds Ranch at Dillon, Montana, a fine car of Shire horses, which they consider the best they have sold the ranch, although they have been selling them horses since 1883. Included in the shipment was the chestnut two-year-old Dunsby Electric, a winner of Iowa and Illinois State Fairs and the International last fall. He is one of the best two-year-old Shire stallions on this side. Dunsby Harold, II., an extremely good four-year-old, weighing about 2,100 pounds, two extraordinary colts sired by the World's Fair winner, Moulton Temple, several other colts, and two imported Shire mares completed the shipment.

Wagons Displacing Motors.

Horsemen came to their own again when recently in the city of New York an order was issued excluding motor trucks from the docks in New York. The Team Owners' Review says:

"The work of years in gradually winning the various steamship lines over to a favorable view of motor trucks has been upset in a minute by the action of the New York Fire Insurance Exchange, which recently notified the owners of all docks that if gasoline or steam trucks were allowed on the piers they would increase the insurance rates 50 cents per $100. As this is a 50 per cent. increase, the dock owners at once prohibited all vehicles using gasoline, kerosene or naphtha from going on the piers."

First Range Horse Sale.

On Tuesday, June 15th, at the St. Louis National Stock Yards, under the management of Campbell & Reid and Western Sale Stables Company, a very active sale signalized the inauguration of the range horse season. The supply of range horses was close to 800 head, and they were in very good shape, considering the length of time grass has been available in the Northwest. The offerings ranged in age from yearling colts to full-aged horses. Although no sensational bidding characterized negotiations, the movement was regular and prices ruled on about the same basis as on the opening a year ago. Clearance was good and the sale was a successful event from every standpoint. Most of the sales were in car lots and bunches, as follows: Lot of geldings at $48 per head; lot of mares, $36; mixed lot of mares and geldings, $35; another lot of mares, $25; mares and geldings, $21.50; mixed bunch inferior, $13; lot of mares and geldings, $44; mares and colts, $45; good lot of mares and geldings, $75; lot of mares and geldings, $50; lot of mares and geldings, $23. Bunch of range mules, $76.50 per head; yearling mules, $45. Lot of mares and geldings, $52.50; lot of mares and geldings, $35; lot of two and three-year-olds, $38.50; bunch of mares and geldings, $35; bunch of yearling fillies, $26; bunch of thin mares, $20.

The July dates of range horse sales of this firm are Tuesday, the 13th, and Tuesday, the 27th. All horsemen should attend these sales, as the offerings are well worth an examination.

At a parade of horses held in New York May 31st last year, the teamster drivers turned out 781 entries strong compared with 457 vehicles on a similar occasion in the city of London. In this connection it is well to observe that Liverpool was in the habit of parading horses on May 1st many years ago, and in the matter of draft teams the town of Liverpool was in a class by itself.

An Awful Revenge.

"Why do you play before the jail for an hour every day? The prisoners don't give you anything?"

Hurdygurdist—"I only play for one of them. He has a grudge against the jailer, and he paid me thirty days in advance before he went in."—Meggendorfer Blaetter.

"You have a fine house and piece of ground here!" "Yep! Made it all with my pen." "Writing?" "Nope; pig-pen."—Judge.

ST. LOUIS THE BEST AND LARGEST HORSE AND MULE MARKET IN THE WORLD. A sample barn at the St. Louis National Stock Yards. This picture gives a first-class idea of the stability of the St. Louis Horse and Mule Market. The capacity of this barn is 450 head of horses with a separate stall for each horse. It is only one of the many barns, stables and pavilions. It is not the receiving barn or one of the commission barns. It is a barn in which horses are assembled to be ready for shipment. It is a buyers' barn, erected for their convenience. The construction is commensurate with the opportunities of the market. At the St. Louis National Stock Yards there is stabling capacity for about 2,000 horses; there is barn capacity for 10,000 mules; there is also pen capacity for 8,000 to 10,000 range horses and mules. There are facilities for the sale of 250,000 horses and mules in a year. With a record of receiving and selling fifty thousand more horses and mules in a year than any other market (which, by the way, is going some), it is progressing towards the condition of being equal to all other Western markets combined.

KITTY GREY and NORENA. The team in the foreground is owned and exhibited by Mr. C. W. Watson, of Baltimore, Md., and Fairmont Farms, Virginia. KITTY GREY and NORENA won the championship prize at the International Horse Show, London, England, for pairs under fifteen hands. They are a pair of elegant chestnut mares, well known as blue-ribbon winners at American Horse Shows. KITTY GREY is an imported English high stepper, a daughter of Atwick Perfection, dam by Sir Alfred, II. She came over a six-year-old in 1901, and now at fourteen years she does not show her age in the least. Her winnings in harness have been a small fortune. She is a light chestnut, about 14.3 hands high, and possesses unusual quality and finish, together with a beautiful figure and very fine, all-around action. Her mate, NORENA, is an American-bred Hackney, by Lord Denby, II., out of Gossip by old Fashion, and is therefore a full sister to the well-known winner Chatterbox, with whom she has sometimes been shown in double harness. The American exhibitors won eight championships at the London International; the English exhibitors, eleven; French, one; and Canadian, one.

SAVE YOUR HORSES FRAZIER'S DISTEMPER CURE

Guaranteed By All Druggists.

American Coach Fours in England.

The New York Herald says: "The fast trotting road four driven by William H.. Moore in the coaching Marathon in England was a Tichenor-Grand team. Dispatches from London state that they covered the distance from Hampton Court to Olympia in a little less than forty minutes, which is almost a 3:00 clip, maintained for twelve miles, an unexampled performance for trotting coach horses. Starting nineteenth in the race, Mr. Moore's team finished second, passing every other excepting the winning coach, Alfred G. Vanderbilt's Venture, and making better time than Mr. Vanderbilt's team by about five minutes. Some of the cabled reports of the race state that one of the English contestants tried to prevent Mr. Moore from passing by blocking the road with an automobile which accompanied his coach, but that the American horseman finally got past and almost put his rival's leaders in the ditch as he did so. The fact that both the first and second teams to finish in the great race in England were made up of American horses is regarded here as a remarkable evidence of the superior speed and stamina of the trotting-bred type. Apropos of the race and of the fast time made by Mr. Moore's team, it is worthy of note that the Tichenor-Grand Company also sold to Paul A. Sorg the four horses that won the coaching race from Seabright to Hollywood Park, in connection with the last Long Branch Horse Show, beating the famous grays that finished first in the London race."

Trotting Horse For Utility.

"In spite of all the demagogues' outbreaks against the trotting-bred horse, it is becoming more and more certain that the horses in this class are nearer the general-purpose horse than those of any other breed in the world. The trotting-bred horse has not only speed to recommend him; he goes into the show rings and wins the highest honors in the classes for high steppers, coachers, carriage horses, and even the classes for saddle horses occasionally. More than that, the good-sized trotting-bred horse, of which, by the way, there are now more than there are of the other kind, will beat any other breed to a frazzle when it comes to performing the many duties of a farm horse, which includes trips to the market as well as pulling the plow, mowing machine and other duties common to the farm of 50 to 200 acres."—Spirit of the West.

Sparks Bros. Mule Company.

This is a well-established, reliable firm, occupying Mule Barn No. 6 at the St. Louis National Stock Yards. Sparks Bros. had a magnificent trade on Broadway, St. Louis, before removing to the National yards, having a fine reputation as a first-class firm.

When the mule dealers moved in a body to the National Stock Yards in February, 1896, the firm of Sparks Bros. obtained one of the best locations and have progressed rapidly ever since. The organization of the Sparks Bros. Mule Company afforded the opportunity for Mr. Henry Sparks to associate with him in the business his two sons, C. M. Sparks and H. L. Sparks as Directors, and Mr. R. R. Sandusky as Vice-President and Secretary. There is no better or stronger organization in the business. The immense mule-feeding barn now occupied by the Sparks Bros. Mule Company is of the most modern construction, as it was erected during the past year. We close the reference to this first-class firm in the language of one of their advertisements, as follows:

"If you want to buy or sell mules, come and see us. If you cannot come, correspond with us. If you are in a hurry, wire for quotations and we will give you the information you need. We carry a very extensive stock of mules at all times, and our patronage extends over all sections of the country. We can sell any number of any kind of mules you desire in the least possible time."

The Acreage Sown to Barley.

The area sown to barley is about 6,881,000 acres, or 235,000 acres (3.5 per cent.) more than the area sown last year. The condition of the crop on June 1 was 90.6, as compared with 89.7 on June 1, 1908; 84.9 on June 1, 1907; and 90.6 the June 1 average of the past ten years. This is from the United States Department of Agriculture report.

The Cotton Ginners' Report.

The report of the National Ginners' Association, issued June 28th, gives the average condition of cotton up to June 24th as 75.6. There has been an abandonment of acreage of 7 per cent., according to the report, making the total acreage 9.8 less than last year.

The Immense Success
—OF THE—
HORSE AND MULE MARKET
—AT THE—
St. Louis National Stock Yards
IS THE WONDER AND MIRACLE OF THE LIVE STOCK TRADE.

COMMENCING with two commission firms and one mule salesman on April 5th, 1895, in five years this market surpassed all rivals and left them far behind.

In the year 1904 the market received a total of 181,431 horses and mules, and

OUTRANKED THE NEXT HIGHEST COMPETITOR

by fifty thousand head and a few thousand more to spare.

The great success of the market is due to the enterprise of its active members; a moderate scale of charges; high standards in business dealing; unexcelled receiving, shipping and yarding facilities; and, above all, to an

UNRIVALED LOCATION

for concentration. It is the center which attracts trade in every direction and distributes it with equal facility with the least cost of expense and to the great advantage of buyer and seller.

There are fifty states and territories on the main land of the United States, and all of these are either contributing horses or mules for sale at the

ST. LOUIS NATIONAL STOCK YARDS

or they are sending buyers to the market in order to gather horses and mules to keep the commerce of the world in motion.

No matter whether it be for a single animal, a span, a car or a train-load, when it comes to quick action, in case of emergency, the

St. Louis Horse and Mule Market

does the business, no matter where the supplies are drawn from or where the delivery is to be made.

The Active, Enterprising Horse and Mule Market Builders are represented by cards in this publication.

COMPETITION

is the Watchword of St. Louis.

ACTIVE COMPETITION FROM MANY AND DIVERSE PURCHASING INTERESTS.

The Superior Location and the Push and Energy of the Market Firms Have Made the

St. Louis National Stock Yards

THE GREAT CENTRAL LIVE STOCK MARKET OF THE UNITED STATES.

This Applies to Cattle, Hogs, Sheep, Horses and Mules.

During the Year 1908 the St. Louis National Stock Yards Made

A BETTER SHOWING

Than Any Other Live Stock Market in the Country.

SHIP YOUR STOCK
To the Best Market, Where Business is on the Up-grade; Where There is the Greatest Competition.

The Sheep and Lamb Market.

On June 30th, at the St. Louis National Stock Yards, good to best native lambs were selling at $7.75 to $8.00 per 100 pounds. The inferior natives sold at $4.50 to $7.50. The Southwest lambs sold at $6.50 to $7.35 per 100 pounds. The good lambs all weigh from 60 to 68 pounds. Mutton sheep, 80 to 157 pounds, sold at $4.00 to $4.25 per 100 pounds. Breeding ewes, selected, 74 to 92 pounds average, sold at $5.00 to $5.40 per 100 pounds; stockers and feeders sold at $2.50 to $3.60 per 100 pounds; and bucks, 130 to 160 pounds, sold at $2.25 to $3.00 per 100 pounds. A few culls sold at $1.25 to $1.75 per 100 pounds.

Native Butcher Heifers.

Butcher heifers in the native division sold at a range of $3.50 to $7.00 per 100 pounds. Here is a difference of 3½ cents a pound on acocunt of a little more quality and a fraction more flesh. At the St. Louis National Stock Yards, June 30th, twenty-four heifers, 631 pounds average, sold at $3.90 per 100 pounds; eighteen head, average 729 pounds, at $4.30 per 100 pounds; nineteen head, 741 pounds, at $5.15 per 100 pounds; seventeen head, 617 pounds, at $5.25 per 100 pounds; ten head, 681 pounds, at $5.85 per 100 pounds; ten head, 718 pounds, at $6.00 per 100 pounds; seventeen head, 597 pounds, at $6.10 per 100 pounds; twenty head, 878 pounds, at $6.50 per 100 pounds; twenty-five head, 831 pounds, at $6.75 per 100 pounds; and twenty head, 761 pounds average, at $7.00 per 100 pounds. There is no other market on earth that receives so many or sells so many or pays so much money for light, handy, fat steers or butcher heifers.

Bulls Selling Well.

Sausage bulls at $3.00 to $3.50 per 100 pounds; half-fat bulls at $3.75 to $4.00; good bulls, $4.15 to $4.75; and prime bulls, $5.00 to $5.50 per 100 pounds. These prices were quotations at the St. Louis National Stock Yards, June 30th, 1909.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.,

ST. LOUIS THE GREATEST LIVE STOCK MARKET—One of the men who has assisted in building it up—MR. ALBERT D. EVANS, head of the EVANS-MONTAGUE COMMISSION COMPANY, doing business at the St. Louis National Stock Yards. See page 7 for illustration of beef cattle sold by his firm.

First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign horses, cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman, General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Don't hesitate to write or ship to

James H. Campbell,
National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK — SHIP US YOUR CATTLE, HOGS AND SHEEP.

Enthusiastic advocate of the St. Louis Live Stock Market—MR. JAMES H. CAMPBELL, of the CAMPBELL COMMISSION COMPANY. He has sold cattle on all the markets and regards St. Louis as the most competitive of them all.

He Sold Seven-cent Heifers.

On June 30th, at the St. Louis National Stock Yards, J. L. Dunn, a well-known Callaway county, Missouri, stockman and feeder, put a top on the butcher heifer market with twenty-two yearling heifers of 761 pounds average, sold at $7.00 per 100 pounds to the St. Louis Dressed Beef Company.

The Top Lambs, June 30th.

On June 30th, at the St. Louis National Stock Yards, J. R. Reno, a prominent citizen of Boone county, Missouri, was on the market with a load of sheep that contained 101 head of lambs that averaged 64 pounds and sold at $8.00, the top of the market. Mr. Reno expressed himself as being entirely satisfied with the sale of his stock; but the market was lower by a cent a pound than it was thirty days previous.

THE GUIDE POST TO PROFIT

CONSIGN YOUR LIVE STOCK TO CLAY, ROBINSON & CO.

NATIONAL STOCK YARDS, ILL.

Attention is invited to page 2 to the illustration of Texas heifers fed in Nebraska and sold by us on the St. Louis market. Also to our card on page 9, showing that we do busines at nine principal markets. Also to illustration on page 8, showing the magnificent hogs that we sold on the St. Louis market at the highest price in sixteen years. We also greatly desire you to visit our headquarters at the St. Louis National Stock Yards and to have your name placed upon the list to receive our special market letters. We keep you posted in all departments.

REMEMBER:

THE GUIDE POST TO PROFIT

CONSIGN YOUR LIVE STOCK TO CLAY, ROBINSON & CO.

NATIONAL STOCK YARDS, ILL.

Baby Beef at $7.05 Per 100 Pounds.

A splendid sample of baby beef was received on the St. Louis market on June 9th. They were shipped bq Breiphol & Huscher, of Lafayette county, Missouri. There were forty-eight head of yearling steers, 868 pounds average, and sold at $7.05 per 100 pounds, which amounts to $61.19 per head. They were fed by Lyons Bros. of that county and they were fed for six months on shelled corn, cotton-seed meal and clover hay.

Native Butcher Cows.

Native cows at the St. Louis National Stock Yards sell at a wide range. Canners at $1.50 to $2.50 per 100 pounds; cutters at $2.60 to $3.30; medium to good cows, $3.40 to $4.40; strictly good to choice cows, $4.50 to $5.00; fancy cows, $5.10 to $5.50 per 100 pounds.

Calves and Yearlings.

There is a wide range in the price of calves and yearlings. The ideal veal calves, 120 to 160 pounds, were selling at the St. Louis National Stock Yards, June 30th, at $7.00 to $7.50 per 100 pounds; calves not so good, at $6.00 to $6.90; inferior calves, $4.75 to $5.90; and what are called heretic calves, overgrown, thin calves and short aged yearlings, $3.00 to $4.60 per 100 pounds.

SHIPPERS AND SELLERS
—of—
STOCK AND FEEDING CATTLE
are reminded that the
ST. LOUIS
NATIONAL STOCK YARDS
furnish by far the best market for their stock.

A majority of the stock feeders of Missouri, Illinois, Indiana and Ohio prefer to buy their feeders at St. Louis. They have short runs, favorable rates, quick service, small shrinkage. These people get their cattle home in good shape. There is never a glut of stock cattle at St. Louis. Western shippers can get their

stock cattle to the St. Louis market just as easily and as cheaply as they can to any inferior Far West market, and at St.Louis there is quicker sale, better results, and in the shipping in, concentration, sale and outward shipment there is less expense, less shrinkage and less loss to come out of the cattle. The center in which all can be brought together and distributed at the least expense to all concerned is the best market of all.

THE BEST MARKET OF ALL—UNDER ANY AND ALL CIRCUMSTANCES—IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

Stock Cattle and Feeders.

On the opening of the July market at the St. Louis National Stock Yards the following were native stock cattle and feeding steer quotations: Good to choice feeders, $4.65 to $5.00; medium to good feeders, $4.20 to $4.85; good to choice stockers, $4.00 to $4.60; inferior to good stockers, $3.00 to $4.00; good stock heifers, $3.50 to $3.85; medium stock heifers, $3.00 to $3.50; stock cows, $2.25 to $3.10—all quotations being at the price stated per 100 pounds.

Beef Cattle at St. Louis.

On the last day of June, at the St. Louis market, thirty head of 1,405-pound steers shipped from Benton county, Missouri, sold at $7.00 per 100 pounds. Other sales of good-weight beef cattle included fifteen head, 1,341 pounds, at $6.90; twenty-five head, 1,321 pounds average, at $6.65; twenty head, 1,320 pounds, at $6.30; and thirteen head, 1,309 pounds average, at $6.00. These prices fairly indicate what the market was for plain or fair-to-best native beef cattle.

Native Cattle, 1,100 to 1,290 Pounds.

Native beef cattle varying in weight from 1,100 to 1,290 pounds sold at St. Louis, June 30th, at a range from $5.10 to $6.85 per 100 pounds. These sales included 1,170, 1,135 and 1,273-pound steers at $6.85; 1,267 and 1,240-pound steers at $6.80; 1,289-pound steers at $6.50; 1,164-pound steers at $6.40; 1,205-pound steers at $6.35; 1,320 pounds at $6.30; 1,071 pounds at $6.25; 1,198 pounds at $6.15; 1,238-pound steers at $5.90; 1,217-pound steers at $5.85; 1,113-pound steers at $5.80; 1,201-pound steers at $5.75; 1,128-pound steers at $5.50; 1,048-pound steers at $5.10. These figures representing car-lot sales give a fair idea of the prices paid for cattle of the weights mentioned.

The Cassidy-Southwestern Commission Company.

This is one of the great firms in the live stock trade. It originated in the business of Cassidy Bros. and became strengthened by leading ranchmen and stock farmers enlarging the capital stock, thereby increasing the influence and standing of the company. The St. Louis market organization is very strong. Cattle are well sold by Al Keechler and F. O. Gregg. E. S. Coddington, a veteran of the market, maintains high reputation as hog salesman; and Oscar White gives their sheep department his best attention. Mr. W. L. Wayland, Assistant Secretary, keeps up a splendid office organization in the interest of their clients.

WE LEAD — OTHERS FOLLOW.

A stock raisers' organization for the purpose of selling Live Stock on commission at the leading markets of the Southwest.

The Cassidy Southwestern Commission Company.

Capital, $200,000

M. SANSOM, President and General Manager.
W. B. WORSHAM, First Vice-President.
AL KEECHLER, Second Vice-President.
S. B. BURNETT, Treasurer; and
J. F. LYONS, Secretary.

The Officers and Directors are stockmen of the highest standing and reputation, and the salesmen at all the markets are experts and members of the Company.

Consignments and Correspondence solicited. Market Quotations furnished.

Address the firm at **National Stock Yards, Ill., Fort Worth Stock Yards, or at Kansas City Stock Yards.**

MR. AL KEECHLER, Manager and Texas Cattle Salesman of the CASSIDY SOUTHWESTERN COMMISSION COMPANY at the National Stock Yards. MR. KEECHLER sells hundreds of thousands of Texas cattle every year on the St. Louis market. At the Fort Worth, Texas, Fat Stock Show in the present year, MR. KEECHLER was elected to sell all the car-loads of show cattle consigned to his firm. He sold eighteen loads at record prices, including the champion car-load at $8.50 per 100 pounds, the highest price ever paid in the state of Texas for a load of cattle.

ST. LOUIS ALWAYS FIRST AND BEST IN THE TEXAS CATTLE TRADE—One of the pioneers of the market—MR. T. J. DANIEL, Cattle Salesman. The EVANS-SNIDER-BUEL COMPANY stand equally strong in every branch of trade, and MR. DANIEL is especially identified with the quarantine cattle division, and it is largely through his efforts that quarantine cattle at St. Louis have produced greater net results than at any other market.

In the service rendered by commission salesmen at the National Stock Yards, this firm is first and the best.

EVANS-SNIDER-BUEL CO. . . .

Valuable Market Information.

With capital and surplus amounting to $125,000.00, the Godair-Crowley Commission Company have splendid resources to make loans to reliable stockmen and to encourage shipments to St. Louis. Their list of salesmen includes Mr. E. C. Gibson, Frank Huffaker, W. F. Houston, H. R. Ray and Oscar White. This firm is enthusiastic in regard to the record of the St. Louis market, which is very satisfactory both in regard to increased receipts and selling activity. Messrs. Godair-Crowley Commission Company cordially invite all stock shippers to communicate with them for the purpose of getting on their list to receive their regular market reports. Address, Godair-Crowley Commission Company, P. O. Box 107, National Stock Yards, Ill.

A strong man in the live stock trade of St. Louis—MR. ARTHUR GODAIR, Manager of the GODAIR-CROWLEY COMMISSION COMPANY at the St. Louis National Stock Yards, a firm that is great in results, records and in all departments.

Webster's NEW STANDARD Dictionary

Home and Office Edition. A splendid book for readers of The National Farmer and Stock Grower. There are 756 pages, 5x7 inches, 1½ inches thick, and the book weighs 22 ounces. It is splendidly bound in flexible cloth, with patent thumb index, with front and back title in gold. There are 840 illustrations and 19 full-page plates. Besides the Dictionary proper and supplement of recent words, it contains many other features, such as key to pronunciation, dictionary of geography, Biblical, classical and historical names, musical terms, foreign phrases, current abbreviations, etc. For handy, quick, general use, for doctors, ministers, lawyers, merchants, mechanics, editors and farmers, this is a great, useful, interesting, necessary book. We use it as a subscription premium in connection with The National Farmer and Stock Grower. Send us One Dollar and we will send you one copy of **Webster's New Standard Dictionary** by mail post paid, and we will send you The National Farmer and Stock Grower, every issue for two years. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Making Poultry Plants Sightly.

On many farms the poultry establishments are the most unsightly objects to be found. In fact, there are few farms on which the poultry house and yard do not give the aesthetic visitor a shock. The yards are generally bare and muddy or dusty; the fences, if of lath, are broken, or irregularly built; the houses themselves are unpainted; and the windows wanting or small and dirt-covered. It is no wonder that on some of the farms the women folks have no interest in the raising of poultry. The writer has in mind one farmer that had his poultry establishment within fifty feet of the house. The hens had the run of the farm, and in muddy weather there was a constant succession of hens' tracks on the walks and door steps. The front yard itself was little more than a great poultry yard, from which the grass had been eaten and in which the mud was beaten into a mush at every rain, assisted by the constant paddling of the hens.

To introduce a little of the aesthetic into the poultry business is to help the poultry business, the farmer's wife and the farmer. 'It will certainly increase the interest of the boys and girls in the raising of poultry and enlist their aid when it would otherwise be wanting.

The first step in making the poultry plant sightly is the abolition of the bare poultry yard, which is so often a shock to the person who finds everything else about the farm covered with verdure. The bareness of this yard can be done away with by increasing its size and by keeping it covered with verdure of some kind. If the fowls when confined are fed all the green stuff they can eat, in addition to the grass growing in the yard, they will not attack the latter and eat it down to the sod. At the North Carolina Station the writer saw an excellent arrangement of yards. These were sown with several different kinds of grasses and plants, such as oats, clover, rape and wheat. The flocks were confined, but in no case were the yards eaten bare. The yards were in all cases sightly places to visit.

The use of wire netting helps to greatly improve the looks of things about the poultry yard. This is not observable at a distance. The cross pieces and stakes can be kept painted and the good effect increased. Most poultry yards that are covered are too high. The writer has seen wire poultry yards that were eight feet high and covered over the top. What is to be gained by such height? The only object in having poultry yards high is to keep the fowls from flying over. If the yard is covered, there is no need of having it more than two feet high, if it is built adjustable, so that one can enter it at will.

Giving the poultry more room inside the poultry yard is one way of improving matters on the farm. Of course, if the yard is to be large, it cannot be so well covered; but the larger it is the less likely are the fowls to get out.

Most farmers can afford to have a light, clean, roomy poultry house.

Egg-laying Experience.

Seven times have the Australian egg layers given us their experience as first-year performers. In the first contest the average was 130 eggs per fowl; the second, 163; the third, 152; the fourth, 166; the fifth, 171; the sixth, 173; and the seventh, 180. The average of seven years was 162 eggs per hen per year.

We have always contended that an average laying of young fowls under ordinary circumstances ought to be not less than 144 eggs. The Australian results beat our average 18 eggs a year. In the last contest the first five winning pens were White Leghorns, averaging 223 eggs to the hen; the next in order was a pen of Black Orpingtons, with 216 eggs to the hen. The winning pen of White Leghorns was one egg short of an average of 230 eggs per hen. The 114 White Leghorns averaged 199 eggs to the hen; the Black Orpingtons averaged 177; White Orpingtons, 115.6; Langshans, 184; Silver Wyandottes, 170. Varieties with only one pen were Cuckoo Leghorns, 193.6; Brown Leghorns, 189.5; Golden Wyandottes, 128.6. The eggs averaged 30½ cents a dozen. The eggs sold for an average of $5.60 per hen; the cost of feed was $1.89, leaving $2.73 per hen to pay all other charges. On such a basis, 1,000 hens, which can be handled nicely on 2½ acres of ground, would pay an income of $2,730 a year—a nice little sum to support a man and his wife. With all extravagances set aside, there is no reason why any nice three-acre homestead near a big city cannot furnish a clear income of $1,500 a year on a thousand well-selected young fowls.

Poultry Notes.

Commercial Poultry remarks that when the brooding hen refuses to voluntarily return to her coop at night, but squats outside, you can be pretty sure that the coop is either fearfully lousy, filthy or close, or perhaps all three. Investigate.

Laying records of hens, like dairy records, are not worth much unless they are substantiated. The average hen as a pullet lays about 144 eggs the first year, and 125 the next, and claims of 240 to 260 eggs a year, except in case of a few out of a thousand, can safely be discredited. One thing can be banked on—that the hen having laid 250 eggs in a year is not in a position to do it again.

Two Bad Weeds.

Only a few years ago buckhorn and wild carrots were almost unknown in Illinois. During my travels in 1907 I noticed many of these pernicious weeds in various localties, and I have been warning land owners against them at every opportunity. Last season, during my summer travels, I found that these weeds were fast spreading over all Central and Northern Illinois, and some farms were fairly overrun with the wild carrot. I find that very few farmers recognize either of these weeds.

Wild carrot grows a stiff, tall stalk, upon which a cup-shaped white head is matured. As the seeds ripen this head closes up, and looks not unlike a small bird's nest. When the plant reaches this stage the seeds are formed. The pastures are usually first attacked by this weed, and if they are left undisturbed they spread rapidly over adjoining fields. Where only a few stalks were noticed last season, thousands have now crept in and menace many farms.

Buckhorn is another bad pest which has unwittingly been sown with alfalfa and clover seed. It matures a seed head which resembles a timothy head, and for this very reason it frequently is passed by unnoticed. The worst field I have ever seen of it was in Livingston county last fall. A renter had sown clover seed with oats the spring previous, using a very cheap grade of seed. I have never seen a worse mess than I saw in that field; and the most deplorable thing was everyone of these weeds matured seeds, so that the land will be filled with these mean seeds for several years.

As lands become worn and new crops are tried or new seed grain introduced, one must be more vigilant in keeping rid of these deep-rooted, tenacious weeds, which have made thousands of acres in the Eastern States practically worthless.—L. C. Brown.

Oats Turning Yellow.

A Pulaski county, Indiana, correspondent writes: "About two weeks ago my oats all turned yellow. I thought some insect was working in them and that the crop would be destroyed. However, I notice that they have started to head out and seem to be thrifty. Will they likely fill out heavy, or would you advise cutting the crop while green?"

Oats turning yellow is not an unusual thing, especially on low, undrained ground. Where insects are not bothering the crop, no doubt the trouble comes from too much wetness. This with the hot sun tends to scald the leaves, but the main stems are firm and healthy, and with favorable conditions will soon overcome the setback caused by the blight. I have seen oat fields turn yellow when the plants were six or eight inches high, and afterwards come out all right, when cool, dry weather followed. When the plants recuperate and appear thrifty and of good color, when they begin to head out, I should allow them to stand until well ripened.—L. C. Brown.

The 1909 Wheat Crop.

According to the Department of Agriculture, the condition of winter wheat on June 1st was 80.7, as compared with 83.5 on May 1, 1909; 86.0 on June 1, 1908; 77.4 on June 1, 1907; and 80.5 the June average of the past ten years.

The area sown to spring wheat is about 18,391,000 acres, or 1,183,000 acres (6.9 per cent.) more than sown last year. The conditon of spring wheat on June 1 was 95.2, as compared with 95.0 on June 1, 1908; 88.7 on June 1, 1907; and 92.6 the June average of the past ten years.

THE SECRET OF EGG FARMING.

First and Second Year's Laying, as Demonstrated by the Australian Egg-laying Contests and by Our Own Utah Experiment Station.

The Hawkesbury Agricultural College of New South Wales, Australia, at the instigation of the Daily Telegraph of that community, has conferred upon the poultry-raising industry some lasting benefits by well-conducted egg-laying experiments, and The National Farmer and Stock Grower desires to acknowledge the great value of the results of the demonstration.

They have held seven annual egg-laying contests between pens containing birds of each of the different breeds, and two contests included a demonstration between the laying of the same hens during the first and second year of their laying period. These experiments, if carried on to the third year, will everlastingly set at rest the egg-laying capacity of the hen as a commercial proposition and define the usefulness of the hen in her egg-laying capacity, year by year, until it may be the good, old motherly hen has no laying capacity at all.

The first time we considered this subject as having great influence upon poultry raising as a business was upon reading a bulletin issued by the Utah Agricultural Experiment Station. They had forty-one hens of different breeds, which averaged 178 eggs per fowl the first year and 125 the second year, and these figures are not far from the Australian results obtained from the laying of about 600 fowls.

In the Australian contest the first double-year contest resulted in a laying of about 193 eggs per hen the first year and 135 eggs per hen the second year. The second double-year contest resulted in about 167 eggs per hen the first year and 125 eggs per hen the second year. The average is about 180 eggs per hen the pullet year and 130 eggs per hen the second year. We will take it upon ourselves to say that the third year would not average over 100 eggs per hen per year, and our friends and patrons can take that guess for what it is worth.

Here we have the entire secret of success in egg farming. It was a secret, but is so no longer. Obtain pullets just about the time they commence to lay in the fall of the year, carry them over the first and second winters through the high-priced egg period just as long as it lasts, and then as eggs become cheaper, say: "Biddy, your time is up; you must find your way to market."

Handling the Cultivators.

The proper cultivation of corn under any and all conditions is not so easy as some seem to imagine. Some corn growers go at it as if the object was to throw up enough dirt about the hills to sustain the stalks and keep them from blowing down. The objects of cultivation are to keep down weeds and retain moisture; so it is evident that in the loose soils of Illinois and Indiana deep cultivation would be a positive injury.

We are having a hard time right now to keep the ground in just the right condition to cultivate. Many fields have been too wet, and when the shovels cut deeply, we do not cover up the weeds as we would like to, neither do we leave the top soil in good condition. However, we must keep at it, from now on. We like to hug right up to the row the first time over, and then at each subsequent cultivation we keep farther from the plants. When corn is knee-high it has a well-developed root system, and, of course, it will check the plant if any of these roots are destroyed.—L. C. Brown.

WHICH SPREADER SHALL YOU BUY?

Progressive farmers are getting beyond the point where they discuss the value of the manure spreader. They are pretty well agreed that it is one of the most valuable of all the farm machines. The question more frequently discussed these days is not whether to buy a spreader, but which spreader to buy.

Without attempting to mention all the manure spreaders that have merit, it may be said that three of the best machines in this line are those sold by the International Harvester Company of America.

Two of these spreaders are constructed in the main on the same general plan. They differ, however, on the important matter of apron movement or the manner in which the manure is brought up to the cylinder for pulverizing and spreading.

The Corn King is a return apron spreader in which the apron requires to be brought back to a certain position before loading. The Cloverleaf is an endless apron spreader whose apron is always in position. Both these spreaders are supplied with either a ratchet or a double-pawl worm feed for the apron. Either feed regulates the amount of manure to be spread at any time to a nicety. Both have a vibrating rake to level the manure as it comes to the beater. Both spreaders are made in three different sizes to suit the needs of all classes of farmers.

The Kemp Twentieth Century Spreader (of the return apron type) is characterized by a staunch frame, strongly braced, superior wood stock, and is supplied with either steel or wood wheels. It has a leveling rake, and the specially-contrived beater bars insure a perfect distribution of the manure.

No farmer goes wrong who decides to purchase any of these excellent machines. Choice between them should be determined by each farmer for himself after study of the catalogue giving the distinguishing features which have only been hinted at here. The same excellent work may be expected from all the spreaders. First, they greatly lessen the work of manure spreading. Second, they greatly increase the value of the manure by avoiding waste and placing it on the land in a form which makes it immediately available to support plant life. Particulars regarding I. H. C. Spreaders may be had by writing direct to the International Harvester Company of America at Chicago or by calling on local International agents.

Plowing Under Heavy Green Stuff.

A Morgan county, Illinois, correspondent writes: "I have a field of big clover which I want to turn under this fall for corn ground next spring. The growth is very heavy, and I am afraid it will give me a lot of trouble in plowing."

I presume our correspondent refers to Mammoth clover, which under the very favorable conditions this season has made an enormous growth. If this land is in fairly good condition I should take off a crop of hay and later turn under the clover. I have frequently observed that when a very rank growth of green material is turned under it does not decay fast enough to become available for the next crop. Should cool, dry weather follow the turning under of these rank growths, the stuff will almost sure be in poor condition to nourish crops the following spring. These heavy growths do give trouble in plowing. The best work may be done by using a chain to drag the clover into the furrows. A recent bulletin recommends disking a heavy growth of clover or alfalfa before plowing. That is not practicable. Pull the clover into the furrow, where it will be completey covered. —L. C. Brown.

Boom For the Guinea Hen.

"Dr. George Vanden, of this city, has informed the Secretary of Agriculture that guinea fowls turned loose in potato patches will absorb all the bugs, and do it much more expeditiously and at less expense than by the use of Paris green. The Secretary has acknowledged his suggestion and writes that he will include it in a forthcoming publication." —Gallipolis Daily Tribune

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

STEEL ROOFING Of All Kinds,
Stock and Storage Tanks,
Wagon Tanks, Etc.

Grain Too High to Feed.

A correspondent from Central Illinois writes: "The price of land and all kinds of grain are too high to pay farmers to feed cattle and hogs. Farmers find that it pays better to sell grain than to feed it."

That letter states precisely the attitude of thousands of farmers in Central and Northern Illinois. Everywhere feed-yards and barns are empty, and crops are marketed so closely that only scant supplies are reserved for the work stock. How long can this thing continue? Every practical farmer knows that any system of farming which does not return to the land, each year, fertilizing matter equal to the amounts removed by the grain crops is bringing his lands nearer to the point of exhaustion. Yet with appalling facts staring them in the face, with evidence in most any locality of the inevitable result of soil robbery, the tide of grain sellers is increasing and feeding in many counties is narrowing down to the vanishing point.

Will farmers take a more rational course? I do not think so; at any rate, not until conditions change, by grain prices going to a lower level or live stock to a still higher one. Too many view the situation just as this correspondent does—there is more money in selling grain than in feeding it, without stopping to figure what it has cost to produce those crops.

The actual cash in hand is the one thing considered. We might just as well say that cattle feeding would pay better than anything else, because fat steers will sell for, say, $100 a head, no matter if we have fed up two or three crops in fattening those steers. Selling grain may give the most actual cash in hand, but dont forget to find out the actual cost. Don't stop figuring until you get at the entire cost. The cash proceeds of any grain crop do not mean much to the man who owns the land. It is what is left after all costs have been deducted that counts. Cattle feeders know pretty nearly how many bushels of seventy-cent corn it will take to make a $100 steer, but not many grain growers ever seem to think it worth while to find out how much of their soil fertility has been used up in producing a fifty-bushel-per-acre crop of corn.

I do not know how long these farms can be bled. But I notice signs everywhere of waning fertility, and there is a growing feeling of unrest among farmers who have given this matter serious thought. Many see the approaching end and are getting from under. Of course no man would like to admit that, but it is a fact. Who will pay the penalty of all this fertility robbery? Not the men who are selling now, but the men who follow will have to shoulder the burden.—L. C. Brown.

CREDIT Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of The National Farmer and Stock Grower will be glad to furnish the paper three years for **One Dollar**, the same to be payable at **the end of the first year.** This edition is a fair sample of the paper. It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date

FOR STOCK FEEDERS.

Profitable Stock Feeding is the name of an excellent book which was written by Howard R. Smith, Professor of Animal Husbandry of the University of Nebraska. It is a nicely-bound, illustrated book of 413 pages. The feeding of beef cattle, dairy cattle, horses, hogs, sheep and poultry of all ages and for all market purposes is fully set forth in a practical, business-like, interesting manner. Professor Smith is a feeder of champions, and his experiences and record fully qualify him to write such a book. All who are interested in stock raising, feeding and marketing should by all means purchase a copy of this book. It will enable them to feed for the best results. **Profitable Stock Feeding** is published at $1.50 per copy. For the price we will send a copy, pay postage on it and include a year's subscription to **The National Farmer and Stock Grower.** Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

The Best Sheep Proposition.

Nearly a year ago The National Farmer and Stock Grower began advocating that farmers of Missouri and Illinois should buy ewes in the fall, breed them to have lambs come as early towards spring as they could be properly raised; to market the lambs as soon as possible; to shear the ewes and sell the wool, and after fattening them, to send the ewes back to market to be sold to the butchers. In support of this method as being a profitable branch of live stock industry we stated that the ewes for breeding purposes were being sold in market at $3.50 per 100 pounds; that the lambs from these ewes would average $4.80 per head in market; that the wool ought to be worth $1.50 for each ewe, and that the ewes would weigh more and sell in market as mutton for more than they cost as stockers.

In getting a line upon the market last fall we were assisted by Mr. Geo. M. Brigham, a stock sheep dealer at the National Stock Yards. On interviewing him on June 26th he said that according to his observation a majority of the lambs had sold from $8.00 to $8.50 per 100 pounds; the lamb weights in market were fifty to seventy pounds average, making fair averages of $4.00 to $5.85 per head in market; that fleeces of wool had sold from $1.50 to $2.00 per ewe, and the ewes had gained ten to twenty pounds per head, and on their return to market had sold from $5.00 to $6.00 per 100 pounds. Some who have tried the experiment have not shipped all their lambs, and some have kept the ewes; but taking everything into consideration, the results have been all and more than were expected.

The season was late, however, and owing to frequent storms in February and March lambs were hard to raise; but even those who purchased very old ewes succeeded well. Mr. Brigham says that just now strong prices are being paid for breeding ewes by farmers of Kentucky and Tennessee. When their season of buying is over in August it is possible that breeding ewes will be cheaper. At any rate, September is a good month to stock up in Missouri and Illinois. The method of handling ewes depends upon getting a good class of ewes at a fair price. Then, if the lambs are properly cared for, the balance is a sure thing.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.**

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the **Cement Workers' Handbook.** Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

The Acreage Sown to Oats.

According to the United States Department of Agriculture, the area sown to oats is about 32,422,000 acres, or 78,000 (0.2 per cent.) more than the same area sown last year. The condition of the crop on June 1 was 88.7, as compared with 92.9 on June 1, 1908; 81.6 on June 1, 1907; and 88.4 the June 1 average of the past ten years.

"WHY SILAGE PAYS."

This is the title of a pamphlet prepared by the Jos. Dick Mfg. Co., of Canton, Ohio. It contains a great deal of condensed matter that makes it worth any farmer's while to get and read. Whether you feed silage or not, it will interest you. Several interesting letters from "Men Who Know" tell of the results obtained from silage. One of the writers says silage is an indispensable feed for dairy cows. In writing, address Jos. Dick Manufacturing Company, 1416 Tuscarawas street, Canton, Ohio.

HORSE BLINDNESS CURED.

Someone has said that "a blind horse is only half a horse." Every horse owner knows that blindness reduces a horse's usefulness and knocks off at least half his value. Visio is sold on a binding guarantee that blindness can be cured. You only pay for actual results. Can you afford to stand the loss when $2.00 will cure your horse and double his value? Send the money for a bottle to-day, tell us what kind of blindness your horse has, then use the remedy according to directions—if it fails to cure, back comes your money. Address, Visio Remedy Association, 1933 Wabash Ave., Chicago, Ill.

Feeding Lodged Grain.

A correspondent asks for the best way to handle lodged grain.

Many fine-looking fields of oats and wheat have badly lodged during the last beating storms. There are two methods of handling this prostrate grain in order to get anything near its feeding value. When the ground is not seeded to grass or clover, and when the grain is not too badly down, it may be left and cut with the rest of the field. The harvesters will get some of it, and then as soon as the rest of the grain is put into shock, better put the mowers into these places and then rake it up. The hogs will work it over and get out all the grain.

Where fields have been freshly seeded to timothy or clover, it will not do to allow this heavy green growth to submerge the grass and clover plants even for one day. So the only thing to do is to cut it with mower or scythe and get it off the ground as quickly as possible. I have noticed during the last few days many fields of oats where exceedingly rank patches had gone down. Some are inclined to leave such fields and take the chance of a favorable wind straightening up the straw before it is ruined or injures the grass crop. At this stage of growth, heavy oats, blown prostrate, will not recover, so one might as well make the best of a bad situation and save the down stuff for fodder.

I have hogged off both oats and barley, which had lodged after the heads had become filled and the grain nearly ripe enough to cut, with fairly good results. Four years ago a ten-acre field of barley, on low ground, went to the ground just as it was about ready to cut. It lay that way for nearly two weeks before we could get onto the ground. When we finally got the stuff mowed it had sprouted badly. We fed it to young hogs and estimated we got the full worth of the crop.—L. C. Brown.

A TRIP THROUGH THE UNITED STATES—FIFTY POST CARDS FREE.

We have obtained the sole right to distribute a grand series of Post Cards entitled "A TRIP THROUGH THE UNITED STATES." We intend to issue them ABSOLUTELY FREE, postage paid, to all who will pay up one-year's subscription to this paper during the months of July and August.

HOW WOULD YOU LIKE TO SEE EVERY POINT OF INTEREST IN YOUR OWN COUNTRY?

There are fifty beautiful multi-colored Post Cards, showing all the beauties of our glorious country. The photographs for these cards were taken by an artist who made a special trip to secure them. These cards illustrate our great country from one end to the other. There is no education like traveling. This beautiful set of Post Cards is the only substitute you can have for a trip like this. You won't know what a beautiful and interesting country you live in until you take this wonderful Post Card trip. It would cost you hundreds of dollars to see all these places.

On this trip you will go to New York, Niagara Falls, Cleveland, Ohio, Chicago, St. Paul, Spokane, Seattle and California. You will travel through the Sunny South; the beautiful West and see the cowboys in action; you will go East, and see all there is to see on Uncle Sam's Farm.

If you like Post Cards, and we believe everybody does, does it not stand to reason that a set of cards picturing one's own country should be of the greatest interest? You read daily of important happenings in various parts of the United States. These cards will show you just what the places look like. If you travel in later years, you will not be a stranger in the various cities you visit. They will all be familiar to you through your Post Card trip.

Send us Fifty Cents to pay one-yar's subscription in advance to The National Farmer and Stock Grower and we will send one complete set of the fifty Post Cards as a free premium. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

A MODERN PACKING HOUSE—Part of the plant of Swift & Company at the St. Louis National Stock Yards. The packing house is a creator of trade. A majority of the products and by-products obtained from the cattle, hogs and sheep bought at St. Louis are sold all over the commercial world. Without neglecting home trade and home opportunities, wherever an opening seems possible Swift meats, soaps and other manufactures are offered for sale in foreign countries. The risk and profit or loss belong to the packer, but the benefits derived from their trade and unbounded enterprise are enjoyed in a measure by all stock raisers in St. Louis shipping territory. Swift & Company represent a large proportion of active competition on the St. Louis market.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

A Business Education

Pays large returns on the time and money spent in school. A few months in a good Business College will be of infinite value to every farmer boy and girl. A course at "BROWN'S, OF ST. LOUIS," will give you a practical education for business, whether you live on the farm or in the city. More farmer boys are attending Business College than ever before. They see the benefit of a good business education. They want to make more money. Send for our new catalogue and Special "Business Farmer Circulars." They are free if you mention the National Farmer. M. M. LINK, Superintendent Brown's Business College, Saint Louis, Mo.

More Corn—Fewer Beans.

This is the cry of the New England States, which are taking an interest in the National Corn Exposition and coming out to Iowa and Nebraska in December to learn from farmers who furnish the world's corn just how it is done.

So much interested are the New Englanders that they have informed the National Corn Association that after seeing the Corn Show in Omaha this winter they expect to give a Corn Show in New England next year. Practically all the New England States will be represented at the coming Corn Show, as well as many other states which could not arrange exhibits last year. Among them are North Dakota, Montana, Arkansas, Kentucky and Georgia.

Drummer and the Farmer.

A commercial traveler from Chicago, who was staying over night at a village in Central Indiana, found the time hanging heavily on his hands and went with several of the other guests at the hotel to a country dance. While there he noticed a buxom miss who danced in every set.

"Not a bad-looking girl," he said, addressing the remark to a stalwart, raw-boned young agriculturist who happened to be standing near, "but she dances like a hippopotamus. Who is she?"

"Mister," answered the young agriculturist, "you can say anything you please about her. She ain't no relation of mine."—Chicago Tribune.

Harvesting Alfalfa For Seed.

In harvesting alfalfa for seed, cutting should be done when the greater proportion of the seeds are hard, but not sufficiently ripe to shell. At this stage a majority of the pods are turned a dark-brown color and the seeds are fully developed. Frequently the cutting can be raked into windrows after two hours, if the weather is drying, and in two or three hours more put into cocks and let stand from twenty-four to forty-eight hours, as the weather may justify. It should, however, be well cured and thoroughly dry when put in the stack, or there is danger of heating, and stack-heating seriously injures the vitality of the seed. It is not uncommon, if extremely ripe, to leave the cutting in the swath only an hour or a half hour, then stack, and let stand for autumn or later threshing. If allowed to stand in the stack for about thirty days the entire mass goes through a sweating and curing process which makes the threshing easier, while less of the seed is left in the straw than would be if it had not been stack-cured. In Western Kansas many seed raisers cut their seed crop with a self-binder, put the sheaves in shocks the same day and thresh in about ten days, or put it into a stack to await a convenient threshing time. They claim to secure 20 per cent. more of the seed in this way than if they cut with the ordinary mower. Others cut with a mower having a dropper attachment, which leaves the alfalfa in small bunches at the will of the driver in the center of the swath, and these are "straddled" by the team and the wheels of the mower in the subsequent rounds. These bunches are left for two or three days and then stacked. There is little, if any, danger from mold or spontaneous combustion in stacks of alfalfa cut for seed, but there is danger of the seed heating in the stack if stacked when damp. If bright, clean seed is expected, the stacks must be well topped with slough grass, covered with tarpaulins or boards, or given other protection. It is better still to put the alfalfa intended for seed into a barn.

One Western farmer reports that he used a self-binding harvester, shocked the sheaves like those of grain, let them stand ten days and then put in a mow, with no bad results.

This is from Coburn's "The Book of Alfalfa." Price, $2.00. It is a complete work, containing everything about alfalfa. We will send a copy of Coburn's Complete Alfalfa for the publisher's price and include a year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Chatham Fanning Mill.

The makers of the Chatham Fanning Mill are very generous in their dealings, and on page 6 of this paper offer to send one machine on thirty-days' free trial to any farm. The Chatham Fanning Mill is a seed grader and cleaner. It will separate buckhorn from clover, barn grass from millet, red top from timothy, wild or tame oats from wheat, or any kind of weed seeds from any kinds of grain or seed, that from its nature is not impossible. We advise our readers to write for catalogue and prices, addressing Manson Campbell Company at Detroit, Mich., or at Kansas City, Mo.

General Farm Notes.

The first cutting of wheat in the vicinity of Abilene, Kas., began on June 26th. It was reported that much of it was being sold at $1.00 per bushel at the railroad.

"Before-the-war" prices were received on the floor of the Cotton Exchange, Houston, Tex., June 28th, when the first bale of this season's cotton sold at auction at $425. The bale came from Mercedes, Hidalgo county, and weighed 686 pounds. The first bale received last year arrived on June 20.

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address, Dr. G. M. Branaman, 1264 Walnut street, Kansas City, Mo.

A GREAT WASHING MACHINE.

Our lady patrons are advised to write to the 1900 Washer Company, 1266 Henry street, Binghamton, N. Y., for the New Washer Book and mention this paper. There are many washing machines, but this one seems to be doing business all the year round. It is sent on thirty-days' trial. See page 25.

STATE COLLEGES AND FARMERS ALL ENDORSE HUMANE HORSE COLLARS.

It will interest readers of this paper who have horses to investigate the Whipple Humane Horse Collar by sending your name to the nearest factory address below for the free book, "Horse Collar Sense," and fifteen-days' free trial proposition of satisfaction or money back.

Over one hundred thousand of these collars have been tried this way with the guarantee to cure your horses while working or money back. Now hot weather is here, don't use cruel "Sweat-Pads" and old-style, misfit collars which only make your horses' shoulders worse. Just try these collars, no risk to you, fit any horse, no pressure on shoulder-blade or bones where sores come—no pressure top or on windpipe—forty-five square inches pulling surface on each shoulder, properly distributed, while there is only ten square inches on other collars. Read two endorsements here below out of thousands received by the makers.

University of Illinois, Urbana, Ill., May 22, 1909.

Humane Horse Collar Company, Chicago Heights, Ill., and Omaha, Neb., Gentlemen:—I am to-day requesting the Purchasing Agent to send you a requisition for a pair of your Humane Horse Collars No. 2, stationary. We have used a pair of your Humane Collars for a year and a half with excellent results. Trusting you will be able to ship promptly without delay, I beg to remain, yours very truly, (signed) R. C. Obrecht, Associate in Horse Husbandry.

Ohio State Reformatory, Mansfield, O., May 14, 1909.

Humane Horse Collar Company, Chicago Heights, Ill., and Omaha, Neb., Gentlemen: I have charge of the teams and general farming at the Ohio State Reformatory, and upon my recommendation a set of your collars were purchased and I have been using them for six or eight weeks on a team that always developed sore shoulders when the spring work began. They have given entire satisfaction, not a sore or abrasion having appeared on either horse. I shall recommend the purchase of your collars for all our teams. Yours respectfully, (signed) A. N. Shaw, 101 Wood street.

Over 4,500 harness dealers carry Whipple Humane Horse Collars, but if yours don't happen to have them in yet, just send his name and your name and address and the company will send you their free book and prices and see that you are supplied freight prepaid, at no extra cost to you. Whenever you buy, you get fifteen days' free trial to prove satisfaction or money back. Address nearest factory, Humane Horse Collar Company, 1035 Lowe street, Chicago Heights, Ill., or 1035 South Thirteenth street, Omaha, Neb. Write to-day and save your team a sore and sweaty horses' time, and valuable hours each week when you need it most.

AN IMPORTANT DATE.

"What was the date of the Union of the Crowns?" asked an inspector.

"1603," he was instantly informed.

"Right. And why was this date an important one for you to remember?"

"Because you were sure to ask for it," returned the little victim of cramming.—Christian Register.

CULTIVATING THE IOWA COW.

Iowa has 1,400,000 cows, which produce an average of 140 pounds of butter-fat each annually. In Holland each cow produces 250 pounds annually. To bring the Iowa cow up to the Dutch standard a society for cow culture was organized at Des Moines, Iowa, recently.

The Iowa State College will supervise a competition for improving the Iowa cow in the following manner: Monthly tests of the cows at the dairy farms entered in competition will be made by the college, and next fall $5,000.00 in prizes and three silver medals will be dvided among those who have made the best showing.

An increase of twenty-five pounds of butter-fat for each cow would mean an increased production in Iowa of $7,000,000, while if the Dutch production were to be equaled, the increase would amount to $30,000,000. A cow that produces 250 pounds a year eats no more than one which produces 140 pounds or less; so part of the object of the cow culture club will be to impress on the farmers and dairymen the advantage of breeding the best and most productive cows possible.

There is another side to this, however, which is worth mentioning. Undoubtedly in Iowa, as in other states, thousands of pounds of butter-fat are wasted or lost every year by antiquating methods of skimming or by the use of inferior cream separators. If the standard of cows in Iowa or any other state is to be raised, it is only fair to the breed to give them the advantage of a cream separator which will get practically every particle of butter-fat from the milk. The U. S. Cream Separator has a firmly-fixed reputation among dairymen, farmers and agricultural experts for skimming to such a close percentage that many times it can be figured only as a "trace." With the use of the U. S. Separator and the development of more productive cows, Iowa should approach the Dutch standard of production as closely as may be, other conditions being equal. Write to the Vermont Farm Machine Co., Bellows Falls, Vermont, and ask for Catalogue 125.

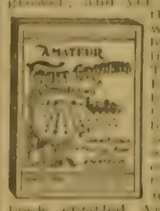
POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

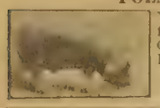
FOR THE FRUIT GROWER.



Someone in the family ought to be a fruit grower, and yet it is very hard to interest the stockman in fruits. We will do our best, however, to place a good fruit book in the hands of our readers. The book entitled Amateur Fruit Growing was written by Samuel B. Green, a practical man and well up on all of the latest methods of fruit culture. It is a book of 300 pages and is profusely illustrated. Each section with special reference to the growing of fruits in the home and the market. We will send this book entitled Amateur Fruit Growing and The National Farmer and Stock Grower one year for 60 cents. Send a money order to Hale Publishing Co., 3550 Vista Ave., St Louis, Mo.

LIVE STOCK BREEDERS.

POLAND-CHINAS.



You should get our prices for this month on Pigs. Others say we've got the kind. Write us about it.
KIRBY STOCK FARM, Marmaduke, Ark.

TRUMAN'S PIONEER STUD FARM,

Importers of SHIRE, PERCHERON and HACKNEY STALLIONS.

Write for catalogue.

Address,
J. G. TRUMAN, Manager, BUSHNELL, ILL.

POLAND-CHINA SWINE. Spring Pigs sired by Keep On Spellbinder and Chief Perfection. These Pigs are beauties. Will sell the choice of litters at $10.00 each. Buy now and this fall, when you will have a $25.00 hog.

D. F. BEAUCHAMP, Meredosia, Ill.

REGISTERED SHROPSHIRE SHEEP.

Rams, Ewes and Ram Lambs of the best breeding. Ram at head of flock sired by an imported English Ram out of a Canadian Ewe. Have used Rams from the best flocks in the United States and Canada. These sheep are bred for wool and mutton. Prices reasonable.

C. J. SMITH & SONS, Stubblefield, Ill.

WELLS' PRIZE-WINNERS "Are Better."

Barred Plymouth Rocks, White Wyandottes and Rhode Island Reds. Prizes at Illinois and Indiana (State Fairs), Mattoon, Nashville, DuQuoin, Thompsonville Shows. Premium Matings (15 eggs), $2.00; Standard Matings (15 eggs), $1.00.
FRANK WELLS, : : DuQuoin, Ill.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Prices reasonable.
WILLARD MILLER, R. F. D. 2, Anita, Iowa.

RED POLLED DAIRY and BEEF CATTLE.

This is the oldest and best combination breed for production of fat cattle and rich milk. I have Bulls and Heifers for sale at reasonable prices.
C. M. CHAMBERS, Bartlett, Iowa.

R. C. JOHNSTON, Lawrence, Kas.,
Breeder of Thoroughbred
REGISTERED ANGORA GOATS.
Goats for sale from imported Turkey and South African Bucks. Satisfaction guaranteed. Write for prices on Bucks and Does.

O. I. C. SWINE.

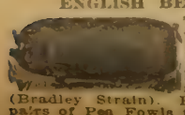
Pigs of all ages for sale. Good individuals. Priced right. Tell us what you want in the line of O. I. C. The best hog on earth.
ALVEY BROS., Meriden, Kansas.

THIRTY HEAD OF PEDIGREED DUROC RED BOAR PIGS, $8.00 a head; Kan't Be Beat and Choice Goods' breeding.
CHAS. DORR, Osage City, Kansas.

JACKS AND SADDLERS. The Cook Farms have 175 head of Registered Jacks, Jennets and Saddle Horses. One hundred head of these must be sold by the 15th of June. If you want a bargain in a good Jack or Saddle Horse, write quick or visit the Cook Farms.
J. F. COOK & CO., Lexington, Ky.

NOBODY BREEDS BETTER Fox, Cat, Deer or Wolf Dogs than I do. Send for free list. Closing out other breeds at your own price. Fox Cubs, $4.00 each.
E. F. WILMOTH, Shelbyville, Ky.

ENGLISH BERKSHIRE HOGS



That are bred right and will be sold right. Also M. B. Turkeys (Wolf Strain), S. C. W. Leghorns (Whycoff Strain), and B. P. Rock Chickens (Bradley Strain). Eggs in season. A few pairs of Pea Fowls for sale. Address,
M. W. MAGNUSSON, Safe, Mo.

ST. LOUIS THE BEST AND BY FAR THE MOST HIGHLY COMPETITIVE MARKET FOR SOUTHERN CATTLE. This picture was taken on a day in June when 250 cars of cattle were yarded and sold in the quarantine division of the St. Louis National Stock Yards. It has been proven time and again that in actual net results to the shipper the St. Louis market has averaged, month after month, year after year, about $2.00 per head more than similar qualities of cattle which have been sold in other Northern markets. This is mainly because when the cattle are slaughtered at St. Louis the meat is nearer the consumer than if it was slaughtered at the Missouri river markets, and because there is more competition at St. Louis than if the cattle paid an additional freight bill to go on to Chicago. There was a time when St. Louis did not receive the cattle and did not have the packers either. That time has passed, and St. Louis continues in the front of the Southern trade, and will continue to be there always.

ST. LOUIS THE BEST AND MOST COMPETITIVE LIVE STOCK MARKET ON THE CONTINENT. Office of ARMOUR & COMPANY, one of the firms that has helped to make it so. This great firm goes back unto the beginning of modern packing operations. Originally of Milwaukee, the business developed beyond the capacity of that city and centered on Chicago, where it became a giant organization, shipping American meat products all over the earth. ARMOUR & COMPANY finally spread to other principal markets, came to St. Louis, and is now a great factor in the trade, buying freely of cattle, hogs and sheep and adding to the consuming power of the market a million head of live stock each year.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won even out of nine first prizes at Lexington, Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907.

Nashville, Tenn., Sta. B., R. F. D. No. 7.

Turning Under Cowpeas.

A correspondent in Menard county, Illinois, asks: "Would cowpeas be all right to turn under instead of clover?"

In localities where clover does not seem to thrive, cowpeas have been grown with very satisfactory results. Both stem and root growth are admirably adapted for turning under where soils are deficient of humus. In some sections cowpeas are sown in June and cut for hay along in August, and afterwards the ground is plowed either for fall wheat or for a spring crop the season following. Handled in this way the succeeding crop gets the benefit of the roots only. If ground is really in need of humus and further supplies of nitrogen, why not plow under the whole crop, stems and roots?

When soil is tolerably good, I have frequently advised taking off one crop of clover and then plow the ground after the clover has made a rather heavy second growth. The roots of clover penetrate into the subsoil and gather much material which will be helpful to following crops, when this is turned, so that the roots as well as stems lie bedded in the surface soil.—L. C. Brown.

A Cent's Worth of Wheat.

There are 766,080 kernels in a well-dried sixty-pound bushel of soft red wheat, and at $1.50 per bushel it amounts to 5,107 kernels of wheat for a cent. And there are people who believe that one cent is too much for a farmer to receive for 5,107 kernels of wheat, or, in other words, one cent is too much to pay the farmer for the wheat that will make a half pound of good, wholesome bread. At $1.50 per bushel, one cent will pay for six ounces and four-tenths of an ounce of wheat, and if properly ground and the bran deducted therefrom, what is left will about make—nearly or about—a half pound of wholesome bread, better bread than city people are in the habit of getting.

"Hessian Fly and Greater Wheat Straw Worm" is the title of a bulletin issued by the Kansas Experiment Station, Manhattan, Kansas. It describes the work of both pests and how to control them. Interested farmers should write for Press Bulletin No. 179.

THE DOMESTIC SHEEP.

There is one modern writer on Sheep industry who has made his mark. It is Dr. Henry Stewart. He has written a book entitled **The Domestic Sheep.**

It is up-to-date in every particular. There are 384 pages, and besides going into the subject in a practical way there are illustrations of every breed and every subject belonging to the industry. For $1.50 we will send **The National Farmer and Stock Grower** for one year and one copy of **The Domestic Sheep.** This is the time to study the sheep business. There is money in it. Address.

SOUTHWEST SHEEP AND LAMBS

Making a Fine Record on the St. Louis Market, and St. Louis is Making a Splendid Record Selling Southwest Sheep.

Sheep arriving from Southwest Missouri are in a class by themselves. Originally they were called "Southwest," as a distinction from the so-called Natives. Native sheep are raised on richer pastures in Northern and Middle Missouri and were bred to the rams of the English mutton breeds and class higher in the market, but Southwest sheep being raised on the open range and pastures, were really more profitable than the natives, because they sold well and cost less to produce. The Southwest sheep arrive in market in considerable numbers and have such a good reputation that as we write this article good Southwest breeding ewes are selling at $5.00 to $5.50 per 100 pounds, whereas only a year ago breeding ewes were selling much lower, even down to $3.50 per 100 pounds. But the sheep from the Southwest can be as well bred and the lambs can be as good and sell as high as any sheep coming to market.

On the last day of May, at the St. Louis National Stock Yards, Davis & Erni, of Crawford county, Missouri, shipping on the Frisco Route, marketed 169 head of 69-pound spring lambs at $8.90 per 100 pounds. These were the first of the season from Southwest Missouri.

On June 10th, also at the St. Louis National Stock Yards, D. G. Hendricks, of Greene county, Missouri, also shipping over the Frisco Route, marketed a load of sheep that contained 138 head of spring lambs that averaged 68 pounds and sold at $8.75 per 100 pounds, which amounts to $5.95 per head for lambs not over four months old.

On June 9th, George Wills, of Christian county, Missouri, marketed a load of Southwest sheep and lambs. His 64-pound lambs sold at $8.75 per 100 pounds. On the same day A. J.

Mathew, of Scott county, Missouri, marketed 64-pound lambs at $8.75 per 100 pounds, and sheep that sold at $5.75 per 100 pounds, both sales being the highest on the day they were made. F. J. Cantrell, of Webster county, Missouri, also sold 64-pound lambs at $8.50, and a few lots at a less price.

On June 15th, J. E. Crews, a prominent stockman of Howard county, Missouri, marketed 150 head of nice, fat, light-weight lambs that averaged 58 pounds and topped the market at $9.00 per 100 pounds. These were smaller than the market was calling for, but they were nice quality and fat. This sale of native lambs is mentioned here to show the strength of the market.

On June 16th, also at the St. Louis National Stock Yards, from Christian county, Missouri, right in the middle of the Ozarks, Kissee & Jennings marketed a mixed load of sheep and lambs, and the lambs weighed an average of 70 pounds and topped the market for the day at $9.00 per 100 pounds, or $6.30 per head. The official reporter of the market said that there were more good lambs coming from Southwest Missouri than had ever come before in the history of the yards.

It must be remembered, however, that all lambs from any country are not top lambs. On the day the ninecent lambs arrived, 448 of 70-pound Southwest lambs sold at $8.90 per 100 pounds; 45 head, 62 pounds average, sold at $8.75; 33 head, 61 pounds, sold at $8.50; 49 head, 60 pounds, sold at $8.50; 196 head, 58 pounds average, sold at $8.25; and others averaging 50 to 60-pound Southwest lambs sold at $5.00 to $8.00 per 100 pounds, according to condition, quality and value, and all of them brought two to three cents a pound more money than they have usually brought one year with another.

The natural conditions of the Southwest are directly favorable to sheep raising. Nature has done her part, and if man will only do his, Southwest sheep will make name, fame and profit. The day of the sheep and lamb has come. America, like England, is becoming a nation of mutton eaters, and it is the St. Louis market that has done the most to bring this about. If the farmers will produce more good mutton sheep and lambs the market is already here and waiting, and the cost of transportation and marketing is very small compared with the total realized for the stock. Other June sales of sheep and lambs will be mentioned on another page.

Record Price For Clipped Lambs.

On Tuesday, June 1st, at the St. Louis National Stock Yards, M. F. Franabarger, a prominent stockman of Adair county, Missouri, marketed 175 head of clipped Western lambs that averaged 83 pounds and broke all records for clipped lambs on the market by bringing $8.40 per 100 pounds. These Western lambs had probably given up a fleece worth $1.50 per head before shipment, and made the total realized about $8.47 per head. Although these are still classed as lambs, they are most of them fully a year old. On the same day over 7,500 sheep and lambs were on the market.

COOPER'S FLUID DIP

CHEAPEST, PUREST AND BEST FOR
SHEEP, HOGS & CATTLE

A positive remedy for scab, mange, ticks, lice, ringworm, eczema, sores, stings, etc., and all disinfecting purposes. One gallon makes 150 to 200 gallons of liquid. Always uniform and mixes readily with any water. Price for gallon can, $1.75—5 gallon can, $6.50. If dealer can't supply you send to

Meyer Bros. Drug Co., St. Louis, Mo., or
Wm. Cooper & Nephews, 177 Illinois St., Chicago

The Ever-Increasing Demand For Sheep and For Lambs.

THE greatest opportunity ever presenting itself to farmers and stockmen is the

UNLIMITED DEMAND FOR SHEEP AND LAMBS

which has developed at the St. Louis National Stock Yards during the past five years.

This demand does not represent a temporary craze and excitement, which appear to-day and are gone to-morrow, but it does represent a slaughtering development which becomes better and stronger every time a thousand sheep and lambs are bought on the open market.

The managers of eight packing houses centering upon the St. Louis National Stock Yards have certified most distinctly that their sheep slaughtering

Has Not Been One-third of What It Would Be

if supplies were sufficient to satisfy their trade.

Instead of getting excited over the situation and fighting over a few loads of sheep which would not make up the deficiency, the buyers send to cheaper markets, where more sheep are concentrated, and pay out in freight bills the money they would as soon pay to the stockman who ships to the

St. Louis Market

in the first place. The extra freight money might just as well be in the pockets of the stockmen as in the traffic department of the railroad companies.

Marketing sheep is best done by shipping directly to the market where requirements are great and supplies are usually less than the trade can use to advantage. This points directly to the St. Louis National Stock Yards, where buyers are willing to purchase, slaughter and are able to sell to advantage

One Million More Sheep a Year

than were ever received upon the market.

Raisers, Feeders and Shippers of Stock will find it to their advantage to do business with the St. Louis market.

THE PRINCIPAL, ACTIVE, UP-TO-DATE COMMISSION FIRMS AT THE ST. LOUIS NATIONAL STOCK YARDS ARE REPRESENTED IN THIS PUBLICATION.

Clover, Skim Milk and Corn.

While visting a farmer in McHenry county, Illinois, a few days ago, I noticed an unusually fine bunch of pigs. I asked about their feed and care. They were produced by big, thrifty sows. Just as soon as they began to eat they were given skim milk and a little soaked shelled corn. As soon as the clover pasture was ready they were allowed to run in it, keeping up the skim milk and corn part of the ration. This ration is rather unsual, for most farmers prefer to feed shorts with their skim milk instead of corn. While this McHenry county farmer fed some mill feed, he always used it in connection with corn. He certainly got results. These pigs will be carried through the summer upon this ration. New corn is not fed here until it is well ripened. Many farmers commence feeding new corn just as soon as it reaches the roasting-ear stage, and invariably much trouble results. It is much safer, and the corn will go farther, if feeding is delayed until after the corn is rather hard. If corn for earlier feeding is wanted, it should be anticipated at planting time and a few acres of a very early variety planted. Our McHenry county friend does this very thing. He plants three or four acres of "Longfellow" for his hogs. This corn is rather a flinty dent; it matures by September 13th and makes prime feed. The pigs are turned into this field, where they run for about a month. They do their own husking. A few pounds of rape seed are sown amidst the corn at the last cultivation. This is much relished by the pigs along in September and October, when they are hogging down the dry corn.—L. C. Brown.

Coburn's "Swine in America."

"It is not a good plan to take all the pigs from the sow, unless one or two of them can be turned with her some hours after, to draw the milk she will have at that time, and again, say after a lapse of twenty-four hours. The preferred way is to leave about two of the smallest with her for several days, and after that leave only one for two or three days more, by which time the flow of milk will have been so gradually diminished that no injury will result to the sow by keeping them entirely away from her. This extra supply of milk helps also to push the smaller pigs along in growth and put them more nearly on an equality in size with their thriftier mates."

This is an extract from Coburn's "Swine in America." It is his new book, his revised book, his text book for the breeder, feeder and student.

Swine is a great crop in America, and Coburn is a great man, a great author and a great hog authority.

Coburn has written a book, a big book of over 600 pages treating of swine from every standpoint.

This book will interest you; it will help you, and it will pay for itself in a little while if you raise hogs.

If you do not raise hogs now, you will after glancing through this book; and you will get so much good, so much help, and so much enthusiasm that you will be certain to make money out of hogs.

This volume is handsomely printed on fine paper, from large, clear type, and is profusely illustrated, containing a large number of magnificent half-tone illustrations and drawings, printed on a special plate paper. Another unique feature is the frontispiece, this being an anatomical and physiological model of the hog. This model cosists of a series of superposed plates, colored to nature, on heavy, serviceable paper, showing all the skeleton, muscles, internal organs, etc., in their relative positions. This model is accompained by an elaborate explanatory key showing just how to use it.

The work contains 650 pages (6x9 inches), bound in fine silk cloth, gold side and back stamping, making one of the handsomest and most attractive agricultural books now before the public.

The price of Coburn's "Swine in America" is $2.00 per copy. Send us the $2.00 and we will deliver the book, charges prepaid, and we will credit one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Weight of Oat Straw and Heads.

A correspondent at Winamac, Ind., writes: "I have a small field of 'Swedish Select' oats this season. It looks fine, but the growth seems to be all straw. What relation, as to bulk or weight, should the heads bear to the straw?"

A large, well-filled head of oats needs a strong, stiff straw to support it. Some varieties grow a stiffer straw than others, and are thus capable of carrying a greater weight of heads than larger straw of poorer texture. A notable instance of this is in the "Khernon" and "Sixty-day" oats. These varieties carry extraordinarily heavy loads on a short, rather slender straw. But this straw is of splendid texture and is stout enough to carry a burden of heads. So when we undertake to say what relation heads should bear to the straw, we should consider the varieties and conditions of growth. With such varieties as "Swedish Select," "Great Dakota," "Silver Mine," "Big Four," and others of the same group, I should place the average at around two pounds of straw for each pound of grain. With such varieties as "Kherson," "Sixty-day" and "Early Champion," I should place the yield of grain at 60 pounds for each 100 pounds of straw.

The season also has a marked influence on the yield of straw. The bulk of straw is much greater this season than last, and present conditions are not favorable for filling. So we may expect a larger proportion of straw to grain this year than usual. Then, of course, the stage of cutting must be taken into account. I have in mind one very rank field of oats which is showing an unusual preponderance of straw. I should place it as high as 100 pounds of straw to each 30 pounds of grain. Last season we had the reverse of this. Our early oats run nearly 75 pounds of grain to 100 pounds of straw; in fact, one grower reported he had a greater weight of grain than of straw.—L. C. Brown.

Air a Food.

"Prof. King tells us that the air a cow breathes is a part of her food supply. That is absolutely true. But how many men believe it? You can tell pretty closely when you visit their stables in winter and see how well they provide this important food for their cows. Not one, we believe, to-day, out of a hundred, of the men who are keeping cows for profit in the United States make suitable provision for pure air for their cows. That shows how much they believe that 'air is food.' The increased performance of cows, when their stable is changed from the old, poisonous supply of air to the King system, is ample proof of the truth of this saying. But any man ought not to wait for special proof on this question. The general principle of the necessity of pure air ought to put him well on the road of itself."—Hoard's Dairyman.

Money in Sheep.

Experts have said that there is nowhere a better sheep land than

THE HILL COUNTRY

along the Missouri Pacific—Iron Mountain in Southeast Missouri. Abundant pasturage, good water and near the best market in America—St. Louis.

Why Don't You Invest in a Ranch?

The land is cheap and it doesn't take much to stock a small place. There is big profit, and it won't work you to death. It's just the time now to look over the land and get ready for the fall start.

Our Little Pamphlet, "MONEY IN SHEEP," Tells You All About It.

B.H PAYNE, General Passenger Agent, ST. LOUIS.

MISSOURI PACIFIC IRON MOUNTAIN

Last of June Hog Prices.

The closing June prices for hogs were on a basis of $8.05 per 100 pounds for choice hogs 265 pounds average. Other loads, 200 to 250 pounds, sold at $7.65 to $8.00, most of them at $7.85 to $7.95. On the same day top hogs at Kansas City were at $7.85. Light hogs at St. Louis, 150 to 190 pounds average, sold at $7.40 to $7.82½; and pigs and lights at $5.00 to $7.65. Heavy culls sold at $7.00 to $7.50. On the same day, Chicago top was the same as St. Louis, and Omaha 25 cents below St. Louis.

The Colonel—"Confound it, sir; you nearly hit my wife!" Jagson—"Did I? Well, you have a shot at mine."—The Sketch.

SECTION OF THE QUARANTINE DIVISION AT THE ST. LOUIS NATIONAL STOCK YARDS. On the day this picture was taken there were 250 cars of Southern cattle in the yards, all received, yarded, fed and watered by 9 o'clock a. m., and all sold by 3 o'clock p. m. In this connection it is well to remark that the healthiest cattle received and sold on any market arrive at St. Louis. This also applies to sheep and hogs. The cattle in the pen were raised in Coleman, Texas, and grazed in Oklahoma. In the pen are Mr. Al Keechler, Cattle Salesman for Cassidy-Southwestern Commission Company, and Mr. George B. Mills, Cattle Buyer for Swift & Company. On the pen at the back are Mr. Boog-Scott, of Texas, and his feeding partner, Mr. Thompson. The cattle sold for $5.40 per 100 pounds.

The BOOK of LIVE STOCK CHAMPIONS

The Greatest Book Ever Issued in the Interest of the Live Stock Industry.

This extraordinary book is a volume of 240 pages, nicely bound in cloth, size of page, 6 x 9 inches, and contains five hundred half-tone pictures of the greatest and most valuable animals that ever lived.

Every picture in **The BOOK of LIVE STOCK CHAMPIONS** represents a champion in domestic live stock. There are first-prize, sweepstake and championship winners at State, National and International Fairs and Expositions, including two World's Fairs. The pictures include every breed of dairy, beef and general-purpose cattle, running, trotting, jumping, coach and draft horses and ponies; fat swine and individual champions of every breed of sheep; also famous Angora goats.

Our offer is this: "Anyone who will send in one dollar on subscription account can select a copy of the latest, up-to-date **BOOK of LIVE STOCK CHAMPIONS** as a premium, and he will also receive **The National Farmer and Stock Grower two years.**"

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista avenue, St. Louis, Mo.:

Herewith please find one dollar to pay in advance for two-years' subscription to **The National Farmer and Stock Grower** and to include a copy of the latest edition of **The BOOK of LIVE STOCK CHAMPIONS.**

Disposition an Important Item.

We consider the disposition an important factor in dealing with the genus homo. It is quite as worthy of note when considering the fowls and animals of the farm. Even in the poultry house it is worth while to observe the different methods of individual birds and verify or prove false the conclusions drawn.

When hens have a free range, some will hang around as if hoping that you will fuss over them continually, while others will bustle off in a business-like manner as soon as the morning meal is eaten, showing by their air that they have work of their own to do. A bug here and a bit of grass there are appropriated, and a foraging trip is well started by the busy-bodies, while the loafers mope around, looking wistfully at you as though expecting another shower of grain.

It does not take long to decide which are the profitable birds. It is those that show a willingness to work, to exercise. They may not always be the largest. We have seen hens that were always on hand when there was any food distributed that crowded the rest to the rear and could eat twice as fast, yet which were failures as egg producers. The only way to get even with them was to convert them into roasts or stews, and the sooner this was done the more profit to the owner.

The same difference may be noticed during the brooding season. One hen will patiently feed her chicks, snatching a bite herself only when they are satisfied. Another will greedily devour the food designed for them in spite of your protests. Which disposition will you choose?

Again, one sitting hen will fight almost to a finish if an intruder of any sort appears; another will fly away without resisting. It is easy to see that while the latter may be a profitable layer, she would never make a good mother. When selecting sitting hens, remember that grit is an essential to success.

Quarrelsome hens are always a nuisance, the injury which they may do to their young rendering them undesirable as brooders. When two hens persist in fighting, it is policy to get rid of one of them as soon as possible; ditto, as to roosters; one will eventually come to grief before you know it; and even if it does not, sparring matches are never profitable, even in the poultry yard.

But distinguish between disposition and training. You may be at fault with the latter; possibly reform is not yet too late. If you persist in feeding the chickens near the door, do not be surprised if they hang around at all times of the day in hope of a stray crumb. If you have no garden fence, do not blame them if they scratch up and eat the newly-planted corn, especially if corn is scantily fed. If no dust bath is provided, do not censure too severely if they improvise one in the middle of your flower bed.

Study your flock individually and collectively and decide what traits you can endure, what ones you can adapt to special cases, what ones you can correct and what ones must be eliminated. It is only through careful supervision that the best results can ensue. Reward the diligent by better care; condemn the lazy and selfish, for which wou should have nō use in the flock.—Bessie L. Putnam.

Business Education Necessary.

Eighty per cent. of the graduates of city grammar and high schools, and nearly all the graduates of country schools, require a business education before they can earn money. They cannot go into offices or factories without a business education, except as office boys, messengers, etc. They lack the one thing needful; that is, knowing how to handle themselves. In big cities, like St. Louis, when there is a vacancy for a young man or woman in an office, they simply call up one of the business colleges and get one who is just finishing the course. The young man comes fully equipped to go to work; he can fill in endorsements in checks; he can make up a bank deposit slip; he can keep books; he can take dictation and write a letter. He naturally becomes a useful member of the force. If he is lazy and watches the clock and does not take an interest in the business, his promotion is slow; but if he is intelligent and industrious he soon works his way upwards. Young people can be divided into those who know and those who know not; those who can and those who cannot; those who try and those who try not. They soon find their level. A business education such as one can obtain in a few months at Brown's Business College is worth a couple of years' experience in business life. The business world is crying out for capable young men. Live ones, not dead ones; young ones, not old ones. There is no time to educate young people in a business house—all the preparation has to be done outside. Then there are municipal, state and federal government positions. The capable applicants pass; the incapable are turned back. Farmers' sons are wanted, provided they have the business education. Farmers' sons usually bring good health and good habits to bear upon the problems of life. We mention Brown's Business College because it is probably the best in the city; the building is new, up-to-date in every respect; instruction straight from the shoulder; nice locality, suitable associations, and, above all, it appeals distinctly to the ambition of youth to become self-reliant and capable men and women. Write to Mr. M. M. Link, Superintendent Brown's Business College, St. Louis, Mo., and after mentioning The National Farmer and Stock Grower ask for the "Business Farmer Circulars."

MONTANA TWO-YEAR-OLDS—Geldings and mares. These are range horses, and an average lot of two-year-olds in fair to good condition. They were sold at auction at the St. Louis National Stock Yards, June 29th. Later on many of these will come back to be sold in the domestic sale ring. There is considerable prospect that many of these horses when matured will sell for $75 to $100 per head more than they cost in the range auction pavilion.

Light-weight Butcher Steers.

Native butcher steers of good quality and in good flesh outsell many loads of heavier cattle. The last day of June, on the St. Louis market, with 6,000 cattle on sale, the top price for 1,400-pound cattle was $7.00; and twenty-three head of 946-pound steers sold at $6.90; twenty-nine head, 917 pounds, $5.65; eleven head, 965 pounds, at $5.50; and thirteen head, 778 pounds, at $4.50. These figures indicate prices of inferior to strictly good light-weight beef cattle, with room at the top for strictly choice yearling steers—all quotations being at the price stated per 100 pounds.

Government Cotton Report.

The government report on the growing cotton crop, July 2, shows the condition 6.2 points below the ten-year average. It is given as 74.6 per cent., as compared with 81.1 last month, 81.2 for the like month in 1908, 72 for the corresponding month in 1907, and a ten-year average of 80.8 per cent.

"What broke up the suffragette parade?" "A department store hung out a sign announcing $2.00 silks at $1.90."—Birmingham Age-Herald.

MONEY IN SHEEP. The St. Louis market has demonstrated that there is a great, growing and unsatisfied demand for sheep and lambs. It is a natural development growing out of the fact that the population of the United States is increasing, and it is due to some extent to the improved quality of the sheep and lambs marketed. To give actual credit where credit is due we must do justice to the packers. Only a very few years ago the demand for sheep was small. There are many markets where full car-loads of cattle and full car-loads of pork products could be shipped for sale, but few of the cities had coolers that could handle and sell full car-loads of sheep and lambs. Therefore it is in the mixed loads of beef, pork and mutton that packers put up and send to the smaller towns and cities that has created a regular, consistent demand for sheep and lambs that is making the sheep-growing industry highly profitable. So far as sheep are concerned, all markets have done their part; but when it comes to lambs, it is the St. Louis market that takes the lead. The MISSOURI PACIFIC RAILWAY has issued a booklet, entitled "MONEY IN SHEEP," which is very interesting and based upon actual facts of the trade. It is advertised on page 24. Kindly mention this paper when writing for the pamphlet.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. Lightning Fish Lure [illegible] One man caught 20 in half hour; another [illegible] kept busy hauling them out. Write today [illegible] Free. Agents wanted. FISHERMAN'S SUPPLY CO., Dept. 20, St. Louis, Mo.

THE UNIVERSAL AMERICAN FLAG.

Every family should own an American flag from patriotic motives, and the good and lasting flags that are of extra material and fast colors are hard to get. We have a flag of nice, soft cloth, fast colors, 2½x4 feet, a splendid flag. We are assured by the manufacturers that it is the best flag made, and it surely is one that any of our readers will be glad to own. We have adopted the Universal American Flag as a subscription premium. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the Universal Magazine for two years, and we will send the Universal American Flag postpaid as a free premium. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Outwitting Himself.

A celebrated physician once attended the child of a wealthy French lady, who was so grateful for the recovery of her boy that she determined to give a larger fee than usual for his attendance. As he was taking leave on his final visit, the grateful mother handed to the doctor a handsome pocketbook, which she said she had worked with her own hands. The doctor bowed stiffly and said: "Madam, the pocketbook is quite a work of art, and I admire it exceedingly, but my fee is two thousand francs."

"Not more?" she replied, and, taking the pocketbook back, she removed from it five one-thousand franc notes, and handed two of them to the doctor, bowing stiffly in her turn, and, replacing the other three notes in the rejected pocketbook, she retired.

Caring For Nice Glassware.

Pretty pieces of glassware can be purchased so cheaply nowadays that nearly every housekeeper can afford a number of pretty articles for the table; but no matter how handsome the pieces may be, they will not add to the appearance of the table unless they are kept shiningly clean.

Before washing glassware, rinse out every particle of milk, fruit or anything that is colored, as hot water will sometimes drive the coloring matter into the glass and ruin its brightness, and use bits of old soft cloth for wiping out the dishes before washing them.

Shot and tacks are very often used for cleaning vinegar cruets and water bottles, but they are apt to scratch the glass and thus mar its beauty, and the best and easiest way to clean them is to put crushed egg shells in the bottle with plenty of hot suds and let them remain over night. In the morning, give the bottle a vigorous shaking and a good rinsing out.

Fine pieces of glassware as well as the pieces in every-day use can be kept shiningly clean by putting them in a strong suds made by stirring enough Pearline in warm, soft water to make a nice lather and then washing the dishes quickly through clear hot water.

Use a brush for cleaning the outside of glass dishes that are deeply cut, and, after rinsing them, wipe with one dry towel and polish with another free from lint. The commonest kinds of dishes can be made to look beautiful by washing and drying in this way, and if any of the glass is dim it will spoil the appearance of the table.

Glass dishes may be mended with melted alum, which must be applied hot and the pieces tied carefully together.

To make the glass shining, the dishes should be washed, rinsed and dried as quickly as possible, and if an extra shine is desired, rub the glass with a flannel dipped in alcohol and then in whiting after it has been dried with a soft towel; but this will not be necessary if the glass is carefully washed and thoroughly polished.—M. H.

For the Antiseptic Dairy.

Uncle Daniel Dewberry wandered around the big department store idly watching the scintillating colors of the electric fountain.

"Well, sir," said the clerk, suavely, "what can I do for you?"

"I want a toothbrush," began Uncle Daniel, and then, before he could say any more, the clerk was tumbling down boxes like circus tents at a one-night stand.

"Yes, sir. You want the latest Parisian importation with the removable handle?"

"No, bub; I—"

"Ah, I see. You want the Japanese special. Antiseptic bristles—"

"No; I—"

"Ah, how stupid of me! You want a toothbrush for the madam—"

"Will you please—"

"Oh, for the baby, eh? Well, here's a peach. The 'Baby Grand.' We—"

Uncle Daniel brought his horny fist down on the counter.

"Young man," he thundered, "let me say a word! I want a toothbrush for our old cow. These pasteurized, hygienic, antiseptic dairies are using them and we want to be up to date, too, be gosh!"

And then the clerk collapsed.—Chicago News.

AGENTS WANTED

We want men who are not actively engaged in business to act as our agents. We pay liberal cash commissions. Write for our catalogue and full particulars.

THE HORSE'S COUGH.

The cold evenings in early summer are often the occasion of starting horses of all ages to coughing. Prevention of a cold by the use of a tonic regularly of Craft's Distemper and Cough Cure is found to be the safer policy. Where prevention is neglected, this is a guaranteed safe cure, which is easily given in the food or by pouring on the tongue. It may be obtained at druggists, or, if need be, one may order it direct from the makers, Wells Medicine Company, 17 Third street, Lafayette, Ind.

"With all respect to the missionaries, who are very good people, we never yet saw one that we would care to eat."—Exchange.

ST. LOUIS THE GREAT MARKET FOR WESTERN RANGE HORSES. This picture was taken on Monday, June 28th, in the cutting pen of the St. Louis National Stock Yards. They were a bunch of yearling colts and fillies sold at auction on the day following with a thousand others. These sales are conducted every other Tuesday during the season. The sale on Tuesday, June 29th, was the second of the season. The July sales are scheduled for July 13th and 27th. These are the greatest range horse sales, and all horsemen will find it to their interest to attend them.

The Festive Fly.

Once we thought it bad enough to have the fly lighting on our nose when we wanted to sleep, and tumbling into our food as it came to the table. It was a matter of inconvenience, sickening sometimes; that was all. But modern science has shown its presence to be more than this; it is alarming. We used to wonder how we got typhoid, and with the dangers of impure water thought we had solved the problem. But, after all, it is only half solved. Modern investigators have found that the bacteria are carried by the thousand through the agency of the omnipresent fly.

The remedy is, more persistent fighting of the six-footed pest. Screens are, of course, a necessity. If they have holes, one can quickly mend small rents with black cloth, this being most inconspicuous. But if the holes are large, it pays better to get a piece of new wire cloth and replace the section which is ragged. A few cents and ten-minutes' time will thus render the old as good as new.

A horse barn near the house will require extra attention, as if not kept well cleaned in summer it breeds flies. For the same reason a horse pasture near the house is undesirable.

If you have not a closed sink, strive to keep all dishes washed as fast as used, or at least keep them closely covered. Closed cupboards in the pantry are of prime importance. Darken the rooms daily long enough to drive out the flies. This may be most readily done if a door opening into the sunshine can be left ajar and the flies brushed toward it with a palm-leaf fan or a leafy branch. Oil of lavender sprinkled about the room is distasteful to them, yet it gives an agreeable freshness to the room.—Bessie L. Putnam.

The Insect Pest.

Recently a leading daily in one of the most intelligent cities of Pennsylvania announced with evident alarm the fact that some insect was destroying the leaves of the magnificent shade trees in which her citizens took a pardonable pride. The enemy was not confined to a limited part of the city, but its depredations were spread over the entire area, and it looked as though the beautifully-shaded walks were to be lost and only grim specters left to remind of former beauty.

No one seemed able to cope with the problem. All looked with silent concern upon the common enemy.

But the next day a farmer who lived several miles out arrived on the scene, armed with a first-class spraying outfit and the necessary insecticides. It is needless to say that he found an abundance of work; and a week later the same daily announced that as a result the pest was in many parts of the city under subjugation and the trees had already improved in appearance.

The shrewd farmer had doubtless earned the price of the sprayer and a goodly profit for his time. More, he had shown to himself and to the community in which he lived the necessity of keeping abreast of the times. While his urban neighbors were wondering what to do, he packed up his apparatus and showed them. It was all A, B, C to him, for hadn't he been reading his farm papers and picking up all the new ideas about the use of insecticides? Truly the farmer of to-day must use as much brain work as the professional; but it is work that pays, if not in dollars and cents, it brings the honest satisfaction of having increased the one God-given talent to ten, of maintaining and developing nature's handiwork.—Bessie L. Putnam.

A Useful Shower.

A bride-to-be was recently given a pretty and useful shower. Of course, only intimate friends were invited. Each guest was asked to bring a handkerchief as a gift to the bride and also an original cooking recipe and a penny photograph of herself.

A few days before the event took place a committee visited the invited guests and suggested that each contribute a small sum of money, not more than fifteen cents, with which to buy material for kitchen towels, dish cloths and iron holders.

Arrived at the house, the guests placed their handkerchiefs on a table arranged for that purpose, and then in the course of the evening each girl took her place at the writing desk and copied her recipe in a neat little book which had been prepared for the purpose. Many of the girls attached some joking comment to the recipe and pasted her picture somewhere on the page.

In the course of the evening two dozen towels were hemmed, a dozen dish cloths finished and about a dozen and a half iron holders were made.

Sandwiches, ice cream and cake formed the refreshments.

But this was not a case in which the bride was to receive so much without giving anything. Just about the time refreshments were served the prospective groom appeared with his very excellent camera under his arm. He proceeded to take flashlights of the group in various positions and each guest was promised one. The groom took charge of these, and several days later the girls each had a set of the souvenir pictures to drop in their memory box.—Janet Thomas Van Osdel.

Preparing Nervous Children For Rest.

If children have a tendency to be wakeful for a long while after going to bed, or if they are restless and toss about after once falling asleep, it is because they are under some sort of a strain. It may be that a heavy supper eaten shortly before retiring is the cause of this restlessness. The healthiest girl I have ever known and one who grew to fill a large place in life is a young woman, who, when eighteen years old, was still following her childish habit of eating a dinner in the middle of the day and a bowl of bread or crackers for her evening lunch.

But another cause for unquietness after the bed hour has come is that the nerves of high-strung little creatures have been wrought up to a high tension by the exciting events of the day, and it may take several hours before they can be soothed into quietness. The best way to overcome this is to have a few quiet minutes with the children just before they go to bed, and in this time draw their thoughts from the events of the day. A quiet little story without adventure in it is almost sure of results. The stories of adventure should be kept for some other time of the day. Bedtime stories and poems are to make one forget all about the trials of school and the fun of play.

Perhaps it is because Robert Louis Stevenson was forced to spend so many of his hours in "counterpane land" that he has given so many choice bedtime poems to our children. Of all the poets he seems to reach the little hearts the best, and his quiet, cheery verses make the bed hour seem a most desirable time. Many is the happy child who has gone to sleep with the words of "A Good Boy" to dream on.

"I woke before the morning, I was happy all the day;
I never said an ugly word, but smiled and stuck to play.

And now at last the sun is going down behind the wood,
And I am very happy, for I know that I've been good.

My bed is waiting cool and fresh, with linen smooth and fair,
And I must go to sleep and not forget my prayer.

I know that till to-morrow I shall see the sun arise,
No ugly dream shall fright my mind, no ugly sight my eyes.

But slumber holds me tightly till I waken in the dawn,
And hear the thrushes singing in the lilacs round the lawn."

After a few readings the child will begin to repeat this with the mother, and it will undoubtedly become one of the bedtime favorites. Another of Stevenson's bedtime poems is "My Bed is a Boat."

"My bed is like a little boat;
Nurse helps me in when I embark;
She girds me in my sailor's coat
And starts me in the dark.

"At night I go on board and say
Good-night to all my friends on shore;
I shut my eyes and sail away
And see and hear no more.

"And sometimes things to bed I take,
As prudent sailors have to do;
Perhaps a slice of wedding cake,
Perhaps a toy or two.

"All night across the dark we steer;
But when the day returns at last,
Safe in my room, beside the pier,
I find my vessel fast."

—Janet Thomas Van Osdel.

How Girls Can Make Fancy Hat Pins.

A very pretty conceit is the hat pin made of sealing wax, and it is something in which every girl can become skillful after a little practice. They are made as follows: Have on hand the ordinary black-headed hat pins and a number of sticks of sealing wax of different colors. The gold and delicate colors work up most prettily in the hat pins. Now melt the sealing wax and dip the hat pin in it, keeping up a constant, steady twirling motion of the hat pin in the same direction, dipping and twirling continually until the pin has a head as large as is desired. Several colors may be worked into the hat pin by dipping from one color to the other if desired. A gold wax with just a touch of pale blue or pale pink added at the last makes a pretty combination. The secret of getting the head perfectly smooth is in the swiftness and smoothness of the twirling, and the longer it is practiced the more adept does the hat pin maker become. In one of the large factories of odds and ends in novelties one of the girls gives her entire time to making these hat pins of sealing wax, and she has become so skilled in handling the wax and the pins that she turns out really artistic work.

An ingenious girl gave a party to girls recently at which she introduced this hat pin making as one of the amusements of the evening, and each girl carried home with her as a souvenir the hat pin she had made.—Janet Thomas Van Osdel.

The Other Side of It.

"It's no disgrace to fail if you have done your best," said the philosopher. "That may be so," replied the man who had failed. "But it's pretty tough to have to admit that the best you could do was to fail."—Detroit Free Press.

"The straight and narrow path—the fire escape."—Chicago News.

Dress Economy

Simpson-Eddystone calico prints are fine long-wearing cotton goods. The patterns are stylish and beautiful, and the colors are absolutely fast. Some designs in a new silk finish. They solve the problem of stylish dressing at little cost.

Standard for over 65 years.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't them write us his name. We'll help him supply you. Don't accept substitutes and imitations.

FOR THE VEGETABLE GARDEN.

There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 252 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

They Were From the South.

"I could tell you were from the South," said the wag.

"Could you?" she asked sweetly.

"Yes. You see, you have a Mobile countenance."

"That's nothing," was her airy reply. "My husband has an automobile face."

Pure Water Needed on the Farm.

There are three things which are essential to our own health and which we should freely partake of, and the best thing about them is that they are all free, if we live in proper surroundings. These are sunshine, pure air and pure water.

We should see that our supply of water that is used on the farm is pure, especially that for drinking purposes. We cannot any longer afford to require our stock to drink water from dirty ponds. Stock that we are feeding for a profit should have pure water in order that they may do their best. I know of one load of cattle that were feeding for market, and they had to drink from a pond that the hogs wallowed in, and the water was rather a thin mud than water, and of this the cattle had to drink, and I am satisfied that the owner lost enough on this load of cattle alone to pay for the best well in the county.

The farmer who does not provide good drinking water for his family is greatly endangering their health, and we cannot afford to endanger ourselves and family. There are many cases of sickness and death which are traced to the drinking of bad and impure water. The man on the farm has the best chance of providing pure water, and we should be glad of this and take advantage of the fact and see that we have it; likewise we have the best privilege of having pure air surrounding us. In countries where there are springs, most of the water as it comes from the spring head is pure and as good as we can get it; but in countries where there are no springs to speak of and we have to depend upon other sources, we like to have water for drinking purposes come from living wells, as we like this better and it is more apt to be pure than from most cisterns. The cistern is a good thing to have if we can have good and pure water in it.

There are many things which we can do that will help make water pure in wells. If we keep the place cleaned up properly and not allow filth to lie around and accumulate, we are going a long ways towards helping matters. If we have the well a short distance from some place where filth is dumped, there are great chances of the water becoming contaminated. The best rule is not to throw anything around, and do not have any waste pile. There is no use for it. Put everything back on the soil, where it will do some good, and that which will not rot, burn it and get it out of the way. Sanitary surroundings above ground go a long way towards making pure water and pure air. Many have a place for dumping the wood ashes in a pile, which a beter way would be to take out at once and scatter on the land. Instead of having a dump pile, I carry the bucket and scatter under some fruit tree, or in the berry patch, and thus keep things clean and sightly, and yet have this refuse matter doing me good. Instead of having a place to dump the wastes from the kitchen, either give to the hogs or chickens, and let them have some good from it.

It will pay to have pure water to drink at any cost, but it is almost free to most of us. A few years ago several cases of sickness were near us, in which two of the family lay sick for three months, but finally recovered. My belief is that bad water was the cause of it all. We farmers have the best chance to give ourselves and family pure surroundings in which to live, and it is our duty to do this, and we should be so inclined.—E. J. Waterstripe.

Pat's Appreciation.

An artist had finished a landscape; on looking up, he beheld an Irish navvy gazing at his canvas. "Well," said the artist familiarly, "do you suppose you could make a picture like that?" The Irishman mopped his forehead a moment. "Sure, a man c'n do anything if he's druv to ut," he replied.—Philadelphia In-

Line Busy.

"No," drawled the Mayor of the far Western settlement, "the boys had some money tied up in that thar bankrupt telephone company an' they just didn't like the way the receiver was handling the business."

"Didn't, eh?" commented the tourist. "Well, what did they do about it?"

"Oh, they just hung up the receiver."—Chicago News.

Which Was the Beauty?

"Halloa, Mrs. Lovejoy!" exclaimed a gentleman of that lady's acquaintance. "Pray what brings you out so early in the day?

"Oh, I've just been to the photographer's with my pet dog, Dido" (which she carried in her arms), "and we had our portraits taken together, haven't we, Dido? Beauty and the beast, you know, Mr. Johnson"—with a saucy little laugh.

"And what a little beauty he is, to be sure!" replied Johnson, inadvertently, as he tenderly stroked poor Dido's head and pulled his ears. And then he suddenly remembered what he was saying and became hot and cold in turn.—Tit-Bits.

Not Meant For Him.

Farmer—"Hi, there! Can't you see that sign: 'No fishing on these grounds.'"

Colored Fisherman—"Co'se I kin see sign. I'se cullid, boss, but I ain't so ignorant as ter fish on no grounds. I'm fishin' in de crick."—Driftwood.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock, 890 Carrier Building, East Hampton, Conn., says that if any of our readers afflicted with a Kidney or Bladder trouble will send their address to him, he will gladly and without charge direct them to the splendid remedy he so successfully used at home in his own case.

THE POPULAR BICYCLE.

The Bicycle is holding its own and gaining. Not so popular as during the "craze," yet it is advancing on its merits and usefulness. Cycle clubs are forming again and country tours are numerous. The great item in connection with Bicycles is the survival of the Mead machines. All the high-priced wheels have disappeared, because they were not worth the money, but the moderate-priced Mead machines survived because they were worth more than they cost. Send to Mead Cycle Co., D 138, Chicago, and ask for particulars of ten-day trial offer.

GREAT FAITH IN ABSORBINE.

Another example of what my customers think of my remedy for use on blemished horses is found in the following letter, received under date of March 19th, 1909, from E. S. Jenkins, Center Point, Ind. He writes: "Have been using your Absorbine for two years with great success for contracted tendons, lumps, swellings, etc. Had a horse that had been lame for eighteen months with strained tendons of the left leg, and two and one-half bottles of Absorbine cured him. I have great faith in Absorbine for such cases as I mentioned. Have recommended its use to many and have aided the druggist in building up a pretty fair sale of it in our little town. I don't deserve any praise for this, for I feel that I owe it to the medicine to tell my friends of its merits." You would find Absorbine equally beneficial, and, if you do not already have one of my free booklets, write at once. You can procure the remedy at your druggist's, or sent postpaid upon receipt of $2.00. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

Earn Stevens Rifle

I Have a Genuine 22 Caliber Stevens Rifle for Every Boy Who Will Write to Me.

This is a 22 caliber Stevens hunting rifle. It is not a toy but a real rifle shooting long or short cartridges. It has a well rifled barrel, fine sights, walnut stock. It is more than three feet long and is in every way a dandy gun. Just what every boy wants to hunt with and for target practice. It is a gun you will be proud to show your friends and I know you will be delighted with it. You know what a splendid gun the Stevens is, the best known rifle in the world. I want to give you this splendid rifle and all I want in return is a little easy work. Write me today and I will tell you all about the gun and just how you can get it.

How He Got Rid Of Consumption

Remarkable Rescue of Prominent Indiana Man a Matter of Life-and-Death Interest To All Throat and Lung Sufferers.

For Benefit of National Farmer and Stock Grower Readers, He Tells How He Cured Himself at Home — Costs Nothing to Try.

"I think I owe it to all sufferers of lung and throat trouble and consumption to tell them some mighty good news, a sure way to cure themselves right at home with little trouble," said E. S. Stroh, of Angola, Ind., yesterday, as he passed through.

"Coming from me, probably, some people might doubt this, but let me tell you," he said, as his 66-year-old face flushed with a resurrected, youthful smile, "over two years ago I was a weazened-up wreck, a consumptive at 63. Three lung specialists passed me up. Every day I would cough up about a pint. I had chills and fever every afternoon. I could hardly eat, even the plainest food, coughed nearly all night, and was down to 137 pounds when I hit on the cure. Well, you see me now. I weigh 166 pounds, frisky as a boy at 66, can do a big day's work, and eat like a prince.

"Now I am not trying to boost anybody, but I must give credit where credit is due. Dr. J. Lawrence Hill, 505 Hill Building, Jackson, Mich., the well-known lung specialist of America and probably so far the only successful one, cured me. That was two years ago. I have just had my lungs examined again and there is no trace of consumption nor danger of its returning. Dr. Hill makes a specialty of treating throat and lung sufferers at a distance who have not the means of visiting his office personally. That's the way he cured me, and I know of many others who had one foot in the grave almost, brought back to life by what he calls his Rational Treatment. It certainly is a wonder.

"I wish every reader of your paper who has weak lungs, catarrh of the bronchial tubes or catarrh in any form, chronic bronchitis, asthma, chronic hacking cough, loss of flesh, night sweats, hemorrhages, soreness or pain in the chest or under the shoulder blades or any other deadly symptom of consumption, to send to Dr. Hill for his trial package. This treatment checks at once further progress of the disease, develops atrophied cell tissues and brings on new resisting power, appetite, flesh and good health." Fill out the coupon below and mail today.

Trial Treatment Package Coupon

Dr. J. Lawrence Hill,
505 Hill Building, Jackson, Mich.

I am suffering from throat and lung trouble, so please send me your large trial package in plain, sealed wrapper, that I may try it and see for myself if it will do what you claim it will. I enclose 20c. to help pay for packing, etc., and as an evidence that I am not sending for the trial package out of idle curiosity.

NAME.....

ADDRESS.....

Knowledge of Wheat Conditions.

In the month of May, American farmers obtained the knowledge of the true value of wheat from the grain market, and not from any other source of information.

The Chicago Board of Trade is the principal grain market of the country, and there the discovery of the shortage created the faith that was the support of the speculative campaign. A certain few buyers came to the conclusion that wheat was cheap and sure to advance, especially if they bought and held large quantities of it. It must be understood in this connection that in order to buy there had to be others to sell. It is no child's play, this buying and selling of grain. Security in money has to be given and kept equal to all anticipated market changes, so that when the day of delivery comes the buyer will get the grain or an equivalent in cash.

When it comes to speculation in grain, Chicago is the leading market. When it comes to selling and delivering grain for spot cash on the day of sale, Chicago is still the principal market; but there are many others which have their home conditions to consider and which in turn have some influence on Chicago.

In this case Chicago traders saw the opening and led the speculative advance which was at first claimed to be without anything more than a speculative foundation. Under influence of the Chicago market, however, cash grain advanced in price in all markets, even to the wagon-load sold in the country towns.

A member of the St. Louis Merchants' Exchange said to the writer of this article that had it not been for the Chicago Board of Trade ascertaining and acting on the true situation the country could have been emptied of grain without any advance in prices.

The members of smaller markets may understand the situation; they can follow a lead effectively; but their influence is in proportion to their dealings and their great source of information is Chicago. In this case the movement was accepted by the minor markets, and those whose interests were on the side of buying cheap just simply had to stand up and pay the price or stand aside.

There were fluctuations and changes in values and a terrible lot of excitement, mostly by people who do not know and never will know anything about the subject.

The time to prove the situation is when it is all over. The May prices for wheat on speculation held steady to the close, and the spot cash market was higher than the speculative option, showing clearly that every man who owned a bushel of grain derived benefits from the advance.

After the whole May trading was closed out, a good market authority said:

"Now that it is all over and the May deal is a matter of history, even the most prejudiced trader is able to see that there is in reality no corner at all; in other words, that the so-called high price was the result of actual scarcity and not of manipulation. The opinion has been further confirmed by the fact that cash prices almost all over the country reached higher levels than in May. This awakening suggests that even the inexpert are beginning to get something like a sensible understanding of the situation. In a word, they see that farmers' reserves were almost exhausted and that the March estimate of the Department of Agriculture was erroneous."

We do not take the position that the Department report was far from correct. The report indicated that there was less wheat in farmers' hands on March 1st than on any March 1st during the previous twelve years. It is ninety-two days from March 1st to May 31st. The whole world has an influence in wheat values and ninety days is long enough for an advance or decline of 20 to 25 per cent. on any commodity.

In the Board of Trade are to be found commission salesmen whose duty it is to sell the grain belonging to their customers as it arrives in the city. The samples are procured and they sell it on the market and on its merits. They are keen business men, investigators of conditions. Some of them have no speculative customers. During the excitement of the May deal, the commission firms went the speculators one better and obtained prices for spot delivery that were higher than where there was time for delivery.

We have honestly tried to find fault with grain market conditions. We have tried to find out if there is more speculation than there ought to be, and we cannot see any positive evil to correct. We once contracted for five-years' supply of paper—our contracts are usually for a year. A tea merchant has to buy tea a year in advance or he cannot get it at all. The shoe manufacturers who make contracts in the spring for fall delivery are all speculating in future conditions, and the commerce of the present day cannot go on without it.

In connection with the subject of markets it is well to assume that much depends upon favorable and unfavorable conditions. These conditions are constantly changing. The bright day brings thousands to the circus and the rains keep thousands away. The great effort of the day is to anticipate conditions and be there first. In this connection we are reminded of a man who wasted a greater portion of his life as a wool dealer in Boston. He was educated, intelligent, industrious, and an investigator. In the trade people looked up to him because of his ability; his competitors went to him for information; he had plenty of capital and good credit, but in the end he was a failure as a wool salesman, and he finally accepted the management of a woolen mill. Before leaving Boston he determined to make an investigation of his own failure, and he went to an old wool trader and said: "Before I leave Boston I would like to know how it is that as a wool dealer I am a failure and you are a success. Tell me the answer." "Oh," said the wool dealer, "that is easy. You are always trying to find out how it ought to be and I am always trying to find out how it is."

The successful advancement of wheat prices in May was due to conditions as they then were and not due to what they might have been.

A GREAT POWER HAY PRESS.

One of the fastest and best of all hay presses is the "Ell" Belt Power Press advertised in this paper by the Collins Plow Company of Quincy, Ill. To be one of the "Ell" family is alone a guarantee of superiority. Ell Presses are famed far and wide. There are nearly forty different styles and sizes, and all of them good. Contract balers and those who have large amounts of their own hay to bale every year will be specially interested in the power press. The whole line of "Ell" Presses are well illustrated and described in the new catalog the Collins Plow Company have just gotten out. If you are interested in hay presses, you ought to send for a copy. You are safe when you buy an Ell. The catalog is free.

BEST HOG AND CATTLE WASH

As well as Dip for sheep is Cooper's Liquid Dip. Mixes readily with hard, brackish, alkali or salty water and is instantly ready for use, requiring no addition whatever other than water. It is three times stronger than ordinary liquids, its concentrated form greatly reducing the expense of freight, storage, etc. It is much cheaper than the crude coal-tar, carbolic and tobacco dips, and no dearer than even lime and sulphur Its effect is always beneficial to the animal, its wool or hair. It does not stain the fleece. See advertisement in this paper.

DEAFNESS CURED
By New Discovery

"I have demonstrated that deafness can be cured."--Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by the famous Physician-Scientist, Dr. Guy Clifford Powell. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous Treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell, 5089 Bank Bldg., Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.

AMERICAN FLAG PREMIUM.

Every family should own an American flag, and the good and lasting flags that are of extra material and fast colors are hard to get. We have a flag of nice, soft cloth, fast colors, 2½x4 feet, a splendid flag. We are offering it as a subscription premium.

To anyone who will send us 60 cents we will send The National Farmer and Stock Grower one year. We will send one American flag by mail prepaid.

We do not brag about our premiums. They are the best ever sent out by any publication.

Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Twice-a-Week GLOBE-DEMOCRAT

Is a magnificent newspaper, containing all the latest home, foreign and political news. It is undoubtedly the best Republican newspaper in the United States. It is published at $1.00 per year, and is worth the price.

The National Farmer and Stock Grower is a nice, clean, general farm monthly publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. It is published at 50 cents a year, or three years for one dollar.

COMBINATION OFFER.

By an arrangement with the publishers of the Globe-Democrat we are able to combine both of these papers for the price of one.

SEND US ONE DOLLAR

and we will mail to your address The St. Louis Globe-Democrat Twice-a-Week Edition for one year; also The National Farmer and Stock Grower for three years.

Address,

EVANS SUBSCRIPTION AGENCY,
3552 Vista avenue, - St. Louis, Mo.

SELECTED POETRY.

NATURE'S BENEDICTION.

Grass is the
forgiveness of nature—
her constant benediction.
Fields trampled
with battle,
saturated with blood,
torn with the ruts
of cannon,
grow green again
with grass,
and carnage
is forgotten.
Streets abandoned
by traffic
become grass-grown
like rural lanes,
and are obliterated.
Forests decay,
harvests perish,
flowers vanish,
but grass is immortal.
Beleaguered by the
sullen hosts of winter,
it withdraws into
the impregnable fortress
of its
subterranean vitality
and emerges upon
the first solicitation
of spring.
Sown by the winds,
propagated by the
subtle horticulture
of the elements,
which are
his ministers
and servants,
it softens the rude
outline of the world.
Its tenacious fibers
hold the earth
in its place
and prevent its
soluble components
from washing into
the wasting sea.
It invades the
solitude of deserts,
climbs the
inaccessible slopes
and forbidding pinnacles
of mountains,
modifies climates
and determines
the history,
character and destiny
of nations.
Unobtrusive and patient,
it has immortal vigor
and aggression.
Banished from the
thoroughfare and
the field,
it bides its time
to return, and when
vigilance is relaxed
or the dynasty
has perished,
it silently
resumes the throne
from which it has
been expelled,
but which it
never abdicates.
It has no blazonry
of bloom to charm
the senses with
fragrance or splendor,
but its homely hue
is more enchanting
than the lily
or the rose.
It yields no fruit
on earth or air,
and yet
should its harvest fail
for a single year,
famine would depopulate
the world.
—John J. Ingalls.

NORAH McGILL.

The ways of a woman,
Soloman said,
Would puzzle a wise man,
Alive or dead;
An' faith! I'm thinkin'
He'd say so still,
If ever he'd met with
Norah McGill.

The wiles of a woman,
Antony said,
Were past believin'
An' better fled;
An' faith! I'm thinkin'
He'd say so still,
If ever he'd looked on
Norah McGill.

The word of a woman,
Malachi said,
Was as easy snapt
As a spider's thread;
An' faith! I'm thinkin'
He'd say so still,
If ever he talked with
Norah McGill.

An' yet there's nothin'
That can compare
With the blue of her eyes
An' the black of her hair,
An' faith! I'm thinkin'
She likes me still,
The while she's plaguin' me,
Norah McGill.
—Temple Bar.

THE FARMER.

The farmer who is yy
Enough to take his ee,
And study with his ii
And think of what he cc;
He hears the clatter of the jj.
They each other tt,
And sees that when a tree dkk
It makes a home for bb.
A yoke of oxen he will uu,
With many haws and gg,
And their mistakes he will exqq
When plowing for his pp.
He little buys, but much he sells,
And therefore little oo;
And when he hoes his soil by spells
He also soils his hose.
—Macon (Ga.) Telegraph.

BOYS THAT RUN THE FURROW.

You can write it down as gospel,
With the flags of peace unfurled,
The boys that run the furrow
Are the boys that rule the world.

It is written on the hilltops,
In the fields where blossoms blend;
Prosperity is ending
Where the furrow has an end.

The glory of the battle,
Of clashing swords blood red,
Is nothing to the warfare
Of the battle hosts of Bread.

The waving banners of the fields
O'er the broad land unfurled—
The boys that run the furrow
Are the boys that rule the world.
—Frank L. Stanton, in Atlanta Constitution.

THE CONSCIENTIOUS COW.

The old cow walked by the dairy shed
And in her ruminant way she said:
"I'm feeling about as fine as silk,
But I'd like a drink of my own good milk;"
And, looking around, she presently saw
A pail a-standing beside the door—
It was buttermilk, about two days old,
But the aged vaccine hadn't been told;
She only remarked: "It's mean to bilk
An industrious cow of her own good milk."
And she took a drink and she looked surprised
And she walked away and that cow surmised;
She surmised about half way down the lane,
And she said in astonishment mixed with pain:
"To judge by the flavor of that there milk,
I can't be feeling as fine as silk.
I must be bilious, I'll bet a hat,
When I get to giving down milk like that!"
—Live Stock World.

BALLAD OF THE SETTING HEN

It was a stub-tailed Leghorn hen—
A hen at least with horny legs—
Who did not know her error when
She sat upon some china eggs.

Not china of the Cochin's kind,
But eggs evolved from potter's clay—
The whiteless, yolkless sort designed
To stimulate fool hens to lay.

Those eggs within her nest she found,
And settled on them with a cluck,
A happy, gurgling kind of sound
That said quite plainly: "This is luck."

She hastened to apply no test
For sulphur, lime or albumen.
The eggs were there, it was a nest,
And that was all that concerned the hen.

They told her of her sad mistake,
But nothing did she care for that;
No sort of notice did she take,
But sat, and sat, and sat, and sat.

The orb of day it rose and set,
(It could not well do otherwise),
But that old stubborn hen, you bet
She'd set, but darned if she would rise.

She heard, unmoved, the call to food;
She had no appetite for grain;
Her fervid fancy raised a brood
Of fluffy chicks from porcelain.

Sternly determined to succeed,
She sat a month or more, but then,
As you'll infer, she was, indeed,
A very optimistic hen.

So on that nest she kept her place,
Heroic! That can't be denied.
But oh! it was an awful case
Of prevalence misapplied.

I've known a lot of people who
Decide to hustle out and scratch,
But sit and dream their whole lives through,
Expecting china eggs to hatch.
—Kennett Harris, in Industrious Hen.

The Summer Visitor.

With the manifold duties of the farm at their maximum, the self-invited summer visitor may disarrange matters seriously. If she is sensible, however, she will try to adapt herself to the conditons and will wish to make no extra work in the household.

Nine cases out of ten, the simple fare of the farm will be more to her taste than all the fancy cooking. Give her fresh fruit and vegetables, butter, cream and eggs in abundance. If she seems to relish them, believe that she does. Why shouldn't she? You would, if you could not get them in abundance. If she seems to want the pastry and fancy cooking—her proper sphere is a summer hotel. But the average city visitor will find plain cereals with rich cream, fresh home-made bread and the delicacies of garden and orchard quite sufficient.

She should, on her part, make it a rule to rise in time to eat with the family. Keeping a meal waiting or serving an extra one is an unreasonable burden to the farm home in summer. She will enjoy shelling peas, gathering apples for supper and looking over the fresh berries. There are many light duties which she should be glad to perform, making that much lighter the work of her hostess.

This will give a delightful afternoon for a stroll to the woods or rest in the hammock in the yard, where the last magazine or book can be enjoyed by both entertainer and entertained. If the summer vacation could be made a mutual enjoyment—and why can this not be done?—it would be more enjoyable to the real summer guest, whom we delight to serve, and less of a bugbear to the busy farmer's wife.—Bessie L. Putnam.

The Difficulty.

"Oh, dear!" sighed her husband's wife, "I can't find a pin anywhere. I wonder where all the pins go to, anyway?"

"That's a difficult question to answer," replied his wife's husband, "because they are always pointed in one direction and headed another."—Chicago News.

Of Course.

"What was the best job you ever did?" inquired the first barber. "I once shaved a man," replied the second barber. "Go on." "Then I persuaded him to have a hair cut, shampoo, facial massage, singe, seafoam, electric buzz, tar spray, and tonic rub." "What then?" "By that time he needed another shave."—Washington Herald.

"If I were you I wouldn't be a fool, Diggs." "True," replied Diggs, complacently. "The unfortunate part of it is that you are yourself."—The Circle.

Magnificent Subscription Premium.

The National Farmer Hat.

The sizes are from 6 5-8 to 7 1-2. They are hats suitable for men or boys. They are of good material. well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color.

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower, grouped in such a way that the sentiment that each flower represents is spelled out by the flowers. For example, the violets of the violet card spell "Faithfulness;" the roses

"Love;" clover, "Be Mine;" ot Each post card is different, finishe in many colors and glossed.

THE UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrate monthly magazine, published at 2 cents a year, and the post cards c be selected as a free premiu Address, HALE PUBLISHING CO 3550 Vista Ave., St. Louis, Mo.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Nine-gored Skirt.

No. 6354.—The simple gored skirt is always a desirable one and always in demand. This one is novel in that the side gores are lapped over onto the front gore, but otherwise it is plain. The lines, however, tend to the fashionable slender effect, and, as the skirt can be made either long for the house or short for the street, it is adapted to every seasonable material. French serge in the new shade known as tea green is the material illustrated, and the only trimming is smoked pearl buttons; but fashionable materials include the washable ones as well as those of wool and silk.

The skirt is made in nine gores, and the fullness at the back can be laid in inverted plaits, or the skirt can be cut off and finished in habit style.

The quantity of material required for the medium size is 10¾ yards 24, 8 yards 32, 5⅝ yards 44, or 4¼ yards 52 inches wide, when material has figure or nap; 7 yards 24, 6¾ yards 32, 4⅝ yards 44, or 3¼ yards 52 inches wide, when material has neither figure nor nap.

The Pattern 6354 is cut in sizes for a 22, 24, 26, 28, 30 and 32-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Lingerie Blouse.

No. 6348.—Embroidery worked onto the material is being extensively used on lingerie blouses this season, and it is always charming in effect. This blouse includes a yoke which is especially adapted to such treatment, and which can e made either with the quare Dutch or the igh neck. In the illustration the material is andkerchief lawn and the trimming is lace insertion, while the sleeves are cut off to three-quarter length. All the pretty muslins of the season are appropriate, however, and as the model can be utilized for the entire gown as well as for the separate blouse, it becomes available for the pretty figured lawns and batistes and the various inexpensive printed wash fabrics as well as for white muslins.

The blouse is made with the yoke, and the full front and back portions, which are tucked and joined to its lower edge. The sleeves are in one piece each, with the seams so arranged as to be nearly invisible, and can be made either long or in three-quarter length. When the high neck is used, a regulation stock collar makes the finish.

The quantity of material required for the medium size is 4⅝ yards 21 or 24, 3 yards 32, or 2¾ yards 44 inches wide, with 3 yards of banding and 2 yards of edging.

The Pattern 6348 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents for each.

Child's Tucked Dress.

No. 6344.—The one piece dress is a practical as well as fashionable one for the younger children, and this model can be utilized for all seasonable materials. The belt is arranged to give the long waisted or French effect, and below it the skirt is allowed to fall free, but above the plaits are stitched to lie flat. In the illustration soft finished white pique is made without trimming of any sort, but muslins of various sorts are utilized for dresses of the kind, and, if a daintier frock is wanted, lawn or batiste could be utilized with collar and sleeve-bands and belt embroidered in some pretty simple design, or there could be embroidery on the front of the dress. Indeed, the model is an available one that can be treated in a great many different ways. Dresden dimities are being much used for summer dresses, and such material made in this way is charmingly dainty, yet suited to every-day wear, while white muslins are adapted to afternoon gowns, and the sturdier pique, linen and the like to all dresses of harder use.

The dress is made with fronts and back and is closed invisibly at the left of the front. The collar is joined to the neck edge and the moderately full sleeves and gathered into bands. There are straps at the under-arm seams which hold the belt in place.

The quantity of material required for the medium size (six years) is 3¾ yards 24, 2¾ yards 32, or 2¼ yards 44 inches wide.

The Pattern 6344 is cut in sizes for children of two, four, six and eight years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Dress.

No. 6350.—The simple little dress that can be worn with or without a guimpe, as the occasion demands, is one sure to be wanted during the warmer months. This one is made with the blouse and skirt joined by means of a belt and is closed invisibly at the back. In the illustration, the material is one of the pretty, inexpensive printed wash fabrics woven with a border, and this border has been cut off and applied as trimming, but any seasonable material can be used with banding of embroidery or lace, of contrasting material or braid, or, indeed, anything that fancy may suggest. The square Dutch neck and the short sleeves are extremely fashionable as well as eminently comfortable for a warm day; but should there be need of warmth, a guimpe can be worn beneath. Lawn and batiste are charming so made, but the simpler chambrays and ginghams are equally suitable, so that the dress becomes appropriate for both morning and afternoon occasions.

The dress consists of the skirt and the blouse. The blouse is made with front and back portions, but the skirt is straight and laid in backward turning plaits. The sleeves are short and in one piece each.

The quantity of material required for the medium size (twelve years) is 6 yards 24, 4⅝ yards 32, or 3½ yards 44 inches wide, with 8 yards of banding or 8 yards of bordered material 24 inches wide.

The Pattern 6350 is cut in sizes for girls of eight, ten, twelve and fourteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Another Girl's Dress.

No. 6338.—Such a simple little dress as this one finds a great many uses. It can be made from embroidered muslin, as illustrated, trimmed with lace and embroidery, and become adapted to occasions of dress, or it can be made from Dresden dimity or some similar material and become much simpler in effect. It is graceful and becoming, yet childish withal, and the square Dutch neck and the short sleeves are both smart and comfortable for warm weather, but if they are not liked the dress can be cut high at the neck and long sleeves can be substituted for the short ones. The epaulettes over the shoulders mean the breadth that is always becoming to childish figures. In spite of its effect of elaboration the dress is a very simple one.

It consists of the blouse and the skirt. The blouse is made with front and back portions that are tucked and the skirt is straight, gathered at the upper edge. The panel at the front and the trimming are arranged over the dress after the blouse and skirt are joined. The epaulettes are attached under the tucks and the closing is made at the back. The short sleeves are gathered into bands, but the long sleeves are plain and close-fitting.

The quantity of material required for the medium size (twelve years) is 6½ yards 24, 4½ yards 32, or 3½ yards 44 inches wide, with 6 yards of embroidered banding, 14½ yards of lace insertion and 4¼ yards of edging to trim as illustrated.

The Pattern 6338 is cut in sizes for girls of eight, ten, twelve and fourteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Misses' Blouse.

No. 6359.—The blouse that is closed at the left of the front is a favorite one of the season and has a great many practical advantages. It is simple and girlish and is

very easy to slip on and off. This one can be made either with the long plain sleeves or with those in regulation shirt waist style, and the neck can be finished with the fashionable Dutch collar or with a neck-band. Plain linen trimmed with striped is the material illustrated, but all waistings are appropriate, for the thinner lawns and the like are so made quite as well as linen, pique and repp. If a more elaborate blouse is wanted, the collar and sleeves could be embroidered with some simple design, or the collar and sleeves could be embroidered and the front edge scalloped, such treatment being much in vogue.

The blouse is made with fronts and back. There are tucks laid over the shoulders, which extend to the waist line at the back, but only for a short distance at the front. The plain sleeves are made in one piece each and can be finished at the wrists to suit the fancy. The shirt waist sleeves are gathered and joined to straight cuffs. When the Dutch collar is used, it can be either joined to the neck edge or finished separately and adjusted over it.

The quantity of material required for the sixteen-year size is 3⅝ yards 24, 2⅝ yards 32, or 2 yards 44 inches wide, with ¾ yard any width for the belt and trimming.

The Pattern 6359 is cut in sizes for girls of fourteen and sixteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Five-gored Skirt With Straight Flounce.

No. 6349.—Skirts that are adapted to washable materials are those in demand just now, and this one is pretty and graceful, yet so simple that it can be laundered with ease. The flounce is straight, and the skirt is gored, and they can be either tucked or gathered at their upper edges, consequently the model is adapted to every seasonable material. It is very pretty for the thin lawns and other muslins, for chambrays, ginghams and fabrics of similar weight, and it is in every way to be commended for the foulards and other simple silks that are so often treated in lingerie style. The crosswise tucks finish both the lower edge of the flounce and give the needed weight, and at the same time add to the effect. When tucks are used, those at the upper edge of the skirt are stitched flat, to do away with bulk over the hips, but very thin materials give a better result when gathered.

The skirt is cut in five gores, and the lower edge is finished with three tucks. The flounce is straight and finished with a hem and two tucks. Whether it is tucked or gathered at the lower edge, it is joined to the skirt, the seam being concealed by the wide tuck.

The quantity of material required for the medium size is 10½ yards 24, 8¾ yards 32, or 5¾ yards 44 inches wide.

The Pattern 6349 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Please address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Waiting For a Full Crop.

A new postoffice was established in a small village out West, and a native of the soil was appointed Postmaster. After a while complaints were made that no mail was sent out from the new office, and an inspector was sent to inquire into the matter. He called upon the Postmaster, and, stating the cause of his visit, asked why no mail had been sent out. The Postmaster pointed to a big and nearly empty mail-bag hanging up in a corner, and said: "Well, I ain't sent it out 'cause the bag ain't nowheres nigh full yet."—Harper's Bazar.

He Was Real Mean.

Miss Golding—"Here's your ring. I have decided that I can never be your wife, so the engagement is off and I shall expect you to return everything you may have in your possession that belongs to me."

Mr. Hamlin—"All I have is a lock of your hair and a photo. I don't suppose you care anything for the photo, but the lock of hair you will no doubt want to preserve as a souvenir."

Miss Golding—"As a souvenir of what?"

Mr. Hamlin—"Of the time when you were a brunette."—Chicago News.

"Every woman says something occasionally to make men wonder where she learned it."—Exchange.

Heiskell's

The most obstinate case of Eczema can be quickly and completely cured by the application of **Heiskell's Ointment.** It also cures Blotchy, Rough and Pimpled Skin, Erysipelas, Tetter, Ulcers, and all other skin diseases. Before applying the ointment, bathe the parts affected, using **Heiskell's Medicated Soap. Heiskell's Blood and Liver Pills** tone up the liver and purify the blood. Your druggist sells these preparations. Ointment, 50c a box; Soap, 25c a cake; Pills, 25c a bottle. Send postal for a new booklet of general interest.

JOHNSTON, HOLLOWAY & CO.,
555 COMMERCE STREET, PHILADELPHIA, PA.

Ointment

CANCER CAN BE CURED.

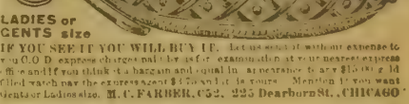
Scores of testimonials, from persons who gladly write to those now suffering, all tell of perfect cures. My Mild Combination Treatment destroys growth and eliminates the disease from the system. **Free book,** "Cancer and Its Cure," and 125-page book of testimonials from cured patients in every State in the Union. No matter how serious your case, how many operations you have had, or what treatment you have taken, don't give up hope, but write at once for my books.

DR. JOHNSON REMEDY CO.,
1233 Grand Ave., Suite 103, Kansas City, Mo.

ELEGANT Thin Model 20 YEAR WATCH

Hunting case beautifully engraved, gold finished throughout, stem wind and stem set, fitted with 7 ruby jeweled American lever movement. Guaranteed 20 years; with long gold plated chain for Ladies or vest chain for Gents.

$3.75



LADIES or GENTS size

IF YOU SEE IT YOU WILL BUY IT. Let us send it without expense to you C.O.D. express charges paid by us for examination at your nearest express office and if you think it a bargain and equal in appearance to any $10.00 gold filled watch pay the express agent $3.75 and it is yours. Mention if you want Gents or Ladies size. M. C. FARBER, C52, 225 Dearborn St., CHICAGO

"GOOD LUCK" KEY CHAIN

No key-ring needed; two little horse-shoes do the work. Send 10c for 25c sample with key; dozen postpaid, 50c—BIG PROFIT and every man buys. AGENTS WANTED.

LYONS MFG. CO., 1222 Day St., Pekin, Ill.

10 DAYS FREE TRIAL

We ship on approval, without a cent deposit, freight prepaid. **DON'T PAY A CENT** if you are not satisfied after using the bicycle 10 days

DO NOT BUY a bicycle or a pair of tires from anyone at any price until you receive our latest art catalogs illustrating every kind of bicycle, and have learned our unheard of prices and marvelous new offers.

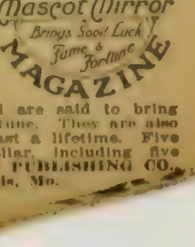
ONE CENT is all it will cost you to write a postal and everything we know about bicycles will be sent you free postpaid by return mail. Do not wait—write us today. Do not order a bicycle from anyone at any price. Learn what we can do for you. Don't miss this opportunity. Do not wait—write now.

TIRES, Coaster-Brakes, Built-up Wheels and all sundries at half usual prices

MEAD CYCLE CO. Dept. D 138 CHICAGO

THE UNIVERSAL MAGAZINE

This is a nice, thirty two page, three-column magazine, issued monthly. It contains illustrated reading matter of interest to all the family. There are nice stories, historical sketches, selected poetry, a splendid line of patterns and a number of original household articles. The subscription price is 25 cents a year, or five subscriptions for One Dollar. Anyone sending in a subscription can select as a free gift a Mascot Mirror. These are circular mirrors, 2½ inches in diameter, and are said to bring good luck, fame and fortune. They are also of fine glass and will last a lifetime. Five subscriptions for a dollar, including five mirrors. Address, **HALE PUBLISHING CO.,** 3550 Vista Ave., St. Louis, Mo.



Concerning Grain Prices.

On June 30th it was the opinion of the grain dealers of the Chicago Board of Trade that July wheat with thirty-one days open for delivery, was worth $1.16 a bushel; September wheat delivery by September 30th was worth $1.11⅝ a bushel; and December wheat to be delivered by December 31st was worth $1.09 per bushel. Farmers who wish to know something about the future market are advised to stick these prices in a book. These figures mean that there were traders willing to buy at the prices stated and some were willing to sell, and did sell wheat at the price stated. Now, there are people who will jump to the conclusion that these figures are derived from straight gambling transactions, whereas it may be that there is not a gambling transaction in the whole business. In Liverpool they must either buy the wheat that is in Liverpool, or on the ocean, or on the railroad, or in the elevator, or on the farm. The mills of England cannot be run on American grain without someone speculates on the future.

At St. Louis, on June 30th, not a great amount of actual cash wheat was on the market. A small lot of sacked new wheat, No. 2 red, was sold at $1.28; No. 2 red, old wheat, was quoted at $1.50; No. 3 red, new, at $1.25 to $1.27; No. 2 hard, $1.20 to $1.30, nominal; No. 3 hard, $1.15 to $1.20; and No. 4 hard, $1.00 to $1.12.

At Chicago the July corn closed at 71¼ cents a bushel; September, 67⅞ cents, and December, 58¼ cents. These are future prospects.

At St. Louis, June 30th, actual corn was sold as follows: By sample: No. 2 corn, 71½ cents per bushel; No. 3 corn, 71 cents, nominal, per bushel; No. 4 corn, 65 cents per bushel; No. 2 yellow, 72 to 72½ cents per bushel; No. 3 yellow, 71½ cents, nominal, per bushel; No. 2 white, 74½ to 75 cents per bushel; No. 3 white, 74¼ cents, nominal, per bushel. Where the word nominal is used there was no trading at the price.

At Chicago, on June 30th, oats delivered on July 31st at the latest, closed at 49⅜ cents per bushel; September oats closed at 43⅞ cents per bushel, and December oats closed at 44 cents per bushel.

At St. Louis the actual deliveries were few and the local demand was limited to the very best selections. By sample, delivered: No. 2 mixed, 50½ cents per bushel; No. 3 mixed, 50 cents per bushel; No. 4 mixed, 49 cents, nominal, per bushel; No. 2 white, 55 cents per bushel; No. 3 white, 53½ to 54 cents per bushel; No. 4 white, 51 cents per bushel.

Now, here we have given the market situation as regards wheat, corn and oats. The traders are pretty well and reliably informed as to existing conditions. Now conditions may arise and affect the quotations. If European harvests are reported short the market will advance; if American harvests are bountiful the action will be towards a lower basis. If industrial conditions indicate an improvement, there will be corresponding strength displayed in the market.

On June 30th, at St. Louis, millers were selling flour as follows: Flour made from soft red winter wheat—Patents at $6.60 to $7.00; Straights at $6.25 to $6.50; and Extra Fancy at $6.00 to $6.15 in wood; Fancy at $4.50 to $5.00; and low grades at $3.75 to $4.25 in jute sacks. Hard winter, in jute sacks — Patents at $5.90 to $6.00; Straights at $5.50 to [illegible]; Clears and First Bakers at [illegible] $4.90; low grades and Second Bakers at $3.40 to $3.90; Red Dog at $3.00 to $3.10; Spring Patents at $6.25 to $6.40 in jute.

On June 24th, at St. Louis, the first receipts of new wheat consisted of a car-load from Charleston, Mo., grading No. 2, and a car-load from Blodgett, Mo., grading No. 3, and were sold at auction on 'Change at $1.30 for the No. 2 and $1.23 for the No. 3, both cars being taken for a city mill. The No. 2 tested 59 pounds to the bushel, plump, dry and in fine milling condition, while the No. 3—slightly rye-mixed and a little tough in one end—was also in good milling condition, testing 57½ to 59½ pounds. There was another car sacked No. 3 in that was not offered. Last year the first car (No. 3) sold at 86 cents.

ST. LOUIS THE GREAT CENTRAL MARKET FOR WESTERN RANGE HORSES. The picture was taken in the cutting pen at the St. Louis National Stock Yards, and represents a good load of Montana mares and geldings. They were sold on Tuesday, June 29th, at one of the auctions held by Messrs. Campbell & Reid and the Western Sale Stables Company. These sales bring together the buyers and sellers of range horses at the most economical center of distribution. Mr. J. J. Searcy, who is in the picture, is Manager of the sales, and he will be glad to communicate with all ranch owners who have horses to sell, also with farmers and stockmen who desire to attend the auction. Address, J. J. Searcy, Secretary, National Stock Yards, Ill.

ST. LOUIS THE GREATEST OF ALL MARKETS FOR LIGHT BUTCHER CATTLE. This picture was taken in the native division of the St. Louis National Stock Yards on Monday, June 28th, and represents a load of native calves and yearlings which averaged 727 pounds and sold at $7.00 per 100 pounds. The young man in the picture is Louis Draggon, who sold the cattle to the St. Louis Dressed Beef Company.

ST. LOUIS THE GREATEST MARKET FOR RANGE MULES. A load of two-year-old mules sold on Tuesday, June 29th, at the auction conducted by Messrs. Campbell & Reid and the Western Sale Stables Company at the St. Louis National Stock Yards. These mules were originally from Texas and had been wintered in Illinois.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "Practical Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages is handsomely bound in cloth stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. **Price, $1.00, Prepaid** including one-year's subscription to this paper. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

VEGETABLE GARDEN.

A VALUABLE TURNIP PREMIUM.

Every farmer ought to have at least one acre in turnips. The **Red Top White Globe** is an excellent variety, especially good for table use, also growing abundantly and valuable as food for stock.

The **Cow Horn Turnip** is practically the largest grower. It is a long turnip. At the Michigan Agricultural College the **Cow Horn Turnip** yielded 1,333 bushels per acre. This turnip is especially good for stock, but is good for the table also. In the Middle and Western States the main crop is sown broadcast in July and August. No one ever repented growing turnips. A pound of seed is about sufficient to sow one acre.

For one dollar we will send one pound of Turnip Seed and **The National Farmer and Stock Grower** for two years. This is a splendid offer. Take your choice.

ST. LOUIS THE GREATEST HORSE MARKET IN THE WORLD. The picture represents a typical horse bought for service in Cuba by MR. GEORGE W. MAXWELL, who has a contract for 1,000 head. The sizes being bought are from 14½ to 15½ hands, all geldings, solid colors, black, bay, brown or sorrel, four to seven years old, in fair condition, saddle broke, no fancy gaits. The horses are for use by officers of the Cuban Army and the Rural Guard. Shippers of horses to the St. Louis market should include this class during the month of August.

St. Louis as a Market Center.

The remarkable growth of St. Louis as a market center is of much interest. Possibly the greatest and most reliable St. Louis trade development is in cattle, hogs, sheep, horses and mules. During the first seven months of the present year the tendency in live stock circles has been a shrinkage in numbers. For example, hog receipts at Chicago decreased 688,500 head; at Kansas City, 205,000; at St. Joseph, 283,000; at Omaha, 107,000; and at Indianapolis, 344,000 head. But at St. Louis the decrease was only 11,000 head. This is because shippers have discovered that St. Louis is the best market.

The market for horses and mules is gaining. As though worn out by the attempt to accumulate, sell and distribute horses and mules at Kansas City without loss to themselves or their customers, the largest horse and mule dealers of that city have come to St. Louis and located either on the outskirts of the market or directly in the St. Louis National Stock Yards. No greater tribute to our market can be imagined than the recent removals to St. Louis from Kansas City. With nearly 100,000 sheep received in excess of former St. Louis records the trade asserts that the packers can easily find room for a million more sheep a year, and the salesmen will guarantee to get good prices for them. The increase in receipts and sales of certain fancy grades of native cattle are creditable alike to the stockmen and the St. Louis market. When the representatives of the Stock Yards ride in the Centennial Parade they will carry a banner inscribed: "The Best Showing of Any Live Stock Market."

and Stock GROWER

The Air in the Soil.

Few stop to consider the necessity for air in the soil and the large part it plays in the growth of plants. It is necessary not only for the development of the roots of most dry-land plants, but it is necessary for those that grow in the water. Even plants living in water take air, but they take it from the water, just as a fish takes air from the water in which he swims. All living things need air, though different things are able to secure it in different ways.

The air in the soil is also necessary for the development of plant food. The agencies that are charged with this development include the minute forms of fungoids we call bacteria, and these have to have air from which they can take the oxygen as well as nitrogen. These forms of life cannot live in a soil that is baked or packed so hard as to keep out the air or that is so saturated with water that no air can be obtained save what is in the water.

The amount of water in the soil suitable to the growth of most plants is at its best when each particle of soil is covered with a film of moisture and each film is connected with every other film so that there is a continuous succession of films from the top of the soil to the water table below the surface. The attraction of the water by the soil particles causes the upward movement of the water through the medium of the film, as fast as it is absorbed by the moisture that goes into the root hairs or by the evaporation at the tops of the series of films.

The spaces between the soil particles are then filled with air way down to the water table, and in this way the air and water are mingled. The air supplies its elements to the various things in the soil, while the water acts as the carrier of the elaborated plant food to the rootlets of the plants.

There is a certain soil work as much as a work of any living creature. But this soil work can go on only under a proper balance of air and water. Exclude either, and the soil laborers go on strike. If the soil is so dry that the water films around the soil particles are destroyed, the soil work is arrested. Plant food ceases to be elaborated, and what plant food there is in the soil is no longer conveyed to the roots of the plants.

Millions of dollars' worth of crops are lost every year because these simple fundamental facts are not fully understood by many. The man that works to keep up the best balance of air and water in his soil is taking the best method to insure a big harvest. Even fertilizing the soil must come after this.

Drainage will often do much to bring about a good condition of aeration of soil; but in some soils something else is needed. Thus a sandy soil that is so light that the moisture film soon disappears to a depth of a foot or more will produce nothing. In such a case other things must be incorporated with the sand of the soil, such as muck, lime, humus, fertilizer, to give it the power to retain the moisture film.

Improving Sandy Land.

Much very sandy land has been little improved because the owners have considered it so leachy that it would not hold moisture enough for the crops. There are hundreds of thousands of acres of sandy land now largely unimproved that will in time become bountiful with crops.

It is true that it takes a larger amount of fertilizer to accomplish [illegible] on sandy land than on soils more suitable to moisture holding, but the sandy land has the advantage of being easily worked and easily aerated. This counts for much in the long run. There is also the additional advantage of good drainage if there is a good outlet for the water.

There is then a large saving in the cost of cultivating the land, which saving can be applied to the purchase of manure or of other fertilizer for the improvement of the land. If owners of light land will view it in this way and act accordingly, they will think more of their very sandy soil than they do now.

One of the very first things to do with light sandy land is to lime it. The lime helps make the soil more compact and more retentive of moisture. It helps also to protect the rootlets of the plants that germinate in it.

The application of fertilizers in large quantities to such land generally brings big returns if the markets for the produce are largely accessible. As a matter of fact, though, much of the light sandy land of this country is in regions not well supplied with transportation facilities, and this fact has operated against the improvement of these soils. It is readily understood that if produce cannot be shipped advantageously there is little use to raise it.

Generally all of the fertilizers need to be used on sandy land, if it is very leachy. Potash, phosphorus and nitrogen need to be applied to get the best results, even if a chemical analysis should show these to be present in considerable quantities in the soil. The trouble is that we can never be sure how large a part of the elements shown by the chemist to be present in the soil are in a soluble form usable by plants.

An illustration of this was to be seen on the light soils at Southern Pines, North Carolina, where the soil was so sandy and light that some of it would blow about in the wind. It was so leachy that it sold for about nothing, being deemed of little or no value for agricultural purposes. The land was limed at the rate of a ton of lime to the acre, after which potash, phosphorus and nitrogen were applied. The results were magnificent and the land blossomed and brought forth in abundance.

In light sandy land humus is generally deficient and needs to be supplied. Sometimes dry muck can be hauled on. This contains a great deal of humus, which will at least help hold the moisture if it does nothing more. It will indeed supply some fertilizer; but where large quantities of fertilizer readily available are supplied, that in the muck will count for little, as it becomes available but slowly.

How Ashes Can Be Used.

Coal ashes contain a large value for the amelioration of land composed of heavy clay. The ashes of soft coal are particularly valuable, as such ashes usually burn out almost to a dust. The ashes of coke should be best of all. The writer has made them in his furnace and has found them good to use on the land, but has never had an analysis made of their manurial value.

And here it should be mentioned that coal ashes have a fertilizer value, in spite of the opposite opinion being held by most people. One has only to stop and think about it to realize that the original trees out of which were formed the coal beds contained phosphorus, potash, nitrogen and lime, as well as the other less-important ingredients. When these old trees were reduced to coal, the mineral elements remained in them, and when we burn that coal, those same mineral elements go into the ashes. The reason why people have formed an idea that coal ashes contain no fertility is, that the trees now grown have in them less carbon than those in the old days, and thus the percentage of other elements to carbon is probably greater now than then, which gives a larger value to our wood ashes but does not annihilate the value in the coal ashes.

The millions of tons of coal ashes that are being annually dumped out of sight will sometimes in the future be wanted as a top dressing for clay land. On a small scale coal ashes can now be used advantageously in this way. The writer knows of one man that for ten years has used all his coal ashes on his clay land with great success. The man is not a farmer, only a resident in a village, where he has a lot larger than the usual.

The ashes are piled out of doors during the winter and so become wet. In the spring they can be sifted without flying. This is then an easy matter, and the sifted ashes are the finest thing possible for mixing with clay. It is astonishing how large an amount of ashes a very strong clay soil will absorb without showing too much ashes. The soil becomes friable and easily worked, and also admits larger quantities of air to the depths of the soil. Ashes often prove better than sand on a heavy clay soil, because the sand will sometimes mix with the clay in a way to form almost a brick under the beating of a heavy rain. The lime in the ashes is also a help in making the clay soil less compact.

Among currant bushes and the like, where the plantation is permanent, the ashes can be used as a permanent mulch. They will help keep in the moisture and keep down the weeds for the first season. But when the weeds have begun to appear in them, they are easily pulled up, because they are rooted only in the ashes.

Ashes can be used advantageously without sifting if one does not care to go to the trouble of sifting them; but it is a question if large quantities of half-burned coal is not a considerable detriment to any soil.

We believe we now offer for $75 the best 2 H-P engine made—built throughout with most painstaking care for those not expert. Its hopper cooler gives large radiating surface, in the best possible shape—made of a single disc of sheet steel, folded in like an umbrella, and galvanized, affording thorough circulation of air and water without blower or pump.
This gasoline engine, complete, on skids, with batteries, ready to start in 15 minutes.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

Farm-yard Manure Varies in Quality.

We frequently hear people speak of farm-yard manure, as if it were a thing of fixed quality. Yet it varies greatly in quality, even when freshly made. The longer it is kept the more greatly does it become diverse in its content of manurial elements.

If we should analyze manures we would find thousands of different qualities, so far as the composition and aggregate value were concerned. In the first place, every kind of an animal, as sheep, horse, pig, sow, gives manure of a different value. Then each one of these animals gives a difference in value or quality of manure in accordance with age of the animal making it. Thus, the manure from a colt is poorer than the manure from a mature horse, because the colt in the making of his body is taking out of the feed more than the mature horse. With the mature horse the amount of manurial elements thrown off in various ways equals the amount of mineral elements taken out of the feed.

But another principle enters into the making of quality in the manure, and this is the kind of feed given to the animals making the manure. A cow fed cotton-seed cake will give a richer manure than a cow not so fed. This fact has been taken advantage of in some localities where it was desired to make the pastures very rich. At one of the Western Experiment Stations the writer saw a magnificent pasture of blue grass in which the steers were simply wading through a sea of green grass. He expressed his surprise that a field of this kind could be maintained in a region where soil water was more than a hundred feet below the surface of the ground. The man in charge of the cattle remarked that the luxuriance of the pasture was in large part due to the fact that the steers of several seasons had been fed cotton-seed cake on that pasture and their droppings had enriched it far beyond what would otherwise have been the case.

But when we consider how greatly foods vary in richness we see that the number of combinations, relative to the quality of farm-yard manure, are far beyond our comprehension or investigation. So when we speak of farm-yard manure as a standard of value we see that we have adopted a standard which is itself very variable.

We have spoken of three factors that enter into the problem. There is a fourth, which is the amount of carbon contained in the manure. The more the carbon the more easily will certain soil elements be produced. Carbon is not a fertilizer in itself, but the carbon goes into various combinations that directly and indirectly affect the utilization of the fertility elements in the manure. Thus, a mass of manure rich in carbon ferments rapidly, and in doing so makes available some locked-up phosphorus. Also the carbon, if placed into the soil, furnishes food for the bacteria that in turn take nitrogen from the air. This is a discovery of comparatively recent origin.

It will pay every farmer to make a study of these things and become master of the rudimentary principles, so far as possible. Otherwise he will be using his farm-yard manure unscientifically, and will also lose many of the opportunities that come to the man that understands things.

Don't Farm More Acres—Make Your Land More Productive

It is not the man with the largest farm that makes the most money. Your neighbor may be "land poor" and still make less money than you will from your 80 or 160 acres.

The secret lies in keeping up the fertility of your soil. Make every acre yield the highest possible returns by spreading the barnyard manure with one of the

I. H. C. Manure Spreaders

The Corn King Return Apron Spreader
The Cloverleaf Endless Apron Spreader
The Kemp 20th Century Return Apron Spreader

Any one of these machines will double the value of the manure by making it go farther and by placing it on the land in such a condition that none of it will be wasted.

And because the machine doubles the value of the manure, it will shortly double the producing power of your land.

Remember that farming more acres to produce larger crops means more fencing, more seed, more labor, more wages and more wear on machinery. Take the short cut to larger crops by investing in the machine that will double the yield of the land you are now farming.

Can you buy a farm machine that would be a better investment?

Call and discuss the matter with the local agent handling one of the I. H. C. lines of spreaders. He will supply you with catalogs and full particulars. Or, if you will write us, we will gladly supply any further information desired.

INTERNATIONAL HARVESTER COMPANY OF AMERICA

Inoculating Alfalfa With Sweet Clover.

Mr. J. A. L., of Kane county, Illinois, writes: "I have heard that seeding alfalfa along with sweet clover will so inoculate the ground that alfalfa will do well afterwards. Is that so?"

I have never sown sweet clover seed for the specific purpose of inoculating. But a farmer living near Lombard (Northern Illinois) tells me he has eighteen acres of alfalfa which were handled in this manner. He gathered enough sweet clover seed along the roadside to sow his field. This sweet clover was then plowed under the following season, and the ground was sown to alfalfa. A fine stand of alfalfa resulted, and the field cut over three tons of hay last season.

I should not recommend that practice. Sweet clover is classed as a weed, and we have never found a method of curing it to get a first-class quality of hay. Any practice that fills the ground with white clover seeds is bad. Sweet clover is hardier than alfalfa, so during the first stages the alfalfa would have a hard time competing for possession of the ground. No doubt sweet clover possesses peculiar organisms helpful to alfalfa. Its good influence was first noticed when the overflow from sweet clover patches worked down over clover or alfalfa fields. This overflow ground produced ranker growth, and the stand filled up readily.

Instead of using sweet clover seed I would prefer to take sweet clover soil, mix it with well-rotted manure and scatter this thinly, with a spreader, over the ground which is to be sown to alfalfa and thoroughly harrow the ground.—L. C. Brown.

Road-making Pictures.

At the National Corn Show of 1909 a series of moving pictures will show practical road making up to date. This is a novelty, which originated with the United States Department of Agriculture.

These pictures show the work being done on the roads of the country, the machinery used and the result of converting a bad road into a regular speedway. Work has just been started on 2,000 feet of films, which was taken in Virginia, where the convicts are making every road in the state as good as paved. This is a unique "ribbon," as the men who are in stripes give it a regular picture-show appearance.

Other pictures are to be taken in the West, where the states will not stand for convict labor, but where enterprising farmers in some sections have devoted a little time to road improvement to the great benefit of the state.

Views along rural postal routes; wagons stuck in the mud; the mail hours behind because of the bad roads; farmers practically marooned and unable to get to market at certain seasons of the year because of the poor roads—all these scenes will be shown at the National Corn Exposition in Omaha, where the pictures will be seen for the first time. Following the Exposition in Omaha, the Department of Agriculture plans to loan them to Fairs and Farmers' Institutes, thus giving thousands the benefit of the pictures.

Let Me Pay The Postage on My Big Free Book to You

Though it costs me 8c to mail every one of these books, yet I'll send you one free because I want you to know about my Celebrated Split Hickory Buggies—made to order—sold direct from my factory to you at home on 30 Days' Free Road Test guaranteed two years. Over 100,000 Split Hickory Vehicles now in use giving splendid satisfaction.

Sugar-cured Bacon For the Farmer.

One thing that almost invariably impresses the city man who goes to the country for a visit is the fine flavor of the meat found on the farmer's table. It is so unlike the ordinary packing house product that it is hard to realize that such a difference is possible in meat coming from the same kind of animals. Take an old country-cured ham, for instance. Can you imagine anything finer in flavor? It smells good and tastes better. Such meat, once eaten, is never forgotten. No wonder that the old-time country darkies had a saying: "Sweet as ham bone." Now that "hog-killing time" is again at hand, the following from George B. Ellis, Secretary of the Missouri State Board of Agriculture, will be of interest to every farmer who likes sugar-cured meat. Mr. Ellis writes:

"For thirty years I have used a method of salting and curing meat that has been very satisfactory, and our meat has been complimented by a great many people who have eaten at our table. I do not think this is the only way, but it is surely a good way, and I will give it to you for what it is worth. Some people prefer dry salting, but I prefer the brine method, and it keeps the meat cleaner and I think safer in a very warm spell of weather.

"It is necessary to have good, healthy and well-fattened hogs to start with, and to know how to properly divide and trim the carcass, but that phase of the question I will not take up. I would prefer to butcher when the weather is only moderately cold, and when it is just a little below freezing. If the meat is allowed to become frozen hard before it is put into the brine, it will not take salt readily. After the carcasses are cut up, spread the hams, shoulders and sides upon a table or boards in the smoke house, but where they will not freeze; do not pile them up. Rub a little salt on each piece, particularly the hams and shoulders, and let the meat cool out for twenty-four to thirty-six hours. Then pack closely in a clean barrel and cover with a brine made as follows: Soft water, three gallons; good salt, two pounds; brown sugar or a good quality of sorghum, one pound. Make this proportion a sufficient amount to cover the meat well. The brine should be boiled and skimmed and put on the meat after it is thoroughly cooled. It will require from four to six weeks, owing to the size of the hams, for the meat to be salted properly. The sides require less time—usually four weeks is sufficient for them, but the proper time to take the meat out of brine can be determined by sampling it.

"For curing I use clean corn cobs or hickory and maple wood. I hang the meat in a dark, tight closet made in the coolest corner of the smoke house. I put the fire for the smoke in a stove and conduct the smoke into the closet through a pipe; thus avoiding too much heat under the meat. It is best to take plenty of time to allow the meat to cure, and I would like to have smoke under the meat about half the time each day, and it will require about three weeks—then the meat should have a nice straw color and be sufficiently cured that it may be immediately sacked and hung back in the same place.

"The butchering should be done early, so that the meat may be salted and cured before the warm weather in March sets in. I prefer meat cured in this manner to any of the packing house products on the market."

Pretty Ears of Corn.

The yield in bushels of good, sound corn is the measure by which to judge of the worth of any type or variety of corn. I was talking about this very matter a few days ago with a Henry county, Illinois, corn grower, who has in nearly 400 acres of corn this season. This grower buys a few bushels of what he terms "show" ears, each year, simply to bring in some fresh blood, but he could not be induced to plant his entire crop with "show" seed. He selects most of his own seed from his own fields, and invariably the biggest, earliest-maturing ears are taken. If there is anything in the saying that like produces like, these big, coarse ears will produce the bulk, and that is what we all want. Another big corn grower, who counts his acres by the thousands, has told me more than once that while he kept up his corn-breeding plat and believed in corn improvement, yet it took the wind out of his sails when some farmer who paid no attention to fancy ears always got from fifteen to twenty-five bushels more per acre than he did. That is a fact, too. One of the best corn breeders I know of gets only from forty-five to fifty-five bushels per acre. All around him are farmers who get from sixty to ninety-five bushels per acre from seed of no particular breeding or variety. I believe that too much stress has been put upon score and points and not enough put upon vitality of the seed, stalk, root system and other features that count in producing a big, sound ear on a strong, vigorous stalk.—L. C. Brown.

Opening Wheat Prices on the Pacific.

On Saturday, July 19th, at Portland, Oregon, wheat was being purchased for foreign shipment at $1.02 per bushel for Blue Stem; 98 cents for Club; 95 cents for Russian; and 98 cents for Valley. This was the first trading of the season in new wheat. On the same day, on the cash market, at St. Louis, No. 2 red wheat was selling at $1.20 per bushel.

Aberdeen-Angus Supremacy.

This is the title of a very interesting booklet issued by Charles Gray, Secretary of the American Aberdeen-Angus Breeders' Association at 17 Exchange avenue, Union Stock Yards, Chicago, Ill. It is splendidly illustrated, there being twenty-pages pages devoted to pictures of champions. He sets forth the assertion that the Aberdeen-Angus breed furnishes the best beef cattle in the world, and then proceeds to prove it by the record. We believe that Mr. Gray will send a copy of this booklet to any stockman who may ask for it, for the reason that the purpose is to encourage beef raisers to adopt the Angus as their special breed, thereby insuring their own success as beef producers.

St. Louis Peach Prices.

ST. LOUIS MARKET HOGS.

The Greatest Variety and the Healthiest Hogs That Are Shipped to Any Center—The Only Western Market Showing Increased Business in the Year 1909.

St. Louis a Good Competitive Market, Affording an Equal Showing For All Buyers — No Monopoly — A Square Deal For All.

Interview With An Order Buyer.

Mr. E. T. Cash, of the firm of E. T. Cash & Co., is a buyer of hogs on orders, and most of his shipments are sent towards the East. He buys large numbers of the best hogs at the St. Louis National Stock Yards and has built up a splendid trade by the highly competent service he is performing for his patrons. The following is a statement of his opinion of the hog market at St. Louis. He said as follows:

"I have grown up with the St. Louis National Stock Yards and went in business on my own account because I believed we had a splendid market and excellent supplies which we could offer to slaughterers. This market is centrally located in the corn belt of the United States, and it takes corn to make good hogs. It is a country in which hogs have splendid forage and are quickly matured to market weights. We have less coarse hogs than other markets, but we have a far greater variety, and every order sent to us can be filled. Our bacon hogs cannot be excelled, and range in weight from 80-pound pigs to 200-pound hogs. We have also the blocky butcher hogs, ranging from 120 to 140 pounds average, and the fine hogs averaging 180 to 225 pounds, which are famous throughout the East as being the lightest shrinking hogs obtainable. Our market is also receiving more prime hogs weighing 230 to 275 pounds than any other market east of the Mississippi river, Chicago alone excepted, and we excel Chicago in the matter of quality or light weights.

"When buyers order hogs they wish to obtain exactly the goods that will suit their trade, and it is only natural that they prefer a market where every grade is represented and they are assured that their orders can be filled with healthy hogs without delay. The health of the hogs marketed at St. Louis is remarkably good, and the government reports sustain this statement. Our inspection here is very strict, and yet the reports indicate a less percentage of condemnations than at any of our competing markets. This is quite an item in itself.

"It is not generally known that this market is receiving 2,500,000 hogs a year and is still gaining. This is the only market in the West that shows an increase in hog receipts during the first six months of 1909 over the same period in 1908. Other markets were going backward, but we were going forward. Chicago has fallen off over six hundred thousand head; Kansas City decreased one hundred and fifty-eight thousand; Omaha shows a loss of nearly one hundred and twenty thousand, while St. Joe is behind last year about three hundred and seventy-five thousand. Our increase is due, principally, to the cooperation of our hustling commission firms engaged in the live stock business at this market. They are making every effort to maintain this splendid record, and they should receive some consideration for their efforts in placing the market in a favorable situation to fill orders for Eastern buyers.

ST. LOUIS THE BEST HOG MARKET FOR EASTERN BUYERS TO SEND THEIR ORDERS. MR. E. T. CASH, of E. T. CASH & CO., buyers on orders at the National Stock Yards, who has built up a nice business shipping first-class St. Louis hogs to Eastern and interior slaughterers.

"So far as this market is concerned, I desire to bear testimony to the fact that it is free and open to all buyers. There is no dominating influence, no monopoly. One man's money is as good as another's. We compete with packing-house buyers, and they have no favors shown them. They are in the market to buy hogs as cheap as they can, and so are we. We buy as cheap as we can and as high as we must. It is a square deal, however, and a one-load order is welcome to the market, and as much effort is made to please and give satisfaction as if they had orders for considerably more.

"We have splendid yarding and shipping facilities. Fifteen thousand hogs are handled without the slightest delay. The buying side of the market is amply provided for. Then again, the railroads are using every effort to expedite the business. In bringing hogs into the market they are two hours earlier than they were, and this gives us a better opportunity for selection. In outward shipments the last year has shown quite an improvement in time of transporting consignments to the several destinations, our local live stock agents having perfected a schedule which has taken a great deal of time and work to maintain; therefore, unusually fast time can be made to any slaughterer this side of Boston, Mass., delivering to Indianapolis in twelve hours; Cincinnati, Ohio, in fifteen hours; Buffalo, N. Y., in thirty-two hours; Pittsburg, Pa., in thirty-two hours; Baltimore, Md., in forty-nine hours; New York, N. Y., in sixty hours; and to other cities in proportion. Taking all the above into consideration, a person can readily see why our market has made such rapid strides in furnishing the East with a liberal portion of their purchases.

"We are thoroughly convinced that no Eastern buyer can afford to go beyond St. Louis in order to purchase hogs. We beat the farther Western markets in health, quality, time of Eastern delivery, and when the saving in freight is considered, we beat them in price. We can also suit the Eastern buyer just exactly according to his orders and furnish him hogs that will help to increase his trade.

"We point with pride to the fact that with the energy and effort used we have managed to place this market before the observing eyes of the wide-awake Eastern butcher, and results will show how the National Stock Yards have furnished them with nearly as many hogs as any two of our competing Eastern markets."

The postoffice address of Messrs. E. T. Cash & Co. is National Stock Yards, Ill.

HISTORY OF AGRICULTURE.

The editor of The National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated, and is a handy, useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Agriculture as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Use Big-type Poland-Chinas.

This is the first principle of hog raising. They easily weigh fifty pounds more at the same age than the ball-shaped, fine-boned kind, which every experiment and the universal experience of progressive stockmen have demonstrated as unprofitable. My hogs are sired by such boars as Ideal Jumbo, Jim Dandy, Perfect Tecumseh, King Mastodon and other 1,000-pound boars with a ten-inch bone (thinnest part of fore leg). My sows are stretchy and bring litters of eight to twelve. If you are for the big Poland-Chinas, write me for more detailed information. J. P. Vissering, Box 1, Godfrey, Illinois.

First-class Shropshires.

Those who desire to purchase first-class, pure-bred Shropshire bucks for fall service are reminded of Willard Miller, whose Oak Ridge Stock Farm is on Rural Route No. 2, Anita, Cass county, Iowa. He has some fine, heavy-wooled yearlings and two-year-olds sired by imported rams and the best that money can buy.

Eight-year-old Spavin Cured.

Dear Sirs:—Will you kindly send me Fleming's Vest Pocket Veterinary Adviser? One of my horses had bone spavin for eight years and got so lame he could hardly walk when first starting. Two applications of Fleming's Spavin and Ringbone Paste cured him of all lameness. I think it is the best remedy in the world.—T. G. Reynolds, Elwood, Neb. Address, Fleming Bros., 218 Union Stock Yards, Chicago, Ill., and ask for Veterinary Adviser.

The Success Manure Spreader.

This is the first manure spreader advertised in The National Farmer and Stock Grower. It was then twenty-one years on the market and giving good satisfaction. The roller bearings reducing the draft are a more recent invention. There is a free catalogue to be had by writing for it. The catalogue shows every detail of construction. Kindly mention The National Farmer and Stock Grower and address Kemp & Burpee Manufacturing Company, Syracuse, New York.

WINTER SEED WHEAT

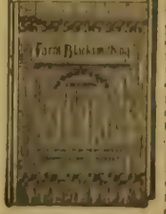
62 BU. PER ACRE: Ratekin's Imported Malakoff, Kharkof, Turkish Red and Fultz; Four hardiest, highest yielding northern grown varieties in the world; made a record of 62, 58, 56 and 54 bushels per acre. All pure, re-cleaned and graded. Mammoth white eye and extra quality new crop grown. Timothy, Clover, Alfalfa and all other farm and grass seeds. Catalog and Samples of any you want mailed Free if you mention this paper. Address RATEKIN'S SEED HOUSE, Shenandoah, Iowa.

WINTER SEED WHEAT

IMPROVED TURKEY RED. Safest to sow, heaviest yielding, strong straw, perfectly hardy. Also other varieties of winter wheat, both smooth and bearded, and **MAMMOTH WHITE WINTER RYE.** Send for circular and samples. Seed shipped on approval.
L. C. BROWN, Farm Seed Specialist, LaGrange, Cook County, Illinois.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.**

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Manure on Sandy Soils.

Mr. G. S., of Crown Point, Ind., writes: "Will it do to apply fresh manure this fall on sandy soil which is to be put into crops next spring?"

It is best under all conditions to apply manures or fertilizers in time for them to become available for the crops which they are intended to feed, but on sandy soils we must count upon considerable loss, by leaching, if these are applied too far in advance of the crops.

Truck gardeners handle sandy ground with profit by using great quantities of nearly fresh manure, but ordinary farm crops could hardly be grown under the same system. Gardeners spread this fresh manure during the winter or early spring and plow it under deeply. They put on five or six times as much as would be considered good for farm crops. The object is to force the crops, and this can usually be done during the early part of the season, while there are frequent rains. But it would be wasteful to apply such amount to crops which need the entire season to mature.

It is interesting to observe how different farmers manage different soils, and it is quite as much the proper understanding of soils as any other factor that produces profitable crops. Clay soils retain the fertilizing elements, so that frequent applications are unnecessary, while a sandy soil permits rains to run through easily and quickly and thus carry away out of reach of the plants large quantities of the plant food. So on sandy soils it is best to fertilize more frequently and put on less amounts. Truck gardeners count upon this waste, and they fertilize heavy enough for the crops, even should this leaching continue throughout the season.

Some farmers do not consider it a good practice to apply any kind of manure to corn ground during the spring. They cannot overcome the notion that it is hurtful to the crop. Of course, if fresh manure is plowed under during the spring and dry weather follows, it will be a hindrance. But plowing under well-rotted manure would create humus, and this would help retain the [illegible] If the fresh manure must be used on sandy soil, I would plow it under this fall.—L. C. Brown.

Kentucky Five Disc and Five Hoe Drills.

To anyone contemplating the purchase of a one-horse grain drill, for sowing between rows of standing corn or for sowing shock rows, we recommend investigating the Kentucky. This drill is made in plain grain and can also be had with detachable fertilizer hoppers which can be attached to a plain one-horse Kentucky drill at any time. Force feed grass seed attachments can also be had. Purchaser can have either hoe or disc furrow openers. This drill has the same feeds as the large Kentucky Drills. They are manufactured by The American Seeding-Machine Co., Incorporated, Richmond, Ind., who will be pleased to send you their Kentucky One-Horse Grain Drill catalogue and any special information within their power. The Kentucky is "good as wheat in the mill," and is strongly guaranteed. Go to your implement dealer and insist on seeing the Kentucky before buying any other.

Corn Harvesting Machines as Related to Full Corn Crop Values.

There is a class of farm machines which, we are persuaded, do not receive the attention they deserve. We refer to the corn harvesting machines and machines for getting greater value out of the fodder of the corn crop.

The corn binder, several styles of which are manufactured by the International Harvester Company, has been brought to a high state of perfection. It should be in much more general use than it is to-day. It is a great labor saver. It facilitates the work. It enables corn raisers to cut and shock all their corn within the very few days when all the nutritious elements can be preserved. It must not be forgotten that there is a "psychological moment" for cutting corn. Take your corn when it is just right, when stalk, leaf and blade are full of sweet, nutritious juices and before it has begun to degenerate into a woody fibre, and you have a feed that is almost as good as the best upland hay. That is the time when corn should be cut. The extra feeding value more than repays for doing the work quickly.

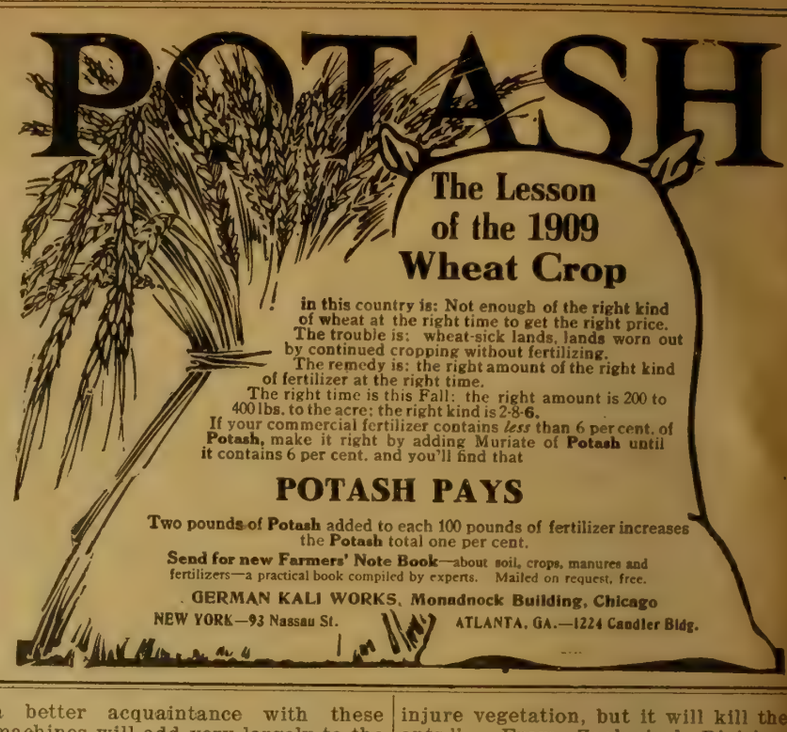
Harvesting corn with an I.H.C. Corn Binder is very much like present-day harvesting of small grains. You can drive right along in the field. The machine cuts and binds into bundles and gathers ready for shocking. Considering the labor saved and the gathering of the fodder when it is at its best, when it really makes an excellent sustaining and fattening ration, the money invested in the machine is quickly returned to every farmer with a considerable corn crop.

There are other International Harvester corn machines hardly less valuable. The corn husker is one of them. There are three different styles of these huskers, and they all do fast, clean, satisfactory work.

The shredder is the greatest aid in getting all the value out of the corn fodder. It shreds and tears apart the dry stalks, putting them in a condition so that all will be eaten. Not to shred the fodder is waste. There is too much food value in dry corn stalks not to have them eaten.

This food value can and should be turned into energy; into day's work; into growth, flesh, milk, etc. The only way to do this is to shred the fodder so all will be eaten and digested.

We think it cannot be denied that a better acquaintance with these machines will add very largely to the net profits that farmers are now receiving for their corn crops. There are thousands now in use, but the use should be still more general. Anyone who wants to do some figuring on present corn crop values and how to increase them will find some very interesting books on these machines with almost any International local agent.



POTASH
The Lesson of the 1909 Wheat Crop
in this country is: Not enough of the right kind of wheat at the right time to get the right price.
The trouble is: wheat-sick lands, lands worn out by continued cropping without fertilizing.
The remedy is: the right amount of the right kind of fertilizer at the right time.
The right time is this Fall: the right amount is 200 to 400 lbs. to the acre: the right kind is 2-8-6.
If your commercial fertilizer contains less than 6 per cent. of Potash, make it right by adding Muriate of Potash until it contains 6 per cent. and you'll find that
POTASH PAYS
Two pounds of Potash added to each 100 pounds of fertilizer increases the Potash total one per cent.

Ant Hills in Grass Plots.

The Superintendent of a cemetery in Pottsville wrote to the Pennsylvania State College in regard to the trouble that was being experienced by some of the lot holders in that cemetery through ants building hills on the lots and destroying the grass.

The letter was referred to Prof. Surface, State Zoologist, Harrisburg, who gave the following information:

"You can get rid of these pests with certainty, and very easily, by making holes in the ant hills to a depth of a foot or a foot and one-half, and pouring in a liquid known as carbon bisulphide or bisulphide of carbon. Use about one-half teacupful of this to each hill, making the holes two or three feet apart, in accordance with the size of the ant hill and the porosity of the ground. For a heavy clay soil they must be nearer, but for a light, sandy soil, they can be nearly three feet apart. These holes can be made with a sharpened stick. A broom handle, pointed at the end, will answer the purpose. After the liquid has been poured in, close the holes with earth and also keep the mound covered with a wet blanket for an hour or two. The carbon bisulphide will not injure vegetation, but it will kill the ants." — From Zoological Division, Pennsylvania Department of Agriculture.

The Corn Estimate.

The government estimates an increase of seven per cent. of the acreage in corn this year. The total area planted is 109,006,000 acres, and on July 1st the average condition was 89.3, against 82.8 last year, and 84.8 for the ten-year average. The estimate is for a crop of 3,161,000,000 bushels, an increase of 234,000,000 bushels over the largest crop heretofore raised.

Superior One-Horse Grain Drills.

These drills are made in the following styles: Five Disc Plain Grain and Combined Grain and Fertilizer styles, Five Hoe in same styles, and Five Disc with shafts and ground wheels, also in plain grain and combined grain and fertilizer. Grass Seed attachments can be furnished for any of these drills. They are used mostly for sowing winter wheat between rows of standing corn. These one-horse machines have the same style feeds as on large size Superior Grain Drills. They are unreservedly guaranteed by the makers, The American Seeding-Machine Co., Incorporated, Springfield, Ohio. Write for the Superior catalogue, and if you are contemplating the purchase of a drill of this kind, go to your implement dealer and insist on seeing the Superior before you buy any other. Remember, "The Name Tells a True Story."

Spring Wheat in Illinois.

There has been a very common notion of late years that spring wheat was out of its element in Illinois, and that in sections where winter varieties would not do well, wheat growing would have to be abandoned altogether. Winter wheat was started last fall under very unfavorable conditions, with the result that many fields were abandoned, and spring wheat was sown over a larger acreage this season in Northern Illinois than for many years. While it is most too early to give yields, yet spring fields indicate much heavier crops than winter varieties.

Here is a problem that must always confront grain growers: Different varieties of wheat do best under conditions peculiar to such variety. Those good conditions have always been present when any one variety has outstripped others. The problem is to maintain those conditions as near as possible, and give the crop the environment under which it does best. In farm practice this is not always practicable, so the thing to do is just that which many farmers did last spring. Instead of abandoning wheat altogether because conditions were against winter-sown, they sowed spring sorts this spring. While the season was against fall wheat all through the fall and winter, it has been very favorable for spring seeding. It takes about so much energy to produce the plant and ripen the grain. The weather and moisture conditions have been almost ideal for forcing this growth of spring wheat, and the crop now nearing maturity promises some old-time spring yields.

Comparing the winter and spring varieties standing, the question naturally arises whether it is not a matter of season and variety, after all, that produces the yield. No doubt seasons change in cycles. May we not have worked around where we must sow at a different period?

In my field travels in Kendall, Putnam, Henry and Will counties, early in July, I found most fields of winter wheat rather thin, straw weak, ripening very unevenly, some smut, and heads not well filled. Alongside of these fields were spring sorts coming along probably about two weeks later, and stiffer straw, no rust, longer heads and of splendid color. With dry weather until these later fields have ripened off, I am confident the spring-sown fields will yield one-third more than the fall-sown. There are small fields of wheat in most localities in Northern Illinois. It will be worth while to observe and compare the winter and spring sorts, and if any particular variety has shown superior standing qualities and makes heavier yields than surrounding fields, that's the variety to stick to.—L. C. Brown.

A Co-operative Movement.

The recent movement by the International Harvester Company, whereby the 30,000 employes of that corporation are invited to subscribe for shares of stock on favorable terms, is explained by the President, Mr. Cyrus H. McCormick, who said that the company desired all of its employes, upon whose efforts the success of the business depends, to have a share on the profits, and to this end it offered them the opportunity to subscribe for its stock. A finance committee was appointed to carry out this plan, so that all responsible employes were enabled to become partners or stockholders on favorable terms. The usual plan in such cases is to have some bank or individual advance the money for the stock and the employe pays the interest and reduces the principal out of earnings of the stock and eventually obtains the stock free and clear and becomes the final possessor of two incomes—one from his own earnings as an employe and the other from his dividend as a partner.

The interest the large owners of a corporation have in such a proceeding is to insure a supply of first-class workmen, who are just as much interested in the success of the works as they are themselves, and it usually happens that workmen who become stockholders are to be found in the most responsible positions, and they are also at work and drawing pay when in dull times the ordinary employe must of necessity be laid off. The movement changes a close corporation consisting of a few owners into a wide organization consisting of a large number of owners, each one being a loyal supporter of his own business.

Such movements are highly beneficial to all concerned and do away with many of the objections which people have to the companies which control large interests.

Notwithstanding large corporations in general have a large number of financial stockholders, they do not stand so well as the companies having a large number of working stockholders, and for this reason the International Harvester Company has very much strengthened its position by opening the door of co-operation to its employes. Farmers are great believers in co-operation, and the action of the International Harvester Company will be commended by them.

Early Oats Harvested.

The early varieties of oats have been harvested. These oats do their best under harder conditions than we have had this spring. Still it will be valuable to compare yields with the later sorts at threshing time.

A test of early Sixty-day oats in Putnam county, Illinois, was ripe July 8. This was fully two weeks earlier than Swedish Select or Joanette, grown alongside in similar plots. Joanette is a big-berry, black oat. It grows a large, bushy head, but rather a delicate straw. Here were three varieties of different habits grown under comparable conditions. The Sixty-day oat is ripe from fifteen to twenty days ahead of either Swedish Select or Joanette. It has grown an unusually long straw this season, fully ten inches longer than last year. The straw is stouter than either Swedish Select or Joanette, and the heads are better filled. Severe wind storms swept over these plots about two weeks ago, and they tested the standing qualities of the three varieties. The Sixty-day stood up much better than either of the others. The Swedish Select, which had made a very rank growth, lodged badly, and the Joanette went down almost flat. In Henry county, 125 acres of these early oats lodged so badly that they had to be cut one way, and other fields fared as badly.

About July 1st heavy wind with rain caught oats at just the critical stage for lodging—right at the stage when the straw would break the easiest. Any field that stood up in the face of these storms is worth noticing. The ideal growing conditions, with soil gorged with plant food, was too much for the good of many fields. The poorer fields, where the plants struck deeper and where plant food was not so abundant, stand up better and are filling better. —L. C. Brown.

CORN IS A DOUBLE CROP FOR THE MAN WITH THE RIGHT MACHINES

THE grain—that is, the ears—represent only about 60 per cent of the feeding value of your corn crop.

The other 40 per cent—almost half of the feeding value—is in the plant.

If you leave the stalks standing beyond the time that the corn has reached its maturity, the feeding value of the fodder dwindles to almost nothing. The wind and weather leave little more than woody fiber.

Then you get only the ears as your return on the crop. You make corn a single crop.

To make corn a double crop—to get your full 100 per cent feeding value—handle the crop so that the fodder will be about equal to timothy hay for feeding.

USE I. H. C. CORN MACHINES

You cannot harvest the corn rapidly enough by hand to conserve the nourishing elements of the fodder. To hire enough help to do this would eat up the profit. Go over the field when the ears begin to glaze, with a Deering, McCormick, Milwaukee or Osborne corn binder. One man and a team is all that is needed. The harvester will cut and bind the corn as fast as the team can walk, and dump the bundles in piles ready for shocking.

Then put the crop through the husker and shredder. A Deering, McCormick or Plano husker and shredder will husk the ears, cut the stalks, leaves and husks into fine shreds, giving you a roughage rich in protein, starch and sugar and one that the stock will relish.

That's the 100 per cent way of handling the corn crop—that is how thousands of farmers have doubled up on returns from their corn land.

Start this season to get *your 100* per cent. To invest in two machines that will save the 40 per cent feeding value every year will certainly appeal to you when you get to figuring.

Talk it over with the International local agent or write us for full particulars.

The Tariff and the Free List.

In our opinion, sufficient customs duties should be imposed upon all foreign productions entering this country, that the citizens of the United States shall be at no disadvantage in our own markets in competition with these foreign importations. This applies equally to raw materials and to manufactured goods.

The producer of grain, or hides, or cattle, in South America, should not be permitted to sell his productions in the United States until those productions have paid the United States government an import tax at least equal to the state and federal taxes which the American producer has to pay in one form or another upon the grain, hides and cattle which he produces and sells.

We believe that people who are agitating for the purpose of doing away with tariff duties that furnish the United States government three hundred and thirty million dollars a year never think of the consequences. Whenever any foreign material that is in competition with our own products is admitted duty free it is fostering the foreign industry on the one hand and injuring the industry of the American citizen on the other, besides creating a deficiency in government revenues which the injured American citizen has to make up in addition to the taxes he formerly paid. Placing foreign goods on the free list empties the government cash box without reducing government expenditures, and as the foreigner cannot be taxed by us in his own country, and we pass his goods in free of taxation, our own people must accept the burden in whatever shape it assumes.

We hope our readers will not assume that the government can get along without an abundance of money. The taxing powers of the city, state and federal governments are exercised with amazing recklessness. Economy in government expenditure was never even seriously considered until the national government was in the hole a hundred million dollars. The city and state governments are constantly increasing taxation, and the reckless and wasteful expenditures continue without check. There are propositions now before the nation that call for hundreds of millions of dollars with as little concern as though they were calling for ten-cent pieces. The government needs money, and if it is not obtained from taxing the foreign productions, it will have to come from direct taxes on home productions, and it will reach the people classed as the "ultimate consumer."

The cry against a legitimate tariff on foreign materials is not a patriotic one. Neither is it based upon true political economy. There can be no more patriotic purpose in connection with the imposition of customs duties than that which protects the taxpaying American citizen against the foreigner who pays this government nothing. It is not enough that foreign goods can be delivered at American ports in ships at less cost for transportation than American productions can be brought from the interior to the coast by rail—which is a distinct advantage to the foreigner—but people advocate that the American goods, which have paid tax to state and national governments, shall be in competition with foreign goods which pay no taxes in this country. The purpose of government is to protect American producers in every reasonable way; and the so-called free list is misplaced protection in favor of the foreigner.

For the first time farmers have their interests placed in jeopardy. They have been told that they never were protected. But they were. The free trade in raw material movement intends to remove the duties from grain, wool, hides, cattle and meats, vegetables, butter and eggs. We advise farmers to look out for South American grain and for stockmen to look out for South American hides and meats. Take down the custom-house bars and the productions they are sending from South America to London and Liverpool will arrive at New Orleans and New York. South America raises immense food productions without a population to eat them—their export surplus is 80 per cent of their total productions. Look out for them and make them pay duties on grain, hides and cattle, to equalize their taxpaying standing with our own.

There is some talk as to who pays the tariff duties, but there is no question as to who gets the money. Uncle Sam had best collect the tax as the goods come in, and it will not have to be paid twice by the American citizen. What we advocate is a tariff for revenue with all the protection that can be derived therefrom.

It looks as though some farmers' products will be placed on the free list. This is mainly due to the agitation of manufacturers, who wish protection for themselves and their goods and deny protection for raw materials. Once the entering wedge and the log will be split wide open. Free raw materials will mean war taxes; taxes on industry; taxes on prosperity; taxes on everything the tax-making power can levy on. The government needs the money, and if foreign imports come in untaxed, new inventions will be required to create new taxes. The time-honored practice of taxing foreign raw materials as they came in is to be done away with, and after our people are distressed with unfair foreign competition the new taxes will make a hole in what remains.

We think deeply on this subject. There should have been organized a National Association of Farmers committed to the principle of reasonable protection to American farm productions—the reasonable protection at least to cause these foreign productions to pay their share of the government burden and to insist that the principle of protection be applied equally as between the different interests of this country. The National Farmer and Stock Grower is in favor of such a platform, and from this time forward will advocate it in season, and, if necessary, out of season.

Oats Value, Present and Future.

During the month of July, on the Chicago Board of Trade, the contracting prices of oats declined. On June 30th the July option for July 31st delivery was quoted at 49⅜ cents, and by the time delivery day came around oats had declined in price to 43 cents a bushel.

At St. Louis, July 31st, on the cash market, the sales by grades were as follows: No. 2 mixed oats, 40 to 41½ cents; No. 3 mixed, 37½ to 40 cents; No. 2 white, new, 48 cents, nominal; No. 3 white, 44 to 45½ cents; No. 4 white, 42 to 43 cents, nominal; and standard, new, 48 cents, nominal. These figures show actual sale and delivery on same day. Nominal means accepted values without sales for want of supplies.

In regard to the value of oats for future delivery we see that on June 30th, the September quotation was 43⅞ cents, and by July 31st this quotation was reduced to 38⅜ cents. On June 30th the December oats quotation was 44 cents, and by July 31st the December quotation was reduced to 38⅝ cents. There is also a price quoted for May, 1910, delivery of oats at 40⅛ cents a bushel.

Farmers must not be misled into believing that these figures are based upon a lot of gambling transactions. There may be some pure and unadulterated gambling in the transactions, just the same as a man may contract to buy hogs at a stated price to be received in the future, and then stand his losses or take his profits, if any; but the gambler is in the minority, and the bulk of the sales are for the legitimate purpose of disposing of the crop to the consumers thereof in this and in other countries.

American Breeders' Association Meeting.

The Sixth Annual Meeting of the American Breeders' Association is called for December 8, 9 and 10, at Omaha, Neb., in association with the National Corn Show held at that place December 6 to 18. A program of addresses by prominent breeders of live stock, prominent breeders of plants and eminent scientists in the study of the heredity of plants, animals and men is being prepared.

Arrangements are being made to have many of the addresses illustrated with stereopticon views and moving pictures. W. M. HAYS, Secretary American Breeders' Association, Washington, D. C., July 30, 1909.

Ernest Kittrell, of Mt. Pleasant, Ky., is reported as having sold eighty acres of land at $500 per acre. On account of a discovered phosphate deposit the purchase was made by the Middle Tennessee Phosphate Company.

FARM AND RANCH LANDS.

ARKANSAS.—Fortunes in Rice Growing. An industry that originated seven years ago is making the prairie lands of Arkansas produce splendid incomes. Write for free booklet entitled "Arkansas Rice." Address, **E. W. LeBEAUME,** 1327 Pierce Building, St. Louis, Mo.

KANSAS.—1,000 Farms and Ranches in forty Kansas counties for sale or exchange. **What Do You Want?** Make plain in first letter what you wish to buy, sell or exchange. Lists and information free. **F. H. Brown,** Opera Block, Winfield, Kansas.

KANSAS. — A Widow's Property. 484 acres, Greenwood County Stock Farm. Well improved; only $12,500; terms. Send for description and plat; it will interest you. **Terra Farm Agency,** Council Grove, Kansas.

MICHIGAN.—I sell Farms in Oceana, the best county in the United States; fruit, grain and stock. Write for list. **J. D. S. Hanson,** Hart, Mich.

MISSISSIPPI.—The best lands for the money in the United States of America. Come and see. **J. W. Jourdan,** Iuka, Miss. Between Memphis and Chattanooga.

MISSOURI.—Farm Bargain. 1,050 acres, Stock, Fruit and Grain Farm; over 4,000 bearing fruit trees; fine condition; nine-room residence; large barns and other buildings; excellent timber on about one-half of the farm; abundance of pasturage; several running springs; three-fourths of a mile from the station, on the Frisco. Old age is cause of sale. Will give good terms. Enclose stamps for farm lists. Will make farm loans. **Victor Wm. Reitz Realty Co.,** 1004 Chestnut street, St. Louis, Mo.

MISSOURI.—Finest Farm in Missouri at half the price of less productive lands in near-by states.

Callaway County, the "Kingdom of Callaway," with wonderful richness of soil, presents the best opportunity to-day for both the investment farmer and the seeker for a home where it requires no pioneering and no hardships.

It is the ideal country for grain and stock raising, corn and hogs, blue grass.

If you don't write for my list and find out more about "Callaway" farm bargains you're a loser. **W. E. Jameson,** No. 20, Fulton, Mo.

MISSOURI. — Money in Sheep. Experts have said that there is nowhere a better sheep land than **The Hill Country** in Missouri, on the line of the Iron Mountain Route. It is right near the great sheep and lamb market of St. Louis, the largest and best in the world. The land is cheap. Write for free pamphlet entitled "Money in Sheep." Address, **B. H. Payne,** G. P. A., St. Louis, Mo.

MISSOURI.—Central Missouri Farms. For Stock, Grain and Grass Farms that will prove profitable as Homes and Investments, write for new list. Farms described and priced. Easy terms. Low prices. **Hamilton Realty Co.,** Fulton, Missouri.

OKLAHOMA.—Two Fine Bottom Farms For Sale. 110 acres; all first bottom; one mile north of Guthrie, Ok.; 160 acres, two miles from Red Rock, Ok. For full particulares write **H. A. McCandless,** Perry, Ok.

TENNESSEE.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennesse Real Estate Company,** Morristown, Tenn.

TEXAS.—Fortunes in Fig Orchards. Fig preserves at Aldine, near Houston, Texas, never fail to produce profitable crops. Better than banks, bonds or life insurance. Opportunity for small investors. See larger advertisement and write for particulars to **E. C. Robertson,** 501 N. Kiam Building, Houston, Texas.

TEXAS.—12,000-acre ranch within eight miles of Sabinal, Uvalde county, Texas. A part fine grazing land and the balance richest agricultural soil. Will sell in 2,000-acre tracts or less. Agricultural lands average $11.00 per acre and grazing lands average $4.75. Greatest bargains in the state. For particulars address, **Albert D. Evans,** National Stock Yards, Ill.

CASH FOR YOUR FARM OR BUSINESS, No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND,** 7910 Adams Express Building, Chicago, Ill.

Wheat and Flour Values.

July wheat finished the month at Chicago at $1.06 per bushel and at St. Louis the end was at $1.05. These were the figures closing out what is called the July option. The market declined 10 cents a bushel during the month.

At St. Louis, on July 31st, the actual cash transactions in wheat were as follows: No. 2 red, $1.08 to $1.09¾; No. 3 red, $1.06 to $1.07½; No. 4 red, $1.00 to $1.04; No. 2 hard, $1.07 to $1.16; No. 3 hard, $1.05 to $1.08, nominal; No. 4 hard, 98c. to $1.02, nominal. These prices do not appear to be causing any hardship to consumers.

Flour was quoted as follows: New soft red winter—Patents at $4.80 to $5.00 per barrel; Straights at $4.60 to $4.75; Extra Fancy at $4.30 to $4.40; Fancy at $3.65 to $3.80; low grades at $3.20 to $3.40. These flour prices are really low when the actual price of wheat is considered. The cash wheat market really needs more activity in flour. If we could advance flour prices, wheat would also gain strength in values.

As to the Board of Trade opinion of future prices it is well to observe that the September option closed at $1.04½ and the December option at $1.02¾. This, properly considered, is valuable information. A farmer can only guess what his onions, potatoes, or his hay, may be worth in September, but he can actually sell his wheat, corn, or oats, for future delivery, at the market price. In order to do so he has to put up his margin to bind the trade, just as business men are bound, and either deliver the wheat at the proper time or make the difference good in money.

The future quotations of the Board of Trade do not fix the price of wheat for September 30th delivery or for December 31st delivery beyond the actual transactions entered into. When the time comes the market may be higher or it may be lower, but the fact remains that wheat for delivery September 30th was bought and was sold at $1.04½ per bushel, and the man who bought put up his forfeit, and the man who sold had to do the same. The transaction gives the answer to the question: "What is the prospect?" The prospect is as stated; men have put up their money on the prospect.

The future beyond December is not yet supported by any number of transactions. Quite an amount of interest will be manifested in the first large purchase of wheat for delivery in May, 1910. The quotation, July 31st, was $1.05⅞ for May, 1910, delivery. It is the proper programme for wheat growers to study the market transactions, and they can do so without giving up their own opinions as to what values will be or ought to be.

Corn, Present and Future.

At Chicago, on June 30th, on the speculative market, the July corn option was quoted at 71¼ cents a bushel; the actual market price a month later on delivery day, July 31st, was 68⅛ cents per bushel. From this it will be seen that in Board of Trade transactions corn actually declined 3¼ cents a bushel during the month of July.

On July 31st, at the St. Louis Merchants' Exchange, in the actual cash trade, No. 2 corn sold at 69½ to 71 cents; No. 3 corn, 69½ cents; No. 2 white corn, 74½ to 75 cents. These actual transactions indicate the independence of the St. Louis market of all speculative quotations.

On June 30th, the Chicago closing quotation for September corn was 67⅞ cents, and on July 31st the closing September quotation was 66⅛ cents.

The September option is the practical close of old corn. The new crop expectation has much to do with December prospective values. On June 30th the Chicago Board of Trade quoted December corn at 58¼ cents; on July 31st the December quotation was reduced to 55 cents. Chicago has also a May, 1910, corn quotation of 55⅝ cents. From this will be seen the basis on which grain traders are operating. The values have great influence on the export trade.

Distemper and the other similar troubles among horses, sheep and dogs is aggravated in the spring by the chilly nights and exposures to storms as well as the sudden change in some cases from dry feed to the new green grass. A regular tonic in advance of Craft's Distemper Cure is a good preventive of colds and the other troubles, or is a cure, should the troubles come. Our readers should note the advertisement in our columns and get it of dealers. If not easily found, it is sent at 50 cents and $1.00 per bottle prepaid direct from the manufacturers. The Wells Medicine Co., 17 Third street, Lafayette, Ind.

A First-class Business College.

Brown's Business College of St. Louis is splendidly located in the West End, where it is bright and healthy. It is a very fine, large school. They understand the application of business methods to the farm. Young men on farms should write Brown's Business College, and, after mentioning this paper, ask the "Business Farmer C[illegible]

Shoo Fly *The Animals Friend*

Keeps off flies and insects in pasture longer than any imitation. **Kills every fly it strikes!** Protect your stock and they'll take on flesh. Cows give ¼ more and richer milk, and horses do more work on less feed. 50c. worth saves 5 qts. milk. 1 gal. protects 3 animals a season. **Cures all sores.** Prevents itching. Nothing better for galls. Used by leading veterinarians and dairymen since 1885. **Kills lice and mites.** Accept no substitute. If your dealer hasn't it send his name and $1, and we'll send enough Shoo-Fly to protect 3 animals 30 days and improved 3-tube gravity sprayer. Name express office. $1 refunded if animals not protected. Shoo-Fly Mfg. Co., 1300 N. 10th St., Phila., Pa. Agents wanted everywhere. Special terms. Write today.

Editor knows from experience Shoo-Fly is O. K.

A Big New York Cheese.

The New York Produce Review says that the largest cheese ever manufactured in the Mohawk Valley, N. Y., was shipped to a Chicago firm recently by a Utica cold storage company. The cheese was built in the usual shape, but it measured 32 inches high, 45 inches in diameter, contained 41,728 cubic inches, and weighed 1,950 pounds. It required about ten tons of milk to produce it and it was pressed into shape by a specially-constructed press in a Lowville cheese factory, and there it was bought by the Chicago firm through the cold storage company.

The company has shipped quite a number of cheeses weighing as much as 1,200 pounds, but this was the largest one it ever tackled. It has a tank which is large enough to paraffin a half-ton cheese, but to-day the monster cheese was paraffined outside of the tank by carefully pouring the molten liquid over it. After the paraffin had cooled the cheese was encased in a sheet-iron covering.

A Good Example.

Under the name of the Southern California Dairy Association four hundred farmers and dairymen have formed a co-operative association, through which they expect to furnish milk to Los Angeles consumers at a price which will give the farmers a good profit and will be cheap to the buyers. This will be brought about by the elimination of the middlemen's profits. Organization of the farmers was a result of dissatisfaction of milk producers with the prices offered by the so-called "Trust," which practically controls the retail and wholesale trade of Los Angeles. At the time the organization was first broached the farmers were securing $1.30 a hundred for 4 per cent. butter-fat milk, f. o. b. that city. When work was begun on the $30,000 plant of the association, now practically completed, the middlemen are said to have raised prices to $1.40 per hundred pounds, and are now giving $1.50 per hundred.

Rules For Milk Producers.

The following rules have been carefully compiled by the Dairy Division of the United States Department of Agriculture and submitted for the earnest consideration of milk producers:

The Cows.

1. Have the herd examined at least twice a year by a skilled veterinarian. Promptly remove animals suspected of being in bad health. Never add an animal to the herd until certain it is free from disease, particularly tuberculosis.

2. Never allow a cow to be excited by fast driving, abuse, loud talking, or unnecessary disturbances; do not expose her to cold or storms more than necessary.

3. Clean the entire body of the cow daily; hair in the region of the udder shall be kept short by clipping.

4. Do not allow any strong-flavored food, like garlic, cabbage or turnips, to be eaten, except immediately after milking. Changes in feed should be made gradually.

5. Provide fresh water in abundance, easy of access, and not too cold.

The Stables.

6. Dairy cattle should be kept in a stable, preferably without cellar or storage loft, and where no other animals are housed.

7. The stable should be light (four square feet of glass per cow) and dry, with at least 500 cubic feet of air space per animal. It should have air inlets and outlets, so arranged as to give good ventilation without drafts of air on cows.

8. The floor should be tight and constructed preferably of cement; walls and ceilings should be tight, clean, free from cobwebs, and whitewashed twice a year. Have as few dust catching ledges, projections and corners as possible.

9. Allow no dusty, musty or dirty litter or strong-smelling material in the stable. Haul manure to field daily, or store under cover at least forty feet from stable. Use land plaster daily in gutter and on floor.

10. Have a light, clean, well-ventilated and screened milk room, located as to be free from dust or odors.

11. Milk utensils should be made of metal, and all joints smoothly soldered. Never allow utensils to become rusty or rough inside. Use them only for handling, storing or delivering milk.

12. To clean dairy utensils, use only pure water. First rinse the utensils in warm water. Then wash inside and out in hot water in which a cleansing material has been dissolved, and rinse again. Sterilize with boiling water or steam. Then keep inverted in pure air and sun, if possible, until wanted for use.

Milking and Handling Milk.

13. Use no dry, dusty food just previous to milking.

14. The milker should wash his hands immediately before milking, and milk with dry hands. He should wear a clean outer garment, kept in a clean place when not in use. Tobacco should not be used while milking.

15. Wipe the udder and surrounding parts with a clean, damp cloth immediately before milking.

16. In milking, be quiet, quick, clean and thorough. Commence milking at the same hour every morning and evening, and milk the cows in the same order.

17. If any part of the milk is bloody, stringy or unnatural in appearance, or if by accident dirt gets into the milk pail, the whole should be rejected.

18. Do not fill cans in the stable. Remove the milk of each cow at once from the stable to the milk room. Strain immediately through cotton flannel or cotton. Cool to 50 degrees Fahrenheit as soon as strained. Store at 50 degrees Fahrenheit or lower.

19. Never mix warm milk with that which has been cooled, and do not allow milk to freeze.

20. A person suffering from any disease, or who has been recently exposed to a contagious disease, must remain away from the cows and the milk.

Another Great Record.

Another remarkable performance by a Holstein cow is now a matter of record. She has the distinguished name of Bontje Pieterje DeKol. She is a Canadian and has just completed a year of testing at the Ontario Agricultural College, and produced more than 20,000 pounds of milk. When it is considered that this one cow shows a yield six times greater that that of the average dairy cow, one can gain some idea of what it would mean to milk a whole herd of her equal.

The milk tested a fraction over 3.76 per cent. and contained 781.91 pounds of butter-fat. The cost of the feed charged up by the college authorities was $72. The value of the butter-fat, at prices that have been paid neighboring famers by the college creamery, was $190.38. If the 20,000 pounds of skim milk and buttermilk were valued at 20 cents per hundredweight, it would amount to $40. Adding this to the value of the butter-fat, the total yield of butter-fat and skim milk would equal $230.38. Deducting the cost of feed, we have a profit over feed consumed of $157.72.

At the prices for cream which have been received during the last year the butter-fat in the cow's milk would have been worth $224.57. The skim milk in this case would have been 175 hundredweight, worth $35, making the total proceeds $259.57, or a profit over the cost of feed of $186.91. To state this cow's record another way, according to the rule for estimating butter yield by adding one-sixth to the butter, the estimated quantity of butter which could have been made from this cow's milk was practically 912.25 pounds, which is about six times the yield of the average cow.

This is a wonderful record, one which very few cows would be capable of making. Professor Dean writes that, so far as he is aware, it is one of the best, if not the best, ever made in Canada, and he doubts whether any other cow beginning her record before she was four years old has a better one.

Dairy and Creamery.

The railroads centering upon Buffalo, N. Y., having advanced their rates upon milk, were called upon to explain why they did it, and they simply claimed that the increased cost in operation warranted the increase in rates.

Unless one buys a first-class cream separator, considerable fat is lost through the skim-milk spout. How much the loss amounts to can only be determined by careful tests of the skim milk. Two samples should be tested, one shortly after the separator has been started and the other just before the run is completed.

CONGO *NEVER LEAK ROOFING*

Congo on Allen Panel Co.'s Buildings, Johnson City, Tenn.

PLIABLE, durable, easily laid, and of such waterproof qualities that it equals rubber itself in keeping out water—that's Congo.

Storms do not affect it, neither does heat nor cold.

Congo doesn't dry out or rot out.

Every roll runs uniform throughout, with smooth, even edges.

Nails, caps and cement free in center of each roll.

Congo gives maximum service with minimum care.

A genuine Guarantee Bond of the National Surety Co. with every roll.

It's worth while writing for a free sample. Do it to-day.

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send **The National Farmer and Stock Grower** for two years and we will send the book, **Profitable Dairying,** as a premium. Address,

HALE PUBLISHING CO.,

Quality of Farm Butter.

The great variability in the quality of farm butter has about driven that article from some of our large city markets. The good farm-made butter has had to take the fate of the poor butter. The maker of good butter has had to share the fate of the maker of poor butter, so far as the big city market is concerned.

There is doubtless much farm butter still sold in the cities, but it is smuggled in under the name of creamery butter, the wise traders knowing how to make a double profit with this trick.

If one tries to buy farm-made butter in Chicago, he will find success difficult to attain. But instead he will be offered a lot of creamery butter at a few cents under the regular price. He suspects this to be oleo, but finds it is not. Then he asks if it is not process butter, and is told no. Often he finds its quality as good as that of any other butter. If he is a citizen and not onto the tricks of the trade, he will remain unable to solve the problem of why he was able to buy this butter a little cheaper than the other butter, while it appears to be equally as good.

But the buyers and the traders profit at the expense of the farmer. The latter sent his butter to the city, where it was sold at a low price on account of being lumped with many other lots, many of which were of poorer quality than the lot that was renamed "creamery" butter. Let no one imagine that the wily Chicago buyer resells a lot of good butter for poor butter simply because he bought it as such. No, he sorts it out and disposes of it in different directions.

This reacts on the farm-maker of butter disastrously. He has not yet found out that he is being robbed year after year by this trick. He will be a long time yet in finding out the truth.

This is made possible by the poor quality of farm butter. Were farm butter generally of high quality, it would not be possible for the traders to purchase it at a small price. The situation can be changed only by the large improvement of the quality of farm butter. Just so long as it has a bad reputation just so long will it be bought in by the city haggler at a price below what it should be sold.

Farm butter is generally low in quality because it varies in so many of the things that compose it. The quality, as understood by the city buyer, takes in the aggregate of everything. The color, the salt, the grain, the flavor, the softness or hardness, the aroma (which may be flavor), all go to make up the quality of the butter.

The farmer in producing a better butter will have to make himself an expert on each of these. Indeed, it will be easier to teach our farm buttermakers what each of these should be than to attempt to consider any mass of butter as a whole.

We must have fairly fixed standards for farm butter. There are those that would leave everything to the unstandardized fancy of the expert maker, but the trouble is that all buttermakers are likely to consider themselves experts. We can have standards for everything except flavor and aroma.

Variation in Moisture.

The Press Bulletin of the Wisconsin Agricultural College says that a creamery owner has writen to the Dairy School that a shipment of sixty-pound tubs of butter was sent to a large city market and examined by the government agent. There were ten tubs of butter from one churning, seven of which were passed, and three held up because of excessive moisture. The question is asked whether the water content of butter in one churning may not be uniform.

To secure additional evidence on this point, a churning was made at the University creamery and packed ready for market in eight sixty-pound tubs. A sample of each was submitted to moisture determination by heating ten grams for two hours in a high-pressure steam oven. The per cent. of water found in the eight tubs was 15.3, 15.4, 15.0, 14.8, 15.4, 15.3, 14.8 and 15.3. This shows an average of about 15.2 per cent. moisture, with a variation between extremes of 0.6 per cent. This indicates that the per cent. of water in the tubs of butter in one churning may vary at least 0.5 to 1 per cent.

The water in butter is mechanically mixed with the fat and not chemically combined. Prof. E. H. Farrington says in discussing this question, it is difficult to get an absolutely uniform mixture of water through all parts of the churning. In order to be on the safe side of the limit (16 per cent.) the buttermaker should not allow the water content of a large churning to exceed 15.5 per cent., unless he makes a water determination of each tub of butter sent to the market. At this season of the year, when butter is naturally soft on account of the luxurious pastures, there will be a tendency to retain an excessive amount of moisture, as soft butter holds water readily.

Milk Producers' Association.

There was no July meeting of the Milk Producers' Association of Missouri and Illinois, but the President, Hon. D. I. Furbeck, acting as Milk Committee, came in and made a round of the dairy companies, and his report was mailed out by the Secretary to members in good standing.

The August Directors' meeting will be held at one o'clock, p. m., Monday, the 23d, at the office of the Secretary, Mr. Wm. A. Fischer, 409 Franklin avenue, St. Louis, Mo.

During the harvest season the attendance is usually very small, but it is hoped that the August meeting will be a success.

The association is short of money. Expenses incurred in looking after freight rates and preventing an advance have not been paid. Three-fourths of the members are not paying their dues. As fall approaches this will be corrected.

The annual meeting will be held in November, as usual, when every milk producer will be invited to attend and do his share towards making the association a stronger organization.

The Milk Reporter says that although a little shy on cream, the receipts of milk for June, 1909, were the largest that ever reached the New York market in any one month.

The Ayrshire Cattle Club offers, for a friend of the breed, "The New England Cup," sterling silver, valued at $125, to be awarded to the exhibitor of the best young herd at the National Dairy Show of 1909, bred by the exhibitor; limited to members of the Ayrshire Breeders' Association living in the United States. The National Dairy Show will be held at Milwaukee this year.

The Famous Kumiss.

Kumiss is a valuable beverage for use in the sick room. Heat one quart of milk to seventy-five degrees Fahrenheit, add one and one-half tablespoonfuls of sugar and one-fourth of a yeast-cake dissolved in one tablespoonful of lukewarm water. Fill sterilized bottles to within one and one-half inches of the top. Cork and shake. Place the bottles inverted, where they may remain at a temperature of seventy degrees Fahrenheit for ten hours; then put in the ice-box or a cold place, and let stand forty-eight hours, shaking occasionally, to prevent the cream from clogging the mouth of the bottle. It is refreshing and nourishing. — Woman's Home Companion for August.

The First Perfect Feeding Device for Cream Separators.

We have frequently referred to the recklessly untrue statements and claims made by "desperate would-be-competitors" struggling to retain Cream Separator business that is going to the **United States Separator.**

We have repeatedly proved by the records of the United States Patent Office at Washington and by the records in the United States Circuit Courts, also by the records of International Expositions and National Expositions, that most of the claims of these would-be-competitors are false.

They are using desperate and false claims in their efforts to make it appear that they are first in everything desirable in Cream Separators.

The **United States Separator** was the first to employ a feeding device in the Separator bowl to deliver the whole milk beyond the cream zone. This device of the United States prevents all conflict of currents and any remixing of the cream and skimmilk in the process of separation. **It is far superior to any "split-wing" device,** more perfect in operation and has won the International prize for the most perfect separation.

The "disc" Separator could not use this device and in its efforts to equal the device of the United States was compelled to resort to an inferior expedient—the "split wing." But the "split wing" does not enable them to equal the United States, as the records show.

The **United States Separator** was the first to distribute the incoming volume of whole milk back of the cream wall.

The **United States Separator** was the first to use non-aligned channels for the currents of milk through the Separator bowl, on which it holds strong patents, and no others can use this construction and it was the **United States Separator** that beat the "disc" Separator at the greatest International contest of Cream Separators ever held.

The "disc" Separator has never been able to equal this test.

It was the **United States Separator** that beat the "disc" Separator in its own County Fair test and recovered more butter in the cream than the "disc" Separator recovered.

The **United States Separator** is manufactured under patents owned by IT.

The **United States Separator** is the originator of the best things in Separator Improvements.

The **United States Separator** is not an imitator in any particular.

Vermont Farm Machine Co.

BELLOWS FALLS, VERMONT

McFARLANE COMMISSION COMPANY.

HORSE and MULE COMMISSION SALESMEN

AUCTION EVERY **MONDAY** IN THE YEAR.

These Monday auction sales at the St. Louis National Stock Yards are the best attended of all sales and produce the most satisfactory results for the shipper.

WE ALSO SOLICIT CONSIGNMENTS OF MULES TO BE SOLD BY THE MOST COMPETENT SALESMEN ON THE BEST MARKET IN THE COUNTRY.

On and after August 16 we reorganize this Company to take over the Tuesday Auction. The name of the firm will be HOLLAND, NUGENTS & MAXWELL BROS. COMMISSION COMPANY.

JOHN A. CAMPBELL, Manager.

Write For Weekly Market Report.

McFARLANE COMMISSION COMPANY,

NATIONAL STOCK YARDS, ILL.

ST. LOUIS THE GREATEST MULE MARKET IN THE WORLD. MR. HARRY GILLEN, one of the pioneers of the National Stock Yards. MR. GILLEN and his partner, MR. ADOLPH HEIMAN, were engaged in business at the St. Louis National Stock Yards before the other members of the trade moved over from Broadway, in the city of St. Louis. Being interviewed recently, MR. GILLEN said: "When I came to St. Louis from Wichita, Kas., nearly fourteen years ago, I was well established there, but I recognized that there could only be one great center of the mule trade, where a majority of the mules in this country could be assembled, fed, perfected, classified and distributed for working purposes to the greatest economical advantage, and I was not mistaken. In the St. Louis National Stock Yards we have the largest aggregation of mule dealers known to the trade, and the market gains in importance and extends its connections whenever a firm joins us. In buying and [illegible] there is the keenest rivalry among us, but when it comes to business integrity we stand together as a unit to uphold the high character of the market, that it may always be said that contracts are filled at St. Louis with the utmost scrupulous care to do exact justice to the absent buyers who favor us with their orders and their confidence. Hundreds of thousands of mules have been sold by St. Louis mule dealers to absent buyers without a single cause for dissatisfaction, and for that reason load after load is shipped out without any appearance of activity on the market.'

The postoffice address of the GILLEN-HEIMAN-HARPER MULE COMPANY is National Stock Yards, Illinois.

ST. LOUIS THE GREATEST MULE MARKET IN THE WORLD. MR. JEFFERSON D. GATES, one of the men who has helped to make it so. MR. GATES is one of the mule salesmen of the CAMPBELL & REID and WESTERN SALE STABLES COMPANY at the National Stock Yards, and is an active operator in the interest of his customers, his firm and the St. Louis market.

The Monday Horse Auction.

We have published an advertisement of the McFarlane Commission Company continuously for five years, and this is the last one, for the reason that after the auction of August 16th the firm name will be changed to Holland, Nugents and Maxwell Bros., and the old patrons of the McFarlane Commission Company will have the benefit of the Monday and Tuesday horse auctions, and in selling mules Mr. Lan Morris will have the co-operation of Mr. Ed Conway. Since Mr. W. R. McFarlane disposed of all interest in the Monday auction it is natural that his name should finally disappear, although the spirit remains, and the loyalty of the McFarlane Commission Company to its patrons, the sterling honor in all dealings will be the guiding influence in the consolidated firm. The reorganization and the alliance of Monday with Tuesday are for the purpose of furnishing a stronger basis on which to enlarge and expand the St. Louis horse and mule market.

St. Louis Horse Quotations.

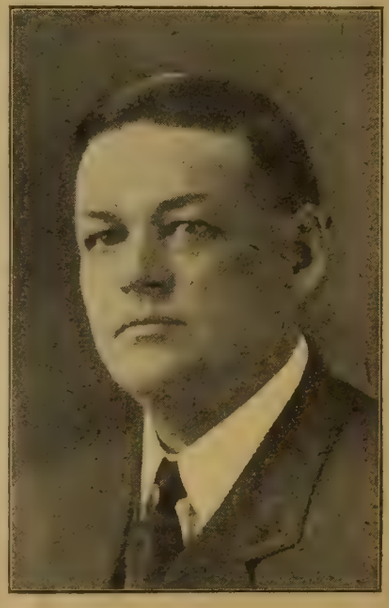
There are a few plug horses that continue to sell at $15 to $35 per head; and strictly common Southern horses are selling at $45 to $60; a little better average class at $70 to $100. Strictly good to choice Southern horses were selling at $110 to $150. Driving horses are variously quoted at $175 to $275. Common to medium chunks were selling at $125 to $150, and good chunks at $160 to $190. Strictly choice chunks for stylish delivery horses sell at times considerably higher. Drafters of the fair class sell at $125 to $160, and good at $175 to $250. Strictly choice heavy drafters are quotable up to $300. This is on the basis of the closing market, July 31st, at the St. Louis National Stock Yards.

A Fast Mile—2:02¾.

At Detroit, Mich., on July 30th, the bay mare Hamburg Belle trotted a mile against her own record of 2:04¾. The time she made by quarters was :30¼, 1:01½, 1:31¾ and 2:02¾. Hamburg Belle is a daughter of Axworthy, 2:15½, and granddaughter of Axtell, 2:12, dam Sally Simmons by Simmons. Her mile is considered a splendid performance, as it was impeded by a high wind on the back stretch. The mare was paced by a runner. Some of the best authorities of the trotting turf expect Hamburg Belle to do considerably better than this, even to making a champion record.

August Range Horse Sales.

At the St. Louis National Stock Yards the August range horse sales will be held on Tuesday, 10th, and on Tuesday, the 24th. These sales are conducted by the Campbell & Reid and Western Sale Stables Company, and generally the offerings range from 1,000 head upward. Any further particulars can be had by addressing J. J. Searcy, Secretary, National Stock Yards, Ill.



ST. LOUIS THE GREATEST HORSE AND MULE MARKET. MR. T. H. HOLLAND, auctioneer and manager of one of the principal live stock commission firms who within a year has become one of the leading spirits of the market.

Announcement by MR. HOLLAND.

On account of our increased business, we will, on August 16th, change our Auction Day from Thursday to Monday and Tuesday. We feel in making the change that it will be a great benefit to our customers, both buyers and shippers, that it will give us more time to handle the large number of horses consigned to us, and that we can give our shippers better service.

The Maxwell Brothers, who have heretofore conducted the McFarlane Commission Company, will be associated as partners with us, and we feel that they will be a great help to the shipper to this market, as they are well and favorably known as honorable, upright young men and enjoy a good retail trade among the best people of St. Louis, and they also have a large order trade among the Southern dealers. They are sons of Mr. Joseph Maxwell, the pioneer mule dealer of the United States, and have grown up in the business and know every detail of the trade. The new firm will be Holland, Nugents & Maxwell Bros.

We will, as heretofore, give every consignment our personal attention. We will do a strictly commission business. We will endeavor to conduct our business on the highest business principles, giving each and every customer and buyer fair and honest treatment. The auctioneers will be myself and Mr. I. H. Howard, with whom I am glad and proud to co-operate.

Mr. Ed Conway, our present mule salesman, and Mr. L. B. Morris, mule salesman of the McFarlane Commission Company, will jointly manage the mule department. Both gentlemen are well and favorably known and are experts in the mule business, and they will give their undivided time and attention to our customers who consign mules. In consolidating our firms we strengthen our forces and equipment.

In thanking the friends and patrons of Holland & Nugent Bros. I desire to say a word in behalf of the St. Louis market. I came here from Kansas City in search of a better location. Kansas City has some advantages as a Western market, but St. Louis is central, being neither North, South, East nor West. This is a market in which there are no remnants. No matter what a load of horses or mules contains, coming in, we can sell it to a buyer who can fill up a full load to suit his trade going out. Here the horse naturally finds itself sold to the best advantage and on the way to its perfect destination without trying to place it where it don't belong. We have a right to solicit consignments to be sold on the St. Louis market. It is the grand 'clearing house,' and so long as we keep the horses and mules coming the buyers stay with us at the most economical distributing center."

HORSES. MULES.

Holland & Nugent Bros.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

Horse Auctions Every Thursday

MOVING TO ST. LOUIS.

The John Sparks Mule Company to Abandon the Kansas City Market.

Henry C Sparks has always been one of the leading mule dealers of St. Louis, and he with his sons, C. M. Sparks and H. L. Sparks, and R. R. Sandusky, constitute the Sparks Bros. Mule Company at the National Stock Yards. His brother, John Sparks, with his sons, Clark Sparks and Charles Sparks, constitute the Sparks Mule and Horse Company, and they are moving to the St. Louis National Stock Yards from Kansas City.

Mr. John Sparks arrived at the National Stock Yards late in April to arrange for the decoration of his new offices, and now the sign of the Sparks Mule and Horse Company is painted upon the corner mule barn, and they will open up for business early in August.

On being questioned as to how he came to move to St. Louis from Kansas City, he said: "Fourteen years ago I was invited to move from Kansas City to the St. Louis National Stock Yards, and I have had it on my mind ever since, and being approached again with a liberal proposition, I am making what I consider to be a good move, and if I did not believe so, no proposition would have caused me to make the change. And, by the way, I am not alone. There is a drift from the outskirts to the center. Several of our good horse and mule men have left Kansas City. Several people whose interests are bound up in the Kansas City market have experienced the desire to get to the front and have moved in this direction. We have many customers whose patronage and confidence we have enjoyed at Kansas City, and I believe we can serve them better from the St. Louis National Stock Yards. I do not care to specify any particular advantage St. Louis may have over the Kansas City market and have no regrets to place on record in regard to our past history. We did a splendid business at Kansas City and overcame many obstacles of location and held many mules on feed that at St. Louis we would most likely have disposed of earlier, and kindly say for me that we do not come to St. Louis for the purpose of cutting into other people's interests. We come to do business at the most economical center of accumulation and distribution to straighten our difficult line of operation to that of the least financial resistance, and we expect to create the new business we hope to enjoy, and we desire no better standing before the world than that which the pioneer mule dealers of St. Louis have enjoyed for many years."

ST. LOUIS NATIONAL STOCK YARDS THE MOST CENTRAL HORSE MARKET IN THE WORLD. Scene at the close of the auction of horses. MR. GROSS, the auctioneer, on the right, has just sold 300 horses, and is not yet cool enough to put on his coat.

Mule Quotations.

In a general way, at the St. Louis National Stock Yards, 14-hand mules are quoted at $80 to $150; 14¼ hands at $100 to $165; 15 hands at $125 to $200; 15½ hands at $135 to $225; 16 hands and upward at $150 to $275. These prices are for car-loads as they arrive in good condition. Select mules, in pairs, good bone, colors, substance and weight, are quotable at $500 to $700 for the pair.

Death of Jay Eye See.

The recent death of Jay Eye See, 2:10, leaves Nancy Hanks, 2:04, the only living trotter now in America that has held the world's record, according to Wallace's Year Book. Maud S., who lowered the record of the little black whirlwind the day after it was made, in 1884, passed away several years ago, and Sunol, 2:08¼, the last of the high-wheel-sulky champions, dropped dead at Paoli, Pa., last spring, aged twenty-three years. Nancy Hanks, who cut Sunol's mark a little more than four seconds with the aid of the pneumatic sulky, in 1892, was foaled in the same year that Sunol was born. She is now in the stud of John E. Madden, at Lexington, Ky., and has recently given birth to a filly by Todd, 2:14¾. Alix, 2:03¾, who clipped a fraction of a second off the record of Nancy Hanks in 1894, has been dead several years, while The Abbot, 2:03¼, who lowered Alix's record after it had stood six years, died the property of John J. Scannell, at his farm, near Fishkill Landing, in 1906, or thereabouts. Cresceus, 2:02¼, who in 1901 lowered The Abbot's colors in a race, besides beating his best record, is still living, but he is now in Russia, as is Lou Dillon, 2:01, the first of the windshield champions, and the present holder of the world's record.

Whether the turf has yet seen a greater horse than the first 2:10 trotter is doubted by a considerable number who witnessed the performance of Jay Eye See a quarter of a century ago. When he gained his record of 2:10 he trotted the last quarter of the mile in 0:31—a 2:04 gait—and this to a high-wheel sulky at the finish of a very fast mile must be regarded as evidence of far greater capacity than his record disclosed. A few weeks after this performance Jay Eye See suffered a nervous chill when prostrated from excessive work and travel, and was never himself again.—New York Herald.

Trumans' Shire Horse Sale.

The time is Wednesday, August 11th, the place is Bushnell, Ill., and the subject is the sale of fifty imported Shire fillies at private terms. Trumans' Pioneer Stud Farm is the head and front of the Shire horse industry. Mr. J. H. Truman resides in the heart of the Shire horse breeding district of England and he buys for his own establishment at Bushnell, where his sons sell them. The sales are conducted fairly, and the intent is to sell the fine lot of mares at the best prices a lot of first-class farmers will bid for them.

WESTERN RANGE HORSES.

The Greatest Sales in This Class Are Conducted by Messrs. Campbell & Reid and the Western Sale Stables Company at the St. Louis National Stock Yards Every Other Tuesday During the Season.

A sale of rangers was held on July 13th and another on July 27th. About 2,000 head were sold. A matched pair of draft mares, weighing 2,500 pounds, sold for $295. The sales included a car-load of mares and geldings at $105 around; a bunch of two to five-year-old mules sold for $105. The long list of sales includes sorted bunches, car-loads, etc.; 1,200-pound mares and geldings, $86.50; 1,150-pound mares and geldings, $86; 1,150-pound mares and geldings (thin), $73; 1,100-pound mares, $71; three-year-old mares, $67.50; two-year-old mules, $65; 1,100-pound mares, $61; 1,100-pound mares, $56.50; 1,100-pound mares and geldings, $56; 950-pound mares and geldings, $56; three and four-year-olds, mixed, $56; 900-pound mares and geldings, $54.50; two-year-old mules, $54.50; 1,000-pound mares and geldings, $45.50; 900-pound mares, $49; 950-pound mares, $44.50; two and three-year-old mares and geldings, $45; one and three-year-olds, mixed, $44; yearlings, $43; mares and colts, $55; mares and colts, $43.50; 950-pound mares and geldings, $40; two to four-year-olds, mixed, $42.50; mares and geldings, $42.50; yearling mules, $38; mares and colts, $39; mostly three-year-old fillies, $37.50; 850-pound mares and geldings, $37; mares with colts, $35; three to five-year-old mares, $35; unbranded mares and geldings, $35; two to three-year-old mares and geldings, $35; three to five-year-old mares, $35.50; mixed mares and geldings, $31; one and two-year-olds, mixed, $30; thin 700-pound mares and geldings, $30; mares with eight colts, $28.50; two to three-year-olds, mixed, $26.50; yearlings to three-year-olds, $26; mostly unbranded yearlings, $25; yearlings and twos, $25; unbranded young mares and geldings, $22; one to three-year-olds, $21; unbranded yearlings, $20; mostly seven-year-old mares, $20; mixed, blemished, $14; yearlings, $25; yearlings, $18.

The list includes the highest, lowest and the middle. The August sales will be held on Tuesday, 10th, and Tuesday, 24th. It will pay every horseman in the United States to attend the range horse sales. For further information, address, J. J. Searcy, Secretary, National Stock Yards, Ill.

Good Mules For Canada.

On July 22d a very fine shipment of mules was made by Messrs. Gillen-Heiman-Harper Mule Company, of the St. Louis National Stock Yards, to Winnipeg, Canada, and it was the second shipment by them to the same buyer this year. They were for railroad construction purposes, averaging 1,300 pounds in weight and 16.1 hands in height, and all good colors, and were purchased by Mr. J. B. McArthur. Before the mules were loaded they had to undergo a most thorough goverment health inspection to prove they were free from any and all diseases, especially glanders; in fact, they were selected from sixty head, all of them up to the contract requirements. The actual cost of the mules is not known, but they belong to the class now quoted at $235 to $275 per head.

Horse and Mule Notes.

"Break your colts to walk down hill. Now, that may mean that you will have to break yourself first, for it seems to be natural to hurry horses down hill. It is a bad plan."

During the month of July, at private sale, Holland & Nugent Bros. Commission Company sold seven head of Eastern chunks from one consignment at an average of $240 per head. The prices singly ranged from $200 to $300, the top price being for a massive bay chunk weighing about 1,400 pounds.

The Chicago Horseman remarks that "it is very hard on a prompt horse to be obliged to work with a lazy one. The wear and tear is great and unnecessary, and a loss." This applies to men as well as horses.

It is not often that a buyer has a chance to get colts by three champions on a credit of one-year's time, yet that is exactly what M. W. Savage, of Minneapolis, offers. He will sell colts by Dan Patch, Cresceus, Directum, Arion, Roy Wilkes and Buttonwood. The colts are guaranteed to be exactly as described and they are out of the best brood mares which money could buy. Send for an illustrated catalogue, which contains full outlines of the easy terms on which colts can be sold. Address, M. W. Savage, Minneapolis, Minn.

St. Louis Seed Market.

Millet seed is selling at $1.25 per 100 pounds for white and to $1.50 for prime German; timothy at $2.75 to $3.25; clover at $5.00 to $9.25; Hungarian at $1.00 to $1.35. These are wholesale prices at St. Louis, July 31, 1909.

Sorghum is selling wholesale at St. Louis at 35 to 40 cents per gallon. Last sale of sorghum cane seed was at $1.51 per 100 pounds.

At St.Louis, old stock of dried fruit is exhausted and new arrivals are small. Evaporated apple rings are quoted about 6 cents and sun-dried quarters 5 cents a pound.

St. Louis honey quotations, July 21st: Per pound: Comb—Choice, 12 to 13c.; amber, 10 to 11c.; extracted or strained — choice Southern in barrels at 5 to 5½ cents and in cans at 6 to 6½c.; old or candied, 1c. less.

BINKLEY MEDICAL COMPANY, Nappanee, Indiana.

THE NEW JERSEY IDEA.

Buying Foreign Draft Horses and Standing Them at Nominal Fees—Is It a Method of Encouragement or Not?

The Live Stock Commission of the state of New Jersey has taken some of the money raised by taxation and has expended it in France and Scotland for the purpose of bringing Clydesdale and Percheron stallions to New Jersey, to stand them at nominal prices for the benefit of such farmers who care to obtain service for their mares. Previous to this movement it is doubtful if any systematic draft horse raising was conducted in New Jersey, and the movement is very popular with those who delight to receive a bounty from the state treasury.

That New Jersey farmers can raise draft mares, if they wish to do so, is pretty generally conceded, but no one seems to care about the true principle which is involved. In our opinion, the use of tax money for such uses is outside of the legitimate purpose of government.

If it is the business of a state government to tax the people in order to buy stallions in a foreign country for the purpose of placing those stallions in service at nominal prices in competition with American-bred, owned or privately imported stallions, the next thing we may expect is that the home-grown industry of producing stallions by breeders will be discontinued and turned over to the state governments. The state of New Jersey may have such an abundance of money that the expense of the movement will cut very little figure as a diversion of state money from its legitimate purpose; but we do not understand why the money was expended in France and Scotland when for the purpose intended it could have been better expended in the United States of America.

If the late lamented King George the Third had taxed the people of New Jersey for money to be expended for stallions in England or Scotland for the additional purpose of standing these stallions at nominal prices, it would have added one more act of oppression to those which brought about the Declaration of Independence, and he could at least have given as an excuse that American breeding establishments were not yet invented; but these New Jersey officials have no such excuse, and they appear to have acted in a manner to discourage the draft-horse breeding industry of the United States to a greater extent than they will ever encourage it in New Jersey.

The action of the New Jersey Live Stock Commission, at best, is questionable. It is giving the draft-horse breeders a touch of what the labor unions call unfair competition. Not only were foreign stallions imported when American stallions would have served the purpose better, but the service price is cut so as to take away any profit there may have been in stallion service in New Jersey and setting a discouraging precedent for other states to follow.

If the state of New Jersey was to use tax money for the purpose of starting corner groceries for the additional intent of selling groceries at half price, we have no doubt that some degraded farmers would accept the partial charity from the state; but the corner grocery that was started by the private citizen for the support of himself and family would go out of business without enough money to buy a mare to get service from a nominal-priced state stallion, and it would be very plain that the one that the state put out of business had a right to complain.

We read in one of our Eastern exchanges that only people who object are those who are going to be injured by it. Well, we would like to know who has a better right to object. The few objectors ought to get together and contend for the principle that state money should not be used for any such purpose. It may be desirable that New Jersey produce draft horses, but we do not believe that the Live Stock Commission has set to work the right way to bring it about. A far better way would have been for the Live Stock Commission to have offered prizes at State and County Fairs and let the production of draft-bred colts proceed without discrimination against American breeders and without starting the state in unfair competition with established and beneficial industries of the nation.

We have never heard of a list of prizes offered by the state of New Jersey at the State and County Fairs for the best draft mares and fillies raised in New Jersey. Fifteen hundred dollars multiplied thirteen times offered at New Jersey Fairs for such a purpose would do the state a hundred times more good without doing any harm. We understand that once upon a time there was a breed of draft horses on the Jersey coast, and it probably died out for want of the encouragement which the state could have extended.

In the horse-breeding ventures of the United States Department of Agriculture the position is taken that the American breeds will furnish the necessary material for development of the desired types, but we have yet to see any list of prizes offered by the United States government for the ideal cavalry horse, the ideal Morgan horse, for the ideal American coach horse, or the ideal American draft horse; but we understand that the nearest encouragement in this direction is the present of a "classification," and that is not much for encouragement to feed or breed upon.

We receive lists of prizes offered by the various breeders' associations, by the Fair Associations, and there is state money in some of the premiums offered at the Western State Fairs, but so far as we have heard, New Jersey is not a leader in State Fair encouragement, and is simply a tail-ender, going wrong in the beginning, spending money in Scotland that ought to have been spent in Virginia, and other money in France that could have been spent to better advantage in New York and Pennsylvania.

Said the New Jersey officials by their action: "Breeders of America, encourage yourselves. We are encouraging the breeders of Scotland and France. You breeders of America have been importing draft stallions and draft mares for thirty years, but you have not draft stallions of your own raising fit to serve a New Jersey grade mare." What do the American breeders think of that?

We are not writing this article for the benefit of New Jersey alone; the New Jersey idea is not confined to New Jersey. A trip abroad playing "Big Ike" with tax money buying stallions is a very attractive proposition. We consider it a bad business—doing the right thing the wrong way. By bringing in Holstein, Jersey and Guernsey bulls from foreign countries for service at nominal prices it will be easy to put New Jersey dairy cattle breeders out of commission; but a state prize at a State Fair would be the right kind of encouragement.

We believe there is reason for an understanding between the National and State Agricultural Departments and the breeders' associations as to proper methods of encouragement. The motives are good but the actions are sometimes bad. In trying to encourage, a different result is obtained, and in some instances the end does not justify the means.

The breeding interest of the United States, in which not less than one hundred thousand farms are involved, is not in a condition in which it should be. There is something wrong with it, and we believe that it is going to the bad, and this partly because it is receiving discouragement in the name of help. We are under obligations to the state of New Jersey for an example of a bad principle in a good cause, and a method of discouragement in the guise of assistance.

This article should receive the indorsement of all who are opposed to the state or national government engaging in business enterprises, either for profit or the purpose of charity in unfair competition with the American citizen from whom the tax money is derived.

Teaching Horses to Take High Jumps.

The marvelous exhibition of high jumping at the recent Royal Horse Show in London has produced a new world's record. The horse Jubilee, owned and ridden by Captain Borille, of the Fourth Regiment French Cuirassiers, cleared a hurdle 7 feet 4 inches in height with perfect ease.

Few of the people who applauded this wonderful performance, however, had any idea of the months of patient training required before a horse can be induced to successfully take such a high jump.

The man had a chat on the subject with H. Buckland who is one of the greatest authorities in the world on training horses to jump. "In most cases," he said, "each rider has his own pet scheme. Usually a horse is not selected until it is at least four years old. When it is hungry it is placed in a small paddock, with a tiny hurdle across the center not more than twelve inches high. Then, in full view of the pupil, a rider on a veteran jumper goes several times over the tiny obstacle.

"The trainer then goes to the side of the paddock opposite to the pupil and holds a measure of grain or other tit-bit so that the animal can see it and at the same time calls the horse by name. The horse, eager to get the food, soon jumps across the hurdle, and after it has eaten a few mouthfuls the trainer goes to the other side of the ring and repeats the lesson. This is done day after day, until the horse realizes what is expected of it, and then the hurdle is gradually increased in height.

"Up to this time the horse has no rider, but at this point the animal is tried with a man on its back. If he has learned the lesson, he is then taken out into the country, where it is expected to take ditches, fences or hedges until the animal has sufficient nerve to make flying jumps in a public arena."

Another very successful method is termed lunging. A long rein or cord is attached to the bit and the animal is exercised in a circle, in which a hurdle has been placed or a shallow ditch dug. A long-lashed whip, used only to keep him in motion, will keep him up to his work. Soon the horse will enter the spirit of the occasion, and will show his delight in the exercise.

People who think they are good looking support the photographers.

Milch Cattle at the Yards.

Each sale includes a cow and a calf. This branch of trade is increasing. Strictly good cows are always wanted, and the only real fluctuations are in the middle grades. Choice to fancy milkers are quoted at $55 to $60; good to choice milkers, $45 to $52.50; fair to medium milkers, $35 to $42.50; and inferior milkers, $20 to $32.50. The good milkers are wanted, three head for everyone sold on the market.

Difference of $32.54 Per Head.

In the class for handy steer cattle weighing 800 to 990 pounds there is considerable difference in quality, flesh and general appearance. There is also a wide difference in price. The last week in July, about twenty-five loads were on sale at the St. Louis National Stock Yards, and they sold at $4.25 per 100 pounds. The top load, weighing 942 pounds, sold for $70.70 per head, and the tail-end load sold at $38.16 per head. The bulk of the steer cattle, weighing from 880 to 950 pounds, sold at $5.75 to $6.75 per 100 pounds. Stockmen are under obligations to the St. Louis market for the high prices at which these handy fat cattle sell. St. Louis is the great butcher-cattle market, and there is no other market in the same class.

Quarantine Cattle at St. Louis.

In this division prices are well sustained. The average of $2.00 per head better net results to the shipper at St. Louis than at any other market has been good for twenty-nine years and remains good to-day. In the last two weeks of July, 36,000 cattle were sold in this division, and 8,760 cars were sold so far this year. Late quotations were as follows: Prime fed steers, $5.75 to $6.00; good to choice steers, $4.50 to $5.75; medium to good steers, $3.75 to $4.50; common to medium steers, $3.00 to $3.75; good to choice heifers, $3.75 to $4.50; common to good heifers, $2.50 to $3.75; good to choice cows, $3.40 to $4.10; fair to medium cows, $3.00 to $3.40; cutters, $2.60 to $3.00; canners, $2.00 to $2.30; bulls, $2.50 to $3.65; fair to choice vealers, $5.75 to $7.00; fair to choice heavy calves, $3.50 to $5.25; common calves and yearlings, $2.00 to $3.50—all quotations being at the prices stated per 100 pounds.

Native Dressed Beef Steers.

Native steers, averaging 1,200 to 1,290 pounds, usually find their way into the dressed beef trade. There is a great variety in condition and quality and a considerable range in price. During the last week in July, at the St. Louis National Stock Yards, about a thousand of these cattle sold at a range of $5.25 to $7.00 per 100 pounds, the bulk of sales at $6.00 to $6.50. The tops at $7.00 weighed 1,276 pounds; the tailings at $5.25 weighed 1,250 to 1,272 pounds. These prices compare favorably with any other market.

Stock Cattle and Feeders.

At the St. Louis National Stock Yards, the trade in native stock cattle is on a reasonable basis when beef prices are considered. Quotations are as follows: Good to choice feeders, $4.30 to $4.75; medium to good feeders, $3.60 to $4.25; good to choice stockers, $3.50 to $4.25; inferior to good stockers, $2.50 to $3.40; good stock heifers, $3.25 to $3.65; medium stock heifers, $3.00 to $3.25; stock cows, $2.25 to $3.90—all quotations being at the price stated per 100 pounds.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H CAMPBELL,

Veteran Commission Salesman, General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Don't hesitate to write or ship to

James H. Campbell,

National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK — SHIP US YOUR CATTLE, HOGS AND SHEEP.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign horses, cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Baby Beef at $7.25 to $7.40.

On July 27th, at the St. Louis National Stock Yards, Hord & Rootes, of Callaway county, Missouri, were represented on the market with a good lot of yearlings that made the second best top of the day. Their sale embraced thirteen head, averaging 887 pounds, that sold to Swift & Co., at $7.25; and another bunch, twenty-seven head, 942 pounds average, sold at $7.40 per 100 pounds. Some of these cattle were heifers, but they all sold at the prices stated. We remember some time ago that such cattle were very few and far between, but they always sold well. The combination necessary is early maturity, good breeding and good feeding. Inferior cattle, but fat, sell at two and three cents a pound less. The market is paying for quality. The yearling steer in the beef market is outselling the average yearling pure-bred bull in the auction ring.

Heavy Native Cattle.

During the last week in July, about 500 head of what are classed as heavy native steers were sold at the St. Louis National Stock Yards. None of them were tops, but the best were only plain, good cattle. Choice to fancy cattle in this class were quoted at $7.00 to $7.15, and the extreme range of prices was $6.00 to $7.00, and the bulk sold at $6.50 to $6.85 per 100 pounds. The cattle at $7.00 averaged 1,380 to 1,540 pounds. After passing 1,300 pounds weight cuts very little figure; in fact, quality and fat have for the present more influence than weight.

St. Louis Pork Packing.

Pork packing in the West has decreased 900,000 hogs in five months, but St. Louis is holding its own, exactly the same as last year.

St. Louis Butcher Cattle.

At the opening of August butcher cattle were selling well at the St. Louis market. The following were the quotations: Choice to fancy yearlings, $7.00 to $7.40; choice to fancy heifers, $6.00 to $6.85; good to choice heifers, $5.00 to $6.00; medium to good heifers, $4.25 to $5.25; common to medium heifers, $3.00 to $4.25; good to choice cows, $4.25 to $4.75; medium to good cows, $3.25 to $4.25; cutters, $2.60 to $3.15; canners, $1.50 to $2.50—all quotations being at the price stated per 100 pounds.

How Bulls Are Selling.

For ten years, from 1880 to 1890, good to choice fat native steers did not sell any higher than fat bulls are selling now. Sausage bulls are quoted at $3.00 to $3.50 per 100 pounds; half-fat bulls, $3.65 to $3.90; good bulls at $4.00 to $4.65; and prime fat native bulls at $4.75 to $5.25 per 100 pounds. These are extraordinary prices.

Elgin Butter Prices.

On Monday, August 2d, the Elgin Board of Trade quoted 26 cents for choice creamery butter, against 26½ cents the previous Monday, 21 cents a year ago, 24 cents two years ago, and 21½ cents three years ago.

Clay, Robinson & Co.

Since entering the St. Louis market this firm has done a remarkably good business, far in advance of expectations. They started up with a first-class equipment in office and yards and have not stood still a minute. They have full telegraphic service from all markets and keep themselves posted as to general transactions for the benefit of their customers. Mr. Emmet, the Manager, said a few days ago: "This St. Louis market is full of surprises, many of which are very satisfactory. We have large runs, and the market responds to them. We are able to resist declines better than we expected. There are always new buying orders coming in. We are not afraid to ask our customers to come here because when comparisons are finally made there is always something in favor of the St. Louis market."

June Rains in Missouri.

According to the Missouri section of the United States Department of Agriculture, the average rainfall for the month, as determined from the records of eighty-six stations, was 5.21 inches, or 0.43 inch above the normal. The greatest local monthly precipitation was 10.05 inches, at Gallatin, and the least 0.74 inch, at Cape Girardeau. The greatest amount recorded in any twenty-four consecutive hours was 4.12 inches, at Bethany on the 7th. Other falls of 2.50 inches or more in twenty-four hours were recorded as follows (stations, amount in inches and date): Columbia, 2.87, 29th; Sublett, 3.65, 28th; Gano, 2.58, 25th—26th; Houston, 3.36, 16th—17th; Lockwood, 3.16, 25th—26th; Mount Vernon, 2.50, 29th—30th; Amoret, 3.10, 19th; and Clinton, 2.85, 25th. In Scott, Mississippi, New Madrid counties and eastern part of Stoddard county less than two inches of rain fell in June.

Swine raisers are always interested in up-to-date preventives or cures for hog cholera. J. Fronefield & Son, 415 Walnut street, Cincinnati, have one on the market which is the result of recent discoveries and is worthy of investigation. See page 18.

SHIPPERS AND SELLERS
—of—
STOCK AND FEEDING CATTLE
are reminded that the
ST. LOUIS
NATIONAL STOCK YARDS
furnish by far the best market for their stock.

A majority of the stock feeders of Missouri, Illinois, Indiana and Ohio prefer to buy their feeders at St. Louis. They have short runs, favorable rates, quick service, small shrinkage. These people get their cattle home in good shape. There is never a glut of stock cattle at St. Louis. Western shippers can get their stock cattle to the St. Louis market just as easily and as cheaply as they can to any inferior Far West market, and at St.Louis there is quicker sale, better results, and in the shipping in, concentration, sale and outward shipment there is less expense, less shrinkage and less loss to come out of the cattle. The center in which all can be brought together and distributed at the least expense to all concerned is the best market of all.

THE BEST MARKET OF ALL—UNDER ANY AND ALL CIRCUMSTANCES—IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

Increase in Sheep Receipts.

During the first seven months of the year 1909 the St. Louis National Stock Yards received 464,256 sheep, which exhibits an increase of 90,532 head over all previous records for that period. It is also safe to say that the increase is all lambs and that these lambs were sold at magnificent prices. Even on July 1st, after a considerable decline in sheep and lamb values, a load of Southwest sheep, 67 pounds average, sold at seven cents a pound. When July comes the freshness of the lamb offerings has departed, but the St. Louis market is ever ready to purchase all that come. At this time of reviewing the market the prices are the lowest of the year, but are higher than last year, which establishes the usual condition that with large receipts the St. Louis market usually makes the best record.

Native Steers, 1,000 to 1,190 Pounds.

During the last week in July, at the St. Louis National Stock Yards, about fifty loads of native steer cattle averaged from 1,000 to 1,190 pounds. The range in price was $4.50 to $7.00 per 100 pounds, and the bulk sold at $5.50 to $6.40 per 100 pounds. Only one load, strictly inferior, sold below $5.00, and one load, 1,171 pounds average, sold at $7.00. There is great competition for this class of cattle at the St. Louis market.

Slaughtering Sheep and Lambs.

The increased slaughter of sheep and lambs at St. Louis is remarkable and amounts to 25 per cent. over former records. The increased receipts during the first seven months of 1909 were 90,532 head and the increased home slaughter in the same period is 92,486 head. St. Louis packers have kept faith with the statements made by them in saying that they would buy all the sheep and lambs that are fit to kill. We can sell another million sheep a year at St. Louis.

During the month of July, 1909, 7,447 cars of live stock were received at the St. Louis National Stock Yards, which is an increase of 487 cars over the arrivals of July, 1908.

August Opening Hog Values.

On the opening day of August, at the St. Louis National Stock Yards, the best hogs, 236 pounds average, sold at $7.95 per 100 pounds. Shippers and butchers paid $7.75 to $7.90 per 100 pounds for many loads of butcher hogs that weighed 185 to 299 pounds. Packers bought plain hogs of good weights at $7.55 to $7.70 per 100 pounds, and the bulk of all the hogs sold at $7.60 to $7.85 per 100 pounds. Mixed loads, averaging 160 to 185 pounds, sold at $7.50 to $7.75 per 100 pounds; pigs and lights, 125 to 160 pounds, sold at $7.25 to $7.80 per 100 pounds, there being a great difference in quality as well as weight. Pigs less than 100 pounds sold at $6.00 to $6.75 per 100 pounds. The quality was not up to the average.

Evans-Montague
Commission Company

THE MEASURE OF SUCCESS
attained by a
SHIPPER OF LIVE STOCK
depends largely upon
THE COMMISSION HOUSE
to which he consigns his
CATTLE, HOGS AND SHEEP.

of our ability
TO PLEASE OUR CUSTOMERS.

Evans-Montague
Commission Company
Box 68,
NATIONAL STOCK YARDS, ILL.

First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

The best showing of any great market is the record of the St. Louis National Stock Yards during the first seven months of the year 1909.

In the first seven months of 1909, at the St. Louis National Stock Yards, 3,705 cars of cattle were received and sold from the state of Oklahoma. This is an increase of 555 cars over the arrivals during the corresponding period last year.

Wonderful Hog Record.

At the St. Louis National Stock Yards, August 2d, the top hogs sold at $7.95 per 100 pounds, against $7.80 at Kansas City, $7.75 at St. Joseph, and $7.60 at Omaha. The St. Louis bulk sold at $7.60 to $7.85 per 100 pounds; Kansas City, $7.40 to $7.70; St. Joseph, $7.50 to $7.65; and Omaha, $7.45 to $7.50. These are ordinary shipping differences. Hogs are easily worth 15 to 20 cents per 100 pounds more to the buyer at St. Louis than they are at either Kansas City, Omaha and St. Joseph. That explains why so many Kansas and Iowa hogs sell at St. Louis. The answer in a nutshell is that they are cheap to the buyer at St. Louis, and after all expenses are paid the shipper obtains better net results at St. Louis than if they were shipped to any of the other markets.

Sheep and Lamb Quotations.

During the closing days of July and the opening of August, at the St. Louis National Stock Yards, the sheep and lamb market was as follows: Good to choice lambs sold at $6.75 to $7.10; fair killing kinds but not as fat as they ought to be, $6.00 to $6.85; best throwouts, $4.50 to $5.25; plain culls, $3.50 to $4.25; and common little ratty lambs $2.50 to $4.25. Mutton sheep sold mainly at $4.25 to $4.50 per 100 pounds, with a few of the poorer ones at $4.00.

The best breeding ewes brought $5.35 to $5.75; fair grades, $4.65 to $5.15; best stockers, $3.25 to $4.00; fair grades, $2.50 to $2.75; and old cull sheep such as no one particularly cared for went at $1.25 to $2.00, but slow. Bucks sold at $2.25 to $3.25; nearly all of them, however, went at $2.50 to $3.00. All quotations were at the prices stated per 100 pounds.

Valuable Market Information.

With capital and surplus amounting to $125,000.00, the Godair-Crowley Commission Company have splendid resources to make loans to reliable stockmen and to encourage shipments to St. Louis. Their list of salesmen includes Mr. E. C. Gibson, Frank Huffaker, W. F. Houston, H. R. Ray and Oscar White. This firm is enthusiastic in regard to the record of the St. Louis market, which is very satisfactory both in regard to increased receipts and selling activity. Messrs. Godair-Crowley Commission Company cordially invite all stock shippers to communicate with them for the purpose of getting on their list to receive their regular market reports. Address, Godair-Crowley Commission Company, P. O. Box 107, National Stock Yards, Ill.

Railroad Service Improved.

Every line of railroad service to the St. Louis National Stock Yards has been improved continually during the past two years and the good work still goes on. The market is from one to two hours earlier than it was formerly. Deliveries are generally very prompt and the vexatious delays of former years are relics of the past. Stockmen are advised to keep in communication with the St. Louis live stock market. There is good money in it.

New Apples at St. Louis.

Early August prices: Sound, three-fourths bushel boxes, from 25 to 40c. for small and windfalls, to 50c. and $1.00 for fancy varieties; melon baskets from 20 to 40c.; barrels from $1.25 to $1.75 for small, and windfalls from $2.50 to $3.25 for fancy, according to quality and variety.

Grain Smuts.

A dangerous parasite of many of the cereal plants is the fungus that produces in the grain or head what is known as smut. There are several well-known kinds of smut, each of which is caused by a distinct species of the fungus.

The greatest loss from smuts in this country is from the stinking smut of wheat and the loose smut of oats. A considerable loss is also due to the loose smuts of barley and wheat, which are more difficult to control and prevent. They are widely distributed, and though they occur usually in small quantities the damage in the aggregate is large. They often are entirely unnoticed on account of their earliness and the absence of any conspicuous sign of them at harvest time.

The stinking smut of heat transforms only the kernels into smut balls which do not break until the wheat is threshed and often remain in the threshed grain. The loose smuts of barley, on the other hand, early discharge their spores, which are blown off by the wind as soon as the smutted head comes out of the leaf sheath; they infect the plant in the flowering stage and enter the embryo inside the ovary before the latter ripens into seed. An infected seed develops a smutted plant the following year.

The most successful method thus far found for preventing these smuts is a hot-water treatment of the seed. This treatment is described in Bureau of Plant Industry Bulletin 152, entitled "The Loose Smuts of Barley and Wheat," recently issued by the United States Department of Agriculture. The bulletin is a report of recent researches into the life histories of these smuts and the determination of methods for their prevention, and is intended for seed growers and scientific farmers.

Thus far this year cattle receipts from Arkansas have increased 116 cars. It is well to say also that Arkansas cattle are improving in quality and market condition.

LIVE STOCK BREEDERS.

POLAND-CHINAS.

You should get our prices for this month on Pigs. Others say we've got the kind. Write us about it.

M. W. MAGNUSSON, Safe, Mo.

Shrinkage of Grain in Drying.

An excessive amount of moisture in corn is the principal cause for its deterioration during storage. The amount of moisture is therefore one of the chief points considered in grading corn, especially for export. In the effort to find an accurate and practical method of determining the amount of moisture in grain, the United States Department of Agriculture two or three years ago devised an apparatus by means of which the moisture can be accurately shown in from twenty to twenty-five minutes. In using this apparatus the amount of moisture is expressed in percentages of the original weight of the grain. For instance, one sample of corn may have only 11 per cent. of moisture, while another may have 35 per cent. Naturally the drier grain is worth more than the other, other things being equal.

But since this apparatus has been put into use disputes between grain merchants on one side and elevator men and operators of grain driers on the other have become more pronounced. The trouble is that the percentage of moisture shown by test before storage or before drying does not correspond with the actual loss of weight which results from storing or from drying. There is no real difficulty in this fact; it is a simple matter of arithmetic.

Suppose a certain sample of grain weighs 100 ounces, and the moisture in it is 20 per cent., or 20 ounces. Now, suppose the grain is dried until it weighs only 90 ounces. That means that 10 ounces of moisture have evaporated, leaving 10 ounces of moisture still in the 90 ounces of grain. The grain has lost 10 per cent. of weight, but the percentage of moisture has been reduced only 8.9 per cent., because 10 ounces is 11.1 per cent. of 90 ounces. It therefore seems as if the shrinkage in weight has been greater than the reduction in the percentage of moisture.

A simple calculation in arithmetical proportion will show the reduction in percentage of moisture when the shrinkage in weight is known, or vice versa. This calculation is explained in Circular 32 of the Bureau of Plant Industry, United States Department of Agriculture, entitled "Moisture Content and Shrinkage in Grain." The circular also gives elaborate tables by which the figures may be learned at a glance, without the necessity of calculating.

Feeding the Brood Sow and Fall Litter.

During the first twenty-four hours after farrowing, while the sow is in a feverish condition, she will show little, if any, inclination for feed. While she is in this condition a good supply of water, slightly warmed, should be given. As the sow has not yet regained her appetite for heavy feed, she will relish a thin mash made of bran and skim milk. On the second day, a slop of wheat, shorts and bran will be found an excellent feed; but if these are not available, four pounds of corn mixed with one pound of oil meal will do well. A mixture of two pounds of corn with one pound of shorts or bran should be fed in increasing amounts until the sow is taking a full feed. A day's ration would then be about 4½ per cent. of the live weight of the growing sow, in pounds, and 4 per cent. of the weight of a mature sow in average condition. Such a heavy ration should consist of six pounds of corn to one pound of oil meal and gluten meal. These foods are often cheaper than shorts or bran. With a sufficient quantity of skim milk, four or five pounds to one of corn may be fed, in which case nothing else is needed.

Not less than 60 per cent. of the sow's full ration should consist of corn, with the remaining 40 per cent. hay; and should the hay be short and fine, or in the form of chaff, half corn would keep her in a good, thrifty condition. I give my sows all the good clover hay I can get them to eat. In feeding young sows uncut hay, I give them about 3 per cent. of their live weight in pounds of corn, and then let them have all the hay they wish. The sows will consume considerably more good clover hay than many people would think.

I never feed sour milk to sows with young litters of pigs, because it is likely to cause scouring and ruin the prospects of the litter. With the young pigs, the fatalities are usually told in the first three or four days of their existence, during which time extra vigilance must be maintained. Young pigs cannot be too well fed or too well cared for. A good ration for pigs is a slop made of milk and middlings, fed twice daily, with little corn at morning and evening.

For the first five months I grow my pigs as rapidly as possible and then put them on a more fattening ration. In this way they develop a good, strong frame, which enables them to carry a good amount of flesh for future market. I feed all corn and slop that they will eat up clean. To keep them anxious for the feeding time to arrive each day is excellent. At six months old they usually weigh around 200 pounds each.

When a sow is suckling a good-sized litter, no mater how liberally she is fed, she is almost certain to shrink in weight. This, however, may be recovered after the pigs are weaned.

I turn my dry sows, from which the pigs have just been weaned, into a pasture by themselves and give them a very little grain. Those that show themselves to be prolific and good mothers I retain as breeders; those being unsatisfactory in any way I fatten and sell as soon as possible.

It does not pay to keep a sow over a year that cannot raise a large litter, unless she is pure-bred and a very exceptional individual.

If I want a second litter during the year, I put the sows to the boars during the first heat after weaning. I do not like to pass many periods of heat for fear that the sows may become shy, and there is no reason why they should not have two litters a year.—Wm. H. Underwood, Ozark, Johnson county, Illinois.

When to Apply Lime.

A LaSalle county, Illinois, correspondent asks: "I want to seed down a six-acre field this fall to alfalfa. I am told that lime is necessary. I intend to cover this field with manure, and will put on 200 or 250 pounds of ground rock phosphate per acre. When is the best time to apply the lime and the fertilizers?"

It would be unsafe now to apply lime to this field. It should have been applied several months ago and have been thoroughly mixed with the soil by this time. Lime now would antagonize the alfalfa seed, besides it should not be applied along with either the manure or the rock phosphate. It releases the nitrogen and neutralizes the phosphate. The best thing to do now is to apply the manure and finely ground rock phosphate, to be plowed under, and omit the lime.—L. C. Brown.

Supplementary Feed Crops.

Never have I seen so much ground put into side crops, such as cowpeas, millet and sorghum. On some farms, where the early regular crops were drowned out, large areas have been put into these supplementary crops, while on many other farms odd acres here and there have been pressed into service. The idea everywhere seems to have been to save all the corn and hay possible and provide the stock with cheaper feed. In Central Illinois cowpeas and millet are grown more extensively than any other of these side crops, while in Northern Illinois millet and sorghum fill the bill. Timothy hay has been selling from $15 to $16 a ton, oats around 55 cents, and corn around 75 cents. These prices have been so attractive that farmers have cashed them and are preparing to do the same thing next year. This really is the reason why so many are depending upon these side crops to furnish rough feed for their stock.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Lexington, Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907.

CHAS. FORD, Mortonsville, Woodford County, Kentucky.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write me for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,

(son and successor to the late H. C. Ezell), **Nashville, Tenn., Sta. B., R. F. D. No. 7.**

A Wine Decision.

According to an opinion handed down recently by the St. Louis Court of Appeals, a wine grower in local-option territory in Missouri cannot sell wine of his own make on his own premises, though he can make it without violating the law.

Ernest Jaeger, who has vineyards near Neosho, Mo., was fined in a Newton County Court for selling wine on his own premises, made from grapes grown in his vineyards. He appealed to the Court of Appeals.

The decision affirms the finding of the lower court, but it points out that wine for sacramental purposes is excepted from the prohibitive clause of the local-option law.

Mr. Jaeger, therefore, may sell his wine to churches, but not to citizens.

"Self-reverence, self-knowledge, self-control. These three alone lead life to sovereign power."—Tennyson.

Amatite ROOFING

Free Sample

THERE are two important points to be remembered in connection with Amatite Ready Roofing.

1st. It has a real mineral surface.

2nd. It is waterproofed with Coal Tar Pitch.

The mineral surface makes painting absolutely unnecessary, and the Coal Tar Pitch waterproofing is the greatest known enemy to water. You are sure of the very best protection at the lowest possible cost, when you buy Amatite.

Send for free sample and booklet.

CREDIT Subscriptions.

Three Years For One Dollar, Payable at the End of the First Year.

The publishers of The National Farmer and Stock Grower will be glad to furnish the paper three years for One Dollar, the same to be payable at the end of the first year. This edition is a fair sample of the paper It is interesting and instructive. Those who read it over will find that it is a help to them in the conduct of their business. All who receive a sample copy are invited to send in a subscription on the following blank form, unless they prefer to pay in advance, thereby securing a premium.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Cost of Feeding Chicks.

According to the New York Agricultural Experiment Station, the cost of food, per chick, to weigh one pound, on ground grain, is three cents; on whole grain, three and seven-tenths cents. After making repeated tests in feeding, this station says the ground ration proved considerably more profitable than the whole-grain ration with the growing chicks; and the same is true of capons of equal weight from these chicks, and from others of equal weight and age, fed alike before caponizing. No difference was noticed in health or vigor of chicks or capons fed either ration." — Profitable Poultry.

Dry-picked Turkeys Best.

"Dry-picking is always to be preferred when preparing turkeys for market," says Profitable Poultry. "When in fine condition, nicely picked and sent to market without having been packed in ice, a turkey is at its best, and consequently commands the highest price. As soon as the fowl is stuck, while the blood is still flowing, pluck the feathers dry from its body, taking care in doing this not to break the skin or tear the flesh. Nothing detracts so much from dressed poultry as torn places upon the carcass or shank; picking must be clean and nicely done. When the fowl is plucked, hang it head down in a cool place until all animal heat is gone from the body, being careful not to hang it where it will be so exposed to cold air as to be likely to freeze. Do not remove the head, feet or entrails, but have the whole carcass, including head and feet, perfectly clean."

Deep-litter Chick Feeding.

The Cyphers Incubator Company is teaching chicken raisers a new method of raising chicks. Instead of feeding them by hand several times a day, they store the feed in alfalfa litter and let the chicks take care of themselves, which they are perfectly able to do. These deep-litter chicks are fed once in seventeen to twenty-three days.

The saving of time in such a method is apparent, and it appears that the results of feeding are equally apparent. At the end of an experiment in which two lots of sixty chicks were fed, one lot fed by hand weighed 152 pounds, and the deep-litter fed chicks weighed 191 pounds.

The chicks fed by hand were fed by hand six months. The deep-litter chicks were fed in the litter four months and were fed dry ground feed two months in hoppers. The deep-litter fed chicks consumed 82 pounds less feed than the chicks fed by hand.

The chicks fed by hand lost nine and the chicks fed in deep litter lost five. Both lots of sixty were kept in 3x3 feet brooders, opened to inside runs of 5x8 feet and then to outside runs 5x40 feet.

The feeding was done in the inside pen and the litter was short-cut and shredded alfalfa. The litter was eight to ten inches deep and the chick food was in layers mixed with it.

The natural thought in connection with this is that the deep-litter run would become very foul, but the experimenters state otherwise; the constant movement of the litter kept it dry, and there was no odor to speak of. They even used the same litter in order to see whether bad conditions arose, but the result was favorable. Water was furnished by the drip system. Beef scrap, grit and charcoal were kept in hoppers or pans during the experiment.

The surviving 107 chickens, White Leghorns, weighed in all 343 pounds, which is about 3.2 pounds per chicken at six months old. The full feed was 1,780 pounds, which amounts to about 5.2 pounds for each pound of gain, or nearly seventeen pounds of feed for each six-months-old chicken.

This is a very valuable experiment for commercial chicken raisers. The farmer will continue to let his chicks rustle and he or his good wife will continue to raise chicks "the good old way;" but to the chicken business as a business, with each sixty chicks confined to brooders and pens of the size indicated, the deep-litter method of feeding means a step forward to systematic economy in food and labor.

Poultry Notes.

The Petluma poultry field in California marketed 5,312,804 dozen eggs in the year 1908 and 83,136 dozen of poultry.

In New York City, during the month of June, 1909, the average price for prime Western eggs was 21½ cents a dozen, against 17 cents in June, 1908. This is a considerable advance over the average of the previous five years.

The Egg Reporter mentions that Carmichael & Patterson, of Columbus, Ind., are using automobiles for the purpose of collecting eggs and poultry throughout the country, and as being the first, but not by any means the last, to do so. The Egg Reporter looks to the auto to be in the business as a time and heat saver whenever roads are good.

The American Poultry Advocate says: "The Rancocas Poultry Farm, which is situated at Brown's Mills, in the pines, claims to be the champion egg-producing farm of the country. They claim to have sent more cases of Leghorn eggs to the New York market during December, January and February than any other farm in the country. Their record of the three months was 94,453 eggs, 5,700 young chicks in the brooder house, and 5,000 eggs in incubators, all of which is the outcome of the eggs produced from 4,600 Single Comb White Leghorn hens kept for egg production."

"Cotton-seed meal, carefully used, is good food for young chickens, but they should be three weeks old before being fed on any of the meal. One part meal to four parts bran is the proper proportion."—American Poultry Advocate.

The nearest to perfection as a table fowl is credited to the White Plymouth Rock. This is only in the territory of Boston, which is the most critical of all poultry and meat markets of the United States. It is also the only market that actually receives them in large numbers.

In Buffalo, which is considerable of a poultry market, the Barred Plymouth Rock is in competition with the Wyandotte. The public preference is for the Plymouth Rocks, which are so freely offered for sale, but the dealers prefer the Wyandottes for broilers on account of their blocky shape and plump appearance.

Clean, white, bright eggs bring the most money in market; the fresh, dark eggs, when all uniform, come next; and mixed dark and light eggs come third. They may be equally good eating, but appearance makes a cash difference between them.

On the Buffalo market, recently, chickens were selling 15 to 16 cents per pound, live weight; roasters at 22 cents, and fowls 16 and 17 cents. Some extra fine 6½-pound dressed spring Pekin ducks sold for 25 cents a pound. Prices in general were considered the highest since 1871.

Cures Constipation Without Medicine

For The Benefit Of Our Readers, We Are Pleased To Publish Prof. Midgley's Wonderful, Clean, Straight Talk On How You Can Cure Constipation Without Pills or Medicines.

I can and do cure the worst cases of chronic constipation—cure them to stay cured, and restore the patient to a state of health and happiness such as they had never known before. I can cure constipation, no matter how bad it is. I can show you how to cure yourself right in your own home without the use of drugs. Constipation is cured for all time when cured my way.

"You Simply Can't Cure Constipation With Pills, Powders or Potions. Force is Folly. I Tell You How to Cure Yourself Permanently at Home by the 'Midgley Way' without Medicines."

Don't delay a moment. It matters not how many doctors have tinkered on your case, or how many pill propositions have discouraged you, my past record of success is sufficient to quickly prove that I can do what I claim. Fill out free coupon herewith and mail today.

Most Diseases Caused by Constipation, Sewage of the Brain.

"It goes to the brain naturally, and to every part of the body, every organ being fed on this polluted blood, or sewerage. It goes to your face in the form of pimple-poison and breaks out on the skin. It goes to your head and gives you headache and dizziness, it goes to your brain and makes you drowsy, it weakens the stomach and causes dyspepsia and bad breath, it goes to the liver and causes biliousness, it goes to the kidneys and eventually gives rise to Bright's Disease, it goes to the heart and makes it thump, it goes to the eyes and they lose their lustre, it makes your nerves flabby and weak and out-o'-sorts, and this is the advance agent of all kinds of disease, which you couldn't get at all if there was pure, rich, red blood flowing in your veins and your whole body was in prime condition."

Free Coupon.

Fill in your name and address on dotted lines below and mail to Prof. T. H. Midgley, 2374 Midgley Block, Kalamazoo, Mich., and by return mail he will send you free his 60 page illustrated book, showing the simple way of curing constipation permanently without medicine. Write plainly.

FOR STOCK FEEDERS.

Profitable Stock Feeding is the name of an excellent book which was written by Howard R. Smith, Professor of Animal Husbandry of the University of Nebraska. It is a nicely-bound, illustrated book of 115 pages. The feeding of beef cattle, dairy cattle, horses, hogs, sheep and poultry of all ages and for all market purposes is fully set forth in a practical, business-like, interesting manner. Professor Smith is a feeder of champions, and his experiences and record fully qualify him to write such a book. All who are interested in stock raising, feeding and marketing should by all means purchase a copy of this book. It will enable them to feed for the best results. **Profitable Stock Feeding** is published at $1.50 per copy. For the price we will send a copy, pay postage on it and include a year's subscription to **The National Farmer and Stock Grower.** Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Alfalfa Among Corn.

Mr. A. L., of Boone county, Indiana, writes: "How would it do to sow alfalfa in the corn stubble after the corn was cut up, say about the 20th of September?"

That would be an unwise thing to do, first because that date is too late to fall sow alfalfa, and the ground would not be in fit condition to nourish young alfalfa plants. Sow alfalfa, during the fall, between August 10th and September 10th, and sow it on thoroughly clean ground. Much more can be accomplished during the six weeks prior to sowing alfalfa by good work upon the seed-bed than in six months afterwards if it should be put in in foul ground. Another correspondent asks about rye as a nurse crop. I refer the correspondent to my reply last month to the same question.—L. C. Brown.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.**

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the **Cement Workers' Handbook.** Address, **Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

There is Money in Wheat.

$7,068.67. That's the amount Mr. R. T. Moore, of Watika, Oklahoma, received from the sale of 10,350 bushels of winter wheat made a few days ago. He still has 715 bushels in his bins for seed and bread. It required over two hundred wagon-loads to move this monster crop to the elevator. Mr. Moore is one of the up-to-date, progressive farmers of Grant county, in the youngest state in the Union, Oklahoma. He owns 480 acres of land, and has started a good bank account. Two years ago he sent to the Ratekin Seed House of Shenandoah, Iowa, for some of their New Imported Malakoff and Turkish Red Seed Wheat. From the product this monstrous crop was grown. He sowed 300 acres of his land to this wheat and it made an average yield of a little over 36½ bushels per acre, although the wheat crop in Oklahoma was infested with green bugs and dry weather. The facts are, however, it always pays to plant nothing but the best. Mr. Moore did this and he won out. If more farmers would do the same, they,too, could soon start a bank account. The Ratekin Seed House is one of the best and most reliable in the country. To all who are interested in the crops they grow, would advise that they send for Ratekin's Seed Wheat Catalogue at once. It will be mailed free, with sample of New Malakoff wheat, if you will mention this paper. A postal card will bring it to your door. The address is Ratekin's Seed House, Shenandoah, Iowa. — Kansas City Weekly Journal.

Clean Seed Grain.

Clean fields of grain are not numerous. I doubt whether farmers have been holding their own this season in the encroachment of weeds and foreign grain. I have been looking into this weed and clean-seed question among eighteen farmers in one township in Northern Illinois. I found sixteen fanning mills, and all these mills were used on the seed grain last spring. Notwithstanding the general use of mills I have never seen grain fields dirtier than they are this season, and there are some very bad pests in the crops.

When farm lands in Illinois were fresh, weeds did not bother very much, and one cleaning through an ordinary fanning mill would give us tolerably clean seed grain. But lands become more foul as they become older, and, when bringing in fresh seed supplies, frequently we bring in great quantities of weed seeds, which have spread at an alarming rate during the last ten years. When our fields were vigorous, grain could dominate the weeds, but as the lands become less active weeds become thriftier, and they now give us more trouble than we have ever had before.

We must be more particular in cleaning seed grain. A sample of grain may look clean and good, yet contain an enormous amount of weed seeds, such as mustard, buckhorn and others equally as bad. The only safeguard is the fanning mill, using the various screens. When foreign grain is mixed with seed grain it is next to impossible to make a complete separation. For instance, it is almost impossible to separate barley from heavy oats, and although a small percentage of barley is not harmful, when oats are wanted for feeding, yet one should be careful of the mixture when the crop is wanted for seed purposes. When one wants to be sure of pure and clean stock seed, a few acres should be hand-picked for all bad weeds and foreign grain heads, and then threshed with a machine which has been thoroughly cleaned.—L. C. Brown.

A TRIP THROUGH THE UNITED STATES—FIFTY POST CARDS FREE.

We have obtained the sole right to distribute a grand series of Post Cards entitled "A TRIP THROUGH THE UNITED STATES." We intend to issue them ABSOLUTELY FREE, postage paid, to all who will pay up one-year's subscription to this paper during the months of July and August.

HOW WOULD YOU LIKE TO SEE EVERY POINT OF INTEREST IN YOUR OWN COUNTRY?

There are fifty beautiful multi-colored Post Cards, showing all the beauties of our glorious country. The photographs for these cards were taken by an artist who made a special trip to secure them. These cards illustrate our great country from one end to the other. There is no education like traveling. This beautiful set of Post Cards is the only substitute you can have for a trip like this. You won't know what a beautiful and interesting country you live in until you take this wonderful Post Card trip. It would cost you hundreds of dollars to see all these places.

On this trip you will go to New York, Niagara Falls, Cleveland, Ohio, Chicago, St. Paul, Spokane, Seattle and California. You will travel through the Sunny South; the beautiful West and see the cowboys in action; you will go East, and see all there is to see on Uncle Sam's Farm.

If you like Post Cards, and we believe everybody does, does it not stand to reason that a set of cards picturing one's own country should be of the greatest interest? You read daily of important happenings in various parts of the United States. These cards will show you just what the places look like. If you travel in later years, you will not be a stranger in the various cities you visit. They will all be familiar to you through your Post Card trip.

Send us Fifty Cents to pay one-yar's subscription in advance to The National Farmer and Stock Grower and we will send one complete set of the fifty Post Cards as a free premium. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Blight in Wheat.

Mr. J. L., of DeKalb county, Indiana, writes: "Two weeks before my wheat was cut it looked fine, but when I came to harvest it I found many white-colored grains. It seems most all fields in this section are affected the same way. I have found no bugs and cannot account for the white grains."

This trouble has been quite common this season in all localities where there was too much moisture. The trouble is caused by blight. Excess of moisture and very hot weather do not make the best conditions for filling. One of my growers in Putnam county had an eighteen-acre field of Turkey red very badly blighted and it makes a very poor sample of grain. Much of the early wheat coming into market now has more or less white and shriveled grains.—L. C. Brown.

As a Last Resort.

The stranger had been compelled to linger twenty-four hours within the gates.

"Well," queried the landlord of the village inn, as the stranger was settling his bill, "what do you think of our place as a summer resort?"

"I'd hate to tell you," answered the stranger, as he picked up his grip. "Even what I think of it as a last resort would not look well in print."—Chicago News.

Mr. A. L. Aitkins, of Parsons, Kas., a swine breeder, reports to the Breeders' Special that he raised a litter of pigs farrowed October 14, 1908, and weighed the choice at forty-three days. He weighed 44 pounds. At seventy-two days old he weighed 85 pounds; at ninety-six days he weighed 115 pounds; and at 114 days 140 pounds. He only weighed the first and second choice of the litter and they weighed within four pounds of each other.

EXPECTED BACK.

Prisoner—"Can I speak with the convict Smith for one moment?"

Jailer—"No, he has just left after finishing his time. But ask me again in about a week."—Fliegende Blaetter.

"Tact is a mixture of sympathy, common sense and forethough, with a little dash of makebelievs."—Exchange.

LICE KILLER—will not injure chickens, but makes them healthy. Sprinkle it where they roost and lice are destroyed. Our **GERM DESTROYER** prevents contagious diseases amongst hogs and cattle. Latest remedy out. **LICE KILLER COMPANY, Marquette, Ill.**

SPRAY YOUR TREES

With Cooper's Tree Sprays and get the best results. They are effective in the highest degree, highly concentrated and absolutely uniform in strength. Mix instantly with water. One part to 100 parts water. No sediment to clog nozzles. Harmless to trees and user. Non-poisonous to animals grazing under trees. Invigorate and cleanse the trees. See advertisement of Wm. Cooper & Nephews, 177 Illinois street, Chicago, Ill.

THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow pan of water and it revives to a beautiful, living fern-like plant. Let is dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.

We have adopted the Resurrection Plant as a subscription premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening,** postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

TAKE HOLD OF A GOOD THING!

You Need the Best!
You Can Afford It!

FOR ONLY ONE DOLLAR.

THE NATIONAL FARMER AND STOCK GROWER is by long odds the best general monthly farm paper. It is full of practical information, and it is specially devoted to cattle, hogs, sheep, goats, horses and mules, jacks and jennets, dairy, etc. There are other good Farm Papers, but **THIS IS THE BEST.**

THE NATIONAL FRUIT GROWER is another first-class monthly paper. Fruit growing is a specialty and has its special publication. **THE NATIONAL FRUT GROWER** is a splendid paper; it contains excellent illustrations, correct descriptions, up-to-date methods. There are other good Fruit Papers, but **THIS IS THE BEST.**

THE RELIABLE POULTRY JOURNAL is another first-class publication. Poultry raising is a specialty and has its special publications. **THE RELIABLE POULTRY JOURNAL** is all that any poultry raiser needs. It is splendid in every department. There are other good Poultry Publications, **BUT THIS IS THE BEST.**

THE UNIVERSAL MAGAZINE. This is another splendid paper. It is for the family. Nice reading, interesting and instructive literature, good counsel, excellent poetry, fashions and patterns. It is a nice, clean publication of thirty-two pages, three columns to the page. There are many Family Publications, and in its class **THIS IS THE BEST.**

The subscription price of these four publications is $1.75 per year, but we have made arrangements whereby we will send all four of these first-class papers for $1.00 per year.

Send your orders at once. This is a low price for a Grand Subscription Campaign. Address,

EVANS SUBSCRIPTION AGENCY,
3552 Vista Ave., St. Louis, Mo.

Fruits and Vegetables.

This season the Georgia watermelon is not up to its reputation. Lots of them are good, but both New York and Chicago markets are complaining. Many cars are immature and green and others hauled in lime and fertilizer cars arrived black and rotten. Many cars were sold for less than freight charges, and the Health Department has been busy condemning all that were unfit for sale. A well-known receiver said: "Growers of melons when picking and loading handle them as if they were stone or iron. If they would leave the melons in the fields until they are ripe and the rind hard, and not bruise them in loading, and cut their stems long and load in ventilated cars, such melons can be shipped from Florida to San Francisco and arrive in good condition."

Judsonia, Ark., is distinguished as being the largest strawberry producing point in Arkansas. This year 134 cars were loaded, containing 550 crates each, and averaged at home $1.70 per crate. Only three varieties are planted: Excelsior for early; Klondike, medium, and Aroma for late berries. Wm. Hinson, who had thirty-two acres, cleared over $3,000.

At Jersey City, the week ending July 24th, was the banner week in melon receipts. In one day 179 cars were received. Some Alabama melons sold up to $300 a car, but the freight bill amounting from $175 to $190 a car did not leave much margin.

In the year 1908 Floyd county, Kentucky, produced 275,000 bushels of potatoes, and the average yield was reported at 227 bushels per acre, against an average of 80 bushels for the state.

A big onion carnival to be held August 25th at Nappanee, Ind., is expected to be the greatest day in the history of that city. No money is being spared to make it a great success. There will be numerous outside attractions, such as balloon and parachute ascensions, ball games, horse and auto races. A great crowd is expected and everybody will be entertained to the queen's taste. G. F. Brown, Secretary of the Nappanee Onion Gorwers' Association, has charge of arrangements. A. A. Laughlin is President of the association, and Wilson Slabaugh, Treasurer.

Hoosier One-Horse Grain Drills.

Every year the practice of sowing wheat between rows of standing corn is becoming more popular. There are many advantages in this method. It permits of allowing the corn to stand until fuly matured, and at the same time the fall seeding is not interfered with, because the seed can be put in the ground at the proper time. The Hoosier One-Horse Five Disc or Five Hoe Drill, with and without Force Feed Fertilizer and Grass Seed Attachments will be found admirable for this purpose. They possess many features not found on other machines of this class. They are made with adjustments, enabling the user to employ them between different width rows. These machines are manufactured by The American Seeding-Machine Co., Incorporated, Richmond, Ind., who sell Hoosier Drills under such a fair and liberal guarantee that no risks are run in purchasing. Send to the manufacturers for a Hoosier One-Horse Grain Drill catalogue, and if you desire special information, they will be pleased to furnish it. Go to your implement dealer and insist on seeing the Hoosier before buying any other drill.

VETERINARIANS EARN $3,000 TO $8,000 A YEAR.

Dr. Stewart Says Demand For Graduates Greater Than Ever Before.

The progress and adoption of modern methods by the Western farmers can well be noticed by the demand for graduates of recognized veterinary schools.

Dr. Sesco Stewart, Dean of the Kansas City Veterinary College, said recently: "The demand for graduates this year has been greater than ever. Had our class been twice as large, all would have found advantageous locations. A large number of our graduates enter the Inspection Department of the United States Government. I regard the opportunity to build up a large general practice better to-day than ever before. Some of our graduates write us that they are now making from $3,000 to $8,000 a year."

The practice of Veterinary Science offers a spendid opportunity to the young man of to-day, especialy to the young man of the farm. Catalogue and full information concerning the course of study at the Kansas City Veterinary College will be sent any interested party who will address Dr. S. Stewart, Secretary, 1324 East 15th street, Kansas City, Mo.

A Pull For Better Oats.

All over Illinois farmers are talking oats. Wherever one goes he hears about varieties and oat yields and the factors needed to make a crop. Under these circumstances there is a livelier interest shown in the forthcoming Oat Show at Urbana in January than I have seen for a long time. Oats is too valuable a crop to be abandoned; still, farmers are about at the end of their resources, and that means switching to some other crop, unless different methods of culture or different varieties bring different results than we have had now for four crops. Some of this trouble has been brought upon us by the estimation we have commonly placed upon the crop. We have never taken oats as seriously as we have corn or wheat, and really most growers have never paid any attention to the essentials in making the crop. Our own Experiment Station has the work now well in hand and something different may be looked for.

During the last ten days I have been in twenty-one different oat fields, in Iroquois, Ford, Kankakee and Livingston counties, Illinois. Wherever a grower secured an uncommonly good crop I have studied the factors that made it. We all talk about thorough work on the seed-bed for oats, yet the two best fields I saw during my ten-days' travels were shoveled in among corn stalks on fairly good corn ground. These fields did not grow so fast nor so rank, and it was evident that the oat plants had to forage harder for their food supplies. This probably accounts for the hardihood of such fields, and their better storm resistance than other near-by fields. There was ample nitrogen here, but it was not easily available, consequently did not produce quick, overrank growth.

It is evident that oats will not tolerate too heavy a dose of nitrogen during a wet season, but, on the other hand, the very poor crops of some fields indicate that oats will not do their maximum on such poor ground. The big problem, it seems to me, is to get more precise knowledge about the degree of fertility and kind of fertilizers best suited to making the crop under normal conditions.

Another thing has been clearly shown this season, and which was strikingly noticeable in the above counties. Oats do not fit into new conditions quite so readily as either corn or wheat, and for this reason local varieties stand a better show than imported seed. I urge every oat grower to give this feature of oat growing serious consideration. Wherever any field in any neighborhood has outstanding merit, either in strength of straw or in superior yield, stick to it, and improve it by hand selection and careful harvesting.—L. C. Brown.

BROWN'S BUSINESS COLLEGE

ST. LOUIS, MO., offers young men and young women from the farm a business education that will be of great value to them. The "Business Farmer" is the farmer today who is making the most money. More farmer boys attended Brown's last year than ever before. They see the value of a good business education. They want to make more money. Our new catalog and special "Business Farmer Circulars" will be sent you free if you mention The National Farmer. If you want a good, practical business training, **WRITE TODAY.**

Prof. Mumford Chosen Dean.

Prof. Frederick B. Mumford, head of the Animal Husbandry Department of the United States Agricultural Experiment Station and Professor of Animal Husbandry in the State University, was appointed Dean of the Agricultural School at Columbia, Mo., at the meeting of the Curators. He succeeds Dr. H. J. Waters, who resigned to accept the Presidency of the Kansas Agricultural College at Manhattan, Kas. Dr. A. Ross Hill, President of the University, announced the appointment after a conference with Prof. Mumford.

Prof. Mumford graduated from the Michigan Agricultural College in 1891 and has been a member of the Missouri University Faculty since 1895. He is a remarkably talented stockman and has already done great service to the state.

Gasoline engines on binders is another step forward towards the horseless farm. The present season has included mechanical demonstrations of this character to a greater extent than heretofore. The motor plow, seeder, cultivator and harvester all in the same gears will enable farmers to run the farm as business men run a factory.

"People who weigh their words seldom speak lightly."—Exchange.

Salesmen Wanted

Traveling Salesmen earn from $1,000 to $10,000 a year and expenses. Over 6,000 employed in the United States and Canada. The demand for good Salesmen always exceeds the supply. We will teach you to be an expert by mail. We maintain the best FREE EMPLOYMENT BUREAU in the world and receive calls for thousands of Salesmen. Have assisted thousands of men to secure good positions and better salaries. Many who formerly earned $25 to $75 a month have since earned from $100 to $300 a month and expenses. Hundreds of good openings for the fall rush. If you want to secure one of them or increase your earnings our free book "*A Knight of the Grip*" will show you how. Write or call for it today. Address nearest office.

Dept. 237 National Salesmen's Training Association, Chicago, New York, Kansas City, Minneapolis, San Francisco.

Webster's NEW STANDARD Dictionary

Home and Office Edition. A splendid book for readers of The National Farmer and Stock Grower. There are 756 pages, 5x7 inches, 1½ inches thick, and the book weighs 22 ounces. It is splendidly bound in flexible cloth, with patent thumb index, with front and back title in gold. There are 840 illustrations and 19 full-page plates. Besides the Dictionary proper and supplement of recent words, it contains many other features, such as key to pronunciation, dictionary of geography, Biblical, classical and historical names, musical terms, foreign phrases, current abbreviations, etc. For handy, quick, general use, for doctors, ministers, lawyers, merchants, mechanics, editors and farmers, this is a great, useful, interesting, necessary book. We use it as a subscription premium in connection with The National Farmer and Stock Grower. Send us One Dollar and we will send you one copy of Webster's New Standard Dictionary by mail post paid, and we will send you The National Farmer and Stock Grower, every issue for two years. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Setting An Asparagus Bed.

"What is the best method to pursue in starting an asparagus bed?" This question was referred to Prof. H. A. Surface, Pennsylvania State Zoologist, Harrisburg, by one of the newspapers of Philadelphia, the information having been asked by a correspondent of the paper. It elicited the following reply:

"In planting an asparagus bed the ground should be spaded or plowed deeply, or to a depth of twelve inches, if possible. In turning the soil, manure should be mixed well with it and, in fact, some of the fertilizer should be turned under completely. The soil cannot be made too fertile. Three or four inches of manure well turned under and stirred into the soil will not be too much. Dig holes to a depth of eight inches with a circumference of two feet, making them five feet apart each way, or at least not less than four feet. Put two inches of well-fertilized good earth in the bottom of each hole and set the asparagus plant or root on this firmly, with the roots spread in every direction. Over this place about two inches of good rich soil that is not so damp as to pack or cake when tramped, and then tramp it with the feet firmly around the heart of the stalk of the plant. The secret of making this kind of plant grow is to pack the earth quite firmly about the roots, but not to have it so wet that it will cake or form a ball. Next, throw two or three inches of loose earth over the packed earth, leaving a depression in the ground for watering and future filling. As the little weeds start, hoe and gradually fill the space around the new plants. Cultivate them deeply, thoroughly and frequently, and use considerable salt and commercial fertilizer. In fact, much salt can be used on the surface of asparagus beds to kill the weeds and at the same time benefit the asparagus plants greatly. I have seen the ground covered with salt to a depth of one inch, killing the grass and weeds but not injuring the asparagus roots.

"The chief pests will be the 'Rust,' for which spraying should be done with Bordeaux mixture, and the Asparagus Beetles, which insects should be dusted with freshly slaked lime (thirty parts) and Paris green (one part); or sprayed with arsenate of lead, one ounce in each gallon of water or Bordeaux mixture."

The Wheel Hoe.

Those who have never given it a trial will scarcely believe the gain which it is. We are prone to look upon it as the tool only of the market gardener, who has no horse at his command to cultivate the rows planted lengthwise of the garden the first two or three times. On the farm it is regarded as superfluous. Yet really in the family garden it is an economy worth looking after, and by its use you will find that if you have previously depended on horse power for the early cultivation, the closer planting of the rows will permit enough additional vegetables to be raised within the same limits to give a handsome surplus, while the speed and ease with which it is worked leave the ordinary hoe far behind. If rightly managed it will pay for itself in a single season.

"It takes a good man to run it," is the comment of one. But don't fear, sister. It takes, or should take, a good man to run an ordinary hoe. If you can hoe cabbage in the old way you can certainly run the weed-cutting attachment, and this does the work so much more quickly than the old way that you will never want to return to the old hoe process. Anyone who can run a lawn mower will have no trouble with the weed cutter or weeder, though the real hoe, which works more deeply in the soil, is a bit too hard work for a woman, unless the soil is unusually light.

And right here let me say that if your soil is not fine, the various attachments soon put an end to the lumps. We have seen a clay soil, plowed when a little wet, and seemingly unmanageable by the ordinary process, worked up by running over a few times, until it was as light as anyone could wish. And after it is once put into proper shape, there is no trick in keeping it there.

By getting both single and double-wheel attachments one may work up very close to the rows, the double wheel passing close on either side of the plant, while the single more easily clears out the ground between. In this way almost all hand weeding is dispensed with, only a scattering weed clinging in the rows needing removal. Even with small plants there is little earth to be removed from them after the first cultivation, with no danger of a horse, by a single mis-move, trampling them into the ground. Weeds are cut out on the start by two knife-like blades, which cut about an inch below the surface, mowing down everything in their path, even to the dock, which the ordinary hoe has the unpleasant habit of dodging, and at the same time loosening the soil near the surface. The weed cutter is easily manipulated in the rows having plants like cabbage or beans in hills, by raising the cutting bars to lift over the plants but taking out the weeds between them.

A twelve-year-old boy can run it with sufficient ease to make the work enjoyable; and we wonder if the proper implements to work with are not, after all, the main key to the solution of how to keep the boy on the farm. He is proud of results, yet when he spends half a day cutting weeds and is still in vivid remembrance of the backaching process—well, two or three hours in the new way will cover several times the same ground and leave a neat, clean job. For another feature worth noting is that the work is well done; it will ridge up the soil or level it flat, as you prefer. But there is even work, whichever the system desired.—Bessie L. Putnam.

Transplanting Vegetables.

Moving plants from one locality to another is more or less of a violent operation. By the process the plant is deprived of quite a number of its long roots and for a time is cut off from its water supply; consequently it is necessary to exercise considerable care with the plant until it again becomes established in the soil. To help insure this, an abundant supply of moisture in the soil at all times is essential to keep the plant from wilting and incite it to take hold of the soil quickly. In sections where irrigation is practiced the transplanted plants should be irrigated immediately after setting, and frequently afterwards until danger of their drying out is passed. This can be told by the plants freshening up and starting new leaves. It is also very essential when setting the plants out, to firm the soil well around the roots. This is very important and should not be neglected. Many plants have failed on account of not doing this. Proper firming of the soil helps to exclude the air from the roots and prevents the plants from drying up.

In sections where irrigation is not practiced plants are preferably transplanted during a rainy spell. If this cannot be taken advantage of, it will be necessary to water the plants by hand until they are established. When doing this, do it thoroughly; a little water is sometimes nearly as bad as none.

In moving the young plants from the seed-bed to the field and until set out they should be protected from the rays of the sun to prevent wilting. This protection can be given by wrapping the roots up in a wet sack or carrying to the field in a bucket or tub with a little water in the bottom to keep the roots moist. When digging the plants out of the seed-bed, use a shovel or spade and avoid breaking off any roots. It is also better to wet the bed first. If the plants are very tall it will be well to cut off a part of the top. This operation will not hurt the plant and helps to keep it from wilting, as it prevents excessive moisture from the plant through the leaves.

Before transplanting the soil should be well prepared, being properly fined and leveled. Plants usually take root more quickly in freshly-stirred soil. After the land has been properly prepared, mark off the rows where the plants are to be set. This may be done, if it is desired to plant on ridges, with a plow, if on the level by a marker. One thing to keep in mind, make the rows straight and the proper distance apart. It never pays to crowd plants. By so doing a crop inferior in quality is liable to be produced. If in doubt about the proper distance to plant, consult a reliable authority or some one who has had experience.

Transplanting can nearly always be successfully done with most plants if the proper care is observed. Some of the things to keep in mind are: Dig plants carefully; protect them from the sun after digging until transplanted; supply plenty of water to transplanted plants; set the plants properly in the hole; firm the soil around the roots. It will pay to carefully observe the above points when doing transplanting. Many thousands of plants are lost annually through carelessness in setting and lack of proper care afterward.—J. E. Mundell, of the New Mexico College of Agriculture.

THE UNIVERSAL HAM KNIFE.

This is called a Ham Knife by the cutlery company that made it. It is a knife on one side and a saw on the other. It might be called a Bread Knife or Meat Knife or a Carving Knife. It is, in fact, an all-round Kitchen Knife and Saw. It is twice as long as the picture, and is 14 inches. It is of good steel. It will bend almost double without breaking. It is well finished, and the handle is hard wood. We buy them direct from the largest manufacturing company in the world. We guarantee the quality. We have never had so much value for the money before.

We use the Universal Ham Knife as a subscription premium with the **Universal Magazine**, our own publication. It is a thirty-two-page, three-column illustrated monthly magazine. It contains interesting reading, stories, poetry, history, and useful information, fashions, patterns, etc. It is a magazine that recommends itself.

Offer No. 1.—Send us Thirty Cents—**Only Thirty Cents**—and we will send you the **Universal Magazine** for one year and we will mail you, postage prepaid, one Universal Ham Knife.

Offer No. 2.—Send us Fifty Cents and we will send you the **Universal Magazine** for two years, and we will send you one knife by mail as a free premium.

Offer No. 3.—Send us One Dollar and we will enter up four one-year subscriptions and send four knives. Money back if not satisfied.

Address and send money orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

COOPER'S TREE SPRAYS

V1—For Trees in Dormant state
V2—For Summer Use
V3—For Leaf-eating Insects

Effective in the highest degree. Are highly Concentrated. Absolutely uniform in strength. Mix instantly with water. One part to 100 parts water. No sediment to clog nozzles. Harmless to the trees and user. Non-poisonous to animals grazing under trees. Invigorate and cleanse the tree. Write for pamphlet of convincing testimony.

Wm. Cooper & Nephews, 177 Illinois St., Chicago

THE DOMESTIC SHEEP.

There is one modern writer on Sheep industry who has made his mark. It is Dr. Henry Stewart. He has written a book entitled **The Domestic Sheep.**

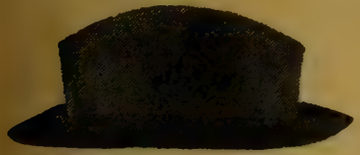
It is up-to-date in every particular. There are 384 pages, and besides going into the subject in a practical way there are illustrations of every breed and every subject belonging to the industry. For $1.50 we will send **The National Farmer and Stock Grower** for one year and one copy of **The Domestic Sheep.** This is the time to study the sheep business. There is money in it. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

MAGNIFICENT SUBSCRIPTION PREMIUM.



The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color.

SUBSCRIPTION BLANK

To be Filled Out if Order is Given.

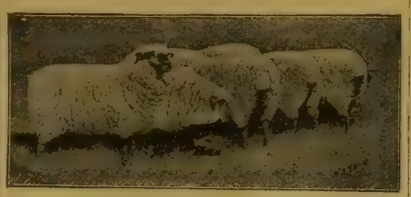
A CHAT ABOUT SHEEP.

Also About Lambs and Ewes and Their Place on the Farm.

That farmers should raise more sheep is a subject worthy of their most serious consideration. The ewe furnishes a fleece and a lamb, and is therefore equal at least to the dairy cow that furnishes the calf and the milk which contains the butter. The hen as a unit probably stands at the head of the list when it comes to the percentage of profit on the amount of capital invested; but for those who like them sheep can make a hundred per cent. profit every year and never decrease in numbers.

When sheep and cattle are compared in the feed lot the results usually show that sheep make the



most gain for the less amount of feed. To make a hundred pounds of gain, cattle required 914 pounds of grain and 440 pounds of hay. Sheep in competition with them required 383 pounds of grain, 464 pounds of hay and a little pasture.

Some calves being fed on skim milk required 432 pounds of grain to produce a hundred pounds of gain, and lambs also fed on skim milk required 284 pounds of grain to increase 100 pounds. Pigs also fed skim milk required 320 pounds of grain for the 100 pounds of gain.

On pasture, to make 100 pounds of gain, cattle required 830 pounds of grain; hogs, 398 pounds; and sheep, 245 pounds. It should be remembered that 6 per cent. of the sheep is fleece, worth 25 cents a pound.

The figures we have given are by Prof. F. B. Mumford, of the Missouri Agricultural College, but we have not yet seen any Agricultural College bulletin showing why it is that the small-sized animals gain more in proportion than do the heavier animals. One sheep does not gain as much per day as the 1,000-pound steer, but six sheep weighing 500 pounds in all will put on as much gain as a 1,000-pound steer. The steer requires food of support for a thousand pounds, and then on extra feed gains two pounds a day, and the six sheep only require food of support for 500 pounds and then on extra feed gain two pounds a day. It applies also to hogs; the heavier the hog the more food is required for the food of support, and the gain in weight then depends on the digestion of an excess of feed over and above the food of support. Prof. Mumford says that the sheep is one of the most efficient meat-producing animals on the farm.

The writer of this article had eleven-years' experience with sheep, and it was not all profitable experience. A flock of pretty nearly pure-bred Ohio Merinos was purchased at a good, stiff price. They were good wool producers, but mutton was scarce. Lambs were small and had to grow to bear wool or be sold for a song. The wool sold in a series of years all the way from 28 cents down to 12 cents a pound. Finally a man came along and opened his mouth, and he went off rejoicing with the sheep. During the eleven years that we owned the flock of sheep the entire complection of the sheep business changed. In the beginning the sheep husbandry was on a wool-growing basis, with mutton as a four and five-year incident, and it changed until it was on a mutton and lamb basis, with wool as an important item.

During the period of our discontent, when our wool sold low and our muttons could not pay the freight, never once did we hear of a complaint from any farmer, whose sheep were either Southdowns, Shropshires, Oxfords or Hampshires or any of the mutton breeds. They sold their muttons and their lambs at good prices, and their light-shrinkage fleeces sold at the top of the market, and they went on about their business because they were doing well, even if wool did sell at a low price.

Sheep were sacrificed in this country as they never will be again. The people did not eat mutton, but now they are glad to get it. There were as many sheep as there was population, and now there are half as many. Then a million sheep a year oversupplied the markets, and now ten million will not do it. The fact of the matter is that the day of the producer has come, be the production cattle, hogs or sheep.

The principal development, however, is the market demand for lambs. A thousand lambs are sold now where 100 were sold twenty years ago. Lambs can be made to weigh from fifty to sixty pounds average in sixty days from birth. In the months of April, May and June such lambs sold for 7, 8, 9 and 9½ cents a pound. Some of the earliest sold higher. Then the ewe gives up a good fleece of wool and either remains on the farm to raise another crop of lambs or is shipped to market as a mutton ewe.

Tennessee, Kentucky and Missouri are in the sheep business to stay. Oklahoma and Arkansas are coming in. The St. Louis market can sell, and sell well, every lamb, mutton or pound of wool raised. The market is here and will stay here. Every day the market is wide open. There is no speculation. Every lamb or ewe is bought for immediate slaughter and is consumed. The next day the hungry consumer needs more. The sheep business is perfectly safe in the hands of the farmer who takes care of his sheep.

Running Lambs in Corn.

An Adams county, Illinois, correspondent asks: "How would it do to turn lambs into the corn fields now?"

I should not turn sheep or lambs into the corn fields for several weeks yet, not until the ears have formed. Of course, the earlier the lambs are put in the more of the weeds they will eat, and that really is what the lambs are put in for. I have seen a bunch of lambs live all the fall among the corn, doing finely, and making better gains than they would on poor pastures. It won't do to turn lambs into corn fields which have been blown over, for they will soon learn to look for the ears and will waste some. This practice of fall feeding of sheep and lambs is becoming quite common, and usually with satisfactory gains, providing the daily water supply is ample.—L. C. Brown.

Sheep Clippings.

The Farmers' Home Journal says: "Have you been using a sheep out of your own flock to head the ewes for a long time? Better go off to some good flock that has new blood in it and buy a nice ram. The improvement in your next year's crop of lambs will more than pay for the same."

"In case a ewe disowns or refuses to let her lamb suck, sprinkle a little salt and aniseed over the back and shoulders of the lamb; this will often induce the mother to lick it and effect a reconciliation, and in no way harms the lamb."—Farmers' Home Journal.

COOPER'S FLUID DIP

CHEAPEST, PUREST AND BEST FOR SHEEP, HOGS & CATTLE

A positive remedy for scab, mange, ticks, lice, ringworm, eczema, sores, stings, etc., and all disinfecting purposes. One gallon makes 120 to 130 gallons of liquid. Always uniform and mixes readily with any water. Price for gallon can, $1.75—5 gallon can, $8.50. If dealer can't supply you send to

Meyer Bros. Drug Co., St. Louis, Mo., or Wm. Cooper & Nephews, 177 Illinois St., Chicago

POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St.Louis, Mo.

Tobacco Kills

Face to Face With Death.

There's nothing that can be said in favor of the tobacco habit. It's expensive; filthy; injurious to health—positively dangerous. Nicotine is a deadly poison—witness the thousands of deaths from tobacco heart, tobacco cancer, from diseases of stomach, liver, kidneys that had their start in tobacco poison.

"Easy-To-Quit" is a positive, absolute "stopper" for any tobacco habit. It is a vegetable remedy and any lady can give it secretly in food or drink. It is harmless; leaves no reaction or bad after effects, and it stops the habit to stay stopped.

Mothers, save the young smoker's brain; he cannot do it himself. Wives, sisters and sweethearts, help save the mind, body and future of some one who is near and dear to you. Without your help it may not be done.

FREE PACKAGE OFFER

Fill out the blank lines below with your name and address, cut out and send it to us; we will send you absolutely free, by mail, in plain wrapper, a trial package of "Easy-To-Quit." You will be thankful as long as you live that you did it. Address, Rogers Drug and Chemical Co., 1213 Fifth and Race streets, Cincinnati, Ohio.

NAME.....

ADDRESS.....

ARKANSAS RICE.

One of the Greatest Developments of Modern Agriculture.

A few years ago, in 1902, Mr. W. H. Fuller, a practical farmer living north of Stuttgart, Ark., decided to experiment with rice growing, and he drilled a well to irrigate the land, planted the seed rice and the result was quite favorable. He enlarged his acreage the second year with the same satisfactory result, and the third year his neighbors followed his example and a new and beneficial industry was founded on the Cotton Belt Route in Arkansas.

This rice-growing industry centers upon the town of Stuttgart, 378 miles from St. Louis. The ground already tested is about 150 miles along the Cotton Belt Route and 100 miles across all accessible territory by the main line and branches of that railroad system. The acreage has increased year by year until in 1908 there were 13,000 acres grown. The seeding is done in April and the harvest is in September. It grows beautifully, thicker than wheat, nearly as tall as a man, and yielding as high as 100 bushels per acre. There is an unlimited demand for rice, and the average price has been $1.00 per bushel.

The United States Department of Agriculture being desirous of helping the movement, established an Experiment Station and demonstrated that this section of Arkansas is a rice country surpassed by no other rice district in the United States.

The Government Experiment Station planted Japan rice and the yield was 96¼ bushels per acre, while during the same year twenty-five acres of watered rice on the Morris farm yielded 1,790 bushels of very plump rice, making 71.6 bushels per acre. Mr. Fuller also cultivated his rice that year and succeeded beyond his most sanguine dreams. His wildest hopes never led him to expect more than thirty-five or forty bushels to the acre. Imagine his surprise, therefore, and that of the whole country, when his crop upon being threshed out showed a net yield of more than seventy-four bushels per acre, or a total of 5,225 bushels from his field of seventy acres. During this year also twelve acres on the Boysen farm produced 1,068 bushels of rice, or eighty bushels per acre. This was Honduras rice and the grain was finer in appearance than the seed rice which was purchased in New Orleans. The yield of straw was about six tons per acre, which the cattle seemed to eat as well as hay. Since then the industry has doubled and trebled and the whole section is regarding rice as the leading crop, and there are winter crops raised on the same land which prevents red rice, weeds, etc.

Our purpose in this article is to invite attention to the Arkansas rice district before all the lands are purchased and occupied. Ten years from now these lands will be valued and sold for more money than they are North—indeed, that is the tendency all over the country; lands are advancing in market value without any change in actual value. The rice district of Arkansas has gone far enough to demonstrate that lands now held at $15 to $25 per acre will eventually sell for $75 to $100 an acre.

The Industrial Department of the Cotton Belt Railway is trying by all means to set people right on this rice-growing, home-building proposition, and for this purpose has issued a pamphlet entitled "Arkansas Rice." It is good and instructive reading, giving all the facts, names, addresses, etc. A copy can be had by addressing E. W. LeBeaume, Cotton Belt Route, 1327 Pierce Building, St. Louis, Mo.

ARKANSAS RICE—FORTUNES IN IT. Grown exclusively on the Cotton Belt Route. "Observe the opportunity." Forty per cent. better than any other rice grown in the United States. The picture represents an Arkansas rice field just before the harvest. All those who wish to be informed in regard to Rice Growing in Arkansas should address E. W. LeBEAUME, G. P. & T. A., Cotton Belt Route, 1327 Pierce Building, St. Louis, Mo.

Nurse Crop Not Best For Alfalfa.

The practice of sowing a nurse crop with alfalfa was inaugurated when the nature of the plant was not as well understood as now. It was also somewhat on the theory, too, that "a half loaf is better than no bread." It began when there was a good deal of doubt about "getting a stand," and the farmer thought no doubt that a crop of oats or barley would pay for the plowing, even if the alfalfa failed. While the practice is continued by many, the prevalent later method is to provide no nurse crop. Few who have abandoned the nurse crop have returned to it. The alfalfa plant does not need protection from the sun, nor is it better by dividing any of the soil moisture or fertilty with another crop. On the other hand, if alfalfa is sowed in the spring, it is important that it obtain an early start in order that its roots can quickly work down into the moisture of the subsoil, against the dry days of July and August. When a nurse crop of any vigor is removed, the alfalfa plants are likely to be found weak, spindling and with little root growth; the nurse crop has also taken up some of the soil nitrogen needed by the young alfalfa; or, if the nurse crop is heavy and has lodged, there will be left bare spots, where the alfalfa has been smothered out.

Cutting the nurse crop is likely to be attended with no little damage to the tender alfalfa plants by trampling their crowns into the ground or breaking them off. Practically all the Experiment Stations favor sowing alone. With few exceptions, the second and third years have brought heavier yields where no nurse crop was used. The theory that the nurse crop will prevent the weeds choking the alfalfa is apparently, as a rule, not well founded. In the first place, alfalfa should not be sown on foul land; and, in the second place, proper disking and harrowing, at near intervals for four or six weeks before sowing, will disturb or kill far more weeds than can any nurse crop. Besides, the oats or barley sown as a nurse when cut leave weeds in good growth or dormant and ready to spring up as fast or faster than the alfalfa. No nurse crop is ever used with fall sowing. When ground has been properly prepared for the preceding crop, and then properly cared for and made ready for the alfalfa by the preliminary weed destruction, it will be found advisable to sow alfalfa alone, even in the spring.—From Coburn's "The Book of Alfalfa."

Insecticides and Fungicides.

Mr. M. K. Killits, formerly General Manager of the Toledo Rex Spray Company, of Toledo, Ohio, has been appointed Field Superintendent for the Insecticide Sales Department of the Sherwin-Williams Company, of Cleveland, Ohio, and Mr. Addison Hyde, who was formerly Factory Superintendent of the same company, has been engaged as Special Representative.

The creation of these positions is the result of the very rapid growth o the insecticide business of the Sherwin-Williams Company. Mr. Killits' many years of experience in this line make him eminently fitted to carry on and develop this department.

The Sherwin-Williams Company have added a splendid lime and sulphur solution to their list of insecticides and fungicides, thus making their line of spraying compounds one of the most complete on the market.

As a pioneer in the exploitation of lime and sulphur solution in the fruit-growing sections east of the Mississippi river, Mr. Killits attained a fund of knowledge on insecticides and fungicides, and in his new connection will be in a position to give better attention than ever before to the requirements of the horticulturists and orchardists throughout the country.

Mr. Addison Hyde, who is to be the Special Insecticide Representative, has had years of experience in the various Agricultural and Horticultural Experiment Stations in a number of states, and is an expert in the manufacture of clear lime and sulphur solution. In addition to his field work, Mr. Hyde will also give close attention to the manufacture of lime and sulphur solution at the various Sherwin-Williams factories.

The principal factory of the Sherwin-Williams Company is at 601 Canal Road, N. W., Ceveland, Ohio.

SECRETS OF SUCCESS.

Thirty-eight years is a considerable period to have done one thing better than it has been done by anyone else. Yet such is the record of the Joseph Dick Manufacturing Company of Canton, Ohio. This concern has made the well-known Blizzard Ensilage Cutter ever since ensilage cutters were in general use. Not only that, they have maintained from the beginning an unquestioned supremacy in their field. Blizzard Ensilage Cutters stand for reliability and the most advanced ideas. Mr. Joseph Dick is continually striving to improve our past performance. This is only part of the secret of his success. The other part is a steadfast adherence to quality. Better write for the catalogue of this firm. Address, Joseph Dick Manufacturing Co., 1416 Tuscarawas street, Canton, Ohio.

Humane Horse Collars.

Probably no advertisement has attracted more attention of late years than the card of the Humane Horse Collar Company, which is to be found on page 6. These collars are sold on fifteen-days' trial, and a trial invariably leads to a sale. For many years inventors have been studying how to work horses without giving them sore shoulders. The Whipple Humane Horse Collar appears to fill the bill, especially so far as farm work is concerned, and the fact that 60,000 are now in use is the best kind of a recommendation. We advise our readers to send to the Humane Horse Collar Company, 1987 South 13th street, Chicago Heights, Ill., and ask for their Free Book on horse collars. It fully explains the subject, and is full of convincing testimonials.

Kitselman Bros., Box 261, Muncie, Ind., sell farm and poultry fence very low—15 cents a rod up. Write them for free catalogue. See their advt. in this paper.

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. **THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago.** THIS IS OUR FIFTY-SIXTH YEAR.

THE COST OF BREAD.

Farmers Can Get a Good Price For Their Wheat Without Any Hardship to Poor Consumers.

At this time of writing (July 31st, 1909,) No. 2 soft red wheat is selling at $1.08 per bushel on the St. Louis cash market. We have also before us the St. Louis quotations for flour from which we select the quotation Extra Fancy $4.30 to $4.40 a barrel, and we understand this is the grade bakers use in the making of bread for the people. At $4.40 per barrel flour is available at 2¼ cents per pound. That is practically what bakers are paying for it, and families can get it in big cities of the West for the same money. There are cheaper grades that make good and wholesome bread.

During the past four months a number of farmers' wives have been kind enough to weigh their flour before baking and their bread after baking, and the results so far show a gain of 40 per cent. One hundred pounds of flour will make one hundred and forty pounds of bread.

If one hundred pounds of flour cost $2.25, and from it 140 pounds of bread can be made, the actual cost of a single pound of bread made in the family kitchen is one cent and six-tenths of a cent, which in round numbers is three pounds of bread at a cost of not over five cents. With flour at three cents a pound, which in round figures represents wheat at $1.25 per bushel, the family cost of bread is only two cents and a tenth of a cent a pound.

During the excitable period, when wheat did sell close up to $1.50 per bushel, The National Farmer and Stock Grower bought flour in several states, and the highest price anyone asked for any grade of flour at retail was four cents a pound, and from each hundred pounds of this high-priced flour the farmers' wives baked 140 pounds of bread that cost less than three cents a pound and was good eating in the house and in the harvest field.

The sensational reports of high-priced bread have no substantial foundation. The wheat is cheap at $1.50 per bushel; the flour is cheap at four cents a pound; the bread is cheap at two cents and nine-tenths of a cent a pound, which is the price at which bread can be baked by families.

And here we leave the story. People who wish to do so can get bread cheap enough. Take the pay of every day laborers—they can pay for bread at three cents a pound, and that is the highest price they have need to pay with wheat at $1.50 per bushel and flour at $8.00 a barrel, for each barrel of flour will make 274 pounds of bread, which is cheap for anyone who is not already in the poorhouse.

Transferring Colonies of Bees.

A great many colonies of bees continue to live in hastily-made boxes, in kegs, in half-barrels or in tree trunks, not because the owner believes that they will do better in such a home than in the modern hive, but because of a lack of knowledge as to successful methods of transferring. No records are to be had from this state, but it has been found, in North Carolina, that colonies in modern hives produce an average of ten pounds of honey to the colony more than those in old-fashioned box hives. This extra amount nearly pays for the new hive the first year, and the hive will last a dozen or more years, if given reasonable care. Many who desire to transfer their bees do not understand the best methods to use to make the operation a success, hence detailed directions are given below.

Preliminaries.—Secure a bee-veil, a smoker, a long-bladed knife, the wire from an old broom or two, a pair of wire pliers and cutter, two or three rolls of old cotton cloth, some matches, a piece of stout string, an ax or hatchet, and a pair of gloves, if you wish to protect your hands from possible stings. All of the articles mentioned will probably not be used, but they should be at hand, as there might be an awkward pause if any article was badly needed and not within reach. "An ounce of prevention is worth (more than) a pound of cure" in transferring bees. Place the new hive near the colony to be transferred, and have about half of the frames full of foundation; the remaining four or five frames are to be reserved for holding comb taken, a little later, from the old hive. The wires may be passed around the frames lengthwise, but such an arrangement will make it necessary to remove the frames from the hive at a later date, after the combs, which have been held in place by the wires, have been securely fastened to the frames. After starting a good smoke in the bee-smoker, putting on the bee-veil and gloves, tieing down the trouser legs, one is all ready to make the transfer. An assistant is desirable, but not a necessity. Take from the new hive the frames that are to contain the combs to be cut from the old hive and place them on a wide board or a small table—a hive cover will answer the purpose. Now go to the colony and puff in some smoke at the entrance, then jar the hive by light blows, then puff in more smoke and jar the hive again. This should be done four or five times to cause the bees to fill themselves with honey. Bees with well-filled honey-sacks are not inclined to sting. A forenoon hour of some pleasant day should be chosen for this operation.

Operation.—If the trees are in a tree trunk there is only one way to get at them, and that is with the ax or hatchet. If the log can be split, it may be opened from top to bottom, exposing the whole of the interior, and if not, the top may be chopped or sawed off at the upper limit of the combs, and the hive placed on top and supported on a board containing holes between the open end of the log and the hive. A steady drumming, with the assistance of smoke puffed in at the entrance, will cause them to move upward into the hive. In case one is not successful in getting a transfer in this way, the log should be chopped or sawed open and the combs carefully removed. Combs that are empty or contain only brood and uncapped honey may be cut out to fit the frames and be held in place by three or four wires. Pieces of comb much smaller than the frame may be slipped in behind the wires and the bees will patch them up in two or three weeks so as to make very good combs. There are some advantages in wrapping strings about frames instead of using wires, for the bees will remove the strings, while the wires will remain until removed by the apiarist. A small whisk broom or turkey feather will be a great aid in encouraging the bees to travel in the right direction.

If the bees are in a box hive, the transfer may be brought about in much the same way. After the preliminary smoking and drumming the hive should be turned bottom up and an empty box put on top, and the drumming and smoking continued until most of the bees have passed into the box. The new hive, now standing where the old hive stood, will soon have returning workers rushing in and out, so the new hive should be supplied with combs from the old ones as quickly as possible; then the box of bees should be shaken into the top or on to a board or paper in front. Care should be taken that not many bees are crushed, and that nearly all get into the new hive or the queen may be lost, bringing about a failure. Scraps of honey should be carried to the house and honey drips carefully washed up, or there may be a bad case of robbing.—W. R. Wright, of the Oklahoma Agricultural College.

The Great and Grand MAJESTIC Malleable and Charcoal Iron RANGE

"The Range With a Reputation"

With water fronts if wanted for pressure or other boilers

Body made of Charcoal Iron, adding 300% to life of Range

Pure Asbestos Lining

PERFECT BAKER

FUEL SAVER

There's Only One Best

—that's the Great MAJESTIC—it's so easy to make claims—but here's the proof—**Majestic Ranges outlast three** of any other make, because they're the only ranges made exclusively of **Malleable and Charcoal Iron** and they just **can't** break, crack or rust. Then, the air-tight joints and pure asbestos lining cuts your fuel bill in half and gives you a perfect baker every day in the year.

The MAJESTIC has a 15-gallon, all copper, moveable reservoir which heats water in a jiffy. No springs in the oven door—when dropped it forms a rigid shelf bearing any weight—oven rack slides out automatically, holding anything secure that happens to be on it. Another feature of

The Great and Grand MAJESTIC Malleable and Charcoal Iron RANGE

is the open end ash pan which acts as a shovel and a small ash cup under the ash pan—no muss or danger of fire about a MAJESTIC. **Each exclusive MAJESTIC feature makes this range more practical, more serviceable, more durable—the best range your money can buy regardless of price.**

MAJESTIC Ranges are sold in nearly every county in forty states. If your dealer doesn't carry MAJESTIC Ranges, write us for the name of a dealer in your locality who does, and we'll send our booklet:

Trumans' Draft Horse Sales.

Trumans' Pioneer Stud Farm of Bushnell, Ill., report as follows:

"Among the sales made by us during the month of July, I wish to report the following: To Messrs. Robison, Johnson & Co., of Gerlaw, Ill., an imported Belgian stallion. We believe him to be one of the best Belgian horses imported this year. He has the distinction of being a medal winner in Belgium. To Mr. Samuel B. Wier, of Augusta, Ill., an imported Shire stallion. To Messrs. McCormack Brothers of Waterville, Iowa, an imported Shire stallion. To Messrs. Westacott & Rafter, of Grand Forks, N. D., two imported Shire stallions. These two horses were shipped direct to the North Dakota State Fair and were shown there with great success the day after their arrival. To Mr. C. L. Hardman, of Knoxville, Iowa, an imported grey Percheron stallion. We had a visit yesterday from Mr. Richard Lundgren, of Lostant, Ill., who had been in the market to purchase a Shire stallion for the past year. After looking all through our horses he finally selected an exceptionally good four-year-old, weighing in ordinary condition around 2,000 pounds. From reports received from our Mr. Truman, he is bringing with him one of the best importations we have ever made of Shire and Percheron stallions. They are to arrive here the day after our mare sale."

A SURE WATER SUPPLY

Every farmer and many villages are interested in an increase in the quantity and quality of the water supply. The call for deep well pumping, where the solid rock is often penetrated, lure water from veins for handling water on a large scale. An opportunity to do profitable work in deep pumping and other kindred lines of labor is offered any of our readers by the advertising of the American Well Works, who have general offices at Aurora, Ill., and several branch offices throughout the country. Correspondence should be addressed to the home office at Aurora, Ill., where catalogues and other information will be furnished on request.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of Hammond's Handy Atlas post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

THE UNIVERSAL AMERICAN FLAG.

Every family should own an American flag from patriotic motives, and the good and lasting flags that are of extra material and fast colors are hard to get. We have a flag of nice, soft cloth, fast colors, 2½x4 feet, a splendid flag. We are assured by the manufacturers that it is the best flag made, and it surely is one that any of our readers will be glad to own. We have adopted the Universal American Flag as a subscription premium. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the Universal Magazine for two years, and we will send the Universal American Flag postpaid as a free premium. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Round Yoke Negligee.

No. 6365.—The negligee that is made slightly low at the neck and with short sleeves is a desirable one on a warm day, and this model is essentially dainty and attractive. In this case it is made of lawn, and the yoke and long sleeves are embroidered; but while such finish is both fashionable and attractive, it is not necessary, for the yoke could be trimmed with embroidery or lace, or could be left plain, if something simpler is wanted. In the back view the same garment is shown with the neck cut high and finished with a standing collar and with long plain sleeves, and treated in such a way it becomes an entirely different garment, yet the one pattern includes both styles.

The negligee is made with fronts and back, which are gathered and joined to the yoke. The edges of the short sleeves can be held together by ribbon ties or tacked one to the other, as liked. The long sleeves are plain and cut in one piece each.

The quantity of material required for the medium size is 3¾ yards 24, 3⅜ yards 32, or 2⅛ yards 44 inches wide.

The Pattern 6365 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, the Embroidery Pattern 425, one size only, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Tucked Blouse.

No. 6392.—The simple tucked blouse is always a smart and a useful one. This model has the advantage of allowing a choice of sleeves of two lengths, and it will be found appropriate for every material thin enough to be laid in small tucks. It is just as well adapted to the entire gown as it is to the odd blouse, and it is altogether as practical as any waist of the season. The tucks are tiny, providing just sufficient fullness to be becoming, and the neck can be finished as illustrated or with a stock collar, as liked. Mercerized batiste is the material illustrated, but the model is a very charming one for dotted Swiss and embroidered muslins of a similar simple sort, and it also will be found pretty for the thinner silks and pongees that are much worn made in lingerie style. Cross-barred muslins, too, are pretty for such use, and eyelet embroidered handkerchief linen makes exceedingly handsome blouses of the sort.

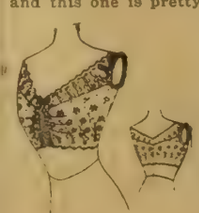
The blouse is made with fronts and back. The sleeves are made in one piece each, and when three-quarter length is desired, are gathered into straight cuffs or bands. The neck can be finished with a neck-band or regulation stock collar.

The quantity of material required for the medium size is 3¾ yards 21 or 24, 2¾ yards 32, or 2⅛ yards 44 inches wide, with 1¼ yards of banding, 2 yards of edging.

The Pattern 6392 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Bust Supporter.

No. 6384.—The bust supporter is a necessity for every woman of full figure. It means neatness and smartness and comfort, and this one is pretty and dainty and easily made. It is especially designed for embroidery, and when made from that material involves very little labor while it serves its purpose perfectly well. Plain material could be used, however, and finished to suit the individual taste. The essential features of the garment are found in its compactness and its simplicity.



The support is made with broad lower portions and narrower shaped upper portions, which are joined one to the other. The broader portions are laid in up-turning plaits at the front edges, and these edges are finished with a band of insertion edged with lace, beneath which the closing is made.

The quantity of material required for the medium size is 2½ yards of embroidery 9 inches wide, with ¼ yard of insertion, ⅝ yard of edging, or ¾ yard of plain material 27, ⅝ yard 36 inches wide.

The Pattern 6384 is cut in sizes for a 36, 38, 40, 42, 44 and 46-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Tucked and Plain Blouses, With Belt or Peplum.

No. 6214.—The simple blouse that is without fullness and which is made of fine material tucked, is a pronounced favorite. Here are two models, one of which is adapted to plain material to be tucked as indicated, the other of which is designed for the ready tucked material, all-over lace and waistings of a similar sort. Both models include the new, long, close-fitting sleeves, and both allow a choice of a belt or peplum at the lower edge, while the tucked blouse also can be extended below the waist line in shirt waist style. The pattern is an eminently practical and desirable one, really including two. In the illustration the tucked waist is made of crepe de Chine, and, as will be noted, the tucks are all arranged to turn in the most effective manner.

Both the plain and the tucked blouses consist of front and backs with one-piece sleeves and collar.

The quantity of material required for the medium size is, for the tucked blouse, 5 yards of material 21 or 24, 3 yards 32, or 2½ yards 44 inches wide; the plain blouse, 3 yards 18, 2¾ yards 21 or 24, 1¾ yards 32, or 1⅝ yards 44 inches wide.

The Pattern 6214 is cut in sizes or a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Men's Night Shirt.

No. 6203.—This simple night shirt with the slightly open neck is one in general favor. It can be made from madras, from muslin, from longcloth, nainsook and all material of the sort and also from the warmer flanelette and washable flannels and from the pongee that is so desirable for warm weather wear. It is simple yet shapely, and the making involves scarcely any labor.

The shirt is made with front and back, and the back is gathered and joined to a square yoke. The neck edge and edges of the opening are finished with a facing, and the all-essential patch pocket is arranged over the left front. The simple plain sleeves are stitched to simulate cuffs.

The quantity of material required for the medium size is 6½ yards 27, or 4½ yards 36 inches wide.

The Pattern 6203 is cut in sizes for a 34, 36, 38, 40, 42 and 44-inch breast measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Tucked Dress.

No. 6364.—The long-waisted, or French, dress is always a becoming one to the younger children, and this one is dainty and attractive, while it is so simple that laundering involves no difficulties. The little straight skirt is gathered and joined to the body portion by means of a belt, and the sleeves are slightly full, gathered into bands when they are made short, but finished plain at their wrists when they are made long. White Persian lawn with a belt of embroidery is the material illustrated, but all the pretty summer fabrics are appropriate for the dress made after this fashion, and Dresden dimities are having special vogue just now, while there are almost innumerable inexpensive printed wash fabrics that are appropriate. Sturdy frocks are just as necessary as dainty ones, however, and the dress will be found very pretty made from chambray, gingham or any fabric of the sort, either with belt of embroidery or of the material, as preferred. On the other hand, something still daintier can be evolved from the design by using white batiste or handkerchief lawn and embroidering some simple little design on the body portion.

The dress consists of the long blouse and the skirt. The blouse is tucked in groups, and the skirt is finished with a hem and three tucks above. The two are gathered and joined by means of a straight belt.

The quantity of material required for the medium size (four years) is 3⅝ yards 24, 2⅞ yards 32, or 2¼ yards 44 inches wide, with 1½ yards of banding, 1¼ yards of edging.

The Pattern 6364 is cut in sizes for girls of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Child's Bishop Dress.

No. 6367.—This simple little frock is dainty and charming, yet perfectly simple. The sleeves are joined to the dress after the bishop style, and there is a round yoke, which can be made either low or high, as liked. In this case white lawn is the material, and the yoke is trimmed with a little applied embroidery, but all the pretty childish materials are appropriate, for the dress can be made from gingham, chambray or something similar and become adapted to morning wear, or from muslin or dimity to become available for afternoon occasions; and the yoke can be embroidered or trimmed in any way that may suit the fancy. Made with high neck and long sleeves, the frock presents a quite different appearance from the one illustrated, and treated in that way is available for challis and similar materials as well as for washable ones.

The dress is made in one piece. The sleeves are joined to it, and the upper edges of both are gathered and seamed to the round yoke. The closing is made invisibly at the back. If a high neck is used, the standing collar finishes the neck and the sleeves are gathered into bands, whether they are long or short.

The quantity of material required for the medium size (four years) is 3¼ yards 24, 2 yards 32 or 44 inches wide.

The Pattern 6367 is cut in sizes for children of two, four and six years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Box-plaited Yoke Skirt.

No. 6391.—The yoke skirt is an accepted favorite and seems likely to increase in favor. This one includes a full-length box plait at the back, which gives becoming and graceful lines, and is adapted to all seasonable materials. Lightweight wool woven in a black and white check makes the skirt illustrated, but it can be utilized for linens and similar washable materials, as well as for wools; indeed, it is available for everything except the very thin fabrics, for in these days we make the lighter-weight stuffs and the heavier ones after much the same models. If the high-waisted effect is not liked, the skirt can be cut at the natural waist line and finished with a belt.

The skirt is made with the pointed yoke and the box-plaited portion, which is cut in seven gores. The yoke is finished at its lower edge and lapped over into the plaited portions, then stitched to position, and the box plait is arranged over the back edges of both. The closing is made invisibly at the left of the back, and there is a fitted girdle which is arranged under the high waist line, which serves to keep it perfectly in place. When the natural waist line is used the belt is joined to the upper edge.

The quantity of material required for the medium size is 8¾ yards 24, 27 or 32, 5¼ yards 44, 4¾ yards 52 inches wide.

The Pattern 6391 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Kindly give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Please address all pattern orders to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

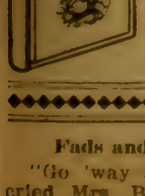
FOR THE VEGETABLE GARDEN.

There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 252 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Fads and Frills and Nerves.

"Go 'way and don't bother me!" cried Mrs. Burns, giving four-year-old Willie an impatient little push. "Mamma's too busy ironing to take care of you now. Go and find Elsie."

"I can't have him now, mamma," called Elsie from the parlor. "I've got to practice my solo for to-morrow night. Nellie's coming over this morning to practice with me, and I'm going to have her stay to dinner."

"No, she can't," returned Mrs. Burns in a tone that almost snapped. "I'll not have company for dinner on ironing day." And again she bent over the board on which lay a snowy mas of puffs and flounces. It was Elsie's best dress and the task seemed to grow harder and harder. Her head ached and it seemed as though the pile of clothes in the basket grew no smaller, though she toiled over them since early morning. She could hear an occasional fretful cry from Willie as he tried to amuse himself and it bothered her. He was usually such a patient child and so seldom troubled her that it hurt her to think she had refused to notice him when he came to her. The noise of the practicing in the front room irritated her until she felt as though she must scream. A step on the side porch roused her and a moment later the door opened and Nellie's mother entered. Mrs. Burns and Mrs. Darrow were old girlhood chums, but to-day Mrs. Burns looked up with scarcely a smile of welcome.

"Gracious me! Ironing this hot day and such a stack of clothes! Here I brought you over a dish of ice cream. I made some for dinner. You sit down and eat this cream before it melts and I'll finish this dress. You look about dead."

While she was talking, Helen Darrow seated Milly near a cool window, uncovered the cream and was back at the ironing board finishing the dress.

Milly, being too tired to remonstrate, submitted quietly for a moment, and then to the astonishment of both pushed aside the cream, rested her head on the table and burst into tears.

"For goodness sakes, Milly, what's happened?" cried Helen.

But Milly could not talk.

"Now, see here," said Helen, as the sobbing woman grew quieter, "has something really happened or are you just completely tired out?"

"I don't know why I cried," answered Milly. "I just couldn't help it. I guess I'm clean tuckered out."

"Of course you are. You'd be a marvel if you weren't. I guess I'm an old enough and a good enough friend of yours to tell you a thing or two, Milly Burns. I've been watching you for several years past. You used to be the gayest of the gay, and now I really don't believe you know what a real soul-stirring laugh is. And it's fads and frills and nerves that's doing the work for you. Look at this dress. Do you remember that it took you days and days to tuck and flounce and embroider this dress for Elsie. And now it means almost a morning's work to iron it. It's a beauty, to be sure, and so is every dress Elsie owns. They look as though they had come from the hands of a French modiste. Everything must be the latest style, and every spare minute of yours, when you're not in the kitchen working, is spent at your machine. Everything Elsie wears must have the latest curluque on it, even though it's some idiotic fad that dies out in a day. Then the next day is spent in removing that fad and putting on the one that has come out a few hours later. Elsie would look just as sweet in a simple little white dress like Nellie's. It took me a day and a half with my work to do it and Nellie irons it herself. Nellie's best dresses are not one-half so fussed up as Elsie's little morning dresses. To my mind, fourteen-year-old girls turn out a deal better if they're not made to believe that the only thing worth living for is style. Even little Willie is as much fussed up as you can possibly have him and still keep him a boy. If he was my youngster he'd be out in a pair of dark rompers this minute instead of that light-colored two-piece suit.

"And it's this everlasting fussing that's gotten on your nerves, Milly, until you're half sick and so tired that you've got no more to give your family now than any woman hired by the day could give them. You wash and iron and sew and cook and clean for them, and you do it faithfully, but you've got something bigger than that for you. There, I've finished the dress and my lecture. Don't you touch a piece of this ironing to-day. This afternoon I'm going to take you to town with me and let Nellie stay at home. To-morrow let Elsie help you with this stack. I'll drive up about two o'clock." With that Mrs. Darrow bustled out the front way, taking Nellie with her .

"Isn't dinner ready, mamma?" asked Elsie, coming to the kitchen door, cool and dainty in a flowered organdie.

"No, it's not," answered Mrs. Burns with some of Mrs. Darrow's own spirit. "You had better slip on your wrapper and iron over those plain pieces while I get dinner."

"Why, mamma," said Elsie in surprise; "ironing is so hard on me. It makes my back ache, and I'm all dressed anyway, because right after dinner I'm going over to Frances Bessemer."

"I think you'll have to put that off to-day," said her mother quietly. "You've been away every afternoon for I don't know how long and I am going to town with Mrs. Darrow this afternoon, so you will have to take care of Willie. To-morrow morning we'll go over that pile of fancy clothes and rip off all the flounces on them that can be taken off and leave them wearable. We won't iron them until we've made them as simple as they can be made. If it's overdressing my children and continually working while they play we'll begin the reform right away."

Elsie looked at her mother in surprise, only half understanding what she was saying. But she did understand the meaning of the unusual determination that shone in her mother's bright eyes, and she dressed herself for work without another word. And then and there began the spirit of simplicity and co-operation in the home that gave Mrs. Burns time to take the place of a wife to her husband and a mother to her children.—Janet Thomas Van Osdel.

Like His Mother Used to Make.

"Beautiful scenery here, is it not?" asked the young man of a solitary traveler whom he found pacing along the seashore.

"Well, no," replied the stranger, "I can't agree with you. I think the ocean is too small. It is no such ocean as my mother used to have."

"Your mother's ocean was superior, then?"

"Oh, yes, vastly superior. What tumbling breakers! What a magnificent sweep of view! What amplitude of distance! What fishing there was in my mother's ocean!"

"But the sky is magnificent here, is it not, sir?"

"Too low, and too narrow across the top," replied the stranger.

"I hadn't noticed," said the young man.

"Yes," said the stranger, "it is too low, and there isn't air enough in it, either. Besides it doesn't sit plumb over the earth; it is wider from north to south than it is from west to east. I call it a pretty poor sky. It is no such sky as my mother used to have."

"Pardon me, but did your mother have a special sky and ocean of her own."

Right here an old resident came up and drew the young man aside.

"Don't talk with him," said the old resident. "He is a hopeless lunatic. He is a man who always used to tell his wife about 'the biscuits my mother used to make,' 'my mother's pies,' 'my mother's puddings' and 'my mother's doughnuts.' The habit grew on him so much that he became a confirmed lunatic, and now he does nothing but compare everything he sees with the same things his mother used to have."—Post-Dispatch.

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The BOOK of LIVE STOCK CHAMPIONS

The Greatest Book Ever Issued in the Interest of the Live Stock Industry.

This extraordinary book is a volume of 240 pages, nicely bound in cloth, size of page, 6 x 9 inches, and contains five hundred half-tone pictures of the greatest and most valuable animals that ever lived.

Every picture in **The BOOK of LIVE STOCK CHAMPIONS** represents a champion in domestic live stock. There are first-prize, sweepstake and championship winners at State, National and International Fairs and Expositions, including two World's Fairs. The pictures include every breed of dairy, beef and general-purpose cattle, running, trotting, jumping, coach and draft horses and ponies; fat swine and individual champions of every breed of sheep; also famous Angora goats.

Our offer is this: "Anyone who will send in one dollar on subscription account can select a copy of the latest, up-to-date **BOOK of LIVE STOCK CHAMPIONS** as a premium, and he will also receive **The National Farmer and Stock Grower** two years."

Weeds.

We look upon them as a curse, when they are in one sense a blessing, inducing us to stir the soil frequently and thus keep it light and porous, readily absorbing the moisture from the atmosphere.

Plants will in time succumb if continually cut down and all vegetation destroyed. They must have leaves to thrive. The cultivator or hoe persistently used will eventually be the victor.

Goldenrod has lately become a pest in many places, multiplying easily by underground shoots. Said one farmer: "I would not be afraid to raise corn on an infested place. I would run over it with a disc harrow until every bit of root was literally cut to pieces," and he made good by doing this after the weeds had gained such a start that many prophesied failure. It is persistence which wins in this as in all else.

Note how nicely the common plantain is kept in check by the lawn mower. While it is not by this agency eradicated, it is dwarfed so as to blend fairly well against the green sward.

Do not be tempted to allow either the white daisy or handsome wild morning glory to gain a footing. It is much easier to keep them out than to get them out, though the persistence in cultivation will do it.

Study the habits of plants and work accordingly. The burdock lives but two years, blossoming the second. If cut off just as about to bloom, its life work is practically ended without the formation of seed. —Bessie L. Putnam.

Vacation Days.

Go through the residence part of any city and you will see tents here and there in the tiny yard—a sure sign of the human longing to get near to nature.

The farm boys and girls who cannot go to an expensive summer resort, perhaps cannot leave the farm, may have a delightful time by adopting the same method on a grander scale.

If a creek runs through the farm, make your camp in the woods or grove near it. And if there are cows and pigs and chickens that must be attended to twice a day, you can still have enough of camp life to prove its charm without incurring loss on the farm.

Fish and rest and have a good time during the rest of the day, just as though you were a hundred miles from home.

The sure base of supplies, the milk, cream and eggs, will give sufficient zest to the game to more than compensate for the small amount of home work. Then if a cloudburst comes along, it may be convenient to have a more secure refuge than the tent; but do not go into it thinking to work and still play. The rest needed can only come by dropping all work except the morning and evening chores. For the rest of the day just imagine yourself many miles from the farm.

Study the birds, stones, animal and insect life. Have a hobby of some sort. It is not necessary to go away to have a vacation. Your own great trees may afford as delightful shade as is to be found in the state. The real thing is to get the fresh air, live the simple life and throw aside home duties. Of course, the latter is the hardest part in sight of home, but it can be done. If you can't leave home, force it to leave you.—Bessie L. Putnam.

Floral Notes.

The calla should have had a good season of rest and be ready now for repotting for midwinter bloom. It is a gross feeder and must have rich soil in order to do its best. Equal parts of rich loam, well-rotted cow manure and sand are well adapted to its growth.

Fuchsias, with the exception of F. Speciosa, are strictly summer bloomers, and any attempt to make them vary their habits of flowering will be certain to end in disappointment. When they show need of rest by cessation of growth and dropping of leaves, place them in a dry, frost-proof cellar.

The scented geraniums do not take kindly to the usual dampness of the cellar; hence the surest way of wintering is in the window garden. The pleasure which the aromatic leaves affords, however, well compensates for the trouble, even if no flowers are to be expected.

Many pull up the geraniums by the roots, allowing as much earth to cling as will, and suspend from the ceiling of the cellar. If not too damp, they keep fairly well and furnish good material for bedding the next season. The surer way, however, is to place well-rooted slips in the window. These, if started early, prove among the most satisfactory winter bloomers.

Have you some undesirable object that you want to shut from view? Try a row of the old-fashioned hollyhocks. They are easily grown from seed, and seed sown now should produce flowering speciments next summer. When a row of plants is once established they require little care, though slight protection during winter is beneficial. As a background for smaller plants or for intermingling with shrubbery they are superb, showing most beautiful colors and of the finest silken texture.

Autumn is the best time for transplanting paeonies, though it will prove cheaper to you in the end to buy a root for a friend rather than divide your own. Most flowers can be divided to advantage, thus promoting a generous spirit with their other advantages; but the paeony and lily are exceptions, resenting frequent disturbances most emphatically. Some of the varieties are as beautiful and fragrant as a rose. They are perfectly hardy and seldom a prey to insect pests. The white and delicate shades of rose and salmon are especially fine.

The aquilegias or columbines deserve more general cultivation, some of them showing fine colors as well as exquisite cut. The single varieties are, as a rule, more satisfactory than the double, the long spurs giving a grace peculiar to the genus. Notable among such varieties are A. Chrysentha, a large-flowered variety from Colorado, and A. Canadensis, an unusual blending of color in coral and light yellow, and native of the East. This genus likes a sandy loam, well drained and sunny, though it is not in the least exacting, and thrives alike in open border or rockery. It grows freely from seed, flowering the second year. Like most perennials, autumn-sown seed will produce spring flowering plants.

The Funkia, or "Lemon Lily" of our grandmothers' garden is too beautiful to be omitted from the perennial collection. It blossoms freely in June, the flowers being of a clear lemon yellow and deliciously fragrant. It is hardy and self-sustaining.—Bessie L. Putnam.

DEAFNESS CURED By New Discovery

"I have demonstrated that deafness can be cured."—Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by the famous Physician-Scientist, Dr. Guy Clifford Powell. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous Treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell, 5089 Bank Bldg., Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

GENUINE BARGAINS IN HIGH-GRADE UPRIGHT PIANOS. Slightly used instruments; 12 Steinways from $350 up; 6 Webers from $250 up; 9 Krakauers from $250 up; 7 Knabes from $250 up; 3 Chickerings from $250 up; also ordinary second-hand Uprights $75 up; also 10 very fine Parlor Grand pianos at about half. Write for full particulars. Cash or easy monthly payments. Lyon & Healy, 62 Adams St., Chicago. We ship everywhere on approval.

PILES, FISTULA, BLEEDING, RECTAL, ULCER, Etc.

Cured without surgical operation. Cures guaranteed. All protruding stopped in one or two treatments. Do not continue to suffer when you can be cured without an operation. Consultation free. Call or write, inclosing 2c. stamp for 172-page Book on Rectal Diseases.

DR. M. NEY SMITH, 814 Pine St., St. Louis, Mo.

"Occasionally a man breaks his word while telling the truth—if he stammers."—Chicago News.

Altering Children's Dresses.

Children's washable dresses often draw up and are outgrown long before the season is over, and often a little altering will make them plenty large enough and without having the appearance of being pieced out. A little striped pique dress was enlarged by cutting the skirt apart and inserting a three-inch piece of heavy white figured goods; then the seams were covered with seaming braid and a guimpe was made of the same material, and in this way a dress that is entirely outgrown can be made to do duty for another season.

If a gingham dress is too short waisted, a belt put in will often be all that is needed, or the shoulder seams may be ripped and a piece set in, and the cuffs and belt can be made of the same material. Bands of insertion can be used to lengthen white dress and to form belts and cuffs, or for vests in the waist when they become too small across the front.

Some little dresses that were faded and outgrown but still quite good were pieced out to make them plenty large enough, then they were boiled in strong suds to which some soda was added to remove the remaining color, and then the garments were boiled in a strong solution of dark blue Diamond dye for cotton, and they looked almost as well and were as serviceable as new garments, and some boy's faded waists were given a new lease of life and usefulness in the same way. The blouse waists were pieced down at the bottom and finished with new cuffs before coloring.

Cotton yokes are invaluable for lengthening pants and underskirts and yokes of the same material or of some color to suit the goods can be used for dress skirts. Another way to lengthen dress skirts, and is a nice way for woolen skirts especially, is to cut them apart about five inches from the bottom and insert a lining wide enough to make the skirt the desired length, then over this stitch a bias band to suit the material from which the dress is made.—A. M. H.

A Daughter's Tribute.

A legal point in regard to the settling of an estate was under discussion. After some discussion by the family, the mother reluctantly consented to ask the opinion of a lawyer, though she still demurred that she did not care to confide in a stranger about the matter.

"Why, if you feel that way about it," spoke up the wife of one of the sons, "I am sure my mother could settle it for you. She knows all the simple points about the law, it seems to me. At least she has never failed me, and I would not think of making any legal transaction without having her along."

"But your mother—" began the girl's husband.

"Yes, I know what you would say, that she hasn't the education either one of us has. She has never been to college. In fact, she has not even a common school education. But she is nevertheless one of the best educated women I know, for hers is the practical kind of an education that comes into use every day. Whenever she goes through a transaction she remembers every point of it, and the things that are not clear to her she asks about. So she gets much of her information first-hand from the very best sources. She reads only the best. Though I graduated from my literary studies with honors, I still make it a point to read any book mother recommends to me and I always find it well worth while. Her English may at times be faulty, but she was never taught the elements of grammar. All that she knows she has picked up, and that, too, hearing a foreign language spoken by her parents all through girlhood. Her knowledge stands the test, and though a college diploma is mine now, I still bow down to the all-around wisdom of mother. The day will never come when she cannot help me."—Janet Thomas Van Osdel.

How to Settle the Range Question.

The average housewife has pronounced ideas on the subject of ranges, and in the great majority of homes when the range question is discussed the last word is always conceded to the housewife who must use it. To her, the perfect range is one which meets her every requirement. Whatever other good points it may have, she insists that it must be a perfect baker, not now and again, but, 365 days in the year. It must be a good cooker and it must be economical in its consumption of fuel.

These are points which she wants to be sure about before she invests her husband's hard-earned money in a range of any kind. After she has satisfied herself that the range she is looking at meets all these requirements, she wants to make sure that it is durable; she doesn't buy a range

THE MAJESTIC RANGE.

every day in the year. If she is a wise woman she will insist that it be a "Range with a reputation" as well.

Before deciding on the purchase of a range the wise woman will examine closely into the merits of the Great and Grand MAJESTIC—it is indeed a "Range with a reputation"—it is a perfect baker at all times.

The body of the Great MAJESTIC is made of Charcoal Iron, which gives it wearing quality that will outlast three ordinary ranges. All top doors and frames are made of Malleable Iron—they won't break, crack or rust. Malleable Iron is absolutely necessary for air-tight joints, and on the MAJESTIC Range all joints are riveted perfectly air-tight—no heat escapes or no cold air can enter—it is also completely lined with pure asbestos—thus the oven can be heated quickly with about half the fuel used in the ordinary range.

The Great MAJESTIC has a fifteen-gallon all-copper reservoir which touches the fire, giving boiling hot water in a very few minutes.

The Great and Grand MAJESTIC is justly called "The Range with a reputation," because it has a reputation of a reliable manufacturer behind it and because there are hundreds of thousands MAJESTIC Ranges in use all over the country, each one of which is giving perfect satisfaction, some having been in constant use for more than twenty-five years and still give excellent results.

MAJESTIC Ranges are for sale in nearly every county in forty states. You will do well to write the Majestic Manufacturing Company for their interesting booklet "The Story of Majestic Glory;" it is well worth reading. At the same time they will tell you where you can see and examine the MAJESTIC and settle the range question.

Address, Majestic Manufacturing Company, Dept. 39, St. Louis, Mo.

George W. Meredith, near Kirksville, Mo., had one-eighth of an acre in strawberries and marketed from them to the amount of $135. This is claimed to be a Missouri record for the size of the ground planted.

Friends of Polk Short, a ranchman, are inquiring for his address. He is supposed to be in Texas or Oklahoma. A letter from him to this office will be sent to inquiring friends.

Mississippi mills are making cotton bagging take the place of jute for the purpose of binding cotton bales. The first shipment went to Texas in July, and the car-load shipment of 534 rolls was sold at once.

FREE TO FARMERS.

By special arrangement the Ratekin's Seed House of Shenandoah, Iowa, agrees to mail a descriptive circular and sample of their new imported Malakoff winter seed wheat to every reader of this paper who will mention it when writing. This marvelous variety of wheat has made a yield and record of over 62 bushels per acre, and is endorsed by the Illinois, Iowa, Nebraska and Kansas Experimental Stations as standing at the head of all other varieties, both in yield and quality of grain. Write for sample and descriptive circulars and mention this paper. It's free. The address is Ratekin's Seed House, Shenandoah, Iowa.

Helps For Cleaning Days.

It pays to wear gloves when painting, varnishing, or polishing stoves, or when sweeping or dusting a room. If paint or varnish does get on the hands, you can easily remove it with coal oil or turpentine; then the hands must be washed in hot suds.

If you are troubled with fleas about the house, sweep the floors, porches and around the house perfectly clean, then sprinkle salt around liberally, and then keep cats and dogs out of the house and use the salt around the stable.

Wash your broom out on wash day in the boiler of hot suds and stand it brush end up near the stove to dry.

The best way to clean all brass articles and the brass on bedsteads is to dampen a cloth with ammonia, rub it over a piece of pumice soap and then over the brass and polish with soft, dry cloths.

Before washing windows, go over them with a soft cloth to remove as much of the dust as possible, then wash the window glass with warm water containing borax in the proportion of one tablespoonful to a gallon of water, and this must be used without soap. The borax water has none of the injurious effects on the woodwork caused by soap or ammonia, and it leaves the glass shiningly clean, and when the borax water is used for cleaning oil-cloths, furniture and woodwork, all stains will disappear and the wood left with a perfectly clean surface. After washing with the borax water, rub dry with a clean, soft cloth and then with a piece of soft flannel to give the polish.

When you go to dust a room, have three dusters. Wring a soft, clean cloth out of warm water and rub lightly over the furniture, then rub dry with one soft cloth and polish with another free from lint. If furniture is cared for in this way it may be kept new-looking as long as it lasts, as the damp cloth removes all fly-specks and finger-marks, and the finest furniture may be treated in this way without any injury to the polish.—Martha.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock, 890 Carrier Building, East Hampton, Conn., says that if any of our readers afflicted with a Kidney or Bladder trouble will send their address to him, he will gladly and without charge direct them to the splendid remedy he so successfully used at home in his own case.

St. Louis Vegetable Prices.

Cabbage—Home-grown, 10c. per bushel box; bulk, 20 to 25c. per 100 pounds; and loose, 20 to 25c. per crate; red cabbage, 20c. per bushel.

Potatoes—Home-grown Early Ohios sold from 47 to 55c. per bushel, but mainly at 50 to 53c.

Onions—Home-grown red, 30 to 40c. per bushel; yellow, 30 to 40c.; and white, 35 to 45c.; North Missouri red, 30 to 40c.; white, 35 to 45c.

Learn Music By Mail

By our wonderful copyrighted Simplex System of Musical Instruction anyone of ordinary education can learn by mail to play piano or organ

IN 20 EASY LESSONS

You need not know the first principles of music. By this wonderful system you may in 20 lessons become a capable musician. The work is easy and fascinating. In a few weeks, by this method, our students play popular, sacred or classical music. Considered better than three times the amount of instruction at three times the cost under old-time methods—teaches the practical and usable in music and does away with all unnecessary theory. You should have this course of lessons. The cost is a mere trifle compared to the real worth. Send for our **Free Book** today. State whether you have piano or organ.

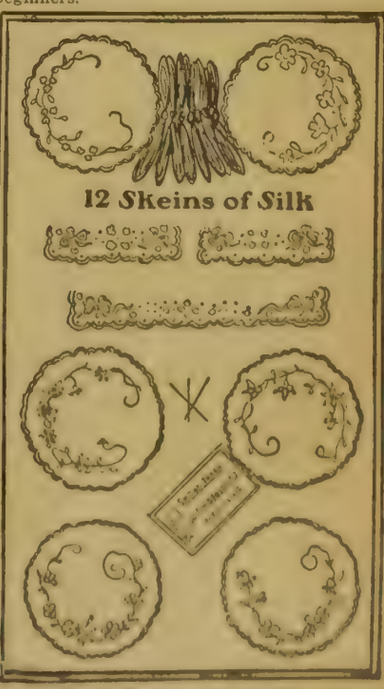
ELEGANT EMBROIDERY.

Everything must have a beginning, and this is the beginning of embroidery. This beautiful trial set consists of six fine linen doilies stamped, assorted designs, one linen collar and cuff set, one package of embroidery needles and pure silk, assorted colors, sufficient to work the same. This is well worth having and will give satisfaction to embroidery experts as well as to beginners.



Send Us 25 Cents and we will send you this embroidery set by mail postpaid. We will also enter up a full year's paid subscription to the new and interesting monthly publication the Universal Magazine, which has been a success from the start. Address, EVANS SUBSCRIPTION AGENCY, 3552 Vista Ave., St. Louis, Mo.

SELECTED POETRY.

HANNAH JANE.

She isn't half so handsome as when, twenty years agone,
At her old home in Piketon, Parson Avery made us one;
The great house crowded full of guests of every degree,
The girls all envying Hannah Jane, the boys all envying me.

Her fingers than were taper, and her skin as white as milk,
Her brown hair, what a mass it was! and soft and fine as silk;
No wind-moved willow by a brook had ever such a grace,
Her form of Aphrodite, with a pure Madonna face.

She had but meager schooling; her little notes to me
Were full of little pot-hooks, and the worst orthography;
Her "dear" was spelled with double e, and "kiss" with but one s;
But when one's crazed with passion, what's a letter more or less?

* * * * *

I was but little better. True I'd longer been at school;
My tongue and pen were run, perhaps, a little more by rule;
But that was all, the neighbors round who both of us well knew,
Said, which I believed—she was the better of the two.

All's changed; the light of seventeen's no longer in her eyes;
Her wavy hair is gone—that loss the coiffeur's art supplies;
Her form is thin and angular; she slightly forward bends;
Her fingers, once so shapely, now are stumpy at the ends.

She knows but little, and in little are we one;
The beauty rare, that more than hid that great defect, is gone.
My parvenue relations now deride my homely wife,
And pity me that I am tied to such a clod for life.

* * * * *

I can't forget—just at this point another form appears—
The wife I wedded as she was before my prosperous years;
I travel o'er the dreary road we traveled side by side,
And wonder what my share would be if Justice should divide!

She had four hundred dollars left her from the old estate;
On that we married, and, thus poorly armored, faced our fate.
I wrestled with my books; her task was harder far than mine—
'Twas to make two hundred dollars do the work of nine.

* * * * *

I was her altar, and her love the sacrificial flame;
Oh! with what pure devotion she to that altar came,
And tearful flung thereon—alas! I did not know it then—
All that she was, and more than that, all that she might have been.

At last I won success. Ah! then our lives were wider parted;
I was far up the rising road; she, poor girl, where we started.
I had tried my speed and mettle, and gained strength in every race;
I was far up the heights of life—she drudging at the base.

* * * * *

At twenty-eight the State House; on the bench at thirty-three;
At forty every gate in life was opened wide to me.
I nursed my powers, and grew, and made my point in life; but she—
Bearing such pack-horse, weary loads, what could a woman be?

What could she be? O! shame! I blush to think what she has been—
The most unselfish of all wives to the selfishiest of men.
Yes, plain and homely now she is; she's ignorant, 'tis true;
For me she rubbed herself quite out; I represent the two.

Well, I suppose that I might do as other men have done—
First break her heart with cold neglect, then shove her out alone.
The world would say 'twas well, and more, would give great praise to me
For having borne with "such a wife" so uncomplainingly.

And shall I? No! The contract 'twixt Hannah, God and me,
Was not for one or twenty years, but for eternity.
No matter what the world may think; I know down in my heart,
That if either, I'm delinquent. She has bravely done her part.

There's another world beyond this, and on the final day
Will intellect and learning 'gainst such devotion weigh?
When the great one made of us two is torn apart again,
I'll fare the worst, for God is just, and He knows Hannah Jane.

—D. R. Locke.

THE RUNAWAY DONKEY.

Don Quixote yesterday
Broke his rope and ran away

From the pleasant feeding-places
From the old familiar faces.

I can in imagination
Hear his brazen cachination

When he finds he's free to wander
Hither, thither, over yonder,

Or, unutterably lazy,
Lie 'mid buttercup and daisy.

Harness none to fret and bind him
And no wagonette behind him;

But ere long did conscience prick him,
Or the naughty nettle stick him,

Or by darkness overtaken,
Felt he friendless and forsaken?

For he came at evening, weary,
Worn, bedraggled, dirty, dreary,

Trailing broken rope behind him,
Back to us who'd failed to find him,

And to-day demurely paces
The familiar feeding-places,

When—'tis no imagination—
Hark! his brazen cachination.

* * * * *

In the simple little story
Find, I pray, an allegory.

—Fullerton L. Waldo, in Christian Register.

AN INCIDENT OF THE WAR.

On one occasion during the war in Virginia General Lee was lying asleep by the wayside, when an army of 50,000 men passed by with hushed voices and footsteps, lest they should disturb his lumbers.

O'ercome with weariness and care
The war-worn veteran lay
On the green turf of his native land,
And slumbered by the way.

The bugle that sighed across his brow,
And smoothed its deepened lines,
Fresh from his own loved mountains bore
The murmur of their pines.

And the glad sound of waters,
The blue rejoicing streams,
Where sweet, familiar tones were blent
With the music of his dreams.

They brought no sound of battle's din,
Shrill fife or clarion,
But only tenderest memories
Of his own fair Arlington.

With perhaps a grander vision,
Which, alas! was not to be,
Of a new-born banner floating
O'er a land redeemed and free.

While thus the chieftain slumbered,
Forgetful of his care,
The hollow tramp of thousands
Came sounding through the air.

With ringing spur and saber,
And trampling feet they come,
Gay plume and rustling banner,
And fife and trump and drum.

But soon the foremost column
Sees where, beneath the shade,
In slumber calm as childhood,
Their wearied chief is laid.

And down the line a murmur
From lip to lip there ran,
Until the stilly whisper
Had spread to rear and van.

And o'er a host a silence
As deep and sudden fell
As tho' some mighty wizard
Had hushed them with a spell.

And every sound was muffled,
And every soldier's tread
Fell lightly as a mother's
'Round a baby's cradle bed.

And rank and file and column
So swiftly on they swept,
It seemed a ghostly army
Had passed him as he slept.

But mightier than enchantment
Was that whose magic wove
The spell that hushed their voices,
Deepest reverence and love.

—M. W. M.

THREE KISSES.

When first I kissed you, 'twas full on your mouth,
Red as a blackbird's cherry. You recall,
'Twas spring, the soft air smelling of the South,
The whole world gay and you most gay of all.
You laughed—that low, sweet, tender, bird-like trill
Which made the very bobolink be still.

When next I kissed you, 'twas upon the cheek,
Molded just round enough. 'Twas autumn then
And you were graver grown, and did not speak
But seemed in wonder at the ways of men,
And yet you smiled. So dear a smile it was
That it seemed sudden summer over us.

When last I kissed you, dearest Heart of Gold,
My lips just brushed your forehead. You were sad,
And it was winter. All the world was old,
But at the touch my love swelled fierce and glad;
For them I felt you tremble, and saw fall
Two great, slow tears. Ah! that was best of all!

—Post Wheeler, in the New York Press.

DOWN ON THE FARM.

When a boy I used to dwell in a home I loved so well,
Far away amongst the clover and the bees;
Where the morning-glory vine 'round the rustic porch did twine,
And the robin red breast sang among the trees.

Many weary years have passed since I saw the old place last,
And mem'ry steals o'er me like a charm;
Every old familiar place, every kind and loving face
In my boyhod's happy days, down on the farm.

There were brothers, young and gay, a father, old and gray,
A mother dear to shield us from all harm,
Where I passed life's golden hours, running wild among the flowers,
In my boyhood happy hours, down on the farm.

And to-day, as I draw near that old home I love so dear,
A stranger comes to meet me at the door.
'Round the place there's many a change, and the faces all seem strange;
Not a loved one comes to meet me as of yore.

For my mother, dear, is laid 'neath the elm tree's quiet shade,
Where the golden summer's sunshine bright and warm,
And near the old fireplace, there I see a stranger's face,
In my father's arm-chair, down on the farm.

—Exchange.

THE FOOL'S PRAYER.

The royal feast was done; the King
Sought some new sport to banish care,
And to his jester cried: "Sir Fool,
Kneel, now, and make for us a prayer."

The jester doffed his cap and bells,
And stood the mocking court before;
They could not see the bitter smile
Behind the painted grin he wore.

He bowed his head and bent his knee
Upon the monarch's silken stool;
His pleading voice arose: "O! Lord,
Be merciful to me, a fool!

"No pity, Lord, could change the heart
From red with wrong to white as wool,
The rod must heal the sin; but, Lord,
Be merciful to me, a fool!

"'Tis not by guilt the onward sweep
Of truth and right, O! Lord, we stay;
'Tis by our follies that so long
We hold the earth from heaven away.

"These clumsy feet still in the mire
Go crushing blossoms without end,
These hard, well-meaning hands we thrust
Among the heart-strings of a friend.

"The ill-timed truth we might have kept,
Who knows how sharp it pierced and stung?
The word we had not sense to say,
Who knows how grandly it had rung?

"Our faults no tenderness should ask,
The chastening stripes must cleanse them all;
But for our blunders—Oh! in shame
Before the eyes of heaven we fall.

"Earth has no balsam for mistakes;
Men crown the knave and scourge the tool
That did his will; but thou, O! Lord,
Be merciful to me, a fool!"

The room was hushed; in silence rose
The King and sought his garden cool;
And walked apart and murmured low:
"Be merciful to me, a fool!"

—Edward R. Sill.

The Habit of Smoking.

Charles Lamb, a famous author, was never satisfied that it was right to smoke, but he never reached a conclusion. Again and again he decided to give it up, and then again he thought better of it. He even sought advice on the matter. "What do you think of smoking?" he wrote to Judge Coleridge. "I want your sober average noon opinion of it. Morning is a girl, and can't smoke—she's no evidence one way or other; and night is so evidently bought over that he can't be a very upright judge. Maybe the truth is, that one pipe is wholesome, two pipes toothsome, three pipes noisome, four pipes fulsome, five pipes quarrelsome, and that's the sum on't. But that is deciding rather upon rhyme than reason."

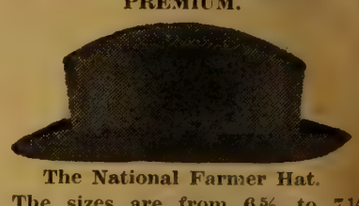
"When it comes to looking on the bright side of things, one-sided views are apt to be satisfactory."—Chicago News.

Put to New Use.

Crawford—"So your wife doesn't make mince pies any more?"

Crabshaw—"No. She uses all the odds and ends around the house as trimmings for her hat."—Puck.

MAGNIFICENT SUBSCRIPTION PREMIUM.



The National Farmer Hat.

The sizes are from 6⅝ to 7½. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color.

SUBSCRIPTION BLANK

To be Filled Out if Order is Given.

Postoffice.. .....

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower, grouped in such a way that the sentiment that each flower represents is spelled out by the flowers. For example, the violets of the violet card spell "Faithfulness;" the roses

"Love;" clover, "Be Mine;" etc. Each post card is different, finished in many colors and glossed.

THE UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine, published at 25 cents a year, and the post cards can be selected as a free premium. Address, HALE PUBLISHING CO. 3550 Vista Ave., St. Louis, Mo.

TIRED MOTHERS.

A little elbow leans upon your knee,
Your tired knee, that has so much to bear;
A child's dear eyes are looking lovingly
From underneath a thatch of tangled hair.
Perhaps you do not heed the velvet touch
Of warm, moist fingers, folding yours so tight—
You do not prize this blessing overmuch;
You are almost too tired to pray to-night.

But it is blessedness! A year ago
I did not see it as I do to-day—
We are so dull and thankless and too slow
To catch the sunshine till it slips away.
And now it seems surpassing strange to me
That, while I wore the badge of motherhood,
I did not kiss more oft and tenderly
The little child that brought me only good.

And if some night, when you sit down to rest,
You miss the elbow from your tired knee,
This restless, curling head from off your breast,
This lisping tongue that clatters constantly;
If from your own the dimpled hands had slipped,
And ne'er would nestle in your palm again;
If the white feet into their grave had tripped,
I could not blame you for your heartache then!

I wonder so that mothers ever fret
At little children clinging to their gown,
Or, that the footprints, when the days are wet,
Are ever black enough to make them frown.
If I could kiss a rosy, restless foot,
And hear a patter in my home once more;
If I could mend a broken cart to-day;
To-morrow make a kite to reach the sky—
There is no woman in God's world could say
She was more blissfully content than I.
But ah! the dainty pillow next my own
Is never rumpled by a shining head;
My singing birdling from its nest has flown,
The little boy I used to kiss is dead!
—May Riley Smith, in Baltimore News.

TO A TRUE FRIEND.

'Tis truly said in time of need,
A true friend is a friend indeed,
For he who has no kindly heart
In misery shall this world depart.

The seeds of youth their harvest grow;
As we would reap, so must we sow;
Those who, in youth, no aid would lend,
Shall in old age meet bitter end.

With my best love and kind intent
These trifles few to you are sent;
May there be many days for you
To share what little I can do.
—Agnes O'Brien.

THE SUNFLOWER.

A farmer was so good, and true,
And wise, in days of old,
The people made him king, and crowned
His dark-brown locks with gold;
But on his royal throne he pined
To sow and reap once more,
And nod his head in drowsy ease
Beside a cottage door.

He died, and from the dusky mold
That hid his silent clay,
A little stalk of living green
Appeared one summer day.
It grew so fast and tall
In sunshine and in shower,
That soon it lifted to the light
A gorgeous yellow flower.

It tops the humble picket fence,
And shades the lowly sill;
It loves to sow from year to year
Its crop of seeds at will.
Consorting most with straggling weeds
It blossoms; but behold!
Though fallen from its high estate,
It keeps the crown of gold!
—Minna Irving, in Everywhere.

PROGENITORS' YARNS.

Bud Forts an' me an' Jack Maloon,
We ketched the durnedest biggest 'coon
I ever see, last Friday night.
Gosh! but you'd oughter seen him fight!
He blame nigh whipped Bud's brag ol' houn'!
He weighed exac'ly thirty poun'
On them new scales at Mace's store—
Fat on his ribs inch-thick, er more.

But Dad, he says that 'coon can't tech
The full-grown 'coons they used to ketch
'Round here when timber still growed thick
Ter miles an' miles 'long Copperas Creek.
'Bout twenty-seven year ago
Dad ketched a 'coon, five rod er so
From where our barn stands now, brought down
The beam—kerplunk!—at fifty poun'.

An' Gran'dad, he says sech a runt
As that wa'n't wu'th the while to hunt.
When he come here, in forty five,
All Fulton county was alive
With 'coons as fat as any hogs,
An' bigger than one-half the dogs.
He ketched five, made a bar'l o' grease,
An' two men a fur coat apiece.

My pore ol' Great-gran'dad, he's dead.
I 'xpect if he was here he'd said
That Gran'dad's 'coons was nothin' sech
As them he uster hunt an' ketch.
He's here 'way back in thirty two—
Three years before the big storm blew,
That 'a' been 'coons in Illinoy
As big as bears, when he's a boy.

GOING HOME.

We said that the days were evil,
We felt that they might be few,
For low was our fortune's level,
And heavy the winters grew;
But one who had no possession
Looked up to the azure dome,
And said, in his simple fashion:
"Dear friends, we are going home!"

This world is the same dull market
That wearied its earliest sage;
The times to the wise are dark yet,
But so hath been many an age.
And rich grow the toiling nations,
And red grow the battle spears,
And dreary with desolations
Roll onward the laden years.

What need of the changeless story
Which time hath so often told,
The specter that follows glory,
The canker that comes with gold—
That wisdom and strength and honor
Must fade like the far seafoam,
And Death is the only winner?—
But, friends, we are going home!

The homes we had hoped to rest in
Were open to sin and strife,
The dreams that our youth was blest in
Were not for the wear of life;
For care can darken the cottage,
As well as the palace hearth,
And birthrights are sold for pottage,
But never redeemed on earth.

The springs have gone by in sorrow,
The summers were grieved away,
And ever we feared to-morrow,
And ever we blamed to-day.
In depths which the searcher sounded,
On hills which the high heart clomb,
Have trouble and toil abounded—
But, friends, we are going home!

Our faith was the bravest builder,
But found not a stone of trust;
Our love was the fairest gilder,
But lavished its wealth on dust.
And time hath the fabric shaken,
And fortune the clay hath shown,
For much they have changed and taken,
But nothing that was our own.

The light that to us made baser
The paths which so many choose,
The gifts there was found no place for,
The riches we could not use;
The heart that when life was wintry
Found summer in strain and tome,
With these to our kin and country—
"Dear friends, we are going home!"
—Frances Brown.

A COUNTRY ROAD.

A dusty, stony way, whose bord'ring sod
Is thick with blackberries and goldenrod;
Abrupt, bare hills on one side looking down,
And from the other you can see the town
Follow the river's course through meadows green,
O'er which thick woods and marble ledges lean.

A little farther, where the road descends,
A brook's soft tinkle with some bird song blends,
(Gone from its edge the dear old dame's small cot
Half hidden by quaint flowers); lush bergamot
Makes sweet its banks, its depths the boys still swim,
Or watch the minnows from some willow limb.

Upon its bridge how often have I stood
Watching the West, whose glory seemed to flood
With tenderest light the poor house and the graves
Beside it—turn to gold the brooklet's waves,
Till from the mill, Oh! dearest sight of all!
I saw my father and I heard him call.

He came with sturdy stride and swinging pail—
My hand in his, I told my day's whole tale
Of joys, that 'neath his bright smile seemed to grow
While lessened was my ever childish woe
As his sweet words fell on my soul like balm,
While we walked homeward through the fragrant calm.

Unchanged the scene (time sometimes spares old joys),
I view it now beside two merry boys,
Who, as they play, mark not the tears that fill
My eyes as I gaze upward toward the hill
That oft my father cleared with sturdy stride
(Feeble his gait, long, long before he died).

Beside the margin of this little stream
The vanquished years to me one long day seem.
Their joys grow brighter and their griefs pain less
In this dear spot his mem'ry seems to bless.
The scene is commonplace, no doubt, to you!
To me it is earth's sweetest view.
—Mary M. McCarthy, in Boston Transcript.

How to Get Rid of Rats.

A persistent animal like the rat, which has spread himself all over the world, is not to be exterminated or materially reduced by the occasional visit of ferrets and dogs. Poisons are often objectionable, if not a failure, while traps, however cunningly devised, will be effectual only until the little rodent has developed an intelligence equal to the occasion and learned how not to get into them.

The old doe rat will carry a young one in her mouth away from danger as a cat carries a kitten, and when not encumbered with young will often travel a considerable distance, making a wide circuit in search of the most congenial abode or to gain a wider knowledge of the premises or surrounding buildings. Old rats will soon learn to avoid barrels and boxes, as they will avoid traps whenever their suspicion is aroused; but a box the dimensions of a small store room, containing also considerable rubbish, has no terrors for them and they will enter it freely. Such a box or room is a little world to so small an animal, and much too large for a rat to circumvent or to see danger in as far as he would with a trap. Here lies the weak spot in the cranium of the cunning little animal.

My remedy, therefore, is to build rat houses in cellars, barns, stables, hotels and ships, where the rats will delight to congregate, closing the openings at will, leaving one opening which will lead to an adjacent cage where their escape will terminate and which should be removed with the contents still alive, for it must be remembered that rats, like foxes, have a dislike in running around just where their own kin have been slaughtered.—W. J. Armstrong, in Country Gentleman.

Scraps From the Sewing Table.

Clean old black silk by sponging with cold coffee. Iron on the wrong side between thickness of plain paper.

If gasoline is not at hand for cleaning ribbons, use Ivory or any good white soap. Rinse in tepid, slightly soapy water, and iron while still damp.

The worn-out silk waist will make a handsome guimpe for a little girl. With the styles so varied, the possibilities of combining left-overs so many, one may utilize many odd bits of finery, and there is good excuse for lingering over the remnant counter. A bit of insertion will let out the outgrown waist, and a few fancy stitches conceal a frayed spot.

Little girls who have outgrown the making of doll clothes will take pride in cutting and making for themselves a new waist or skirt out of some of the very cheap yet pleasing fabrics now on the maket. Let them do their own designing, but supply patterns as far as possible in accordance with the selections.

Ribbons which have become soiled may be washed and dyed to supply the school hair ribbons, of which the modern girl uses so many.

To make a short sleeve out of a long one is an easy process; but the skilled economist reverses the process to obtain the long, tight-fitting one now in vogue by cutting from the top a new top after a well-fitting pattern. To piece out the length she uses the sides cut off, supplying any deficiency with insertion and three tucks across near the elbow, one of which conceals the piecing, leave no suggestion that the stylish long sleeve is a made-over.—Bessie L. Putnam.

To Remove Stains From Wash Fabrics.

A garment is often ruined by allowing a stain to set because the laundress is not familiar with the agent that will probably remove the spot. Some of the most common stains with their removing agent are as follows:

Chocolate stains may be washed out by the use of soap and lukewarm water before putting the pieces so stained to soak with other clothes.

Coffee and tea stains should be soaked in cold water for a little while. The fabric should then be wrung out, laid on a flat surface and a little glycerine put on the spots. After standing for several hours they should be washed with cold water and soap.

Grass stains should be soaked for a few moments in kerosene oil before the stained piece is put in the tub.

Oil and tar stains can be softened by rubbing with lard and then washed in the regular way.

Fruit stains will not set if a little salt is rubbed on the stain as soon as it is made. It can be removed by stretching the stained fabric across a bowl and pouring boiling water on the stain.

Ink stains can be eradicated by soaking in sour milk. If this does not wholly remove the stain, let it lie for a few moments in a weak solution of chloride of lime. Lemon juice and salt are also used effectively on ink stain.

A scorch stain may be washed out with soap and water and hung in the sun to bleach. If the scorch is very light it may be bleached by hanging in the sun without washing.—J.T.V.

CANCER CAN BE CURED.

Scores of testimonials, from persons who gladly write to those now suffering, all tell of perfect cures. My Mild Combination Treatment destroys growth and eliminates the disease from the system. Free book, "Cancer and Its Cure," and 125-page book of testimonials from cured patients in every State in the Union. No matter how serious your case, how many operations you have had, or what treatment you have taken, don't give up hope, but write at once for my books.

DAIRY SHOW DIRECTORS MEET.

Make Additional Plans For the National Dairy Show This Fall—National Creamery Buttermakers to Meet at the Same Time.

A meeting of the Board of Directors of the National Dairy Show Association was held at the Briggs House, Chicago. There were present Mr. Colon C. Lillie, President; Prof. H. E. Van Norman, Vice-President; and Directors J. A. Walker, W. B. Barney and D. H. Jenkins. The resignation of Director E. Sudendorf as Secretary of the association was accepted, and Professor Van Norman was elected to the position of Secretary and Manager.

Those who have the interests of the Dairy Show at heart were greatly pleased to learn that the President of the Pennsylvania State College and the Dean of the School of Agriculture had granted Professor Van Norman a leave of absence so that he might devote his entire time to the Dairy Show Association in preparation for the 1909 exhibition. It was clearly not feasible for Mr. Van Norman to attempt to carry on both tasks, on account of the distance, so he was released entirely for a period ending next December, and will spend all of his time in Chicago and Milwaukee.

Upon the election of Mr. Van Norman to the office of Secretary and Manager, he resigned his previous position as Vice-President in order to qualify for the new positions. Mr. D. H. Jenkins was thereupon elected Vice-President of the association.

The first thing done was to wipe off the old slate—in other words, to pay all bills or order them paid. There were only a few small items outstanding, principally occurring since the last show closed. This left a working balance in the treasury, with everything clear to date.

Milwaukee's proposition was then fully discussed, and it was definitely decided to hold the 1909 exhibition in that city, the dates being October 15th to 24th, inclusive. President Lillie and Manager Van Norman were delegated to go to Milwaukee to close up the final arrangements for the Show. Headquarters will be opened at once in that city, and the campaign for this year's event will begin in earnest about the 15th of August.

At the same time as the Directors' meeting was being held, the Executive Committee of the National Creamery Buttermakers' Association was also holding a meeting in Chicago. They were invited to the Diretcors' meeting, and, after lunch with the officers of the Dairy Show, an amicable working arrangement was entered into, by which the Buttermakers' Association will unite with the National Dairy Show Association and hold their show and annual meeting in Milwaukee at the same time as the 1909 Dairy Show, the dates for their convention being October 20th to 22d, inclusive.

There were present for the Buttermakers: President J. J. Farrell, of Carver, Minn.; Vice-President Lauritz Olson, of West Depere, Wis.; Secretary-Treasurer S. B. Shilling, of Chicago; and R. F. Frary, of Lapeer, Mich.; also Mr. H. E. Schuknecht, of Chicago, former State Dairy Commissioner of Illinois; and Mr. H. J. Credicott, Federal Butter Expert at Chicago. Al matters pertaining to a successful Dairy Show were gone over, both in joint session and by the Directors alone.

The new Milwaukee auditorium, where the 1909 Dairy Show will be held, is just being completed, and is probably the greatest structure of that character in America. It is 300 x330 feet and divided into two sections, the auditorium proper and the administration wing. The latter has five halls for meeting and fixed exhibit purposes, such as machinery and products of the dairy. The auditorium proper contains the great arena, 100x225 feet, a stage 35x50 feet, and is surrounded by tiers of opera chairs seating 5,000 people. For the housing of cattle there is the great basement, containing 80,000 square feet. It is built of solid concrete, 15 feet in the clear, and its windows are above ground. The auditorium is in the heart of the city, within two blocks of Grand avenue, the city's principal thoroughfare. It is a fire-proof structure, built of concrete and steel, and within a few squares of the railway terminals.

Prof. Van Norman is now at Milwaukee and will remain until the show is over.

FORTUNES IN ARKANSAS RICE

DON'T YOU WANT SOME of this MONEY?

Consider What These Figures Mean:

J.N.Strickler got	$3,420	clear from	60	acres
T. Hein	"	$2,926	"	"	45	"
Roy Kleiner	"	$3,619	"	"	49	"
J. P. Rich	"	$6,017	"	"	93	"
F.E.Beacheler	"	$4,245	"	"	50	"
J. L. Hagler	"	$4,550	"	"	90	"

These men are all rice growers in the prairie lands of Arkansas.

There are hundreds of others doing just as well. Growing rice on the Grand Prairie of Arkansas beats growing corn or wheat anywhere on earth. Did you ever make that much money on either wheat or corn?

Rice has only been grown in Arkansas for four years, but it has proven so profitable that last year the acreage was five times what it was in 1907, and this year it will be much larger than in 1908. There is no crop so sure. It is grown practically in water and is under absolute regulation at all times. Water for rice lands is abundant.

Arkansas prairie lands are now considered the best lands for rice and the rice markets give the highest quotations on Arkansas rice because it is the highest quality.

Rice invariably brings $1.00 or over a bushel and the production is far below the consumption. It will be many years before the rice yield is sufficient to supply this country, and the present high price is not in any danger of dropping. Any man who can grow wheat can grow rice and make big money on it.

Good rice land can be bought for $15 an acre up to $40, and one crop will more than pay for the land even at the highest figure. These low prices will not hold long—they have already doubled in the last two years.

Get in on the ground floor now. You're on the wrong track trying to grow wheat up North. This Grand Prairie land will beat the land up North even at growing wheat, while it will grow enough rice to make you rich.

Write without a moment's delay for a free copy of our book—"Arkansas Rice, Its Growth and Possibilities." Tells you all about rice growing, its profits and what you can do about it. Illustrated with photographs of actual rice fields. This book is as good as a ticket to prosperity. Write now.

P. S.—See another page of this paper for article on Arkansas Rice Growing. Very interesting.

Spraying Dairy Cows.

Editor of The National Farmer and Stock Grower: Dear Sir:—I wonder if other people realize what it means to keep the flies off their stock in pasture as well as in the stable? Before I used anything my cows either stood in the creek most of the day or they would scratch and lacerate themselves in the bushes and briars in an effert to keep off the flies, all of which meant less milk. Now I spray them every morning and I find that I get about a third more milk and my stock is in fine condition, and all it costs me is less than a half cent a day.

I know there must be other readers whose experience has been the same as mine, but I wanted to write you this for the sake of the farmers who have not yet realized the importance of using fly-repellants.

(Signed) B. L. ALLISON.

We print the above in the hope that our readers may profit by Mr. Allison's experience. There is an advertised preparation which has been on the market for a number of years called Shoo-Fly, which the editor knows from experience will do all that is claimed for it. Shoo-Fly, if sprayed on in the morning, will keep off flies and insects, even out in the pasture, all day long. Of course on hot, sultry days it should be sprayed a little heavier than on cooler days, on account of the evaporation. Our readers will do well to look into this excellent preparation and write the Shoo-Fly Manufacturing Company, 1305 North Tenth street, Philadelphia, for booklet.

St. Louis Root Quotations.

By the pound: Golden Seal at $1.45; Ginseng—Wild at $5.50 to $6.00, and cultivated at $5.00; Lady Slipper, 20c.; Seneca, 30c.; Pink, 20c.; Black, dry, 7c.; May Apple, 4½c.; Snake, 36c.; Angelica, 5c.; Wahoo—Bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 4½c.; Blueflag, 5c.; Sassafras—Bark of root, 5c.; bark of tree valueless; Wild Ginger, 9c.; Spikenard, 3c.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "Practical Barn Book" and put up many of the buildings.

A Valuable Work.

We hope we have impressed you with the value of this book and that the nominal price asked is nothing by which the practical value of the book should be measured. This book is 8x10½ inches, contains 156 pages, is handsomely bound in cloth, stamped in two colors, and printed on fine glossy paper. Order to-day while you are in the mood. That's what to do. Price, $1.00, Prepaid, including one-year's subscription to this paper. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

STOP A MINUTE

And consider how important it is that you keep your horses in good condition. If you have a blemished horse, write for my free book telling how to treat them. Absorbine is performing wonders in removing puffs, thoroughpins, curbs, enlarged glands, swellings, etc. Absorbine at your druggists, $2.00 a bottle or delivered postpaid. Made only by W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

VEGETABLE GARDEN.

A VALUABLE TURNIP PREMIUM.

Every farmer ought to have at least one acre in turnips. The **Red Top White Globe** is an excellent variety, especially good for table use, also growing abundantly and valuable as food for stock.

The **Cow Horn Turnip** is practically the largest grower. It is a long turnip. At the Michigan Agricultural College the **Cow Horn Turnip** yielded 1,333 bushels per acre. This turnip is especially good for stock, but is good for the table also. In the Middle and Western States the main crop is sown broadcast in July and August. No one ever repented growing turnips. A pound of seed is about sufficient to sow one acre.

For one dollar we will send one pound of Turnip Seed and **The National Farmer and Stock Grower** for two years. This is a splendid offer. Take your choice.

ST. LOUIS THE GREATEST MULE MARKET IN THE WORLD. Pair of dapple gray mare mules, 16.1 hands high, the pair weighing 2,770 pounds in ordinary working condition. They were raised near Monroe City, Mo., and had won many prizes at local shows before being shipped to market. These mules were bought and sold at the St. Louis National Stock Yards by Mr. Henry Sparks, of the SPARKS BROS. MULE CO., and represent for weight, height and working ability as good mules as money can buy. The Eastern buyers who bought these mules bought several loads, paying about $260 around for strictly good large mules, and these were valued in the car-load upwards of $600 for the pair. At the St. Louis National Stock Yards a buyer can select from 5,000 mules any day in the year.

The St. Louis market is also the best for all kinds and classes of horses. The horse auctions are held on Monday, Tuesday, Wednesday and Thursday of each week. These auctions are attended by buyers representing great interests, and there is more clean-cut competition at St. Louis than at any other market. The native cattle trade, the native stock cattle trade, are both increasing on the merits of the market. The Southern cattle consignments net the shippers about two dollars a head more than they can realize at any other center. The hog shippers are so much pleased with their returns that more are coming all the time. The sheep and lamb trade is gaining rapidly, all by reason of open, fair market competition, supported by large packing and shipping interests.

Amatite ROOFING

MINERAL SURFACE—NEEDS NO PAINTING

AMATITE roofs need no painting. The owner need never look at them; they take care of themselves. They are "no-trouble" roofs. They present to the weather a *real mineral surface* against which storm and wind and snow are absolutely powerless. This surface does not require constant painting like the smooth surfaced or so-called "rubber" roofings. The mineral surface is far better than paint.

Of course before Amatite came, the "smooth surfaced" roofings were the best kind to buy. Now that Amatite has been invented and thoroughly tested by years of use, painting a roof is wasteful and unnecessary. The cost of painting a "rubber" roofing from year to year will soon cost more than the roof itself. That is why everybody who knows about roofing is buying Amatite nowadays. *It needs no painting.*

Amatite is easy to lay. Anyone can do the work. Large headed nails and liquid cement come free with every roll.

We shall take pleasure in sending you a sample of Amatite with our compliments upon request.

Fall Plowing For Corn.

Not all farmers are of the same opinion about the advantages of fall plowing for corn. A correspondent in Edgar county (Ill.) calls my attention to the results of fall plowing in that particular locality, and cites his own field as one instance where corn is not doing so well on fall plowing as upon spring-plowed ground. This field suffered from lack of moisture during the last of July, and now is firing badly. This trouble is due to improper handling of the ground last spring. This ground was left until nearly planting time before it was touched, and then it was merely harrowed. Fall-plowed ground becomes packed, so that to put it into condition it should be disced thoroughly before planting is done and then harrowed down. If this is done moisture will be preserved, and there will be no firing along in August.

Every practical farmer knows the advantages of a warm seed-bed for corn. Fall plowing will furnish this; besides it is much easier to plant corn at an even depth on fall-plowed ground, than on loose, spring-plowed ground. Many observed these advantages last spring. After discing and harrowing fall-plowed ground was in fine condition for planting, while much of the spring plowing, which had to be done while the ground was wet, was out of condition all spring.

Fall plowing of stubble must be done early to be effective. This will bring weed seeds nearer to the surface where they will sprout and be killed by frost, and the volunteer growth of grain and weeds will act as a mulch and protect the ground during the winter. Sod ground may be plowed later in the fall, when it is needed for pasture or when a clover seed crop is to be taken.—L. C. Brown.

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

Handling Old Clover Fields.

Two correspondents ask me the same question again this week about how to handle old clover fields, which were badly killed out last winter.

Give them a coating of well-rotted manure this fall and plow them up. Don't try to thicken up the stand. I never could see any economy in revamping things. Attempting to build up poor stands is nearly always disappointing, with the single exception of alfalfa. With alfalfa I would save whatever stand I secured from the first sowing, because the few thrifty plants would soon put the ground into condition to produce a full crop. But with clover or any of the grasses, don't lose time and scourge land with partial stands.—L. C. Brown.

The Chicago International.

The preliminary classification of the Chicago International Live Stock Exposition for 1909 is to hand. This year the opening day is Saturday, November 27th, and the closing date is Friday, December 10th. This Exposition is the Clearing House, the Crowning Show of the year. It is the Live Stock Supreme Court, and the verdict stands without appeal. Booklets with classification and entry blanks can be had by addressing Mr. B. H. Heide, General Superintendent, Union Stock Yards, Chicago, Ill.

Our readers are generally familiar with the liberal prizes and great honors to be won at this show. The premiums in the breeding hog division are unusually liberal, which ought to bring out an extensive exhibit of pure-bred swine. This barrow show is a leading feature. The appropriation for this, the Tenth International Exposition, is materially increased, enabling the management to place all breeds of sheep on an equal footing. The preliminary classification contains a larger number of special premiums than usual; indeed, the tenth show will surely be the greatest of all.

Wonderful Orchard Country.

In this paper will be found an advertisement of the Grand Valley of Colorado. This is a valley forty forty miles long by six miles wide and containing 140,000 acres of land. The martyr President Garfield said: "At Grand Junction I saw a wonderful country. That part of Colorado is as near perfect as nature and the hand of man can make it." Hon William Jennings Bryan said: "I have visited many countries, but no section of any country ever appealed to me more forcibly, as a particularly favored section, than has this little valley of yours." This is sufficient introduction. It is a country that depends on irrigation, and then it becomes an unlimited success. Our readers who are earnestly looking for new homes, new farms and to settle for good in a most productive country should write to J. C. Vining Company, 533 17th street, Denver, Colo., and ask for a panorama picture of the Grand Valley Fruit District. It is true to nature, and wherever it is seen or shown it attracts great attention. The descriptions in the pamphlets that come with it are interesting and the illustrations are enchanting. We hope this will lead to additional settlements in the Golden Valley of Colorado.

On August 25th twenty-three carloads of fruit left the Grand Valley, including the first car-load of melons and the first refrigerator car of Elberta peaches. Bartlett pears are constituting a large part of the shipments which have increased at a single bound from forty cars a week to almost that many a day. The first car-load of honey left for Kansas City. Manager John F. Moore, of the Fruit Growers' Association, started for Omaha, where he will spend the next month looking after the distribution of local fruit shipments at that point.

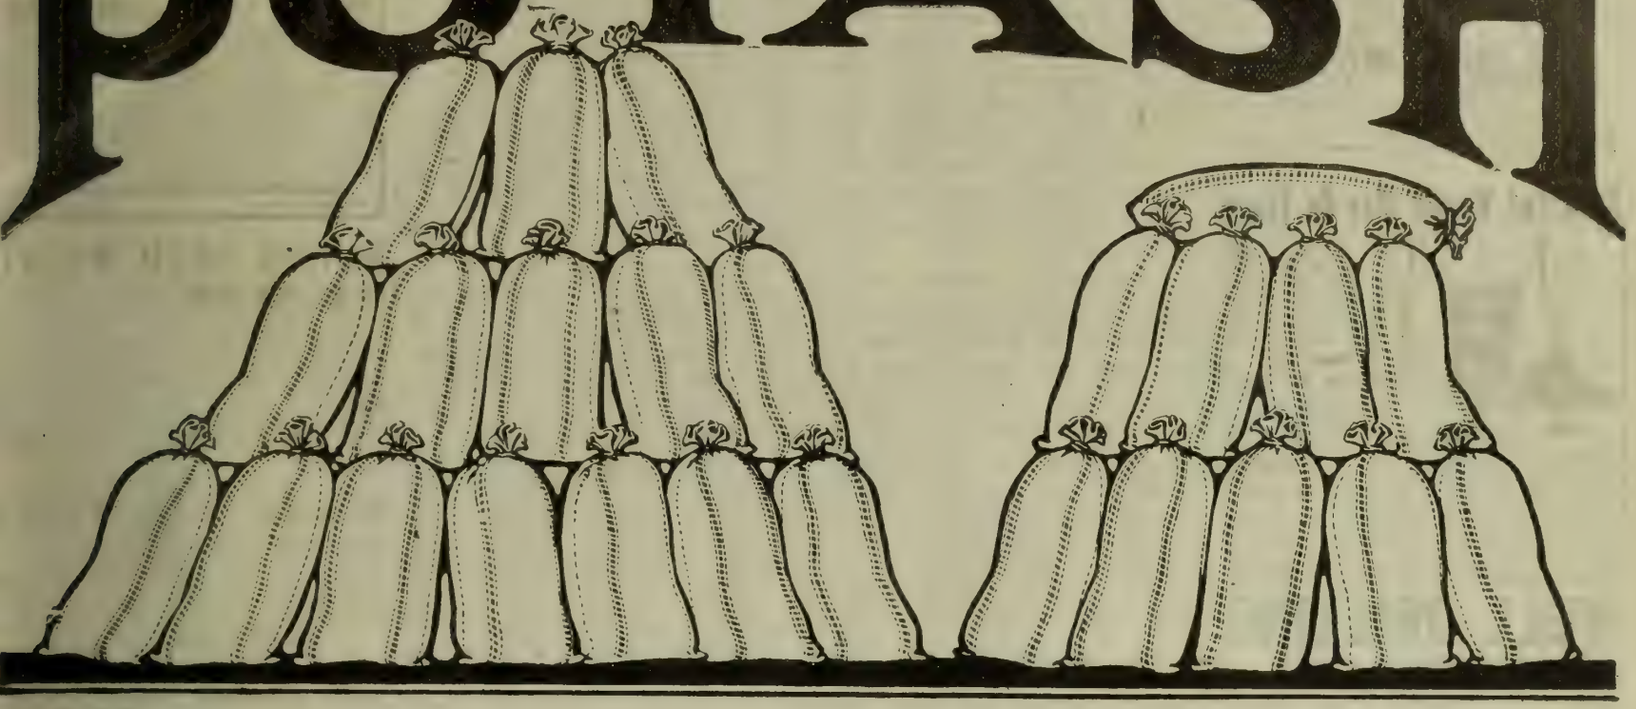
Some Points About Leases.

I have been called upon several times during the last year to decide points between landlord and tenant, points which were omitted in leases, or which were not clearly understood. The interests of both parties are best protected by having a lease, properly signed and attested. Both parties have rights, but it is unsafe and unwise, to simply follow "custom." A verbal lease is no lease at all. Here are some points for both landlord and tenant.

Make out the lease in duplicate, so that each party may have a copy. Put in every stipulation, which is agreed to. State precisely what repairs are to be made, how fences and buildings are to be kept up, how manure is to be handled; in fact leave nothing vague, or to a common understanding. Unless you have a well-worded lease to go by, better have one drawn by some lawyer who has had long experience in such matters. Tenants should insist upon their full rights being protected, and landlords should insist upon a stipulation of forfeiture and reentry in case of breach of any of the covenants of the lease by the tenants. Let there be a precise understanding at the outset, and then the lease will protect both parties.—L. C. Brown.

Go slow, and you won't have to sit down and rest when you get there.

POTASH



YIELD, 31 bu. FERTILIZER, 300 lbs. of 2-8-**6**.
Containing Nitrogen, Phosphoric Acid and Potash—complete.

YIELD, 21 bu. FERTILIZER, 300 lbs. of 2-8-**0**.
Containing only Nitrogen and Phosphoric Acid—incomplete, no Potash.

The first figure of formula in each table shows per cent. of Nitrogen; the second, Phosphoric Acid; the last (in bold type), Potash.

Look at YOUR WHEAT and as you go through it THINK OF THIS:

To Make More Money on Wheat, Your Land Must Produce More Wheat

¶ The best self-binder can't harvest the wheat that your land does not yield, or that grows up and then lodges. The best machines can't thresh it. Look at your land as a manufacturer looks at his plant. Make it yield all it is capable of yielding without injuring it. The difference between what you actually harvest and what your land can be made to produce is as much a loss as if you actually threw the money away.

¶ But one kind of plant food won't do. To get complete results, you must use a complete fertilizer, a fertilizer completed by Enough Potash.

¶ Potash makes deep roots, gives strength to the stalk, vitalizes the plant to resist rust and other fungus diseases, fills out both head and grain and increases weight at the rate of two to four pounds per struck bushel.

¶ REMEMBER—Potash results are compared only with results from fertilized lands. REMEMBER—Potash is as much needed to maintain the yield on your best lands as to improve your poor lands. REMEMBER—most commercial fertilizers do not contain enough Potash to produce the most profit your land can produce. REMEMBER—Add Potash and get big, Profit-Paying Yields.

¶ The more Potash, the bigger the yield—other things being equal. The lesson of the test lies in the comparison of the "No Potash" and the "With Potash" products, the quantity of the Nitrogen and Phosphates being the same in each case. Here is an increase at the rate of 10 bushels per acre, secured by the application of Muriate of Potash at the rate of 35 pounds per acre, costing to apply per acre, 87 cents. Question: With your wheat acreage this year, at the prices you got for your last crop, what would your prospective profit be this year if you had drilled 2-8-6 at the above rate when you seeded last Fall? This Fall add 15 pounds of Muriate of Potash per 100 of bone or plain phosphate, or, to 2-8-2, add 10 pounds per 100. All elements are required, but be sure to add Potash, for

Potash Pays—Potash Pays—Potash Pays

See your dealer at once and plan to use POTASH. All dealers do not carry it in stock. Make your arrangements now to get it when you need it.

Doing Away With Quotations.

In New York City at the Mercantile Exchange by a vote of its members, it was decided to discontinue a committee whose duty it was to officially quote the day's prices for the standard grades of butter, cheese and eggs.

These quotations had been the subject of much criticism, and the action taken was seemingly forced upon them by an investigating committee appointed by Governor Hughes of the state of New York, which practically decided that the prices officially quoted were often not respective of actual transactions, but rather figures which the Exchange committee agreed to quote in the interest of the wholesale trade.

At first glance it appears that the whole business was wrong, and it is natural to simply condemn the New York Merchants' Exchange and be thankful that the members have been brought to time, and that hereafter there will be no official quotations. Upon reflection, however, it may be that in connection with a general knowledge of how the quotations were arrived at, they may have served a good purpose. One thing we may take for granted, and it is that any method which a first-class mercantile organization has established is not far wrong. We have in the west an Elgin butter quotation which is equally subject for criticism, and which many of us do not understand. Instead of selling the butter first, and then quoting prices according to actual sales, the committee, representing all interests, agree upon a price for the standard grade, and although only binding upon its own members, it stands as a great commercial influence even as far east as New York City, and stands good until a new quotation is made. The Concentrated Creameries, the Co-Operative Creameries, and the smaller independent creameries over an immense extent of territory buy butter fat based on Elgin quotations, and every city dairy company within the Elgin influence has contracts drawn based on Elgin prices.

We have had our own doubts as to the usefulness of the Elgin quotation, but they have all passed away because of the universal belief in the honesty of purpose of the Elgin Board of Trade to reach a basis to do justice to all. The New York market, however, has no such standing, and the quotations are looked upon with suspicion because they were understood to underquote the market in the interest of the larger operators buying elsewhere and shipping on the New York market. If the members of the New York market who are sellers, will sell their butter, cheese and eggs as high as they can, and members of the New York market, who are buyers, will buy the butter, cheese and eggs as cheap as they can, and honestly record the sales, the New York press and the trade press will see that honest quotations will go out broadcast over the face of the earth, and there will no longer be any charge of manipulation in the interest of any special class.

How Much Alfalfa to Sow.

Mr. H. T., of Watseka, Ill., writes: "I have been advised to sow alfalfa in the standing corn about September 1st. Also some tell me that 10 pounds of seed is sufficient."

I have never recommended seeding alfalfa among corn, because corn is such a gross feeder that the alfalfa plants are liable to starve; and should the fall be dry the alfalfa plants would suffer from lack of moisture. Another thing, which is equally as serious, many weeds spring up in corn fields, after the corn is laid by, and these would seriously interfere with the thriftiness of the alfalfa plants. I will say this, I know of some fields, in fact some localiaies in Michigan, where alfalfa is seeded altogether among corn, and it has done remarkably well. But these fields were clean; they were cultivated four and five times, and the ground was in the pink of condition. The success here no doubt was due to these controlling conditions, and not to the fact that among the corn roots was a first-rate place to nourish tender, feeble alfalfa plants.

The rate of seeding should be controlled by the quality of the seed and by the conditions of the ground. If every seed was placed so that it would produce a plant five pounds per acre would be sufficient. But with the ordinary run of samples, there would not be much above 90 per cent of alfalfa seed, and possibly not more than 90 per cent of this would grow. Then under ordinary seeding methods not over 50 per cent of the seed actually sown is situated where it can sprout. Allowance must be made for these defects, and under these conditions ten to fifteen pounds of seed would give only a moderate stand. Thicker seeding makes a finer growth, which is much superior for feeding, and thicker seeding will choke out the weeds. Under ordinary conditions, I should sow from fifteen to twenty pounds per acre.

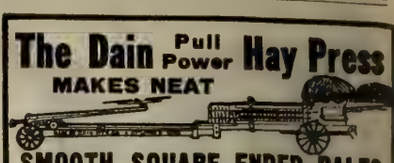
Yields Are Too Low.

Small grain yields in many localities are disappointing. A report from one county in northern Illinois says oats are making 25 to 35 bushels per acre, barley 18 to 20, rye 15 to 20 and wheat 20 to 22. If this report merely showed the conditions of one locality it would not be serious; but it reflects the conditions of hundreds of counties in the Central West. Such crops do not cover the expense of production and the unfortunate owner of the land which produces them must cut into his reserves every year. So long as his reserves hold out the game will go on. But the day of accounting can, at best, only be staved off. There is something wrong radically wrong, and the quicker farmers set about to find out what it is, the better. Such meager crops mean further ground starvation, and poorer grain. Look the proposition square in the face. To look it in the face requires a good look into the soil. If the ground is poor in nitrogen all the farmers ought to know what to do. If it is poor in phosphoric acid—that element must be supplied. If it is poor in potash that element must also be supplied—for no full crop can be grown without it and at all times humus must be supplied in the form of well spread barn-yard manure. The idea that crops can be raised on worn-out, half cultivated soil is a mistake and just as great mistake is the idea that good soil will remain fertile—without food—forever.

St. Louis Root Quotations.

Quote: Golden seal at $1.65; ginseng—wild at $5 to $5.75 and cultivated at $5; lady slipper 20c; seneca 32c; pink 22c; black dry 7½c; May apple 5½c; snake 38c; Angelica 5c; wahoo—bark of root 14c to 16c, bark of tree 4c; blood 5c; blueflag 5c; sassafras—bark of root 5c, bark of tree valueless; wild ginger 10c; spikenard 3c; skullcap 8c.

The Dain Pull Power Hay Press
MAKES NEAT



SMOOTH SQUARE-ENDED BALES

Our rocker tucker (nothing like it on any other Press) folds every feed so that Dain made bales pack close in cars. The Pull Power feature saves Time, Work, Money, increases capacity. The Dain Press is simplest, Strongest Hay Press made. No complicated toggle joints to wear and make trouble. No bungle-some Pitman for team to step over. No waste power and rebound like a pile driver. We want you to know why it turns out most perfect bales, is lightest running, fastest baling Press made. Our Free Book proves its superiority—send for it today

DAIN MANUFACTURING COMPANY
825 Vine Street Ottumwa, Iowa

WINTER SEED WHEAT

62 BU. PER ACRE: Ratekin's Imported Malakoff, Kharkof, Turkish Red and Fultz; Four hardiest, highest yielding northern grown varieties in the world; made a record of 62, 58, 56 and 54 bushels per acre. All pure, re-cleaned and graded. Mammoth white eye and extra quality new crop grown. Timothy, Clover, Alfalfa and all other farm and grass seeds. Catalog and Samples of any you want mailed Free if you mention this paper. Address RATEKIN'S SEED HOUSE, Shenandoah, Iowa.

WINTER SEED WHEAT

IMPROVED TURKEY RED. Safest to sow, heaviest yielding, strong straw, perfectly hardy. Also other varieties of winter wheat, both smooth and bearded, and **MAMMOTH WHITE WINTER RYE.** Send for circular and samples. Seed shipped on approval.
L. C. BROWN, Farm Seed Specialist, LaGrange, Cook County, Illinois.

OUR ROTARY WELL DRILL

A money saver, a money maker. One man and one team does the work. Drill turns its own rope and drill bit never strikes twice in same place. No cog wheels, friction wheels, belts, chains, springs or pulleys; no repair bills.
FT. SMITH WELL DRILL MFG. CO., Ft. Smith, Arkansas.

Self-Feed 3-Stroke Eli Baling Press

Latest addition to the great "Eli" family. Three strokes with automatic self-feed makes the gang hustle. Built on lines that make horse presses really valuable. Greatest leverage when pressure is hardest. Low Step-over, Full Circle, Block Signals, etc. A little giant in strength. We've always led as hay-press builders—18 different styles, horse and belt powers. All in one catalog and it's free. Write for it.
Collins Plow Co., 2014 **Hampshire St., Quincy, Ill.**

DICK'S FAMOUS **Feed Cutters** Excel All and Are LOW IN PRICE.
All sizes, for hand or power. Illustrated book free.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Heredity of Acquired Qualities.

It used to be disputed if acquired qualities are inherited. It is now accepted as proven that they are. This applies to human beings, to animals and to plants. It is a matter in which the breeder of plants and animals is primarily concerned.

Looking around us, we find all kinds of proof of the correctness of the theory. Think of the various kinds of dogs and the things they now do from instinct. The bird dog has an instinct to assist in the hunting of birds, yet he was taught that in the first place. The sheep dog shows wonderful intelligence in the care of sheep, but this is because many generations ago his ancestors began to be taught to assist in the care of sheep. The watch dogs have been taught for hundreds of years to watch the property of their masters, and have acquired what we call the natural instinct to do so.

The dog family in its association with the human race is acquiring increased intelligence. The future will show more remarkable demonstrations of this than the past has done, though what has been shown in the past has excited our wonder.

Fortunately what is true with dogs is true of all other animals. We have only to teach things to animals to have them acquire things that will be transmitted with some certainty though not in the full degree till after generations of continual teaching Thus, we can teach mildness to the horse and transmit the quality. This fact should be regarded in the breeding of horses. Only those horses should be selected for breeders that that have the mild qualities demanded by our conditions.

The heredity of acquired qualities is exceedingly important in plants, though we have paid so little attention to it that we have not yet given it the consideration it deserves. But nature has been giving it consideration while we have been sleeping. Wheats planted in dry cold regions have acquired the ability to grow in such regions and to form a hard kernel with little moisture and a reduced amount of starch. In time the transmission of this acquired quality has given us the hard or durum wheats, primarily used in the making of macaroni.

The heredity of acquired qualities touches all life. If we resist evil and elect the good we establish in ourselves to some extent a quality that is transmitted to our children. They will therefore be the more able to resist temptation. If we allow ourselves to become weak morally, we establish an undesirable quality that will also be transmitted to our children. We should therefore beware of the kind of qualities we allow ourselves to acquire.

All life is changing, and we have the power to control the changes to a limited extent. We therefore become the molders of our own future as well as of the futures of our children. We can work our ideals into our children, as well as into the animals and plants around us.

On the other hand, in the selecting of plants and animals to use, we need to look back as far as possible and trace if we can the existence of the desired or undesired qualities. The registries of plants and animals have their greatest value in helping us to do this.

Long Shocks or Round Shocks.

The last heavy rains have tested the efficiency of differently made shocks in shedding water. Where round shocks have been well made—carefully set in the stubble and then capped with one or two sheaves—the hard rains have not done much damage. The long shocks—where the sheaves are set up by pairs—have blown down badly and have taken the rain badly. I thoroughly believe in stacking all small grain, but if one must thresh out of shock, then do the next best to stacking—make good shocks. This job is usually given to inexperienced help, poor shocks are made, capping is poor and much grain is spoiled. Another thing, don't thresh damp grain out of shock. Throw out the shocks and let them dry thoroughly. You will get a much better sample of grain and your straw pile will be worth something.

Stalks Versus Ears.

Some corn growers still cling to the idea that big corn must necessarily be grown on big stalks. but there is such a thing as one overbalancing the other. A stout, sturdy stalk is essential to carry a big ear of corn and such a stalk usually has a well-developed root system. A DeKalb County (Ill.) farmer calls my attention to this characteristic. He is growing a variety of corn, probably Silver Mine or Silver King, which has low-down, sturdy stalks, with ears in easy husking distance. Last season the ears were big enough to make 80 bushels per acre. This farmer tells me he has always had better yields from varieties of corn which had this habit of growth.

His soil conditions are excellent, nor over-fed, but still fairly rich, and always kept in perfect tilth.

A First-class Business College.

Brown's Business College of St. Louis is splendidly located in the West End, where it is bright and healthy. It is a very fine, large school They understand the application of business methods to the farm. Young men on farms should write, Brown's Business College, and, after mentioning this paper, ask for the "Business Farmer Circulars."

What Paint?

That's the question—not what to paint, nor when to paint. You know that everything exposed to the weather should be painted. You know how to utilize your spare time between regular work on the farm to improve your buildings and farm machinery.

You may not know that there is as much difference in the quality of paint as there is in the quality of seed corn or farm machinery. Therefore what you need to know is the name of the paint that makes good every time.

SHERWIN-WILLIAMS PAINTS

are such paints. They are made with a correct knowledge of just what you will require of them. They last longer, protect better and improve the appearance of your buildings more than paints that cost less, because they are made especially for the purpose, and of the best obtainable materials.

A talk with the Sherwin-Williams dealer in your town will be of great assistance to you. Write for our booklet, "Paints and Varnishes for the Farm." It is sent free and will tell you how to save money with the right paint.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Address all inquiries to 689 Canal Rd., Cleveland, O. In Canada to 639 Centre St., Montreal.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement. How to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.**

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Potash Fertilizer.

There is a large amount of clean-cut, practical information in the books issued free by the German Kali Works. These books are issued for the purpose of showing the proper place in which potash stands as a fertilizer in relation to American agriculture. For the purpose of showing potash results the entire experiments are printed and illustrated and the best methods of cultivation are explained. "Principles of Profitable Farming," "Potash in Agriculture," "Farmer's Note Book," "The Farmer's Guide," and "Plant Food," all relate to general agriculture. "The Cowpea," "Strawberry Culture," "Truck Farming," "Orange Culture," relate to the specialties mentioned. "Why the Fish Failed" explains how the Indian corn crop decreased when only fertilized with phosphoric acid, and is the very A, B, C of fertilization.

All or any of these books can be obtained free of charge by addressing the German Kali Works, 560 to 563 Monadnock Block, Chicago, Ill. We advise our readers to write for these books for the reason that we refer to them more often than to any other works on farming. Read the advertisement on page 3.

Shrinkage of Grain.

Storing of grain may be an advantage, under certain conditions, but it is well to take into account the probable shrinkage and other incidental losses, even under the most favorable circumstances. Here is a case in point: Oats have been abnormally high during the last year, with the result that thousands of farmers have threshed out of shock, and rushed their crops to market. This dumping of grain has depressed prices to a level where it probably will be profitable to store until this early movement has been cleared. Thirty-cent oats does not appeal to farmers; oats have a much higher feeding value than that, so under these conditions undoubtedly it will be safe to hold on to oats for a while.

Oats will shrink from six to eight per cent, during the next six months after it is threshed; wheat will shrink from six to seven per cent; and corn will shrink fully twenty per cent between husking time and the following May. These are actual shrinkages, and they do not take into account any losses from vermin, interest on money tied up, or losses from fire. I believe that farmers rarely gain much by strong grain, unless the market happens to work, for the time being, below actual cost of production.

Giving Free Rent.

An Adams county (Ill.) farmer is working out his renting proposition in a way which satisfies the tenant and keeps the land in good condition. He allows free rent for one year on that part of the farm which is annually sown to clover. The tenant furnishes the clover seed, and of course, takes care of the land and keeps all of the crop raised. The clover is sown with a very light nurse crop, but the nurse is never allowed to interfere with the clover. The ground is given over to getting a good catch of clover, and the grain is only a secondary consideration.

The point which I want to bring out is the attitude of the landlord in the matter. Usually landlords think they have done enough when they have furnished clover seed, so when paying cash rent the tenant has no recourse except to make as much out of the nurse grain crop as possible. This invariably works against the success of the clover, so that failures are most frequent than good stands. This same idea has been carried out farther south, where some landlords are willing to give rent free on land growing cowpeas. These landlords estimate that the manurial value of a crop of cowpeas compensates them for the loss of rent for one year. These liberal policies attract the best class of tenants, large crops are grown, and the farms are growing better every year.—L. C. Brown.

Too Much Poor Timothy.

If one would go over the timothy meadows which supply the bulk of the hay for city markets, he would not wonder that so small a percentage of timothy really grades No. 1. My attention was called to the matter some time ago by a correspondent, who complained that his hay always went into one of the low grades, and he could not understand it. I find that large users of timothy hay in Chicago have standing orders out for "choice timothy," but not much of that grade really comes in. "Choice timothy" must be sound, well baled, properly cured, bright, naural color, and not mixed with over one-twentieth of other grasses. The trouble with so much of the hay is, it is mixed with other grasses, and contains many weeds.

Meadows are neglected until they become weedy and the yield runs from one to two tons per acre of poor, coarse stuff. When one is growing hay for city consumption, it will pay to strive for quality.

One of my neighbors sold clean, bright timothy a year ago last spring in Chicago, at $22 a ton, when market grades No. 1 and No. 2 were really at $14 to $16. The difference in price was the difference in quality.—L. C. Brown.

Get Out the Manure.

A Logan county (Ill.) farmer asked me a few days ago, "Where is the best place to apply manure?"

Manure will give good returns if applied any place on the farm, providing the manure is hauled out soon enough and not left to accumulate about barns and feed lots. Pastures and meadows are benefited by liberal dressings of manure. The best time to spread it is during fall or early winter. One of the best farmers I know of covers 40 acres of his farm every fall with manure. He puts it on his sod ground, at the rate of eight spreader loads to the acre. This farmer keeps his ground in a very high state of fertility. He follows a definite system, applying manure, turning under clover and applying rock phosphate in regular order. You can depend upon it that there are no loafing fields around this farm—L. C. Brown.

Discing to Save Moisture.

With no rain for six weeks some fields of corn are showing the lack of moisture. The time to conserve moisture is when we have plenty of it, but that usually is the time when most of us try to get rid of it. The ground which was well disced last spring, before the plowing was done, is standing dry weather much better than that which was not disced. The reason is this: Where the ground was not disced the ground turned very lumpy and these lumps were turned to the bottom of the furrow, where they could not be reached by the harrow or cultivator. Plowing, under the conditions we had last spring, without following up with the harrow, left the ground in almost as bad condition for saving moisture. I thoroughly believe in the disc. It cuts up the crust and fines the soil into a capable seed-bed. Clods will dissipate moisture, and the easiest way to reduce them is to not make them.—L. C. Brown.

WITH EVERY ROLL of CONGO ROOFING

THIS GUARANTEE BOND FULLY PROTECTS YOU

LOTS of manufacturers are keen to tell you what their goods are made of. They give you a beautiful word picture of a marvelous and mysterious "*gum*" that only they can produce. Others tell you of the real "*rubber*" that they use—and so on.

Regarding Congo Roofing, we have only two statements to make:

First—We believe it is the *best* ready roofing made.

Second—Because we believe that, we give a *genuine Surety Bond* with every roll, which guarantees three-ply Congo for 10 years.

These bonds are issued by the *National Surety Company*, and they are as good as a government bond.

No other roofing manufacturer *dares* give such a guarantee.

You take no chance when you buy Congo.

There is no "gum" in it to make it sticky; there is no rubber in it to get brittle. It is made of the best roofing materials that it is possible for us to purchase under the best manufacturing conditions. Because it is made right, it gives such satisfactory service that we are not afraid to issue a *Guarantee Bond* to back up every statement we make.

Ask any other manufacturer for a *Real Bond* and see him squirm.

Booklet and samples of Congo free on request.

Alfalfa For Swine.

J. E. Woodford, of Coffey county, Kansas, April 1, 1905, placed ten choice pure-bred Poland-China brood sows from 12 to 18 months old, that were due to farrow in the latter days of June, on a five-acre field of alfalfa. They were given no other feed than the alfalfa pasturage until they had farrowed and their pigs were a week old. After that the sows had in addition to the alfalfa some bran slop until about August 20, when new corn was fit for feeding. He wrote: "The sows from the time they were turned on the alfalfa until the last week in June made a remarkable growth, besides gaining somewhat in flesh. They did well with their pigs, reared an average of seven to each sow, and as sucklers they were a sight to see. The pigs were the most attractive bunch ever raised in Coffey county, as admitted by our breeding competitors. We weighed a gilt from this lot when six months and five days old, and her weight of 225 pounds was not above the average of the whole lot. In our life-long experience in rearing swine we have found nothing as a grazing crop for swine that in value approaches alfalfa."—From Coburn's "Swine in America."

Young Pig Management.

A hog is half made when past the weaning period without a stunt or kink in its growth. Every check or halt in prosperity through its first two months is more expensive than at any later period. Too much rich, feverish milk of the dam, causing thumps or other ailment, may leave harmful results, perhaps as much so as scant feeding or other neglect of the sow. More injury may be done to a pig's growth in two or three days than can be repaired in a month, even if he is made the subject of special care, which where many are raised is not the rule nor easily practicable. "Good luck" with pigs calls for attention, and that not occasional, but frequent and regular.

From the first week after farrowing until weaning time the sow will be little else than a milk machine, and to be a high-power machine in perfect operation she must have proper care. Nothing else is so well calculated to make pigs grow as a bountiful supply of wholesome sow's milk, and the pigs that have plenty of other feed with the milk of a well-slopped sow for eight weeks will ordinarily have much the start of those weaned at five or six weeks, no matter how much food and attention the earlier weaned pigs may have had.

At eight or nine weeks old most pigs are, or rather should be, fit to take away from the sow; some litters are individually older at seven weeks than others at ten, and better fitted for weaning. Sometimes it is necessary to wean when the pigs are five or six weeks old, and in other cases it may be advisable to wait until the pigs are ten weeks or even older. In the corn belt the period will generally average longer than in New England. Breeders who wean at early ages generally do so in order to more profitably raise two litters a year.

Provided with and taught to eat suitable feed some weeks beforehand, pigs are not noticeably checked in their growth by weaning, but those that have been dependent mainly upon the mother's milk, when abruptly taken away from it, frequently seem to have their growth partially suspended for weeks. Many breeders successfully let the sow wean her pigs, as she will in time, and the change is so gradual that no pause in growth indicates when the milk diet ceased. A modified application of this, in which the pigs are separated from the sow at an age suiting their feeding and the convenience of the breeder, will not infrequently be found advisable, but by no means should the pigs be allowed to remain with a sow until she is virtually devoured by them as is sometimes done.

It is not a good plan to take all the pigs from the sow, unless one or two of them can be turned with her some hours after, to draw the milk she will have at that time, and again, say after a lapse of twenty-four hours. The preferred way is to leave about two of the smallest with her for several days, and after that leave only one for two or three days more, by which time the flow of milk will have been so gradually diminished that no injury to the sow will result by keeping them entirely away from her. This extra supply of milk helps also to push the smaller pigs along in growth and put them more nearly on an equality in size with their thriftier mates.—From Coburn's "Swine in America."

Clean Up the Roadways.

Now is a good time to get out the mower and scythe and clean up the roadways and fence corners. Don't wait until all of the weeds have matured seeds, that will be too late, if riddance of weeds is the object. Flowering stage is the best time to attack weeds. They are then at their maximum growth, and it is before they shed their seeds. When fall plowing of stubble cannot be done early enough to kill the weeds, run over the field with a mower. A day or two spent in cleaning up right now will make the fields more sightly and a great deal cleaner next year. I notice wild mustard creeping in along fences and roadways. Better get rid of every plant. It is a mean pest. And I want again to repeat my previous warnings against Buckhorn and Wild Carrot. Both of these pests have been spread alarmingly this year, and on many farms they have secured serious footholds.

Movement of Water in Soils.

Of late years we have been learning many things about the movement of water in soils, especially of the water that is applied for the purposes of irrigation or sprinkling. The results of all investigation show that in the past a great deal of watering of various kinds have been done ineffectively.

This is as true of the watering in a small way as of the watering in a large way. In the dry summmers even the farmer in the humid states does some artificial watering on his garden, while the farmer in the arid states turns on his water through his irrigation ditches.

Poor results are frequent, and now it is known that the said poor results are largely due to the fact that the water does not get to the roots of the plants for whose sake it was applied.

In soils that are well fitted for the growing of plants, water does not move rapidly in any direction, even up and down. The up and down movement is most common, and the lateral movement is very small. Even when water lies in irrigation ditches for days, in alluvial soil best fitted for many of our plants, the water does not move sideways more than two feet. Therefore the idea that furrows could be plowed through an orchard and the furrows used to water the trees is proving erroneous. This failure of the soil to permit the passage of water explains many of the failures in the application of fertilizers to such soils, the water being necessary to the trees in their attempt to secure the applied plant food.

Not long ago the United States Government made some experiments in conjunction with California orchardists to determine the amount of lateral movement of water in irrigated orchards. In irrigated orchards where the the furrow system had been used, cross sections of the irrigation furrows were dug out to ascertain just what had happened to the water. It was found that it had moved laterally, but two feet. It had passed downward a few feet, but much of it had evaporated from the surface. The soil was wet downward in a cone-shape or wedge-shape, the wide part of the wedge being at the surface, where evaporation was greatest. The trees between the irrigated portions stood in absolutely dry ground and the roots of the trees had received no benefit from the irrigation water except where they touched the wet area near the irrigation furrows.

It was also found that the water had moved laterally a little the best where the soil had been recently stirred up, though this increased lateral movement was not great.

After all, the attempt to apply water in large quantities in certain spots and have it move laterally does not prove effective. Nature's way of applying water in the form of drops over all the surface is best, and that will have to be approximately imitated if we are to get the best results from our outlay for artificial watering.

An irrigation or sprinkling by which the whole surface of the soil is wet to a considerable depth is best, and we can keep this in mind in the sprinkling of our lawns and gardens.

The slowness with which water moves laterally in the soil was the primal cause that led to the abandonment of sub-irrigation, which for some years promised to become popular.

The Has Been Soup.

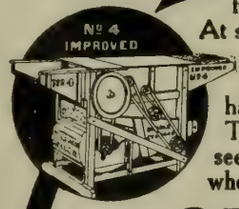
"What is this stuff you have brought me?" queried the Boston guest of the Boston waiter.

"That, sir? That's bean soup, sir?"

"I don't care what it has been," retorted the truculent patron. "What is it now?"

HOW TO MAKE 100% PROFIT
FROM YOUR PEA AND BEAN CROP

Pea and Bean Seed is worth from $2.00 to $3.00 per bushel. **DO YOU SAVE IT?** If you don't you **must**, in order to get **100%** profit from your crop.



At such a price per bushel the seed is too valuable to use as feed. — Too valuable to attempt to thresh with a regular grain thresher, that will split one-third to one-half of the $2 to $3 seed.

To get **all the profit**, you must be able to take every seed from the vines and pods and to produce it in a **whole, clean, marketable condition,** the

OWENS
Pea & Bean Threshers

are designed and built especially for this purpose. We ship them to Pea and Bean Growers under a bona fide binding guarantee, that they will thresh any and all kinds of Peas and Beans **directly from the vines, without splitting the seed.**

We have a proposition to make, if you are a grower of Peas and Beans, a proposition that you ought to hear about and that you cannot fail to be interested in. It is the most liberal and fair proposition that ever a manufacturer made, so it is worth your while to write us —but do it soon—today if you can.

Free Book
on PEA and BEAN CULTURE

Information furnished by the best authorities in the country, gives splendid illustrations and a thoro description of the "Owens" Thresher.

Cash Corn and the Option.

On June 1st cash corn, No. 2, the standard grade, sold at 74 cents a bushel; on June 30th, the same grade sold at 71½ cents; on July 30th it sold at 69½ to 71 cents and on August 21, the price was 67 to 68 cents. There is no future to cash corn. It is all over, the goods are delivered, the money is paid. But there is a speculative deal on which international trade is conducted and it is called the option. On June 30, at Chicago, corn was selling at 67⅞ cents for delivery September 30th; July 30th, the quotation was 66⅛ cents, and on August 31st the September quotation was 64⅞ cents a bushel. The December option on June 30th, was 58¼ cents, July 31st, 55 cents, and on August 31st, 56¼ cents. The quotation for next May delivery, on June 30th, was 65⅝, and on August 21st, had advanced to 57⅛ cents. These option figures change all the time according to circumstances and the actual transactions of the market.

Cash Wheat at St. Louis.

On August 31st at the St. Louis Merchants' Exchange cash wheat sold as follows: No. 2 red $1.04 to $1.06½ a bushel; No. 3 red at 98½c to $1.04; No. 4 red, 93 to 98 cents a bushel, and one car, same grade, but fancy, at $1.02.

No. 2 hard winter, yellow, sold at 90 cents to $1.01; dark at $1.01 to $1.01½; Turkey, $1.05½; No. 3 sold at 94 to 97 cents; choice car of this grade at $1.00¾; No. 4, 91½ to 93 cents, nominal. With the exception of the last item all sales were based upon actual sales. On July 31st cash wheat at St. Louis sold at $1.08 to $109¾ and on August 31st cash wheat closed at $1.04 to $1.06½ a bushel. This applies to No. 2 soft wheat of which grade St. Louis is the principal market and the decline is the least on this grade.

Milk Producers' Association.

Hon. D. I. Furbeck, of Allenton, Mo., made the rounds of dairies in August, and, acting as milk committee, ordered his milk report sent to members in good standing only.

Last year the price was 12 cents a gallon for uncontracted milk, and this year a slight gain was secured. It is reported that three small St. Louis dairies failed during the month of August. As the price of milk to the consumer at retail is twice as much and more than it is bought at wholesale from the producer, it would appear that there ought to be fortunes made in the city milk business, but the expense of sale and distribution is large. Several dairy farmers, producing certified product, opened up in St. Louis for city distribution with apparent success, and were glad to turn over their organizations to large dairy distributors upon terms have obtained without demonstrating their ability to sell their product in the city, but, having gained the point, they were willing to give up the contest and retire to the farm.

Incidental to the duties of Hon. D. I. Furbeck as president of the association, he secured a reduction of 3 cents a gallon in the milk rate from Robertsville, Mo., to St. Louis, thereby enabling several new members to ship their product to St. Louis at a rate in line with other points.

The milk committee will continue to act, but unless called by the officials there will be no meeting in September. In the meantime communications for the association should be aldressed to Wm. A. Fischer, Secretary, 409 Franklin Ave., St. Louis, Mo.

A National Beverage.

We desire to state to the readers of The National Farmer and Stock Grower that after having made a very careful investigation of COCA-COLA we have concluded to accept its advertising. We find by consulting the most eminent authorities that COCA-COLA does not contain in the minutest proportions, either cocaine, morphine, or any other narcotics; that it is not injurious to health, but is refreshing and invigorating in its physiological effects.

COCA-COLA contains about the same amount of alcohol as is found in a vanilla ice cream soda, or in a glass of ordinary soda water. The infinitesimal amount in COCA-COLA is derived from the flavorings used.

It contains caffeine in less quantity than is found in a cup of strong coffee and about the same quality as is usually found in tea, but it is absolutely free from the tannic acid found both in coffee and tea.

Notwithstanding the absolutely innocent character of COCA-COLA competitors have encouraged and paid for circulations of false and injurious statements concerning the article, thereby leading many sincere persons to a false impression of the component parts of this really meritorious beverage.

In the interest of truth and of justice complete information will be supplied either by The Coca-Cola Company, Atlanta, Ga., or by ourselves, giving analyses of the article by leading chemists of the United States, and statements from prominent physiologists as to the physiological action of COCA-COLA. The oca-Cola Company are willing, if so desired, to pay the expense of scientific investigation of the effects of COCA-COLA, by any church, body, or temperance organization, or by any combination of religious publications, which desire to know the truth and to publish it.

Cash Oats and the Option.

At St. Louis on June 30th, cash oats, standard grade, sold at 50½ cents; on July 31st, sales were at 40 to 41½ cents and on August 31st, the quotation was 37 cents. Here is a decline, without future speculation of 13½ cents a bushel.

The speculative market of Chicago in September oats declined from 43⅞ cents on June 30th, to 37 cents on August 31st, and December oats declined about the same. Oats for delivery May 31st, 1910, were quoted at 39½ cents on August 31st, 1909. The large crop of oats has cut the market price down.

FARM AND RANCH LANDS.

ARKANSAS.—Fortunes in Rice Growing. An industry that originated seven years ago is making the prairie lands of Arkansas produce splendid incomes. Write for free booklet entitled "Arkansas Rice." Address, **E. W. LeBEAUME,** 1327 Pierce Building, St. Louis, Mo.

ARKANSAS.—Good farm of 400 acres near Searcy; land is nice and smooth; 300 acres in cultivation; fenced; two dwelling houses, barns, wells, orchard, etc. Price, $12.50 per acre. **L. E. Moore,** Owner, Searcy, Ark.

COLORADO CROPS—WHERE CHEAP LAND and scientific agriculture are making farmers rich; choice locations under proposed reservoir ditches. **W. A. Brookshire & Co.,** Lamar, Colo.

KANSAS.—1,000 Farms and Ranches in forty Kansas counties for sale or exchange. **What Do You Want?** Make plain in first letter what you wish to buy, sell or exchange. Lists and information free. **F. H. Brown,** Opera Block, Winfield, Kansas.

KANSAS. — A Widow's Property. 481 acres, Greenwood County Stock Farm. Well improved; only $12,500; terms. Send for description and plat; it will interest you **Terra Farm Agency,** Council Grove, Kansas

LOUISIANA.—For sale 750 acres, ten cabins, one residence, two stores; railroad station and steamboat landing on property. Suitable for cotton, corn, corn, truck, live stock. Can be irrigated from river for rice. About half open, balance hardwood timber. For prices, etc., write **C. L. Snyder,** Winnsboro, La.

MICHIGAN.—I sell Farms in Oceana, the best county in the United States; fruit, grain and stock. Write for list. **J. D. S. Hanson,** Hart, Mich.

MINNESOTA.—100 improved farms in Central Minnesota; all sizes; cheap prices; easy terms; always a good title. Write for Land List No. 27. Mention this paper. **C. D. Baker,** Fergus Falls, Minn.

MISSISSIPPI.—The best lands for the money in the United States of America. Come and see. **J. W. Jourdan,** Iuka, Miss. Between Memphis and Chattanooga.

MISSOURI.—Farm Bargain. 1,050 acres, **Stock, Fruit and Grain Farm; over 4,000 bearing fruit trees;** fine condition; nine-room residence; large barns and other buildings; excellent timber on about one-half of the farm; abundance of pasturage; several running springs; three-fourths of a mile from the station, on the Frisco. Old age is cause of sale. Will give good terms. Enclose stamps for farm lists. Will make farm loans. **Victor Wm. Reitz Realty Co.,** 1004 Chestnut street, St. Louis, Mo.

MISSOURI. 800-ACRE FARM. MISSOURI.

Note what I say: It is a great bargain; well improved; it adjoins railroad station; it will grow 60 to 80 bushels of corn to the acre; it is underlaid with coal; it is in a fine country; it is high-class; it is about two hours from Kansas City, six hours from St. Louis, and twelve hours from Chicago. Price, $75 per acre; easy terms. Farms immediately adjoining are held at $100 to $125 per acre.

The finest large farm in Missouri, nearly two sections, seven miles from South Kansas City limits; R. R. station on farm.

Also 2,500 acres, fenced and cross-fenced; four good houses; eight fine barns; rich corn land. Land and improvements all in fine shape. About 1,500 acres in blue grass, $40 per acre.

Other farms for sale.

J. H. LIPSCOMB,
306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI.—Finest Farm in Missouri at half the price of less productive lands in near-by states.

Callaway County, the "Kingdom of Callaway," with wonderful richness of soil, presents the best opportunity to-day for both the investment farmer and the seeker for a home where it requires no pioneering and no hardships.

It is the ideal country for grain and stock raising, corn and hogs, blue grass.

If you don't write for my list and find out more about "Callaway" farm bargains you're a loser. **W. E. Jameson,** No. 20, Fulton, Mo.

MISSOURI.—CALLAWAY COUNTY BLUE GRASS LANDS FOR SALE. Write me or come to Fulton, the town of schools and state institutions, and I will sell you any kind of a farm you want, any distance from town, at prices that will please you. Write me your wants and a quick reply will follow. Make my office in Fulton your headquarters. You are always welcome. **E. F. Tucker,** Fulton, Mo., Real Estate, Loans and Insurance.

MISSOURI. — Money in Sheep. Experts have said that there is nowhere a better sheep land than **The Hill Country** in Missouri, on the line of the Iron Mountain Route. It is right near the great sheep and lamb market of St. Louis, the largest and best in the world. The land is cheap. Write for free pamphlet entitled "Money in Sheep." Address, **B. H. Payne,** G. P. A. St. Louis, Mo.

MISSOURI. — 1,285-acre timber tract, $10,000; fine oak and hickory; 1,000 acres good plow land; large iron bank; six miles from railroad town. Wonderful bargain in farm tracts; no better soil. **S. L. Powers,** Wappapello, Wayne county, Missouri.

MISSOURI.—Central Missouri Farms. For Stock, Grain and Grass Farms that will prove profitable as Homes and Investments, write for new list. Farms described and priced. Easy terms. Low prices. **Hamilton Realty Co.,** Fulton, Missouri.

OKLAHOMA.—"Farmers of Small Means." —Oklahoma sells 2,000,000 acres of school land on 40 years' time; gives you a chance to own your home; also big opening of 4,000,000 acres of Indian land on four years' time; one crop pays for land; send 25 cents for descriptive booklet telling all about it. **M. N. Due,** Publisher, Dept. 31, Tecumseh, Oklahoma.

OKLAHOMA.—Two Fine Bottom Farms For Sale. 110 acres; all first bottom; one mile north of Guthrie, Ok.; 160 acres, two miles from Red Rock, Ok. For full particulars write **H. A. McCandless,** Perry, Ok.

TENNESSEE.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennesse Real Estate Company,** Morristown, Tenn.

TEXAS.—Land opening in the Pecos Valley. Tracts can be secured for immediate settlement under a mammoth irrigation system now building. Write for particulars. **F. E. Dobbins,** Land Commissioner, 850 Finance Bldg., Kansas City, Mo.

VIRGINIA.—VIRGINIA FARMS. Poultry, Fruit, Dairy, Grain, Stock, Truck Farms and Colonial Estates. Low prices; delightful climate; abundant pure water. Large Eastern markets. Timber lands a specialty. Write for free illustrated catalogue. **WILES LAND COMPANY, Inc., RICHMOND, VIRGINIA.**

CASH FOR YOUR FARM OR BUSINESS,
No matter where you live. **Write me today** if you want to buy or sell any **kind** of **Real** Estate or business. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

We can sell your property. Send description. **Northwestern Bus. Agcy., Minneapolis, Minn.**

RAILROAD LANDS VERY CHEAP.

FREE TRANSPORTATION.

To quickly build up population along the Washington and Choctaw Railroad in new reservation just thrown open, I will sell a little of our 100,000 acres of $25 and $50 lands at $17.50 per acre.

Magnificent opportunity for settlers, investors and speculators. Easy terms, as low as $1.00 per month. Any size tract from ten acres up. Gulf Coast Lands the most productive in the world—ten acres will yield an income of $5,000 a year. Sweet, pure water; cool, pleasant summers and mild, balmy winters; beautiful lands, adapted to farming, truck and fruit growing, or live stock, poultry, bees and dairying; no swamp, no stones; irrigation not needed; only part of the United States absolutely free from local diseases. Sixty miles from the coast; 21 hours from St. Louis; 29 hours from Chicago; with best shipping facilities. Don't buy lands anywhere until you investigate this. Send me your name—a postal card will do—and I will send you complete details, also a railroad pass free on Washington and Choctaw Railway, whether you buy or not.

M. G. WINEGAR, General Manager,
6155 Times Bldg., St. Louis, Mo.

Special terms to live land agents capable of buying two sections or more for spot cash.

WESTERN FARM LANDS
FAMOUS GRAND VALLEY ORCHARDS.
Plateau Dairy Farms, Debeque apple orchards, Northern Colorado farms, stock farms and ranches, etc. Propositions bearing closest investigations. Best bank references. Write for particulars. 3,500 cars peaches in Grand Valley this year.
THE J. C. VINING INVESTMENT CO.
533-17TH ST. DENVER, COLO.

Success of Hog Cholera Serum.

A thirty-day test of hog cholera serum ended satisfactorily at the Kansas City stock yards on August 20th.

It was conducted under the most rigid supervision of the United States government and the Kansas City Stock Yards company, and the unquestioned efficacy of the serum discovered by Doctor M. Dorset, a government specialist, for the prevention of hog cholera, was demonstrated.

Of a poisoned squad of thirty-five hogs, the thirteen which were not immunized at the beginning of the test are dead and the twenty-two which were treated are perfectly healthy.

The twenty-two were subjected to every conceivable form of exposure to cholera and the thirteen which succumbed to the disease died in the pens with the twenty-two at various times during the progress of the tests. The carcasses of the dead hogs were permitted to remain in the pens with the immunized animals sometimes two or three days. Every opportunity was given to the twenty-two immune hogs to succumb to the disease. Under normal conditions every hog would be dead. The fact that the twenty-two did not die is absolute proof, those who conducted the tests declare, that the serum is an unfailing preventive of hog cholera. The serum for use in the tests was furnished by Hon. James Wilson, secretary of agriculture, who took a personal interest in the tests and gave them his approval.

The hogs used in the test were purchased from a farmer who was willing to make affidavit that there had been no cholera on his farm in ten years.

The significance of this test is not greater than other tests already made, but it was probably the most thorough and public of all. With a sure preventive of hog cholera, the production of marketable hogs can be pursued without limit. No man ever failed in hog raising except by his own neglect or because the dread disease invaded his herd without his having power to prevent. This discovery is a very valuable service rendered the stock growing interests of the country on the part of the United States Department of Agriculture, and of much greater value thean the discovery of the tick fever in Southern cattle.

Speculative Wheat Figures.

The market is now trading on wheat for September, December, 1909, and May, 1910 deliveries. On July 30th, September sales were at $1.11⅝ per bushel; by July 31st the September market closed at $1.04½, and by August 31st, the price was 98½ cents a bushel. On June 30th, the wheat for delivery on September 30th, was $1.11⅝; this was reduced to $1.04½ by July 31st, and on August 31st, this September option closed at 98½ cents. Here we have a decline of 13⅛ cents a bushel in two months. On June 30th, December wheat closed at $1.09, on July 31st, at $1.02¾ and on August 31st, December wheat sold at 94¼ cents. For delivery in May next year on July 31st, the option sold at $1.02¾, and on August 31st, the close was 98 1-3 cents. It will be remembered that the May option was closed out at $1.34 the present year. The same market is now quoting May, 1910, wheat at 98 1-3 cents. The influence of the estimated large world's crop is to be seen in the decline.

"A room hung with pictures is a room hung with thoughts."—Sir Joshua Reynolds.

THERE'S ALWAYS ROOM AT THE TOP

The question is--how to get 'em there. Our "ladder" makes it easy.

It's all in the SALESMANSHIP. Try our brand of selling service. It has pleased and profited thousands of live stock feeders and shippers, and will do likewise for you.

What Hon. Jacoba Irene Did.

She is an Illinois Jersey cow, and her test is quite recent. It was mentioned before in this paper and is worthy to be mentioned again. This cow produced in one year 17,253 pounds, or nearly nine tons, of milk and 1,112 pounds of butter. This is an official record, made by a representative of the Dairy Department of the University of Illinois, and has broken all Jersey records. Only one other cow in the world has a higher record for one year, but taking her average production for four years, Jacoba Irene stands absolutely without an equal.

Prof. W. J. Frazer, of the University of Illinois, says that the record by Jacoba Irene is over four times the production of the average cow for Illinois and seven times the poorest fourth in Illinois. There are 250,000 poor cows in Illinois, so poor that it would take 209 of them to equal one such cow as Jacoba Irene in actual profit. How much easier to milk one such cow than 209 poor ones.

During this year she would have supplied eighty people with the average amount of milk consumed per capita and furnished cream for their coffee besides. This was rich Jersey milk containing 5½ per cent. butterfat, and worth for direct consumption at least 8⅓ cents a quart, amounting to $653.50 a year. A dairyman would need only four such cows to supply milk for the average-sized milk route, make him a good living and have an excellent profit besides. If one could be so fortunate as to own ten such cows he would have a nice little income of $6,535 a year.

The 17,253 pounds of milk produced by Jacoba Irene during the year contained 14.65 per cent., or 2,527 pounds, of total milk solids. This shows something of the perfectly enormous amount of work done by this efficient dairy cow in one year. Compare this with the work done by the average steer, weighing 1,100 pounds at the age of two years. When born he will weigh close to 100 pounds. Thus in the two years of growth he has actually produced 1,000 pounds of carcass, only one-fifth, or 200 pounds, of which is edible matter. This means that Jacoba Irene produced as much edible solids in one year as would twenty-five steers, thus certainly establishing by a good margin the world's record for a cow of any breed.

The Pure-milk Problem.

In the old days there were few problems connected with dairying. The first families depended on the family cow, and later the same cow was used to supply milk to the few families that had not cows. In the course of time the growth of the cities the villages brought into existence the small dairyman, who produced his own milk and distributed it to a fixed list of customers.

But the continued growth of the country has increased the number of the consumers of milk and pushed the producers far away. The supplier of milk no longer produces his milk within a few miles of the users of it. He is not even known by name to the consumers of the milk. He produces his milk, hauls it to the railroad, and sends it out into the great unknown. Out of this condition rise many of the dairy problems that now confront us, and which will become more serious with the continued increase of population.

One of the problems that has assumed great proportion is the cleanliness of the milk. Since the milk is to be consumed by people unknown to the producer, he becomes somewhat careless as to the conditions that surround his production. When ten thousand producers of milk let up a little on the care of milk pails, the care of the stable, the care of the hands that draw the milk, and so on, it becomes in the aggregate a great matter.

The cities have tried to cope with this condition by appointing inspectors to go out into the country and examine the farms and dairies and to compel them to clean up on the pain of having their milk boycotted by the city consumers. This has proved efficacious to some extent, but it is impossible to have enough inspectors to watch ten thousand farms. The cleaning of the places in which milk is produced helps some, but it does not insure personal cleanliness in the drawing and handling of the milk.

We need a higher morale on the farm that produces milk for sale to distant customers. The conscience of the milk producer must be appealed to. Dirt is dangerous. Disease of many kinds are carried by dirty milk. Only last year a great epidemic of scarlet fever was spread in the vicinity of Chicago through contaminated milk. On one of the dairy farms inspected at that time it was found that a milker had had scarlet fever and had been doing his part of the milking during most of the time. He was ambitious and not very sick, so he kept at work. He was a first class disseminator of disease.

To keep sick people from taking part in the production of milk is one of the difficult problems of the present time. The scarcity of labor makes it sometimes a great temptation to accept the services of men that may be suspected of being in the first stages of consumption.

When we get down to the bottom of things in milk producing, we find that the factor we call cleanliness counts for more than most others, so far as the keeping quality and healthfulness of the milk are concerned.

As the years go on we shall pay more and more attention to the cleanliness of milk produced.

The Jersey 700-pound List.

During the year 1909 to August 2d, nineteen Jersey cows undergoing authenticated tests finished up their year's business with butter production ranging from 700 to 1126 pounds per cow per year with an average of 818½ pounds of butter for each of the 19 head. The butter is figured on an 83 per cent basis, and is computed by overrun for each grade of milk, and gives the quantity that could be actually churned out, allowing for all probable losses in creaming and churning.

The list includes three cows each producing over 1000 pounds of butter in a year. They are Hon. Adelaide of Beechlands 168,699, 1003 pounds 6 ounces, owned by Beechlands Farm, East Aurora, N. Y.; Hon. Olga, Fourth's Pride, 160,791, with 1005 pounds 14 ounces, also belonging to Beechland's and the world famous Hon. Jacoba Irene, 146,443, owned by the Auten Farm, Jerseyville, Ill., whose record was 1126 pounds 6 ounces of butter in a year.

We understand that many other tests are being conducted, and that other cows are heading for a qualification in this list of seven hundred pounders or better.

A natural question in this connection is "Did these Jersey Cows give any milk?" The answer is "Yes." The smallest production was by Star of Weldon, an Iowa cow, who gave 9743 every day in the year. Our readers pounds of milk, from which was made will notice that we have added the 713 pounds 10 ounces of butter, and prefix "Honorable" as a title to the the largest milk production was by names of the cows that have produced Hon. Jacoba Irene, whose milk record 1000 pounds of butter or better. We was 17,253 pounds in one year, and believe it is a very good idea, and the average of 19 cows was 12,792 we hope the agricultural press will pounds of milk during the year. By adopt it. It applies equally to Hon. reducing the pounds to liquid measure Yeska Sunbeam, the Guernsey; Hon. we find that all these Jerseys, busy Colantha 4ths Johanna, the Holstein, with the production of butter fat, were and all other cows giving 1000 pounds credited with 16 1-3 quarts of milk of butter or better.

The Passing of the Milk Factories

has been caused by

The Universal Adoption of Cream Gathering

The Vermont Farm Machine Company are the pioneers in the cream gathering system. This cannot be successfully denied.

The farm or dairy sizes of the **United States Cream Separators** made such headway that the proprietors of milk factories, against their will, had to change. **The farmers demanded it.**

Not **10 per cent.** of the whole milk factories of nine years ago are running today as such. They have either closed up or changed to cream gathering, the more economical plan. Our "would-be-competitors," who are always "claiming the earth," cannot deny this fact.

These "would-be-competitors" had been supporting the whole milk scheme and fighting the progressive cream gathering system. When they saw that their efforts were futile—that the change was bound to come—they tried to save what they could out of the wreck.

If you have read their big blustering advertisements containing testimonials from creamerymen, you have noticed that nearly all admit they changed from whole milk and took agency for farm separators of this particular "would-be-competitor," because of the **large commission allowed to the creamery on the sale of their Separators.** The creamerymen made more money out of them than they did on the cream. Some went so far as to refuse to take cream from any separator which they did not sell and get the commission on.

This worked for a time, but the farmers were **too intelligent to be bulldozed** in this way. They insisted on having the BEST separator. All these creameries tacitly admit that they had to give up their exclusive agencies and take cream from the United States Separators.

Several events forced them to it. Their pet separator was beaten in the greatest International skimming test ever held, in endurance tests running over thirty days.

The **United States Separator** also **beat this pet separator** in the county where its factory is located; and in that county, for ten years the United States has averaged more than **three separators** to every one of this "would-be-competitor's."

Figuring on the same basis as our "would-be-competitors" figure their profits, it puts **seventy-five dollars a year into the farmer's pocket** if he uses a United States Separator instead of this "would-be-competitor's separator.

A United States Separator catalogue, which can be had for the asking, explains all these things fully.

Quick Silo Building For Permanent Results.

"The best type of silo for cheap and quick erection as well as general durability, considering its cost, is the hoop stave silo," says Prof. C. A. Ocock, of the Agricultural Engineering Department of the College of Agriculture, University of Wisconsin. "Farmers frequently inquire how they can best provide themselves with a good silo and do it late in the season in time to receive the corn crop which is now approaching maturity. With good care the stave silo may last fifteen to twenty years. Care is especially importance since the save silo is like a large tub and the hoops must be kept tight or the tub may fall to pieces, especially when it is empty during dry summer weather."

The solid concrete foundation is best, continues Prof. Ocock, and this may be made by building forms for the wall above ground not less than twelve inches apart at the top and about sixteen inches at the bottom with the inside wall perpendicular. On level ground the foundation should extend two to three feet into the soil depending upon whether it is solid or loose. On well drained soils a shallower foundation will prove effective.

A solid concrete bottom should be laid within the foundations by filling in about three inches of coarse gravel, upon which are placed three inches of concrete. Finish with a coat of cement and sand. For the foundation forms set studding one foot apart and use one-half inch lumber bent in the desired circle.

The ready made silo is usually best as this can be purchased from manufacturers complete and will prove more satisfactory than when made from materials prepared at home. The grades of timber vary greatly, fir, cypress and red-wood being best ,and highest priced. A good 150-ton silo can be purchased at a cost of $200 to $500 acording to the material. A cover should be provided where there is much snow and the door must be air-tight and easily removed from the outside as soon as the silage has been removed below the level of the door within.

Hints on Silo Erection.

Be sure that you have plenty of staves then follow the manufacturers' directions carefully. The drying out of the staves subsequent to a season's use, followed by tightening of the hoops may draw the walls inside of the foundation unless the full number of staves are used when first erected. It is better to have the silo larger than the foundation the first year than to have it too small later on.

Get in your orders to manufacturers early and urge that they be rushed in order to avoid delay in getting your materials. When the silo has been erected it should be thoroughly stayed by four guy wires from the top hoop to a stout stake set at least 30 feet from the bottom of the silo. This will prevent racking during windy weather when the silo is empty and will greatly increase its period of service. During dry weather use especial care to keep the hoops screwed up tight and do not loosen them when filling the silo. This is undesirable and unnecessary.

Paint the staves on all sides before erecting the silo rather than to paint the exterior later on since paint put on the outside afterward holds water in the cracks and causes the staves to decay more rapidly.—Press Bulletin, University of Wisconsin.

The Cow Knows the Clothes.

Columbus, Ind., Aug. 21.—William Baker, a farmer who lives in Clay township, Bartholomew county, has superceded his wife in the affections of the family cow, but the cow does not know it. Baker is playing a joke on the cow.

Mrs. Baker always milks the cow, but this week she decided to go to Newman, Ill., on a visit. When the cow returned from the pasture Baker took the milking pail and the little stool and started to milk.

The gentle bovine turned her head and stared in mild surprise to see a man at her side. Then she became genuinely aroused and started trouble. She kicked the bucket and the bucket holder, and tore up things generally. Baker was in a quandary. The cow had to be milked and his wife was on her way to Illinois. Then he had an idea and he put it to work.

He went to the house, donned a dress belonging to his wife and pulled a sunbonnet over his face. Returning to the barnyard he approached the cow and she seemed glad to see him. He milked without any trouble, and now he has to wear his wife's clothes whenever milking time comes.

Dairy and Creamery Notes.

A widow in Chicago who sells milk was served with a notice to the effect that a sample of milk taken from her depot contained 3,175,000 bacteria per C. C., and gave her ten days to discontinue the sale of milk containing over 3,000,000 bacteria per C. C. If she does not reduce the bacteria in the milk she is to be prosecuted. We get this from the Milk News as being an official notification from the Board of Health at Chicago. The Board evidently made a mistake. The notice ought to have been served on a cow.

In order to reduce pounds of milk to gallons the Connecticut way is to divide the number of pounds by 2.15 to reduce to quarts, and divide the quarts by four to reduce to gallons.

The Secretary of the American Ayrshire Association mentions twenty-five cows of the breed. The average milk production was 10,635 pounds each cow per year, and the average butter production was 500 pounds for each cow.

On Monday, August 30th, the official Elgin quotation was 29 cents for choice creamery butter, against 28 cents the week before, 23 cents a year ago, 26 cents two years ago, and 24 cents three years ago. We take our information from the Elgin Dairy Report.

St. Louis cheese quotations, September 1st, per pound: Northern—Twins, 15½c.; Singles, 15¾c.; Long Horns, 16¾c.; Daisies, 16½c.; Young Americas, 16¾c.; Prints, 17¼c. Limburger, 14½ to 15c.

The Coming Universal Use of

DE LAVAL

CREAM

SEPARATORS

The same economical considerations which have already brought about the practically universal use of creamery and factory sizes of DE LAVAL Cream Separators are absolutely certain to accomplish the same result in the use of farm and dairy sizes of such machines within the next five years. This is no mere advertising claim but the simple statement of a conclusion based on the logic of facts as positive as to outcome as the solution of a mathematical problem.

The same considerations of greater capacity; closer separation, particularly under hard conditions; better quality of cream and butter; more economical operation, and greater durability are bound to ultimately accomplish the same result in the use of small as of large sizes of cream separators.

But naturally it requires longer and is vastly more of an undertaking to educate the 2,500,000 present and prospective American users of farm sizes of separators as to the importance of separator differences than the 12,000 users of creamery separators. Naturally it is more difficult to make a user appreciate a difference of $50.- a year in results than a difference of $1,500.-, even though the difference of $50.- may relatively mean more to the user than the difference of $1,500.-.

Again, the users of factory or creamery sizes of separators have so much better sources of information. The use of the separator is a business with them. The results are known from day to day and year to year, and what one user accomplishes is readily comparable with the results of another. On the other hand, the great majority of users of farm and dairy sizes of separators know little of separators and cannot easily determine whether their results are as good as they should be or might be better under other circumstances. But the problem is bound to finally work out in the same way.

The DE LAVAL factory separator was invented 31 years ago and commenced to come into creamery use 28 years ago. Within a few years the original patents began to expire. 15 years ago there were a dozen makes of power cream separators on the market. Today the use of DE LAVAL factory machines exceeds 98 % and is almost literally universal. It has been so for five years. No effort is longer made to sell any other make of power separator.

The DE LAVAL hand separator was invented 23 years ago and commenced to come into farm use about 20 years ago. As the earlier patents expired there were more than 30 makes of such machines on the market five years ago. Today there are less than a dozen and not more than five which have a sale worth counting at all. Each year the number decreases and their sales become fewer and more difficult.

What is true in America in this way is true in even greater degree elsewhere throughout the world. In many countries the sale of DE LAVAL machines is now almost universal. Dollars-and-cents differences in product mean more there than to American farmers. The sale of cheap "mail order" separators has not been attempted elsewhere, and would-be competing manufacturers and dealers have never been so unscrupulous in making the unjustified "claims" that so many American buyers have accepted as facts.

It makes an AVERAGE DIFFERENCE OF FIFTY DOLLARS A YEAR whether the farm user of a separator uses the DE LAVAL or some other kind. It will make that difference this year, and go on making it until a DE LAVAL is used. A DE LAVAL catalogue helps to explain this and is to be had for the asking, as well as an Improved DE LAVAL machine for practical demonstration of it to any intending separator buyer.

Arkansas Rice—Fortunes in It.

In our last edition we illustrated an article concerning "Arkansas Rice" with the picture of a man standing up to his neck in a rice field. This month we desire to say a few more words upon the subject. The rice fields of Arkansas are worthy of investigation. People in cities are aware how difficult it is to engage in city business with moderate means, since there has been consolidation of capital to govern and control so many lines of industry. The choice of people of moderate means, who do not care to work for an uncertain salary, lies between the business of a retailer to a life in the country. We cannot all be retailers, but we can all find homes, independence and profit in the country just so long as cheap and valuable lands can be had. The new beginner should study some specialty so as to obtain the benefit of the experience of others, to profit by their example and arrange to "do likewise" and arrive at the same results as those who had been engaged in the same business for a season of

A Weiner, Ark., Rice Well.

years. The safest line of conduct for any experienced farmer to pursue in opening up a new farm in a new country is to follow the example of those who have been there long enough to understand all local conditions. If he does this he cannot go wrong and later he can turn his own experience into account and branch out in other directions.

Arkansas Rice is an irrigated farm proposition—fortunes have been made at it near the coast in spite of some draw-backs the Arkansas fields are not subjected to such as the freedom from salt water and the ravages of coast birds. At first it was believed that the limit of the Stuttgart rice fields was a few miles north of Stuttgart, but it is now developed that rice can be grown as far north as Weiner, 88 miles from Stuttgart, and only 290 miles south of St. Louis on the Cotton Belt route. This is a new field and enlarges considerably the rice-growing territory of Arkansas. About 1000 acres are now under successful cultivation at Weiner and next year three times the acreage will be sown in rice. Land here can be had cheaper than at Stuttgart, on account of the fact that it was not known until this season that it was suitable for rice production. Full particulars concerning the new rice lands and the great bargains can be obtained by addressing E. W. LaBeaume, G. P. A., Cotton Belt Route, 1327 Pierce Bldg., St. Louis, Mo.

Well-fed Cow Pays Best.

We have often said, and surely believe it, that 80 per cent of failures in dairying are due to feeding the cows short rations. This appears to be supported by the "Study of Connecticut Dairy Herds," by Prof. J. M. Truman of the Storrs Experiment Station. He says:

"It is worth noticing that in practically every case the cows fed the most expensive ration made the largest net profit. Wherever there was an attempt to save money by feeding a cheap ration the loss in milk overbalanced the saving in feed. It is true that Herd No. 4, which had the highest average cost per year, did not have the highest net profit per cow, but that has already been explained as being due to the lack of pasture. A study of the individual cows in this herd shows that as a rule the cows using the most food gave the largest profit.

Wanted a Riding Churn.

An agent was going through the country selling a new churn. At one farmhouse he asked the wife if she did not need a patent churn. She said, "Yes, I do." And as the man started after it she inquired, "Is it a riding churn?" "No, not exactly, but what kind of a churn is that?" "Well," answered the housewife, "my husband always buys riding plows, riding cultivators, riding hay rakes and such things, and I've made up my mind that I'm going to have a riding churn."—Breeders' Special.

Chief of Milk and Cream Exhibit.

C. B. Lane, formerly Assistant Chief of the United States Dairy Division, has been selected to look after the milk and cream exhibit at the Fourth National Dairy Show. The displaying of these products, in competition for prizes, was inaugurated by Mr. Lane at the National Dairy Show when he was Assistant Chief of the Dairy Division. The growth of interest on the part of those producing certified or market milk, and the increasing attention given to city milk supplies by the health boards, has made this an important feature of the dairy show. Premiums will be awarded on much the same plan as in previous years. The dairy show will be held October 14 to 24 at Milwaukee, Wis.

Cost of Producing Milk.

The New Jersey Experiment Station reports that in a herd containing 35 cows one year and 34 the next the average yearly production per cow for the two years was 6,348 pounds of milk averaging 4.32 per cent fat, which would yield 320 pounds of butter. The cost of feed per cow averaged $46.19, making the cost of 100 pounds of milk, not including that for labor, 72.78 cents. At $1 per 100 pounds for the milk the average return per cow would be $17.29 for the year. At 18 cents per pound for butter it would be $11.41. Under these conditions the cow must produce 4,619 pounds of milk, or 257 pounds of butter, to pay for the food she eats. The only profit, if any, for labor expended would be in the manure. The manurial value of the feeds purchased is, of course, a considerable item.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock, 890 Carrier Building, East Hampton, Conn., says that if any of our readers afflicted with a Kidney or Bladder trouble will send their address to him, he will gladly and without charge direct them to the splendid remedy he so successfully used at home in his own case.

The Dairy Show.

The National Dairy Show Association will hold its fourth annual dairy exhibition at Milwaukee, in the new Auditorium, October 14-24. It is desired to make this dairy show a strong representative of all dairy interests, to bring together dairymen, butter and cheese makers, farmers and manufacturers of dairy products, from all parts of the country for educational purposes; also to be present at this gathering the best and most up-to-date makers of dairy machinery and to show choice herds of cattle representing all the different dairy breeds.

Prof. H. E. Van Norman, secretary and manager, is at the Plankinton House, Milwaukee, and will remain until the show is over.

Pea and Bean Threshers.

Don't forget the pea and bean threshers manufactured in sizes to suit any and all circumstances by J. L. Owens Co., 679 Superior street, Minneapolis, Minn. Write for free book on Pea and Bean Culture. It is extremely interesting to farmers who study the economies of their business.

Paints For the Farm.

There is more swindling in paint than in almost any other material; therefore we have invited Sherwin-Williams Company, a strictly reliable firm, to furnish each of our readers with a free copy of their book entitled "Paints and Varnishes For the Farm." It will tell how to save money with the right paint. Address, Sherwin-Williams Company, 689 Canal Road, Cleveland, Ohio.

A Considerate Companion.

Four old Scotchmen, the remnant of a club formed some fifty years ago, were seated around the table in the club room. It was 5 a. m. and Dougal looked across at Donald and said in a thick, sleepy voice:

"Donald, d'ye notice what an awful peculiar expression there is on Jock's face?"

"Aye," said Donald, "I notice that; he's deead! He's been deead these four hours.'

"What? Dead! Why did ye no tell me?"

"Ah, no—no—no," said Donald, "A'm no that kind o' man to disturb a convial evening."—Tit-Bits.

HAMBURG BELLE.

he New Queen of Trotters—Two Race Records Broken.

The performance of Hamburg Belle Cleveland, Ohio, on August 25th a matter of interest to all lovers horses.

The contest was between Hamburg elle 2:02¾ by Axworthy and Uhlan 03¾ by Bingen. Hamburg Belle de- ated Uhlan in two straight heats, id also set a new world's record for trotting race and for the fastest o heats ever trotted.

The new record for a mile is 2:01¼ id was made in the first heat of the ce. The former record of 2:03¼ as made by Cresceus in a match ce with The Abbot at Brighton each in August, 1901.

Sweet Marie formerly held the rec- d for the fastest two heats trotted, ving made miles in 2:04¾ and 03¾ at Syracuse, N. Y., September . 1906. Hamburg Belle's time is 01¼ and 2:01¾.

Immediately after the first heat amburg Belle was sold to H. M. anna, of Cleveland, for $50,000 by dward and Joseph Madden, owners the mare, and sons of John E. adden.

Hamburg Belle drew the pole and t away with a head the advantage the start. The mare drew away om Uhland, until she was a length ead at the quarter pole. Uhland owed a remarkable burst of speed the next quarter, forcing Hamburg lle to use every bit of her strength prevent him from going ahead of

The mare led by less than a head en the half-mile post was reached 1:01. Down the track the horses d to the three-quarter pole in 1:31 when they headed into the home tch they were neck and neck. mburg Belle appeared to be tiring a mighty shout "Uhlan wins" it up from many parts of the grand- id.

Driver Proctor urged Uhlan to exert himself to his best and for a moment it seemed that he would race under the wire a winner; then Driver Andrews, behind Hamburg Belle, waved his whip sharply above the back of the lagging mare.

As though electrified by the wish of the whip, the mare took on new courage and pushed steadily down the course away from Uhland, winning by a head and establishing the new mark of 2:01.

In the second heat Hamburg Belle got away a neck ahead and lengthened her lead to a length in the first quarter, which she made in 30½; Uhlan spurted at the turn but a few feet from the half-mile pole a boot slipped causing him to break.

After losing 100 yards, Driver Proctor got the horse on his feet. The boot slipped further down, caught in Uhlan's shoe and pulled it off, causing the horse to come limping home, distanced.

St. Louis Mule Trade.

Holland-Nugent-Maxwell Bros. Commission Co. issued a Mule Circular to the trade September 1st., which contained the following:

"The mule trade was active. We had a good run and the trade was very satisfactory. All mules that are fat and finished and ready to come to market are selling good. There is a good demand for big mules with plenty of quality and they are selling as high as they ever sold in the world. Good miners are selling strong, in fact, all good, fat, finished mules are selling good; and remember, that we have got the best salesmen in the country to handle your stock. There is no trouble to sell good, finished mules to make money."

WE WILL HOLD OUR
SEVENTH and EIGHTH
Range Horse
Sales
TUESDAY, Sept. 7th, Sept. 21st,
AT
THE ST. LOUIS HORSE AND MULE MARKET

And every two weeks thereafter until the close of the season. We will hold our regular Domestic Horse Auctions throughout the year on WEDNESDAYS and THURSDAYS. Write us for further information.

Campbell & Reid and Western Sale Stables Co.,
NATIONAL STOCK YARDS, ILL.

Trumans' Shire Mare Sale.

The auction sale of imported Shire mares by Trumans' Pioneer Stud Farm, Bushnell, Ill., August 11th, resulted in an average of $600 for twenty-seven head. The top price paid was $1,300, by Samuel Myers, of Newark, Mo., for Wrydeland's Girlie, a high-class mare foaled in 1907. D. D. Johnson & Son, of Curlew, Ia., paid $1,000 for the brown mare Nottingham Trimmer, and Frank Berkey & Son, of Ankeny, Ia., paid the same price for Horbling Star, a foal of 1906. Messrs. Truman will have a most select lot of Shire, Percheron and Hackney stallions at the Illinois State Fair, the best they have ever shown. Our readers should write to Messrs. Trumans' Pioneer Stud Farm, Bushnell, Ill., and ask for their catalogue and large bird's-eye view of Pioneer Stud Farm. It will be necessary to mention the National Farmer.

Mule Quotations.

In a general way, at the St. Louis National Stock Yards, 14-hand mules are quoted at $80 to $150; 14¼ hands at $100 to $165; 15 hands at $125 to $200; 15½ hands at $135 to $225; 16 hands and upward at $150 to $275. These prices are for carloads as they arrive in good condition. Select mules, in pairs, good bone, colors, substance and weight, are quotable at $500 to $700 for the pair.

September Range Horse Sales.

At the St. Louis National Stock Yards the September range horse sales will be held on Tuesday, 7th, and on Tuesday, the 21st. These sales are conducted by the Campbell & Reid and Western Sale Stables Company, and generally the offerings range from 1,200 head upward. Any further particulars can be had by addressing J. J. Searcy, Secretary, National Stock Yards, Ill. The best way, however, is to drop everything else and attend the sale.

The Best of the Season.

Holland-Nugent-Maxwell Bros. Commission Co. hold auctions on Monday and Tuesday at the St. Louis National Stock Yards. In their last sale, in August, they had 716 horses, every one direct from the country and sold on the open market. They reported the trade as being the best of the season. "Southern horses never sold better, big horses in strong demand, fat chunks, 1,300 pounds, sold fairly well if they were fat, full aged and finished. Common, thin, horses were the only kind that suffered, but they sold as high as any one could expect them to at this season of the year. There were plenty of buyers for all horses suitable for Eastern trade. The South were represented from all sections and more buyers than have been here any time this year."

Horse and Mule Notes.

At the Audrain County Fair there was a magnificent display of Missouri saddle horses. It was a $500 stake ring, and was won by Astral King, owned by Houchins & Anderson, of Jefferson City; Golden Glow, the property of A. S. Burr, of Bement, Ill., second; Lady Blees, owned by John Hook, of Paris, third; and Princess Belle, owned by Tom Bass, of Mexico, fourth.

At Cleveland, O., over the North Randall track, on August 13th, Country Jay reduced the world's record of 2:13¾ for trotting a mile under saddle to 2:10½. He was ridden by Ramey Macey, son of Gus Macey, the famous trainer and driver. The former record was held by Charlie Mack, ridden by C. K. G. Billings at Glenville, O., in 1904.

The Farmers' Home Journal says: "At the Hardin County Fair held at Elizabethtown, Ky., Ben F. Craddock, of Nolin, who owns two fancy spans of mules, one pair costing $800 and the other $900, carried off six blue ribbons in the mule rings."

At Parsons, Kas., on August 11th, Ginger, owned by H. W. Brown, of that city, did a quarter in thirty-one seconds flat, thus lowering a world's record for pacers in a race over a half-mile track. The time for the mile was 2:07¼. It required four heats to decide the race.

The United States Army has established a remount station at Fort Keogh, near Miles City, Mont. The intention appears to be to purchase Western three-year-old colts and train them for cavalry service and then distribute them to different regiments. Some very good selections have already been made by Captain Howard, who is in command of the Fort Keogh Reservation.

JOS. A. MAXWELL MULE CO.,
Postoffice, National Stock Yards, Ill.
DEALERS IN ALL KINDS OF
MULES
Especially the Better Class.
Large Mules and Miners.

MR. JOSEPH A. MAXWELL, Pioneer Mule Dealer of America, founder, and formerly of MAXWELL & CROUCH, has now associated with him his sons, GEORGE W. MAXWELL and FRANK MAXWELL.

A large, select stock of all classes always on hand. Our guarantee will ever remain as it has during the many years of our existence—GILT-EDGED. Information concerning the market cheerfully given.

Our References: Anyone who has ever bought of us.

Jos. A. Maxwell Mule Co.,
NATIONAL STOCK YARDS, ILL.

Jos. A. Maxwell Mule Company.

This firm is never without a fine lot of first-class mules, ready for immediate service and fully up to all market standards. The firm is composed of the pioneer mule dealers of St. Louis, Mr. Joseph A. Maxwell and associated with him are his sons, Geo. W. and Frank Maxwell. This organization is up-to-date and gilt edge. Contracts are entered in for the sale and delivery of horses and mules.

The Heavy Draft Mule.

The mule is the draft horse of the South, and so far as large mules are concerned, they are in demand everywhere. Shipments from the St. Louis National Stock Yards indicate that the large mule demand has no limtations. Canada, Maine, New York state and Pennsylvania are drawing on St. Louis for large mules, and it often happens that a select load of mules will be sold for delivery in mule-raising territory. Mule dealers are having the utmost difficulty in getting together fine large spans of mules.

At St. Louis apples are quoted at $1.50 to $3.65 per barrel, the bulk of sales at $2.0 to $2.75. The Jonathan apple seems to sell in quantity at the best prices.

Don't Have a Blind One

"VISIO"

Wonderful Discovery

DISEASES of the EYE successfully treated with this NEW REMEDY.

AN ABSOLUTE CURE

for Moon Blindness, (Ophthalmia), Conjunctivitis and Cataract, Shying horses all suffer from diseased eyes. A trial will convince any horse owner that this remedy absolutely cures defects of the eye, irrespective of the length of time the animal has been afflicted. Range Horse Sales.

On Tuesday, August 26th, at the St. Louis National Stock Yards, Campbell & Reid and Western Sale Stables Company held their auction of Western range horses and sold 1,400 head, 250 of them being broken to halter. The quality was good, prices look strong, but the actual values were lower. In other words, the buyers obtained better horses for the money. The sales were in carloads and bunches as follows: Load of mules, two to five years old, $127 per head; 1,200-pound mares and geldings, $114; mules, two-year-olds, $100; 1,210-pound mares and geldings, $100; 1,100-pound mares and geldings, $90.50; 1,050-pound mares and geldings, $80; 1,050-pound mares and geldings, $76; 950-pound thin mares with colts, $68; 1,050-pound mares and geldings, $75; 1,000-pound mares and geldings, $66; 1,050 pounds, mostly mares, $75; 1,100-pound mares and geldings, $80; 1,100-pound mares and geldings, $78; 1,050-pound mares and geldings, $74.50; 1,000-pound mares and geldings, $74.50; 1,000-pound mares and geldings, $70; 1,000-pound mares and geldings, $68; 1,050-pound mares and geldings, $58; 900-pound mares and geldings, $49.50; 850-pound mares and geldings, $46; 800-pound smooth mares and geldings, $40; twos and threes, mares and geldings, $38.50; four to seven-year-olds, $33; 1,000-pound mares and geldings, $58; 900-pound mares and geldings, $44; 850-pound mares with colts, $46.50; 800-pound mares and geldings, $35; yearlings, $32; 1,000-pound mares and geldings, $55; 850-pound thin mares and geldings, $38; 750-pound mares and geldings, $36; two and three-year-olds, $35; 700-pound thin mares with colts, $26; 700-pound mares and geldings, $37.50; 800-pound mares and geldings, $33; twos and threes, $24.50; yearlings and twos, $22; 700-pound poor mares with colts, $25.50; no brands, threes and fours, mares and geldings, $33; 750-pound mares and geldings, $33.50; 1,000 pounds, mostly mares, $66.50; 900-pound mares and geldings, $53; three to five-year-olds, mostly mares, $40.50; twos and threes, mares and geldings, $42.50; twos and threes, mostly mares, $31.50; 800-pound mares and geldings, $31; 750-pound mares and geldings, $29.50; 700-pound mares and geldings, $27.50; 800-pound mares and geldings, $35; three to seven-year-olds, $44.50; yearlings and twos, $22; yearlings, $19.50; yearlings and twos, $16; no guarantee, $14.50; 700-pound thin mares and geldings, $21; no guarantee, $11; no guarantee, $10 per head.

The September sales will be held Tuesday, 7th and 21st, and the first October sale will be on the 5th. Any further information can be had by addressing J. J. Searcy, Secretary, National Stock Yards, Ill.

Exports of Horses and Mules.

During the year ending June, 1909, the mules exported by the United States were 3,432 head. The horse exports were 21,616 head, distributed as follows: Great Britain, 1,267; Belgium, 23; France, 17; Germany, 81; British North America, 17,277; Mexico, 1,619; West Indies and Bermuda, 974; Asia, 15; other countries, 343. Two years ago mule exports were 6,781, and horses 33,882.

SAVE YOUR HORSES FRAZIER'S DISTEMPER CURE

Guaranteed By All Druggists.

At any time that you buy a bottle of FRAZIER'S DISTEMPER CURE from your druggist and results are not satisfactory, your money will be refunded. Beware of the druggist who wants to substitute. BINKLEY MEDICAL COMPANY, Nappanee, Indiana.

ST. LOUIS THE GREATEST AND BEST HORSE AND MULE MARKET IN THE UNITED STATES. Bay horse and mare, 16½ hands high, perfectly matched, weighing 1,600 pounds each. This pair was bought singly and paired by Mr. George W. Maxwell at the St. Louis National Stock Yards and sold to Mr. Jno. W. Byers, Live Stock Agent of the Pittsburg Coal Company, of Pittsburg, Pa. To substantiate the height of these horses it is only necessary to say that Mr. Byers, who stands in front of them, is himself 6 feet 2½ inches tall and weighs 280 pounds. He is a very popular visitor at the St. Louis National Stock Yards, where he buys and ships out many car-loads of horses and mules.

ST. LOUIS THE GREATEST MULE MARKET IN THE WORLD. The business end of first-class Missouri mare mules bought and sold at the St. Louis National Stock Yards by Mr. Henry Sparks, President of the SPARKS BROS. MULE CO. Another picture of these mules, showing the side view, will be found in this paper.

Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

The Lawrence-Williams Co., Cleveland, O.

The True Horse Situation.

Summed up in a few words, the horse situation is this: "Plugs are plentiful and good horses are scarce." We are informed that during fifteen years ending with the year 1908 the population of this country increased 33 per cent and that the number of horses increased 23 per cent. It is represented that in consideration of automobiles displacing many horses in city work there ought to be enough horses and mules to serve all market purposes, but experience leads to another conclusion.

In market statistics horses and mules are classed together and have to be so considered. The largest marketing of horses and mules in the west was in 1904, and since then the number has decreased, we may say, continually. It is only twelve to fifteen years since the determined effort began to concentrate horses and mules for sale at all the stock yords where cattle, hogs and sheep are sold. It is only a few years since range horses began to be sold high enough to pay freight bills and leave the shipper sufficient money to justify him going on with his business. Up to five years ago a good active market would bring in a large number of horses, but now it will not. There is a continual rivalry between seven of the principal western markets. During the first seven months of the year 1908 by a very hard and determined struggle for business these markets received 215,699 head of horses and mules, and during the corresponding period this year, with the struggle more intensified, the total was only 215,450—showing a small decrease of 249 head. With an increase of horses in the country there ought to be an increase of receipts at these markets. Of the seven months' total the St. Louis market received 66,681 head, Chicago 65,751, Kansas City 36,258, Omaha 16,949, Sioux City 6,921, St. Joseph 14,507 and Fort Worth 8,383. With one unimportant exception, all these markets have received more horses and mules in previous years than they did in 1909. So far this year the eastern movement of horses from the western ranges shows considerable decrease from former best records, but there is likely to be a gain before the end of the year.

Going in and among the shippers of horses, who are buyers in the country one week and sellers on the markets the next, they say, "In the country horses are scarce and high and in the market the horses are all cheap, except the good ones. The good ones are mainly stylish chunks and heavy drafters. The demand for coach and carriage teams is only a remnant of what it once was. Ordinary work horses bring no premium. Stylish Southern horses sell almost as well as ever. There is a total absence of any urgent buying, but there is and has been sufficient inducement to bring horses into the markets if there was a surplus in the country. Quiet buying is going on all the time in a conservative way. The regular trade is always in business—but urgency in any line of horse buying would range the market upward and even then large receipts as compared with former records could not be assembled at any market.

"People in the horse trade compare these markets one week with another. They call the market dull and slow when the action is not quick enough to suit them—and it is a fact that, compared with former years, the market is high now. A first-class draft horse at $275 is $75 higher than several years ago. Top Southern horses now selling at $125 to $150 used to sell at $60 to $75. Western range horses selling at $45 to $60 used to sell at $25 to 30. Many horses for city use selling at $150 to $200 used to sell at $100 to $125. This is encouragement for the horse raiser to go on with his business; it is also encouragement for a farmer to raise a few colts; it is also encouragement for the farmer to buy and fatten and break range horses and send them back to be sold at the same market. The automobile was expected to injure the market for pleasure horses, and it has surely done so, but the commercial grades of horses are still right side up on the market."

Another Record Broken.

At Lexington, Ky., the world's record of 2:08¾ for three-year-old pacers, held by Brenda Yorke since September 16th, 1906, was broken on August 11th by Maggie Winder. She is a daughter of Oratorio and Clara Direct and negotiated the distance in the first heat of a race in 2:08¼. She came back in the second and final heat in 2:09.

ST. LOUIS THE GREATEST HORSE AND MULE MARKET IN THE WORLD. Full train of mules leaving Kansas City for the St. Louis market. Owned by the SPARKS MULE AND HORSE COMPANY, the said firm leaving the Kansas City market to engage in business at the St. Louis National Stock Yards.

ANNOUNCEMENT.

We wish to announce to our friends and the public generally the entire removal of our horse and mule business from the Kansas City Stock Yards to the National Stock Yards, East St. Louis, Ill.

We made the move because the National Stock Yards is an older, stronger and a better established market—this, of course, is to the material advantage of the buyer and seller.

We thank all of our friends for their very liberal patronage, loyalty and support during a period of nearly a quarter of a century of that we have been in business in Kansas City.

We invite all to visit us in our new location. We will carry a larger stock of mules than ever before. We will also handle horses.

On account of our brother, "Henry," doing business at the St. Louis National Stock Yards under the style of "SPARKS BROS. MULE CO.," we have chosen the name "SPARKS MULE AND HORSE CO.," (John, Clark and Charles Sparks). We are now open for business at our new place.

Promising fair treatment to all, asking a continuance of your patronage, we remain,

Yours Truly,

SPARKS MULE AND HORSE CO.,

National Stock Yards, East St. Louis, Ill.

COMPETITION

is the Watchword of St. Louis.

ACTIVE COMPETITION FROM MANY AND DIVERSE PURCHASING INTERESTS.

The Superior Location and the Push and Energy of the Market Firms Have Made the

St. Louis National Stock Yards

THE GREAT CENTRAL LIVE STOCK MARKET OF THE UNITED STATES.

This Applies to Cattle, Hogs, Sheep, Horses and Mules.

During the Year 1908 the St. Louis National Stock Yards Made

A BETTER SHOWING

Than Any Other Live Stock Market in the Country.

SHIP YOUR STOCK
To the Best Market, Where Business is on the Up-grade; Where There is the Greatest Competition.

Stock Yard Notes.

At the St. Louis National Stock Yards horse and mule receipts are about equal to the combined totals of Kansas City, Omaha and St. Joseph.

Great Sheep-feeding Station.

About the best sheep-feeding station we know of is the Independent Stock Yards , St. Louis, Mo. It is practically at the door of the market for the reason that the rate which carries the sheep into the Independent Yards also delivers them to the National Stock Yards, East St. Louis, whenever the sheep are ready or when the market is high, no matter whether the sheep are ready or not. The sheep are fed No. 1 alfalfa hay, wheat screenings, cottonseed meal and cracked corn and the charges for feed are reasonable. There is no charge for water, care or yardage on the sheep at the Independent yards. There is a fine lot of covered pens and sheep thrive and fatten. Any one interested in feeding sheep at a first-class market should address G. E. Thonssen, manager Independent Stock Yards, St. Louis, Mo., and ask for feed prices.

Time to Buy Ewes.

Whenever they say that the Kentucky demand for stock ewes is over, then is a good time for the Missouri and Illinois farmers to obtain ewes at reasonable prices. The Kentucky sheep raisers are earlier by a month than Missouri when it comes to raising lambs and they quit buying stock ewes in August. This leaves the market for breeding ewes just where a buyer likes to have it and it is the duty a buyer owes to himself to buy stock at reasonable prices.

Increase in Sheep Raising.

The increased sheep and lamb receipts at the St. Louis National Stock Yards during the present year have been largely contributed by the States of Illinois, Kansas, Kentucky, Missouri, Nebraska, Oklahoma and Tennessee. Missouri and Illinois lead the procession.

James H. Campbell,

Expert live stock salesman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign horses, cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Native Dressed Beef Steers.

Native steers, averaging 1,200 to 1,290 pounds, usually find their way into the dressed beef trade. There is a great variety in condition and quality and a considerable range in price. Duing the last week in August at the St. Louis National Stock Yards, about a thousand of these cattle sold at a range of $5.00 to $7.10 per 100 pounds, the bulk of sales at $5.85 to $6.50. The tops at $7.10 weighed 1,296 pounds; the tailings at $5.00 weighed 1,250 to 1,272 pounds. These prices compare favorably with any other market.

OUR REFERENCE IS EVERYONE WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman, General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Don't hesitate to write or ship to

James H. Campbell,

National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK — SHIP US YOUR CATTLE, HOGS AND SHEEP.

Southern Cattle at St. Louis.

This branch of the cattle trade naturally centers on St. Louis for the reason that St. Louis sells a majority of the Southern cattle that are shipped to Northern markets, and the results are eminently satisfactory. The shippers are not advertising the fact that their cattle bring good prices, but they know it. Most of the Texans are coming from Oklahoma. Included in late sales were 175 good grass steers from Dewey, Okla., 1,098 pounds at $4.50 per 100 pounds; 316 fair grass cows, 837 pounds, from Silverdale, Kas., at $3.35 per 100 pounds. E. Lasater marketed 210 cows, 858 pounds average, at $3.40 per 100 pounds, and 122 steers, 1,047 pounds average, at $4.70 per 100 pounds. These are sample sales indicating the strength of the market.

Missouri Steers at $7.50.

On the second day of September, Colonel J. T. Johnson, of Audrain county, Missouri, reported on the St. Louis market with a nice consignment of thirty steers averaging 1,492 pounds, which sold for $7.50 per 100 pounds. Mr. Johnson has been feeding and shipping cattle for the past thirty years, and he made the remark that this price obtained was the best he ever received for a bunch of cattle on any market. He was very well pleased and spoke in the highest terms of the market at the National yards.

St. Louis Horse Quotations.

There are a few plug horses that continue to sell at $25 to $45 per head; and strictly common Southern horses are selling at $45 to $65; a little better average class at $70 to $100. Strictly good to choice Southern horses were selling at $110 to $150. Driving horses are variously quoted at $150 to $275. Common to medium chunks were selling at $125 to $150, and good chunks at $160 to $190. Strictly choice chunks for stylish delivery horses sell at times considerably higher. Drafters of the fair class sell at $125 to $160, and good at $175 to $250. Strictly choice heavy drafters are quotable up to $300. This is on the basis of the closing market, August 31st, at the St. Louis National Stock Yards.

National Stock Yard Receipts.

Receipts at the St. Louis National Stock Yards during the first eight months of 1909 amount to 666,706 cattle, 1,635,576 hogs, 561,669 sheep and 75,081 horses and mules, compared with 693,494 cattle, 1,678,363 hogs, 462,220 sheep, and 74,646 horses and mules. These figures exhibit a slight decrease in cattle and hogs and a liberal gain in sheep and a small gain in horse and mule arrivals.

Another Buyer For St. Louis.

Mr. Taylor J. Gilliam arrived at the National Stock Yards for the purpose of buying hogs for the Dold Packing Company of Buffalo. He said: "I will want all of the good, smooth hogs I can get, weighing from 200 to 230 pounds, and am willing to pay good, strong prices for them." This will increase the competition on this market for good, medium-weight hogs. Mr. Gilliam is now shipping some of the best hogs to Buffalo, and naturally has to pay the top of the market to get them.

The condition of the cotton crop is 63.7, against 71.9 at this time last year, and a general average of 73.6 for ten years.

Arkansas cattle at St. Louis are destined to make a great reputation. There is a continual improvement in quality which will bring Arkansas up to the average of Missouri.

The St. Louis market has received horses and mules this year from 33 different states and territories.

Clay, Robinson & Co.

Since entering the St. Louis market this firm has done a remarkable good business, far in advance of expectations. They started up with a first-class equipment in office and yards and have not stood still a minute. They have full telegraphic service from all markets and keep themselves posted as to general transactions for the benefit of their customers. In the sale of fat cattle, hogs and sheep they are making a splendid reputation and they have a large order trade in buying and selling stock cattle and sheep. Circulars are issued to shippers, explaining market condition in every branch of trade which can be had by addressing Clay, Robinson & Co., National Stock Yards, Ill.

September Prices For Hogs.

At the St. Louis National Stock Yards, September 1st, the top price for hogs was $8.25 per 100 pounds for a load averaging 241 pounds, shipped by Mr. W. J. Houston, of Morgan county, Ill., and he received 5 cents per 100 pounds more than any hogs sold for in Chicago. Two loads of St. Louis hogs, averaging 229 pounds, sold at $8.20, the bulk of the hogs at $7.80 to $8.05 per 100 pounds. Light hogs, weighing 150 to 190 pounds sold at $7.50 to $8.10 per 100 pounds, and pigs 100 to 150 pounds average, sold at $7.25 to $8.00 per 100 pounds. These prices were the best paid at any western market. Kansas City did not sell a hog above $8.10.

NATIONAL STOCK YARDS, ILL.

The Price of Grass Seeds.

Grass seeds are quoted at the price per 100 pounds: Quote: Timothy at from $2.50 to $3 for off grades to $3.25 to $3.40 for the mest of the current receipts—high grade worth more. Clover at from $2 for trashy up to $10 for prime; redtop at from $2 to $11—latter fancy; millett at $1.25 to $1.50. Sales: Clover—2 sks. at $6.25, 39 sks. (24 old and 15 new) at $6.65, 3 sks. at $7.50; 10 at $7.65, 4 at $8.10, 2 sks. at $9.25, and other small lots at $5.25 to $9.25. Redtop and timothy—A few sks. at $9 to $10.

The St. Louis market is making splendid records in selling sheep and lambs.

SHIPPERS AND SELLERS
—of—
STOCK AND FEEDING CATTLE
are reminded that the
ST. LOUIS
NATIONAL STOCK YARDS
furnish by far the best market for their stock.

A majority of the stock feeders of Missouri, Illinois, Indiana and Ohio prefer to buy their feeders at St. Louis. They have short runs, favorable rates, quick service, small shrinkage. These people get their cattle home in good shape. There is never a glut of stock cattle at St. Louis. Western shippers can get their stock cattle to the St. Louis market just as easily and as cheaply as they can to any inferior Far West market, and at St.Louis there is quicker sale, better results, and in the shipping in, concentration, sale and outward shipment there is less expense, less shrinkage and less loss to come out of the cattle. The center in which all can be brought together and distributed at the least expense to all concerned is the best market of all.

THE BEST MARKET OF ALL—UNDER ANY AND ALL CIRCUMSTANCES—IS AT THE ST. LOUIS NATIONAL STOCK YARDS.

St. Louis the Great Hog Market.

Comparisons are made monthly between the different markets for the purpose of ascertaining prices paid for hogs and during August it was ascertained that the bulk of the Chicago hogs sold at $7.59 to $8.00 per hundred pounds, and at St. Louis the bulk of the hogs sold at $7.80 to $7.97 per one hundred pounds. This, it is claimed, is an average of 18 cents per 100 pounds in favor of the shipper who ships to the St. Louis National Stock Yards, many of whom pay a smaller freight bill shipping to St. Louis than if they were shipping to Chicago.

St. Louis Higher Than Kansas City.

During the full month of August a comparison of hog prices shows that the average top price at Kansas City was $7.86 per 100 pounds and the average top price at St. Louis was $8.07 per 100 pounds. This shows an average of 21 cents in favor of the shipper of good hogs shipping to the St. Louis market. During the same month the average prices paid for the bulk of the hogs at Kansas City were $7.61 to $7.80 and the average prices at St. Louis were $7.80 to $7.97. This is an average of 17 to 19 cents per 100 pounds in favor of the hog shipper patronizing the St. Louis market. Any shipper who will buy on the basis of Kansas City prices and then ship the hogs to St. Louis, cannot fail to make an unlimited fortune.

Sale of Pure-bred Cattle.

Mr. W. C. McGavock, of Springfield, Ill., is preparing to hold his semi-annual sale at the St. Louis National Stock Yards. The dates claimed for the sale are November 16, 17 and 18. One day is to be devoted to the sale of Herefords, one to shorthorns and one to Aberdeen Angus cattle. Mr. McGavock is now collecting entries for the sale and we hope he will be able to offer a good average lot of cattle. Owing to the excellent prices which stockmen are receiving for their fat cattle of good quality, they ought certainly improve their herds for the simple and only reason that it pays to do so. The market recognizes and pays for quality as much as 2 and 3 cents a pound over and above the scrubby and ill-formed cattle. Mr. McGavock will put his usual energy and ability into this sale, and advertise it extensively that he may have a good buying attendance. His personal address is Springfield, Ill.

First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company
Box 68,
NATIONAL STOCK YARDS, ILL.,

Heavy Native Cattle.

During the last week in August, about 500 head of what are classed as heavy native steers were sold at the St. Louis National Stock Yards. None of them were tops, but the best were only plain, good cattle. Choice to fancy cattle in this class were quoted at $7.00 to $7.50, and the extreme range of prices was $6.50 to $7.50, and the bulk sold at $6.60 to $7.10 per 100 pounds. After passing 1,300 pounds weight cuts very little figure; in fact, quality and fat have for the present more influence than weight. The best cattle, 35 head, 1610 pounds, average at $7.50, were shipped by Joseph Considine, of Thompson, Mo.

Native Steers, 1,000 to 1,190 Pounds.

During the last week in August, at the St. Louis National Stock Yards, about thirty loads of native steer cattle averaged from 1,000 to 1,190 pounds. The range in price was $4.50 to $7.40 per 100 pounds, and the bulk sold at $5.50 to $6.40 per 100 pounds. Only one load, strictly inferior, sold below $5.00, and one load, 1,151 pounds average, sold at $7.40. There is great competition for this class of cattle at the St. Louis market.

Stock Cattle and Feeders.

At the St. Louis National Stock Yards, the trade in native stock cattle is on a reasonable basis when beef prices are considered. Quotations are as follows: Good to choice feeders, $4.30 to $4.80; medimum to good feeders, $3.60 to $4.25; good to choice stockers, $3.50 to $4.25; inferior to good stockers, $2.50 to $3.40; good stock heifers, $3.25 to $3.65; medium stock heifers, $3.00 to $3.25; stock cows, $2.25 to $3.90—all quotations being at the price stated per 100 pounds.

A Hog Shipper's Experience.

Mr. H. B. Hubbard, of Davies county, Mo., lives within 65 miles of Kansas City and St. Joe, but finds it highly profitable to shut his eyes, ignore the mand bring his hogs 257 miles to the National Stock Yards. Mr. Hubbard said:

"My experience has been that St. Louis hog prices average 12½ to 20 cents per hundred pounds higher than St. Joe or Kansas City quotations. It costs me 18 cents to run hogs to the St. Louis National Stock Yards and 13½ cents to get to St. Joe and Kansas City. To offset the additional freight amounting to barely 5 cents a hundred, I gain an average of close to 15 cents higher for my hogs when selling here. This gives me a clear net profit of 10 cents per hundred pounds by coming to St. Louis. Now this amounts to 20 cents per head, or $25 for every 100 good heavy hogs that I ship. You can readily see why I patronize St. Louis."

Sheep and Lamb Prices.

Although this is not a market report we believe that the closing sheep quotations of any month are always interesting. On August 31st, at the St. Louis National Stock Yards several loads of good lambs sold from $7.25 to $7.50, while medium lambs brought $6.50 to $7.15 and fair grades from $5.50 to $6.25. The best of the culls sold at $4.00 to $4.75 and the poorer ones at $2.50 to $3.75. The best mutton sheep sold at $4.35 to $4.50 and some that were hardly as fat as they ought to have been brought around $4.25. Breeding ewes were a little slow sale with the best at $4.75 to $5.25, and fair grades $4.00 to $4.65. Good stockers sold at $3.00 to $3.50, fair grades showing a little age $2.25 to $2.85, old cull sheep $1.25 to $1.75 and bucks $2.50 to $3.00. All quotations at the price stated per 100 pounds.

Increase in Sheep Receipts.

During the first eight months of the year 1909 the St. Louis National Stock Yards received 561,669 sheep, which exhibits an increase of 99,449 head over all previous records for that period. It is also safe to say that the increase is all lambs and that these lambs were sold at magnificent prices.

Just at this time, however, the lamb market is not high, but it is considerably higher than last year, and it has been so from January 1st to the present date. St. Louis is gaining a splendid reputation as a sheep and lamb market.

Slaughtering Sheep and Lambs.

The increased slaughter of sheep and lambs at St. Louis is remarkable and amounts to 25 per cent over former records. The increased receipts during the first eight months of 1909 were 99,449 head and the increased home slaughter in the same period is 103,684 head. St. Louis packers have kept faith with the statements made by them in saying that they would buy all the sheep and lambs that are fit to kill. We can sell another million sheep a year at St. Louis.

Top Lambs, August 31st, at $7.50.

At the St. Louis National Stock Yards, on the closing day of August, James Moran, of Osage county, Mo., marketed a load of sheep that contained 62 head of lambs that averaged 72 pounds and brought $7.50 per 100 pounds, which was the top of the market. West Duncan had in a load of sheep from Osage county, Mo., including 69 lambs that weighed 78 pounds and brought the top of the market, $7.50 per 100 pounds.

Valuable Market Information.

With capital and surplus amounting to $125,000.00, the Godair-Crowley Commission Company have splendid resources to make loans to reliable stockmen and to encourage shipments to St. Louis. Their list of salesmen includes Mr. E. C. Gibson, Frank Huffaker, W. F. Houston, H. R. Ray and Oscar White. This firm is enthusiastic in regard to the record of the St. Louis market, which is very satisfactory both in regard to increased receipts and selling activity. Messrs. Godair-Crowley Commission Company cordially invite all stock shippers to communicate with them for the purpose of getting on their list to receive their regular market reports. Address, Godair-Crowley Commission Company, P. O. Box 107, National Stock Yards, Ill.

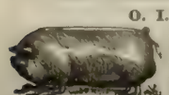
Bred from the choicest strains of imported Angora Goats. Sweepstake and First-prize Winners at the American Royal Show. Satisfaction guaranteed.
R. C. JOHNSTON, Lawrence, Kansas.

O. I. C. SWINE.
Pigs of all ages for sale. Good individuals. Priced right. Tell us what you want in the line of O. I. C. The best hog on earth.



ALVEY BROS., Meriden, Kansas.

Co-operation Among Farmers.

Co-operation among farmers is making good progress in this country, but is making still greater progress abroad. We hear of numerous societies of a co-operative nature in the countries of continental Europe, and they embrace in their operations those things that are the most important for agricultural success. So successful have some of them become that they have excited the hostility of the traders, in some localities, and this hostility has led to suits at law. In France especially the matter has become of such moment that the highest courts of the country have been called upon to decide if agricultural societies, as now organized there, can buy and sell products and supplies. The courts have decided in the negative, and this has created much excitement among French farmers engaged in co-operative movements. It is now proposed that a national law be enacted permitting such societies to buy and sell, but it is a long road from the proposing to the securing of any law opposed to the commercial interests. The fact that the co-operative agricultural societies have forced themselves into national attention shows the strength they are developing. In that country the producers associations number over 400 and the selling associations over 2,400. The co-operative credit societies number over 2,300 and these own a number of strong banks.

Like development of the co-operative method among farmers is found in Italy, Austria, Germany, Belgium, England and Ireland. In the United States, as yet little has been accomplished in the effective work of agricultural societies. Beginnings have been made in co-operative dairying and in grain selling and handling.

A few small co-operative associations of various kinds have started up in different parts of the country, but they are as yet very small and weak. Most of them are unknown outside of the immediate neighborhood in which they exist.

The writer of this article has seen the wrecking of several co-operative societies conducted by farmers. The elements that wrecked the societies included mutual distrust, jealousy and unfair dealing among the members of the societies. This shows that we have as a people little studied the science of co-operation; for it is a science.

One society of fruit sellers was wrecked because some of the members were discovered secretly sending their fancy fruit to market where they could get the highest prices for it while their medium and poor fruit was turned over to the co-operative society which was supposed to receive all of their fruit.

Another went to pieces because certain members with large interests made secret compacts with large buyers of fruit to favor the latter when they came to bid for the fruit of the society. Another society disappeared because its buyers of supplies took percentages from the wholesale houses that furnished them goods, and this practice was discovered .

Yet co-operation is in the air and will become a great factor in our American agricultural life, just as it has already done in Europe. Study and experiment will show us how to get around the difficulties.

Blooded Stock Notes.

Splendid young Jersey bulls ready for service are offered for sale by Albert S. Ennis, of 712 Missouri Trust Building, St. Louis, Mo. He has a fine herd near California, Mo., which is tuberculin tested by the State Veterinarian. That is the way to insure a healthy herd. Jersey cattle are money-makers when they are properly handled. For economy of production and quality also they are hard to beat; in fact, the Jerseys are making wonderful records, as will be seen by reading this paper through and through.

Look up the change in the advertisement of Chas. Dorr, of Osage City, Kas., offering seventy-five head of Duroc spring pigs for $8.00 a head. The blood of Kan't Be Beat, W. L. A.'s Choice Goods, Oom Paul and Hunt's Model, as well bred as any in Kansas. Pairs or trios not related and guaranteed safe arrival. Write at once and get a start of full-blooded Duroc red hogs.

Clay, Robinson & Co.'s live stock report of August 27th contains a fine picture of a load of branded Nebraska-fed beeves that were sold by the firm and topped the Chicago market for heavy cattle at $7.80. They were shipped by Starke Bros., of Red Cloud, Neb., and averaged 1,721 pounds. This is as high as any aged cattle had sold since last December. They were grade Herefords not over three-fourths blood and show what a first-class feeder and top-notch salesman can do with the right kind of cattle. The steers were branded and were heavier than the buyers care for.

At the Gregory farm, Whitehall, Ill., on August 24th, W. S. Corsa sold Berkshires at auction. The top of the sale was $250, paid for Duke's Artful Bell, paid by J. H. McDonald, of Montezuma, Ia. The top of the boars was $215, paid by S. J. Craig, of Elmwood, Ill. In all thirty-seven sows and pigs brought $4315, an average of $111.22. Eleven boars and boar pigs brought $990, an average of $90. The total of the sale was $5,305 on forty-eight head, an average of $110.52. It was the highest average at a Berkshire public sale this year.

At the Kentucky State Fair at Louisville, September 16th, Messrs. Giltner Bros., of Eminence, Ky., will sell at auction forty head of pure-bred Herefords contributed by themselves and other leading breeders of Kentucky. We hope the sale will result successfully.

At the Blue Grass Fair held at Lexington, all the prizes for Tamworth swine were won by our advertiser, Chas. Ford, of Mortonsville, Ky. He has a magnificent herd in fine shape and the best lot of young stock he ever offered for sale, and expecting many first-class September pigs. Through his advertising in this paper Mr. Ford has sold Tamworths in fifteen states, and one sale helps to bring on another.

At the Blue Grass Fair, the bull King Cumberland won the Shorthorn championship. We published his picture in the January number of this year, just after he won the grand championship at the Chicago International Show. He is now owned by Elmendorf Farm, Lexington, Ky. The Blue Grass champion Shorthorn female was the two-year-old Elmendorf Lassie.

At the Blue Grass Fair, J. F. Cook & Co., of Lexington, Ky., won the first premium for saddle stallion in service and quite a list of other premiums. Messrs. Cook & Co. have advertised in The National Farmer and Stock Grower for several years.

Edna Mae, a famous chestnut saddle mare owned by Mrs. Lowndes and ridden by Matt Cohen won the thousand-dollar stake for five-gaited saddle horses at the Blue Grass Fair.

At the Blue Grass Fair, in the Hereford class, the champion bull was Fowler's Lad, an aged bull, exhibited by J. H. & J. L. VanNatta, of Lafayette, Ind. The champion cow was Diana Fairfax, an aged cow, exhibited by W. T. McCray, of Kentland, Ind. The first prize on graded herd went to McCray, and the first prize on young herd to Giltner Bros., of Eminence, Ky.

SEVENTY-FIVE HEAD OF PEDIGREED RED BOAR PIGS, $8.00 a head; Kan't Be Beat and Choice Goods' breeding.
CHAS. DORR, Osage City, Kansas.

SADDLE MARES and MAMMOTH JENNETS.

We have a nice lot of Saddle Mares and Mammoth Jennets, in foal by the best sires in Kentucky, with colts by their side. All are registered. Come and see them or write us.
J. F. COOK & CO.,
Lexington, Ky.

TAMWORTHS FOR SALE. The bacon hog the largest and most prolific breed. Early to mature. Economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs, not akin, from best strains. None better. Prices reasonable. My herd won seven out of nine first prizes at Lexington, Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907
CHAS. FORD,
Mortonsville, Woodford County, Kentucky.

ENGLISH BERKSHIRE HOGS

That are bred right and will be sold right. Also M. B. Turkeys (Wolf Strain), S. C. W. Leghorns (Whycoff Strain) and B. P. Rock Chickens (Bradley Strain). Eggs in season. A few pairs of Pea Fowls for sale. Address,
M. W. MAGNUSSON, Safe, Mo.

SUNSET JERSEY CATTLE HERD.
Splendid young Bulls about ready for service, one for $75.00; several at $50.00; also two Heifer and two Bull Calves. Good bargains. Satisfaction guaranteed. Write for description, etc. Herd tuberculin tested by State Veterinarian.

ALBERT S. ENNIS,
712-21 Missouri Trust Bldg., St. Louis.

FOR SALE—RABBIT DOGS, COON AND FOXHOUNDS and other breeds and pups; also Pigeons, Poultry, Ferrets, Rabbits, Cattle, Sheep and Swine. Descriptive illustrated catalogue.
C. L. B. LANDIS, Reading, Pa.

Mill Creek Stock Farm,
The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

Hog Cholera Cure
and Preventive. A New Discovery
Satisfaction *guaranteed or money back.* Cholera kills millions of hogs annually. Keep yours healthy by using this remedy as a preventive. Have a bottle on hand at *all times.* 1 qt., $2.00, express prepaid. Order from this ad or write for circular.
J. H. FRONEFIELD & SONS CO., 415 Walnut St., Cincinnati, O.

Skim Milk For Chicks.

At the New York Agricultural Experiment Station experiments were made to learn whether skim milk could be freely utilized for poultry feeding without ill effect, many chicks have been grown to maturity with this only for drink. None were sickly and the few losses were accidental. Unusually early and full feathering, especially among Asiatics, was attributed to the free use of the skim milk in the ration.

"To get information as to the possibility of feeding it to chicks as profitably as to calves and pigs, two lots of the chicks were fed in confinement where all the food could be accounted for. Except for the close confinement they were reared by ordinary farm methods and were brooded by hens so long as necessary.

"The sweet skim milk constituted on the average about three-fourths of the total food. For the whole time that the feeding trial covered, one pound increase in live weight was made for every 3.4 pounds of dry matter in the food, very slightly less by one lot and very slightly more by the other. Allowing for the gain in weight made by the hens while they were kept with the chicks, the figure would be reduced to about 3.2 pounds for each lot. The result compared favorably with the showing made by other farm animals of lower market values per pound than poultry.

"Chicks averaging 2.4 pounds in weight at from ten and one-half to eleven and one-half weeks of age were grown at a cost for food of 5.3 cents per pound in one instance and of 5.4 cents per pound in the other, a cost very considerably below the market value of the poultry. While the foods and products have fluctuated considerably in price since then there has been no occasion to modify the conclusion then made, that some of the skim milk of the farm could be profitably used for growing chicks."

Destroying the Cabbage Worm.

A number of Pennsylvania cabbage growers wrote to Prof. H. A. Surface, the State Zoologist, for instructions in regard to destroying the cabbage worm, which has become quite a serious pest of the cabbage crop. For the benefit of all growers, State Zoologist Surface has given out the following information:

"The cabbage worm is most easily destroyed by the use of an arsenical application. Most of our successful cabbage growers use about two pounds of arsenate of lead in fifty gallons of water, or one pound of Paris green in the same amount of water. The arsenate of lead sticks better than the Paris green, especially on cabbage leaves, and is to be preferred. The liquid bearing the poison should be blown well around the cabbage leaves with a good fine spray nozzle, applying it as a fine mist but not in drops. It sticks much better when put on in a fine mist than when poured on from a sprinkling can or otherwise applied in drops.

"If it be not convenient to apply the poison as a spray it can be mixed with thirty times its bulk of Paris green or air-slaked lime, and applied as a dust. The best results from this will come from making the application in the evening, or in the morning while the dew is on. The use of arsenites in the dust or powdered form is recommended, especially on small premises where the owner does not have a spray pump.

"There is no need to fear poisoning consumers by applying arsenical poisons to cabbage for the cabbage worms. The heads form from the inside and the constant tendency of the growth is to spread or open the poisoned leaves, and thus they are gradually removed. Also a few of the outer leaves are removed in preparing cabbage for the table, and thus whatever poison may adhere to it is taken away.

"I have never known of a case of a person being poisoned by the spraying or dusting of cabbage, and, indeed, it is estimated that it would take two or three hundred heads to carry enough poison to have any serious effect on a person. The extensive growers all over this State resort to poison to keep the chewing pests in check, and especially apply this for the green cabbage worm, the same as for the potato beetle."

Too Gentle For the Police Force.

Four dogs, which the New York Police Department had condemned as being unfit for duty, were sold at auction at the police kennels, Riverside Drive and Depot Lane, in July. The dogs, which cost the city a good round sum, brought only $14.50 in all, there being only three bidders. Lassie, a short-haired Collie, brought $3.50, her purchaser being a gardener, who was attracted to the sale by a crowd of newspaper men standing around. Nanon, a French dog, went for $6.00, the purchaser also buying Kitty and Sue, two Belgian dogs, for $2.50 apiece.

One of the last orders issued by former Commissioner Bingham was to the effect that the dogs were to be sold for the good of the service. But the real reason was the fact that they were not vicious enough. They learned readily, but when it came to attacking the policeman disguised as a burglar they were found wanting. They would trip him up or leap at his throat, but in a half-hearted manner, so it was decided they must go.

Ten other dogs, which have been going through a course of instruction at the hands of Lieutenant Wakefield, will be put on patrol shortly. "Within a few years," said Lieutenant Wakefield, "every street will be patrolled by dogs. My experience up here has convinced me that police dogs have come to stay."

Poultry Notes.

Ventilation does not mean an open house, neither does it mean the wind blowing through the house, but it does mean such openings as will let in the pure air and let out the foul air. Ventilation in winter to a limited extent is an aboslute necessity in poultry houses.

Sell off all two-year-olds as soon as they show signs of moulting, says Dr. W. R. Fisher in the Poultry Fancier. If this was the rule in every poultry yard, and no three-year-olds were kept, the profits of poultry raising would be increased 25 per cent.

Mr. A. L. Hooker, in the American Poultry Adovcate, suggests that now the selling of day-old chicks is an established industry, there is also room for another class of stock chickens in the eight-months-old pullet. It is not a bad idea. The country producer who is too far away from market ought to be able to produce large numbers of good, healthy, eight-months-old pullets, and the near-to-the-city poultryman ought to be able to pay a good price for them.

The Farmer Did Not Own Them.

"You said you had no mosquitoes," said the summer boarder indignantly.

"Well," answered Farmer Corntossel, "I don't take nothin' I said back. Them you see strayin' around don't belong to me."—Washington Star.

A NEW EGG FARM.

Stoddard's book entitled **A New Egg Farm**, is, in our estimation, the best book for a young poultry raiser to study. It shows the way to profitable production of eggs and poultry. He compares the best locations for the business. Tells how to build the houses for layers, breeders, sitters or chicks, adapted to the colony system, the yard system and other methods. How to breed and manage. How to breed and select. Choice of breeds and crosses. Management for mild or severe climates. How to feed fowls and keep them at exercise without hard work. How to manage hundreds of sitters with little labor. How to raise brooder chicks and keep them alive and growing. There are 320 pages of useful, attractive, illustrated information. The book is nicely bound, and we will send this book by mail, postpaid, and include a year's subscription to **The National Farmer and Stock Grower**, for one dollar. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

GALVANIZED RUST PROOF IRON

The Best Roofing Manufactured!

Requires no painting. Economical and easy to put on; no previous experience necessary. Absolutely guaranteed; brand new, clean stock. *Bright at a dollar.* Sheets are *full* size. Comes in Corrugated, "V" Crimped, Standing Seam or Plain Flat Sheets. Heavily galvanized on both sides with the most approved galvanizing material; preparation will adhere forever. "Galvanized" means that the iron has been coated with liquid Zinc, which makes it absolutely rust and weather-proof; *not affected by heat or cold.* Makes buildings warmer in Winter and cooler in Summer. Drains perfectly and does not soak. Does not taint rain water. *Fire and lightning-proof.* Makes your insurance cheaper. Sold direct from our own roofing factory—the largest in the world. Chicago House Wrecking Co. sells more roofing material than any other concern. We sell thousands of squares of "Galvanized Rust-Proof Iron" every week. Used in all climates. For every kind of building.

PAINTED STEEL ROOFING AT $1.25 PER HUNDRED SQUARE FEET!

Also in stock, a full line of painted Steel and Iron Roofing, Siding and Ceiling, all styles at prices from $1.25 sq. foot up. Fill in the coupon below. We will send you samples free of charge together with a vast amount of roofing information.

CENTURY MFG. CO.,
Dept. 551, East St. Louis, Ills.

The Complete Fertilizer.

Our understanding of the example on page 3 is that a wheat field was fertilized with 300 pounds of commercial fertilizer consisting of nitrogen and phosphoric acid with the result that the yield was only 21 bushels to the acre. Another field of wheat grown under similar conditions was fertilized with 300 pounds of commercial fertilizer, which was divided into proper proportion, to produce the best results, and consisting of potash in addition to nitrogen and phosphoric acid. The result was a yield of 31 bushels. The additional 10 bushels in the yield is attributable to the presence of the potash fertilizer in proper proportion.

Potash as a plant food is explained in the Farmers' Encyclopedia of Agriculture as follows: "Potash fertilizers are primarily concerned in the production of starch in plants and the development of fruits and seeds."

Nitrogen promotes the growth of stems and leaves, phosphoric acid is for food of maintenance and general development, and potash is required to make the perfect fruit.

One of the greatest mistakes in agriculture is the failure to use potash. It is a common error. It results in the failure to produce the fruit. Where land is fertilized, and potash is omitted, it results in losing some of the benefits of other fertilizers.

Gorging the land with nitrogen by means of leguminous crops and barnyard manure does not furnish sufficient phosphoric acid; neither does it supply enough potash to bring the crop to perfection.

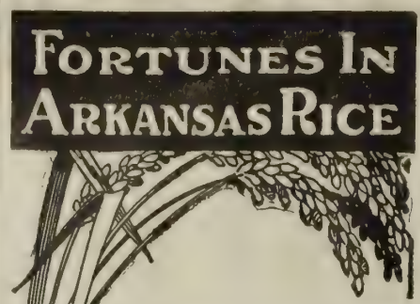
One booklet entitled "Potash in Agriculture" contains record of seventy pages describing experiments with fertilizers. This booklet gives due credit to every form of commercial fertililzer. Lands, that with favorable seasons and proper cultivation do not produce full crops, need something which must be supplied in available form, and generally speaking that something is often times potash. The booklet mentioned entitled "Potash in Agriculture" can be obtained by addressing German Kali Works, 560 Monadnock Block, Chicago, Ill. It will be necessary to mention this paper.

A Subscription Story.

Uncle Piper, subscription editor of the National Farmer and Stock Grower, has told many stories concerning the agents he has employed, and some of them are quite funny. One agent, last year, who had worked hard and faithfully, took a notion that the pan handle season was about over and he dropped in to the office and announced his intention of taking a holiday. He had obtained a good many subscriptions, had held up considerable of the money, had received some remittances from the office and, of course, a settlement was due him. Finally after much figuring on his account a balance of $3.75 was found to be in his favor and it was promptly handed over. He was noticed to carry the money around in his hand looking as though he did not know what to do with it, and Uncle Piper said "Well, George, what's the matter?" "Oh," says George, "I have all that is coming to me, but in my family most of us die young and I am afraid I will not live long enough to enjoy all this wealth."

Free Book of Stoves.

The reliable, pioneer firm—Montgomery, Ward & Co.—again invite attention to their line of stoves, ranges and heating plants. This is a splendid line of goods and all they wish you to do is to write for their "Free Book of Stoves" and when it arrives you will have the best opportunity. Address the nearest house, Montgomery, Ward & Co., Chicago, Ill., or Kansas City, Mo.



FORTUNES IN ARKANSAS RICE

DON'T YOU WANT SOME of this MONEY?

Consider What These Figures Mean:

I. N. Strickler	got	$3,420	clear from	60	acres
T. Hein	"	$2,926	" "	45	"
Roy Kleiner	"	$3,619	" "	49	"
J. P. Rich	"	$6,017	" "	93	"
F. E. Beachler	"	$4,245	" "	50	"
J. L. Hagler	"	$4,550	" "	90	"

These men are all rice growers in the prairie lands of Arkansas.

There are hundreds of others doing just as well. Growing rice on the Grand Prairie of Arkansas beats growing corn or wheat anywhere on earth. Did you ever make that much money on either wheat or corn?

Rice has only been grown in Arkansas for four years, but it has proven so profitable that last year the acreage was five times what it was in 1907, and this year it will be much larger than in 1908. There is no crop so sure. It is grown practically in water and is under absolute control at all times. Water for rice lands is abundant.

Arkansas prairie lands are **now** considered the best lands for rice, and the rice markets give the highest quotations on Arkansas rice because it is the highest quality.

Rice invariably brings 90c or over a bushel, and the production is far below the consumption. It will be many years before the rice yield is sufficient to supply this country, and the present high price is not in any danger of dropping. Any man who can grow wheat can grow rice and make big money on it.

Good rice land can be bought for $15 an acre up to $75. One crop will practically pay for the land even at the highest figure.

These low prices will not hold long—they have already doubled in the last two years. Get in on the ground floor now. You're on the wrong track trying to grow wheat up North. This Grand Prairie land will beat the land up North even at growing wheat, while it will grow enough rice to make you rich.

Write without a moment's delay for a free copy of our book — 'Arkansas Rice. Its Growth and Possibilities". Tells you all about rice growing, its profits, etc. Illustrated with photographs of actual rice fields. This book is as good as a ticket to prosperity. Write now.

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address, Dr. G. M. Branaman, 1264 Walnut street, Kansas City, Mo.

The Mitchell Auto.

The United States Army is sending the Mitchell auto on a test run from New York to San Francisco and it is now on the road in advance of the schedule. Mitchells are advertised on page 4, the Weber Implement Co., 415 North Main street, St. Louis, Mo., will send catalogue on request. They are expecting the 1910 model in the near future.

VETERINARY INSTRUMENTS.

Haussmann & Dunn Co., Chicago, Ill., the pioneer dealers in veterinary instruments, have an announcement in our columns which interests every owner of live stock. They supply up-to-date instruments which every stockman is in need of. Their complete illustrated free catalogue gives full particulars.

A New Way to Can Tomatoes.

Last summer I tried a new method of canning tomatoes, and it proved so satisfactory that I want to pass it on. Scald and peel the tomatoes as usual. Have the cans sterilized, place the raw tomatoes in them whole, pour in boiling water to fill the cans, running a knife around the cans, so that all the crevices are filled, then put on the cover. Place the cans in a boiler or large vessel, pour in boiling water till it reaches the neck of the can, put the lid on the boiler, wrap it with a blanket or rug, and leave until the water is cold, which will be next morning. The cans are then ready to put away. I did not lose a can out of forty quarts. When the cans were opened, the tomatoes were whole and firm enough to slice easily.—Woman's Home Companion for September.

Sore Head in Fowls.

Sore head is often caused by damp, filthy, poorly ventilated quarters. This disease is contagious and may be introduced into a flock that is kept in the best sanitary condition by bringing a bird from an infected yard. Where fowls are kept in clean, well ventilated quarters and given the proper food and water, diseases are unknown. By the use of carbolic acid as a disinfectant, the yards and houses can be kept in healthful condition. The affected birds should be isolated and treated with carbolated vaseline. The drinking vessels should be washed daily with boiling water.—Mrs. B. F. W. ,

St. Louis Feather Quotations.

By the pound—Prime white live geese in small sks. at 51c and large sks. at 49c; prime gray do. at 39c in small and 37c in large sks. Old white 36c to 38c; x 27 to 32c; xx 16 to 20c; xxx 10c to 14c; xxxx 5c; tare 10 per cent on small sks. and 3 on large. Duck—White 32c; dark 27 to 30c. Chicken—Prime dry-picked body 3c—wet, damp and quill-mixed 2c. Turkey —Tail (straight and clean, no shorts) 22c; wing 15c; pointers 5c; tail, wing and pointers mixed 10c; dry body 5c; green body 1c to 3c.

When Washing Knitted Goods.

White summer shawls made of soft wools that are only slightly soiled may be cleaned by rubbing them in several changes of flour and magnesia mixed. They are rubbed through this mixture as if washing in water, then they are shaken and brushed with a soft brush until all the flour is brushed out. The best way to wash shawls to keep them from stretching out of shape when they are knit or crocheted is to baste them to a piece of thin muslin a little larger than the shawl, then cover with another piece of muslin and baste this in place, then wash in suds made with good white soap. Wash the article by pressing and squeezing between the hands and rinse through two waters, then hang over the line to dry. Sweaters and baby sacques and caps cannot be basted to muslin, and the best way to dry them is to put them in a cheesecloth bag and pin this over the line and keep shaking and turning the bag until the article is perfectly dry. All such articles should be washed in warm water in which a little borax is dissolved and a tablespoonful to a gallon of water is about right. The borax is used to soften the water and to keep the article from turning yellow, and hard water and resin soap will ruin dainty woolen articles and colored woolen articles should be put to soak in the borax water before washing as the borax not only softens the water but prevents the colors from fading. A white sweater and a pretty red one have been kept fresh and new looking by washing in this way, but to keep them in good shape they must be pulled into perfect shape while wet and then they must be pulled and stretched into perfect shape while drying. Woolen articles of this kind should never be twisted in wringing, as that stretches the stitches and the best way is to place the article in a towel and press the water out between the hands, and in washing such articles all the changes of water must be of the same temperature. M. H.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

Any carpenter or builder, or even a farmer himself who is handy with tools, can take our "Practical Barn Book" and put up many of the buildings.

"A good sentence, or a thing well said, is always in season."—Montaigne.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

DEMAND FOR SHEEP AND LAMBS.

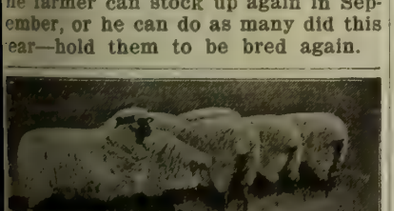
The Splendid Record of the St. Louis Market.

How to Start and Succeed in the Sheep Business.

An Article That Shows the Way In, Also the Way Out.

The right way to start in the sheep business is to buy a healthy band of ewes in the fall of the year, to breed them to pure bred bucks of the mutton breeds, to have the lambs come at the customary time, in the section they are located, to care for these lambs, and force them to market as soon as possible, to shear the ewes at shearing time, to fatten up the ewes and market them also, thus going out of business with the exception of the bucks and me may say that the wool on these gentlemen ought to pay their board bill if nothing more.

People approach the sheep business as though there was some mystery about it, but there is not. You buy the healthy breeding ewe and for five months they need ordinary care; if grass is good that is all they require. They need shelter and hay during storms of winter and a little grain will not hurt them. The work begins at lambing-time. Every lamb properly raised looks like a five-dollar bill—therefore it pays to raise it. The well-fed ewe will suckle a good lamb and grow a good fleece on her back and she will readily fatten when it is decided to send her to market. Having sold the ewes in June or July the farmer can stock up again in September, or he can do as many did this year—hold them to be bred again.



This is an easy proposition from beginning to end. If the ewes are good and healthy the farmer ought to have no difficulty in carrying them on very little pasturage until lambing time. Farmers will differ very much in their methods; one will have his ewes covered with burrs and another lot will not have a burr on them; but even the burry lot will pay it if the range or pasture is good. If the ewes have good pasturage in a moderate climate, feeding the ewes any amount of grain before lambing will not be necessary; it is altogether necessary, however, that the ewe be in good condition at lambing time and that the lamb have a good start. The ewe must be able to give plenty of milk, because a vigorous lamb demands it and he needs a full ration.

In a very large section of country tributary to St. Louis there is pasturage all the year round. Many sheep and lambs actually come to market that have never had anything to eat except grass, but this experiment requires that the lamb shall be fed grain and fed all he can eat. It also includes the final fattening of the ewes with something besides grass, and nothing fattens easier than a ewe in spring that has just weaned her lamb as weaned it should be when it goes to market.

Professor Craig, a sheep expert, when in Wisconsin, began feeding lambs when they weighed 10 pounds and forced them along until they weighed 62½ pounds at a cost for feed (in addition to ewes' milk and what grass they could get) of 18 cents a head. This proposition of ours includes feeding each of the lambs about 18 cents' worth of bran, corn meal and cotton-seed meal—whatever is good for them at the time.

The principal difficulty in this experiment is the care of the flock during the lambing season. This to one man or woman is a pleasure and to others a burden. Lambing, however, is a chapter by itself. Another difficulty is dogs, and that is another chapter by itself.

Stock ewes are for sale at all great markets. At this time at the St. Louis National Stock Yards stock ewes fit for such an experiment are selling at $3.75 to $4.50 per 100 pounds, and a better class at $5.00 to $5.50. The market may change at any time, but these prices would be all right. There would be a freight bill to get the ewes home. Good lambs 70 to 80 pounds average are selling at $7.00 to $7.50 per 100 pounds, which makes the price per head $4.90 to $6.00. During the earlier months of the year lambs sold much higher—even up to $9.00 per 100 pounds.

This method of lamb raising for the spring market is a sure winner in the country tributary to St. Louis. St. Louis is becoming more important as a sheep and lamb market every year. We earnestly advise farmers to study this proposition. So far as we know it is the only absolutely sure thing in agriculture.

WM. M. LANDRUM,
Goat Breeder.

The Angora goat industry has just lost by death Mr. Wm. M. Landrum, of Uvalde county, Texas. He was the pioneer Angora goat breeder of California, having received in 1861 a silver goblet and $25.00 in cash, in recognition of his introducing Angoras into that state. They were then called "Cashmeres" and he trailed the goats by ox-wagon route from Georgia to the Pacific Coast when the country was full of hostile Indians. He afterwards bred and raised Angoras in Texas and Oregon and was always the owner of some of the heaviest shearing goats of the breed. He was a great man and the fleece-bearing development of the Angora goat was due largely to his work as a breeder.

Sheep Notes.

Messrs. Brigham & Son, stock sheep buyers at National Stock Yards, Ill., report that the Kentucky demand for ewes began earlier this season and is now over. Mr. Brigham advises Missouri and Illinois sheep raisers to stock up with ewes in September. The buyer can then breed his ewes to suit himself, whereas many of the stock ewes coming to market in October are already bred. He reports that good thrifty young ewes, 80 to 90 pounds, can be bought at $4.00 to $5.00 per 100 popnds according to quality. These prices may go higher or lower.

G. B. Ford, of Ohio, reports doing extensive shearing in Ohio this year, principally in Guernsey county. His best day's work was 125 sheep, and for ten days 1,050 sheep. He claims to have clipped 2,500 sheep with one pair of shears. He is proud of the record, and doubts any eastern shearer having been able to beat it.—American Sheep Breeder.

It is reported that the vigorous fight against scab and ticks in Utah has so well cleaned the sheep industry that the average weight of fleece in that state has been increased 25 per cent in 5 years. This ought to be good reading for Kentucky sheep growers who are now quarantined on account of the prevalence of scab in their flocks.

According to a correspondent of the Sheep Breeder during the year just closed Australia and New Zealand together exported 756,590,263 million pounds of wool. The United States' production of wool is about 300,000,000 pounds.

There will be a good opening for native lambs in the spring of 1910. Owing to the short lamb crop of New Mexico, western lambs are scarce and held high. In the San Luis Valley of Colorado the alfalfa is not up to the usual standard, and in the Arkansas Valley many sheep feeders are taking a turn at cattle. The outlook for native lambs is especially good, and the way to make money is to keep the ewes in good condition, and when the lambs arrive to take extra care of them.

The American Sheep Breeder says: "When so conservative a sheep breeding establishment as the Butterfield Livestock Company, of Idaho, goes to England to purchase 600 head of registered Hampshires and Lincolns, for the sole purpose of enlarging and improving their mutton stud, it looks as if the American wool grower had some confidence in the stability and future of the sheep industry. This is the largest purchase of mutton sheep ever brought over from England for breeding purposes in an American flock."

FREE TO FARMERS.

By special arrangement the Ratekin's Seed House of Shenandoah, Iowa, agrees to mail a descriptive circular and sample of their new imported Malakoff winter seed wheat to every reader of this paper who will mention it when writing. This marvelous variety of wheat has made a yield and record of over 62 bushels per acre, and is endorsed by the Illinois, Iowa, Nebraska and Kansas Experimental Stations as standing at the head of all other varieties, both in yield and quality of grain. Write for sample and descriptive circulars and mention this paper. It's free. The address is Ratekin's Seed House, Shenandoah, Iowa.

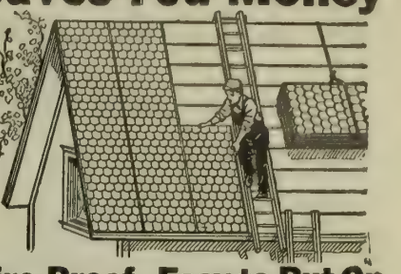
THE PEOPLE'S MISERY.

Warm weather brings misery to all fat people and death to many. Obesity (overfatness) is a disease that shortens life ten to forty years by blocking up the vital organs with unhealthy fat so that the blood circulates badly, the heart, stomach, kidneys, etc., cannot perform their functions properly and a general condition of feeble health and premature old age is certain, unless the sufferer's life is cut off suddenly by heart failure, heat collapse, sunstroke, apoplexy or some other awful fatality.

Everybody knows how over-fatness spoils the figure and ruins the complexion.

There's no use in trying to permanently, quickly and safely reduce weight by patent medicines, as those who have wasted time and money upon this delusion can testify. The Bradford method acts with remarkable quickness and the health, as well as beauty is restored. A proof treatment can be obtained free, postpaid (in plain package) by any reader who writes H. C. Bradford, M. D., 20 E. Twenty-Second St., 182, New York, N. Y. Correspondence is strictly confidential and you are not put under the slightest obligation by accepting this free offer.

Saves You Money



Fire-Proof. Easy to Put On

A steel shingle roof costs half as much as best cut wood shingles, and about the same as high-grade 3-ply prepared roofing. But it wears four times as long as wood shingles and six times as long as composition roofing.

Edwards "REO" Steel Shingles

are stamped in sheets of finest Bessemer steel, 6 to 10 feet long, covering width 24 inches, either painted or galvanized. Can be laid with hammer and nails. No soldering. No tarring. A boy can do it.

$10,000 Guarantee Bond Against Lightning. We will refund amount paid for our steel shingles if your roof is damaged by lightning. Cheapest kind of fire insurance.

Buy at Factory Prices. We are largest makers of iron and steel roofing and pay the freight on all Steel Shingles; Plain, Corrugated, V. Crimp Roofing; Imitation Brick Siding, etc. Send size of roof and we will quote our lowest factory prices delivered, and mail free catalog No. 59. Write today.

THE EDWARDS MANUFACTURING CO.
919--939 Lock Street, CINCINNATI, OHIO

Hog Cholera Cure.

Swine raisers are always interested in up-to-date preventives or cures for hog cholera. J. Fronefield & Son, 415 Walnut street, Cincinnati, have one on the market which is the result of recent discoveries and is worthy of investigation. See page 18.

Distemper Cured or No Charge.

The Binkley Medical Co., Nappanee, Ind., manufacturers of Frazier's Distemper Cure, has for the past twenty-five years been selling it under a guarantee to refund the money if the remedy ever failed. In this period the sale of Frazier's has constantly increased, until it is used by over a half-million breeders and farmers. It is time that those not familiar with it should investigate it. If your druggist will not supply you, the above firm will prepay all charges on direct orders; $1 size holds three 50c bottles.

BROWN'S BUSINESS COLLEGE

ST. LOUIS, MO., offers young men and young women from the farm a business education that will be of great value to them. The "Business Farmer" is the farmer today who is making the most money. More farmer boys attended Brown's last year than ever before. They see the value of a good business education. They want to make more money. Our new catalog and special circulars will be sent you free if you mention The National Farmer. If you want a good, practical business training, **WRITE TODAY.**

POULTRY HOUSES, COOPS, ETC.

This is an up-to-date poultry book, written by H. A. Nourse, editor of the Poultry Herald. It was prepared during the past year and is the result of many years' study and experience. It is a book of newest plans for building poultry houses, with description of coops, fixtures and poultry utensils for the farm, village or suburban poultry keeper. It is a book of 100 pages, and is finely illustrated. It is worth its weight in gold. We are sending The National Farmer and Stock Grower for one year and the book Poultry Houses for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St Louis, Mo.

Webster's NEW STANDARD Dictionary

Home and Office Edition. A splendid book for readers of The National Farmer and Stock Grower. There are 756 pages, 5x7 inches, 1½ inches thick, and the book weighs 22 ounces. It is splendidly bound in flexible cloth, with patent thumb index, with front and back title in gold. There are 840 illustrations and 19 full-page plates. Besides the Dictionary proper and supplement of recent words, it contains many other features, such as key to pronunciation, dictionary of geography, Biblical, classical and historical names, musical terms, foreign phrases, current abbreviations, etc. For handy, quick, general use, for doctors, ministers, lawyers, merchants, mechanics, editors and farmers, this is a great useful, interesting, necessary book. We use it as a subscription premium in connection with The National Farmer and Stock Grower. Send us One Dollar and we will send you one copy of **Webster's New Standard Dictionary** by mail postpaid, and we will send you The National Farmer and Stock Grower, every issue for two years. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

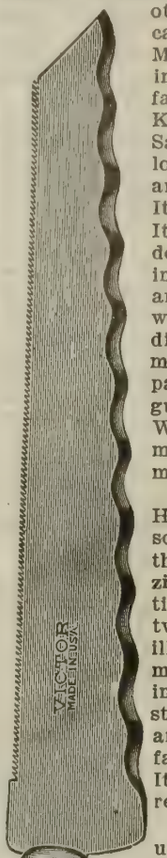
Renovating Dresses.

Black silk may be cleaned and made to look well as long as there is any good in the material. Perhaps it is soiled and lustreless. Rip it up, carefully picking out all the loose threads, and brush it to remove the dust and lint that accumulate near the seams. If there are any grease spots, rub them with a cloth dipped in gasoline until they have disappeared. Lay the breadths, one by one, on a clean kitchen table and sponge them, first on one side, then the other with a soft piece of flannel dipped in a warm suds. Rinse in clear water without wringing, and when all the breadths are done, stretch each one on a clean board and fasten the edges at intervals with very small tacks, taking care to keep them perfectly straight. When it is removed, you will find it smooth and lustrous, especially on the wrong side. This will be a great improvement on ironing, which frequently changes the color of the silk and leaves it too stiff. Any black woolen goods may be washed in good suds and ironed on the wrong side before using again.

Light-colored woolen goods often become soiled and spotted while the material is quite good. There is nothing that will restore the color, but it may be dyed any dark color desired with very little trouble. The material will take navy blue, brown, several shades of red or black. Take the dress apart, dissolve a package of Diamond dye of the color selected in cold water, pour it in a large pan—a porcelain or tin dish pan will do—then add enough boiling water to cover the goods. Wash the goods, and, while it is still wet, put it in the dye and stir it constantly so the dye will penetrate all parts of the goods. It should be allowed to boil one-half hour, then take it out, rinse through three waters and hang it up to dry. Dampen and roll tightly and after an hour iron it on the wrong side.

I have gone into the details of the work because many women have dresses that might be renovated and made to look as well as new, but they are afraid to undertake to do the work at home.—E. J. C.

THE UNIVERSAL HAM KNIFE.



This is called a Ham Knife by the cutlery company that made it. It is a knife on one side and a saw on the other. It might be called a Bread Knife or Meat Knife or a Carving Knife. It is, in fact, an all-round Kitchen Knife and Saw. It is twice as long as the picture, and is 14 inches. It is of good steel. It will bend almost double without breaking. It is well finished, and the handle is hard wood. We buy them direct from the largest manufacturing company in the world. We guarantee the quality. We have never had so much value for the money before.

We use the Universal Ham Knife as a subscription premium with the **Universal Magazine**, our own publication. It is a thirty-two-page, three-column illustrated monthly magazine. It contains interesting reading, stories, poetry, history, and useful information, fashions, patterns, etc. It is a magazine that recommends itself.

Offer No. 1.—Send us Thirty Cents—**Only Thirty Cents**—and we will send you the **Universal Magazine** for one year and we will mail you, postage prepaid, one Universal Ham Knife.

Offer No. 2.—Send us Fifty Cents and we will send you the **Universal Magazine** for two years, and we will send you one knife by mail as a free premium.

Offer No. 3.—Send us One Dollar and we will enter up four one-year subscriptions and send four knives. Money back if not satisfied.

Address and send money orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

LAND OPENING!
IN THE FAMOUS PECOS VALLEY

Ten, twenty, forty and eighty acre tracts in District No. 3 of the famous Pecos Valley, Pecos County, Texas, can now be secured for immediate settlement or for investment. Every acre is irrigable and will come under the ditches of the Orient Project, a mammoth irrigation system now building. Toyah Lake and reservoir, the sources of water supply, cover nearly ten thousand acres, being the largest inland body of water in Texas. The water supply is guaranteed to be ample.

The Kansas City, Mexico & Orient Railroad, now in course of construction, adjoins District No. 3 on the south. The building of this great trans-continental railway from Kansas City to the west coast of Mexico insures rapid transportation to the market centers of the world. The soil is a rich chocolate loam, ranging from 8 to 25 feet in depth, and of rare quality, yielding enormous crops. Six to eight cuttings of alfalfa can be raised that will average a ton to the acre at each cutting.

After exensive investigation **Secretary of Agriculture F. D. Coburn of Kansas** said: "The country I looked at especially was the Lower Pecos Valley, in Pecos Reeves and Ward counties, Texas, and more particularly Pecos county, now about to be opened up to settlement. It will be made directly tributary to Kansas City by the Orient Railway. **The best of the lands here, astonishingly fertile, are certainly favorably situated for irrigation.** They are being disposed of at prices and on terms apparently attracting purchasers from all parts of the Union. *** **Those who get there ahead of the railroads and the resulting rush will reap the benefits of the earlier low prices and the advantages that inevitably come later.**"

Competent authorities regard the climate and soil in the Pecos Valley of Texas as good, if not better, than in the Upper Pecos Valley, where improved irrigated lands sell for $250 to $2000 an acre. Colorado irrigated lands brought to a high state of cultivation sell for $250 to $2000 an acre, in Oregon $250 to $1000, in Idaho and California $250 to $2000.

Land including perpetual water right can now be bought for **$40** an acre on very easy terms. This is probably your last opportunity to secure a farm home in the Rich Pecos Valley at so low a cost. Those who buy now before the railroad is completed and other improvements are made will doubtless see their land doubled and quadrupled in value in a very short time. FULL INFORMATION, INCLUDING ILLUSTRATED BOOKLET, FREE.

F. E. DOBBINS, Land Commissioner, Texas-Orient Development Co., 850 Finance Bldg. Kansas City, Mo.

[Please mention National Farmer and Stock Grower.]

From the "Arizona Kicker."

A Stranger's Mistake.—A chap calling himself the "Utah Terror" struck this town last Tuesday with a whoop. As near as he could figure, the wave of civilization was not due here for five years yet, while as a matter of fact it rolled over us more than a year ago. He was about six years out in his calculations. The terror was mounted on a mule. Once upon a time it was the proper caper for a terror to ride his mule into a saloon and drink his whisky while seated in the saddle. The stranger headed his animal for the Red Front saloon and dug in the spurs and uttered his warwhoop, but the next thing he knew the doctor was probing for bullets and he had gone out of the warwhoop profession. The City Marshal had been looking for such a break, and he was on the spot to check it. The mule was killed at the first shot, but it is believed at this writing that the man will in time recover sufficiently to limp out of town in search of some spot where the good old-fashioned customs are still preserved in their purity.

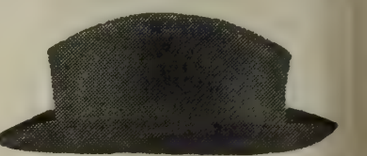
Not Identified.—Tuesday afternoon last a stranger who looked as solemn as if he had buried a wife and ten children came into town by the Cherry Valley road on a bay mule and dismounted at Scott's Bank. Some of the boys sized the stranger up as an undertaker looking for an opening, while others had a suspicion that he was up to snuff. This state of uncertainty lasted about fifteen minutes, during which time someone loosed the saddle girths and attached the saddle to a hitching post by a rope about twenty feet long. The stranger found Mr. Scott alone in the bank and pulled a gun on him and asked for a loan of $500. Mr. Scott never loans money without good security. He dodged the gun and raised an alarm, and the solemn man bolted for the street and his mule. He jumped into the saddle with a whoop of defiance, and when the mule went out from under him he was probably the most surprised man in Arizona. He got up and began shooting, but our efficient City Marshal, assisted by about twenty prominent citizens, turned loose on him and brought his career to a dead stop. The mule made a bolt for it and could not be caught, but he bore the brand of a New Mexico ranch. Nothing was found on the man to identify him. He had two guns, fifty cartridges, $2 in cash and a plug of tobacco. He was buried at the expense of the city, and the look of chagrin which covered his face as he was laid away was so marked as to excite general comment. He probably lived in some back township where no newspapers are taken and therefore knew nothing of the changes of the last five years."—C. B. Lewis.

Fixing Up For Boarders.

"I suppose you have a cow and a garden and plenty of chickens," said the man who was looking for summer board.

"Nope," answered Farmer Corntossel, "them things went out o' style several seasons ago. But we've got down the clothesline an' some mosquitar nettin' an' fixed up a real purty tennis court. We also mowed off a patch in the meddar for a golf rink, an' we've bought a phonograph that plays brass-band music clear up till midnight."—Washington Star.

MAGNIFICENT SUBSCRIPTION PREMIUM.



The National Farmer Hat.

The sizes are from 6⅝ to 7½ They are hats suitable for men o boys. They are of good materia well made and stylish. These hat are sent direct from the manufact urer to the subscriber in a tube an sent by mail prepaid. These hats ar black and steel gray. We send blac unless steel is called for. These hat wear as well and last as long as an $2.00 to $3.00 hats on this market They will give entire satisfaction We believe this hat will make a first class subscription premium. Th subscription price of The Nationa Farmer and Stock Grower is On Dollar for three years. We cut on one year, and in place of the thir year we include the hat. Therefore send us One Dollar to pay for two years' subscription to The Nationa Farmer and Stock Grower, and w will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to men tion the size and color.

Opinion Upon Race Suicide.

Once more Dr. Woods Hutchinson has gone to the rescue of our much-abused civilization. In September Woman's Home Companion, he points out that not only are all wrong about the race-suicide problem, but there isn't any.

According to Doctor Hutchinson, the whole question is befogged by misconceptions. He says the question is not a new one, but is very old. An increasing population is a sign of civilization. As for our immediate forefathers, they can claim no credit for large families, for they either gave no thought to the question at all, or else welcomed children as future bread-winners.

"To sum up," he says, "I believe that the evidence is conclusive that race suicide, so far as it has yet gone, has proved an almost unmixed blessing instead of a curse; that the race can never again return to the method of blind and wholesale reproduction without thought of the future. No class or group in the community which believes itself worthy to exist can of course view with equanimity any proposal to limit the offspring of marriage to less than three, or such number as may be necessary to secure the survival of that quota to adult age, so that the second generation may be at least a trifle more numerous than the first.

"On the other hand, biologic morality, while deprecating the production of children, who are likely to be born unfit, or become so from lack of proper support and training, glorifies and exalts as both the highest racial duty and the most precious individual privilege the bearing of children by those who are personally fit to bear and financially competent to rear such as will be of value to the state. There is no achievement better worth living for, no more valuable legacy that can be left to the future, no more enduring claim to honorable remembrance, than a family of well-born, well-reared children.

"At the same time there is a growing tendency to encourage and promote in every possible way the marriage at a reasonably early age of young people, who are particularly desirable as future ancestors, to use a Hibernicism. Some day possibly we may become sufficiently intelligent to endow this sort of matrimony with state funds. At all events, an intelligent direction of race fertility, by selection of parents and rational limitation of the number of children, will be the path of future progress."

Poisoning Gophers and Ground Squirrels.

Interesting results have just been announced by the Forest Service as a result of the campaign conducted in Southern California by Stanley E. Piper, Expert of the Biological Survey of the Department of Agriculture, to exterminate ground squirrels and gophers.

Extensive experiments were tried to determine the best means of killing off these destructive little animals, and it was found that most effective results were obtained by using poisoned green or ripening barley heads. The squirrels are exceedingly fond of this green herbage, and eagerly ate the poisoned food placed along their runways. Toasts were also made with oats, wheat, barley, raisins, prunes, dried apples, and cracked corn, but these did not prove so successful.

While green barley proved most successful for poisoning ground squirrels, yet the diffculty of procuring a sufficient supply in all localities led to dried barley grain being tried. The grain was treated with strychnine sulphate, saccharine, and eggs, and although this combination proved very destructive to the squirrels, it had practically no effect upon doves and quail. In fact, a deliberate attempt was made to poison these birds at their watering places, but no bad effect resulted. The poisoned grain was also used in fields grazed over by sheep and produced no ill effects what ever.

The experiments also proved that gophers were partial to raisins and dried apples, and these were sucessfully used in the poison experiment. It was found that by sprinkling the apples or raisins with the strychnine solution, as effective results were produced as could be obtained by inserting the poison into the fruit.

The experiments for exterminaton of squirrels also resulted in the death of a considerable number of rabbits, and in other experiments it was found that poisoned oats proved very effective in killing both jacks and cottontails. Green alfalfa was also used with good results for the same purpose.

Poultry in the Fall.

A good system of feeding through the summer will increase the value of poultry in the Fall.

Many fowls go into the fall months thin in flesh and small in bones, because they have been permitted to hunt for their feed during the summer months and have had little besides.

It takes good feed to make good birds of any kind. Even the farm fowls that have the run of the fields frequently are insufficiently fed during summer.

A fowl that has to run the fields all day to get enough to keep it from being hungry will survive, but there is not much material out of which to make good growth.

This condition is made worse at the present time by the high price of corn. Corn is not a first-class feed for fowls in summer, but it is better than no grain at a time when some is needed to help in the development of the growing fowls.

In the summer time the birds that were hatched in the spring are in need of a great deal of growth material, as they have not yet reached full size. The latter part of their growth takes part in the late summer and early fall, and this is the time when every organ of the growing fowl is calling for more and more material out of which to make cells for new growth.

At this period the writer has obtained excellent results by feeding liberal portions of ground bone and lean meat. It works easily into mourishing elements to be used in body building, and the vitality of the growing fowls is sufficient to make use of every particle of building material thus supplied.

As to green food, rape is a very good thing to supply to the fowls, and this will grow quickly from seed even when sown in the end of summer. The later the season at which it makes its growth, the smaller can it be utilized. As it makes leaf rapidly, it does not have to reach a certain size before being fed off. It will stand about as much frost as cabbage and turnip, of which it is a relative .

The farmer can better afford to feed wheat screenings than anything else in the grain line, as these give better materials for growth than most things that are available at this time of year. Oats are excellent, but are not likely to yield so much unmarketable material as the wheat.

As the cold nights of fall come on, the poultry should be given increased attention as to their housing. Overlooking this, results in developing colds and sometimes make a way for the introduction of roup into the flock. More than once, a year's work has been lost to a poultry raiser by leaving needed repairs on the poultry house till too late in the fall.

The separating of the young fowls into two flocks—one to be sold and the other to be kept—is a desirable move at this time. This will enable the poultry raiser to feed the sale flock for fattening purposes, while he can feed the other flock so as to stimulate the best growth without fattening. Many neglect to do this, but the practice is increasing with the increase in interest in scientific poultry raising.

A Business Woman.

Frank Work, the venerable New York millionaire, discussed, in his distinctive way, international marriages.

"Our girls don't marry men any more," he said, grimly. "They marry titles. Girls haven't changed, it seems, since the Middle Ages.

"There was once, you know, a lady of Touraine who was wedded to a mediaeval count. The count went out from his castle one fine morning to meet the foe, but the foe defeated him and took him prisoner.

"Then the count's castle was besieged. The countess was summoned to the battlements. From below a herald shouted:

"'Lady, your lord has been defeated and is now our prisoner. Surrender the castle to us and he shall be restored to you in safety.'

"But the countess answered without an instant's hesitation:

"'No, I'll do nothing of the sort, for I can easily obtain another husband, but getting another castle is quite a different matter.'"

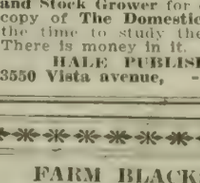
Put Your Name on Everything.

The Farmer's Handy Marking Outfit advertised in this edition is a very useful combination for a farmer to have in his workshop. It is the real thing—an up-to-date marking outfit which can be used for all purposes advertised. The cost is quite reasonable. The advertiser also wishes to engage agents to sell the marker in their special territory. See double-column advertisement of the Montrose Supply Co., Montrose, Mo.

"You will never be happy if you envy the happiness of others."—Chicago News.

THE DOMESTIC SHEEP.

There is one modern writer on Sheep industry who has made his mark. It is Dr. Henry Stewart. He has written a book entitled **The Domestic Sheep.**

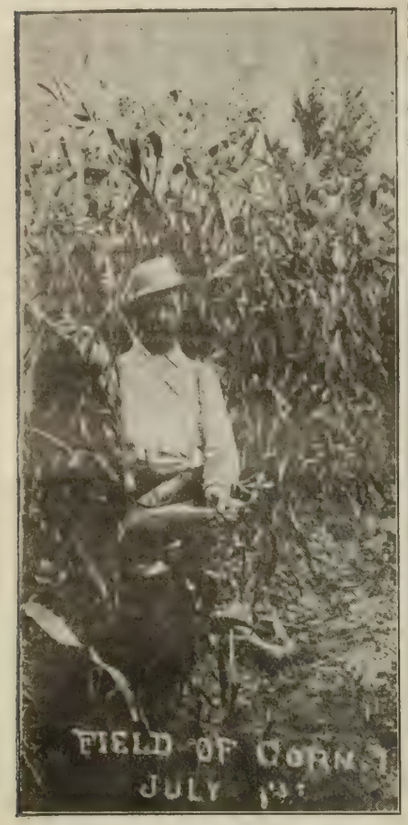


It is up-to-date in every particular. There are 384 pages, and besides going into the subject in a practical way there are illustrations of every breed and every subject belonging to the industry. For $1.50 we will send **The National Farmer and Stock Grower** for one year and one copy of **The Domestic Sheep.** This is the time to study the sheep business. There is money in it. Address,

HALE PUBLISHING CO.
3550 Vista avenue, - St. Louis, Mo.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



THE PECOS VALLEY. — The picture shows one section of a field of corn in the the Pecos Valley, the photograph being taken on July 1st, when the corn was furnishing roasting ears. Large crops of corn are absolutely certain in the irrigated lands of the Pecos Valley.

IRRIGATION.

The Famous Pecos Valley.

Farming by irrigation was practical in the remotest times and has been known to the people of all ages. In the United States the subject is of the greatest importance. The increase in our population and consuming power, the growing demand for food stuff, and the almost complete subjugation of the cultivable humid areas have naturally turned to the possibility of irrigation. Irrigation has made a practical science of agriculture, for with all the elemental forces under complete control, chance is eliminated, the law of cause and effect operates without interruption, and a crop failure is impossible. The value of irrigation is easily measured. The United States Government has already expended millions of dollars in reclamation of irrigated lands, and private corporations and individuals are likewise spending millions in that direction. The opportunities of securing cheap irrigated farms are limited. Values in the irrigable districts are constantly rising, and the demand is just as rapidly and constantly increasing. The Pecos Valley of West Texas is a section showing rapid and wonderful development under irrigation. Under the Texas Orient project more than 25,000 acres are now being opened up for settlement in this famous valley, which are being sold in small tracts and upon easy payments. The lands are located in Pecos county on the line of the new transcontinental railway—Kansas City, Mexico & Orient, now building and rapidly nearing completion. The grain, fruit and vegetable production of this section is favorably known as well as the fertility of the soil and healthfulness of its climate. Great interest is now being enlisted in this rapidly growing territory, and full free information can be had regarding same by addressing F. E. Dobbins, Land Commissioner, Texas Orient Development Co., 850 Finance Building, Kansas City, Mo.

THE PECOS VALLEY.—Small sectional view of Toyah Lake, the source of water supply for the lands for sale by the Texas Orient Development Co. Engineers figure that when Toyah Lake is enlarged by dam it will irrigate 80,000 acres of land, allowing 36 inches of water per year. The rainfall averages 15 inches, making about 51 inches of available water.

Suggestions For Farmers.

The farmers of the United States are naturally very much interested in the census of agriculture and farms that will be taken April 15, 1910, as one of the subjects to be covered by the Thirteenth Decennial Census. Many are showing their interest by writing to the Census Bureau for the purpose of making comments upon census information regarding agriculture as presented in the past. The director of the census welcomes all such suggestions and gives them careful consideration, as he is anxious to have the result of the coming census correspond as nearly as may be to the desires of the people most interested.

In addition to studying carefully these suggestions, the director has on his own initiative requested certain professors of economics and agriculture of the more important universities of the country, and other persons who have specialized in agricultural matters, to come to Washington for a short time for the purpose of studying carefully and criticizing plans now under way. Especially is it desired to obtain their opinion relative to the questions to be asked and their form, as the results to be obtained will so largely depend upon the character of the schedule and the manner in which the questions are propounded. These suggestions, coming from outside experts, are proving to be of great value, and it is believed that in consequence of this preliminary study more valuable and accurate data will be obtained than could otherwise be secured. After these special students and experts have made their preliminary studies, formal conferences are held in the office in which the whole matter of the character of the schedules and the best methods of securing the information are thoroughly gone over.

The department is also seeking to secure the advice and co-operation, as far as possible, of the officers and experts of the Department of Agriculture, of the state agricultural colleges, farmers' societies and like organizations. Address Director of the Census, Washington, D. C.

PUT YOUR NAME ON EVERYTHING.

Your name, name of farm and address, **NOT PRINTED BUT PERMANENTLY PAINTED,** designed as illustrated here. With this outfit you can in an artistic manner **MARK YOUR MAIL BOXES, SACKS, IMPLEMENTS, BARRELS, BOXES, CRATES, ALL SHIPMENTS, your FRUIT, AGRICULTURAL, STOCK and POULTRY EXHIBITS AT FAIRS.**

Besides stopping loss of possessions, errors in shipments, and insuring safe return, it makes a fine advertisement for you.

An appropriate name gives your farm, orchard or estate **"INDIVIDUALITY," AND ADVERTISING IT IN THIS WAY** in connection with your own name it makes your land more valuable.

THE FARMER'S HANDY MARKING OUTFIT does all this. **COSTS ONLY $1.00 COMPLETE—Marker, Paint and Brush. LASTS A LIFETIME AND PAYS FOR ITSELF IN LESS THAN A MONTH.**

Send a dollar bill to-day or money order. Every farmer, large or small, should have this outfit. Write your name, farm name and address plainly.

ANY KIND OF MARKER MADE TO YOUR OWN ORDER. YOUR MONEY BACK IF NOT SATISFACTORY.

Eradication of Weeds by the Iron Sulphate Method.

The eradication of farm weeds has been the subject of special investigations by the Agricultural Experiment Station of the University of Wisconsin for several years. Experiments with the iron sulphate solution were begun in 1906 and successful results were secured in the eradication of wild mustard and in the partial control of other weed pests. These results are described in Bulletin No. 179, just issued, entitled "The Eradication of Farm Weeds with Iron Sulphate."

The iron sulphate solution is prepared by mixing 100 pounds of granulated iron sulphate with fifty gallons of water and stirring thoroughly. This solution is sufficient to treat one acre of land infested with wild mustard. A specially adapted sprayer is necessary to apply the solution. Such machines are now to be found upon the market at moderate prices.

Fifteen to twenty-five acres can be sprayed daily and a single application of the solution will kill all of the mustard if applied at the right time. The spray is most effective if applied when the younger plants are in the bud and the older plants in the third leaf. Weather conditions should be favorable, as rains wash off the solution making it ineffective.

Mustard spraying experiments made in 1906 and 1907 have demonstrated the effectiveness of this method of eradicating mustard and the partial control of cockle bur, bind weed and rag weed. Fields of oats at the station farm, at Madison, and in Waukesha, Kenosha and Langdale counties, were sprayed with successful results.

Canada thistles are not killed when sprayed with iron sulphate. Although some plants are serious injured, the solution merely causes the leaves to be scorched and the thistle plant soon recovers its natural vigor. Experiments show that eradication of thistles can be more effectively done by the cultivation method. This involves a rotation which keeps the thistles under control by frequent cultivation.

The cost of spraying with iron sulphate is about $1.25 per acre, including the following items,—sprayer, $60 to $150; man and team spraying 20 acres per day, $4; man for making solution, $1.75; one ton of iron sulphate, $16; freight on same (200 miles), $3.25; total cost for material and spraying 20 acres, $25. The cost of the iron sulphate varies according to distance it must be shipped, and is cheaper when purchased in car lots.

LATEST IMPROVEMENT IN HAY PRESSES.

A condenser hopper of unusual merit has recently been perfected for use on a belt power press. This hopper opens up and allows extra feeding space, increasing the capacity; also the earning power of the press and making easier work for the feeder.

This great advantage is found on the Belt Presses made by the Dain Manufacturing Company. They also have an automatic tucker which turns out smoother, squarer bales than is possible with any other press.

Any one desiring further information relative to the Dain press can get it by writing direct to the Dain Manufacturing Company, 828 Vine St., Ottumwa, Iowa.

ABSORBINE CURES SHOE BOIL.

J. L. Dexter, East Orange, N. J., in a recent letter stated: "There is no doubt about ABSORBINE as a cure for Shoe Boils. One of my mares developed one recently (very large). In not over three days, by the use of ABSORBINE, I took the same out clean, and I can therefore testify to its value for the cure of Shoe Boil. ABSORBINE at druggists $2.00 per bottle or sent express prepaid upon receipt of price. Write today for free booklet. W. F. Young, P. D. F., 10 Temple St., Springfield, Mass.

The Speedy Hired Man.

"I see you farmers are all buying automobiles."

"We are," admitted Farmer Whiffletree, "and you can believe it or not, but my hired man has developed enough energy to be pinched for speeding."—Kansas City Journal.

DON'T BUY GASOLINE ENGINES

UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline, kerosene or alcohol engine, superior to any one-cylinder engine; revolutionizing power. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. **THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago.** THIS IS OUR FIFTY-SIXTH YEAR.

BEST SHOT GUN SHOTS.

The Big Grand American Handicap at Chicago Shot a Hero Into the Shooting World.

Fred Shattuck, of Columbus, Demonstrated His Nerve.

Every year the best shotgun shots in the land assemble in competition for the greatest of all shooting honors—the Grand American Handicap. The big shoot is usually held the last week in June, which gives the men practically three months to get their aim in trim. Trap shooting is virtually warm weather sport, though many of the inveterates crack away at the flying clay saucers all winter long.

This year, the Grand American was held at Chicago, with the big event scheduled for Thursday, June 24th. Sunday saw the well known shooters rolling in from all the four corners of the United States. Monday and Tuesday everybody went out to practice—that is, to get used to the "conditions," such as the background and flight of targets. On these days every man stands on an equal footing. That is 16 yards back of the traps from which the targets are thrown. Wednesday a Preliminary Handicap was held. On this day every man stands at the postion he will shoot from in the big event next day. The poorest shots are placed at 16 yards, the best as far back as 21 yards, and the others at 17, 18, 19 and 20 yards acording to the judgment of the Handicap Committee who knows the record of each one. Thus, every man has an equal show.

When the Grand American Handicap started on the fourth day, the quiet determination of the 450 or more seasoned shooters created an atmosphere that is hard to explain. Perhaps it was something like the start of the famous Olympic Marathon race at Windsor Castle—men keyed to the breaking point though outwardly as cool as ice.

Fred Shattuck, of Columbus, Ohio, the winner, gave such a demonstration of pluck that his name will always be prominent in the shooters Hall of Fame. The race is for the best score out of ... targets . After 80 had been shot, one man had missed only one and several only two and three. Shattuck had missed four. The last 20 targets try a man's mettle and Shattuck knowing this, counted himself in the race though some thought he had little show. He had the grit and skill to break those last 20 without a miss which gave him a total of 96. All eyes were on Shattuck now, when it was learned that three other leaders in the race had missed enough to make their score 96 and tie him. His 20 straight under such a strain as that was marvelous shooting. The four men who were tied then had to shoot it off on a string of 25 targets. This is the most gruelling test of all. Shattuck was at 19 yards. Two men had an advantage of him—one at 16 yards and one at 17 yards . The referee lined up behind the four men and the race started anew. "Dead! dead!" he shouted, as Shattuck broke bird after bird. It was not a runaway race, for all were scoring breaks with clockwork regularity. The 25th bird was reached—all had missed but Shattuck. Crack! and he breaks the target clean as a die. Then a great shout for one of the gamest finishes ever recorded—45 straight. Who could beat that? All hats were thrown in the air to Fred Shattuck.

Shattuck lays much importance upon the fact that he used UMC Steel Lined Shells which have a tough band of steel around the smokeless powder. No other shell made has this improved feature. One man is reported to have remarked, "I never saw a man shoot with such confidence as Shattuck . There must be something extraordinary about those UMC shells he used. He makes the 12th winner who has used them and only 18 Grand American Handicaps have ever been held!" "That's right," his friend said, "And no other make has won more than 6. You can trust one of those boys to know the best shells any chances of losing out."

Farm Butter-fat Records.

Being asked by the New York Produce Review and American Creamery to "Give a simple method of keeping records of butter fat production on the farm, one which will require the least work for the farmer and yet give approximately the number of pounds butter fat per cow," Mr. O. A. Storvick, of Minnesota, answered as follows:

"The method I would favor is one very simple and yet quite accurate. Use a scale made for the purpose of weighing milk, one having two indicators, so one can be used for taking the tare by placing on zero when empty pail is hung on scale.

"For taking samples I would use glass stoppered bottles with numbers corresponding to the number of cows; also use a chart ruled so as to give name and number of each cow. place for weight of milk, test and pounds of butterfat.

"Would weigh each cow's milk morning and evening on the 10th, 20th and 30th of each month, and take a sample of milk from milk pail before weighing, at each of these milkings. Supposing a cow gives 12 pounds of milk in the morning and 13 pounds in the evening on the 10th, or 25 pounds for the day, we simply add a cipher and we have amount for the first ten days of the month, which in this case would be 250 pounds of milk; on the 20th, repeat the same and also on the 30th, hence there would only be the three sums to add, now we would test our samples and compute fat produced by each cow, and credit each cow in a book ruled for this purpose, where each cow's record can be kept for the entire year.

"I have found this will give very satisfactory results, and one which will require but little trouble and work. Of course, should a cow not be in a normal condition on one of these dates, which could easily be noticed by the weight of milk, the sample could be taken one or two days later also. Some favor taking the samples three days in succession, but this I do not think will give quite as accurate result in case the milk flow should increase or decrease, and for this reason I favor the three dates mentioned."

New Rugs From Old Carpets.

"In almost every home there are usually to be found some carpets that because of either shabbiness or extreme ugliness have been banished to the attic," says Woman's Home Companion for September. "These can be turned into a most attractive kind of rug. The carpets are sent to the maker, who has them cleaned and raveled and then woven into a soft, fluffy surface of nondescript tone, with a border of contrasting color. These 'fluff rugs' are among the best of the cheap rugs and do not look cheap at all, and it is a pleasant surprise to see how many useful and charming rugs can be made from a seemingly hopeless old carpet. To have them made costs about one dollar a square yard, making the twelve-by-nine size cost twelve dollars. The marker usually pays express charges one way."

There's Only One Best

—and that's the GREAT MAJESTIC—they are the only ranges made exclusively of **Malleable and Charcoal Iron—outlast three ordinary ranges**—don't break, crack, or rust. Malleable Iron allows absolutely air-tight riveted joints in a MAJESTIC and these combined with pure asbestos lining, **save half your fuel bill and give you a dependable cooker, a perfect baker—every day.**

The MAJESTIC is equipped with a 15-gallon, all-copper reservoir—it touches the red hot fire and heats water in a jiffy.

The Great and Grand MAJESTIC
Malleable and Charcoal Iron
RANGE

has an oven door, which when dropped, forms a rigid shelf strong enough to bear any weight—oven rack slides out automatically, holding anything, that happens to be on it, securely. Other attractive MAJESTIC features are the open end ash pan, acting as a shovel and the ash cup under it.

No muss or danger of fire from red hot ashes with a MAJESTIC.

Each exclusive MAJESTIC feature makes this range more practical, more serviceable, more durable—the best range your money can buy regardless of price. MAJESTIC Ranges are sold in nearly every county in forty states. If your dealer doesn't carry MAJESTIC Ranges, write us for the name of a dealer in your locality who does, and we'll send our booklet:

It Should Be In Your Kitchen

THE PLUS QUALITY IN ENSILAGE CUTTERS.

Attention of readers of this paper is called to the announcement made in this issue by the Jos. Dick Mfg. Co. of Canton, Ohio. These people make the Blizzard Ensilage Cutter and all those who have seen it work are one in proclaiming it the most wonderful machine ever built. It will cut up a broom stick without ceremony. Of course no one wants to cut up broom sticks with it, but this is just an illustration of its activity.

Here's the point: The Blizzard Ensilage Cutter does **more** than is expected of it—more than you will ever require. It is like hiring a man to work eight hours and finding he will work ten for the same price. You get **extra** value. Get the blizzard catalog one will be sent free if you address Jos. Dick Mfg. Co., 1416 Tuscarawas St., Canton, Ohio. Ask also for pamphlet, "Why Silage Pays."

A Long Horse Wanted.

It is a curious fact that the invariable first thought of a British jack tar when landing from a cruise is to get on a horse. For purposes of economy one animal frequently serves for two or three grinning sailor boys.

Recently a sailor from the fleet of British warships that accompanied the prince of Wales to Quebec approached the keeper of a downtown livery stable, and asked for a horse.

"For riding or driving?" asked the liveryman.

"We'll be goin' aboard of 'im," responded the sailor.

"What kind of a horse do you want," continued the liveryman—"black, white, chestnut sorrel—lively or gentle?"

"Stow all that," said the sailor; "what I'm after is a good long one. There eight of us a-goin' on 'im."—Success Magazine.

Two Theorists.

When Mme. de Stael declared, in the generalizing method peculiar to the feminine mind, that to know everything was to forgive everything, she swept condemnation, and, to a large extent, criticism out of her horizon, and made the love-lighted outlook of charity limitless.

To certain rigid natures the Frenchwoman's epitome of the Christian creed bears no appeal, and to the honorable soul of one, John Thorpe, it would, if presented to him, have appeared as valueless as that valuable equipment in the making of personal history—an unbounded ambition. Unexpected heir to a distant relative's fortune—a relative of whom ugly facts had come to light as to dishonorable speculations — John Thorpe refused to benefit by the will. Old Anthony Thorpe, who, in the amassing of his fortune, had given his conscience such liberal license, would have smiled sardonically had he known the powers of the inward monitor in his heir's Quixotic soul.

When questioned as to his career, Thorpe said he preferred to live on his wits. These commodities were not such as might be termed brilliant in the brain of this devotee to his own particular view of a right theory, and his friends predicted sackcloth for apparel and ashes for fires of coal.

Some years after the termination of John Thorpe's college career his father had heavy losses and shortly afterward died, when the allowance which had made the son independent and enabled him to follow his amateurish taste in art melted into thin air.

Within a month or two from the date of these adversities Thorpe found himself acknowledging heir of old Anthony. Fate had indeed flaunted her fickleness in the face of the faithful, but she was in a measure defied when this John-o'-Dreams, with little care for the pinchings of poverty, took up his abode in a garret, with his paint-box, his easel and his dog.

Thorpe's appearance, his length and lankiness of stature, had an oddity almost fantastic, which was also not without a certain distinction. He resembled a Vandyke portrait, supposing that painter of style to have surveyed his sitter through the medium of a convex mirror, thereby exaggerating at every point his leanness and lengthiness. The long oval of the thin, refined face might have been accused of femininity but for the line of the firm-lipped mouth and the reserve of the kindly eyes. These were virile enough.

The singularity of Thorpe's appearance had its own fascination for at least two of his friends. Their gaze of untiring admiration was as fervent as that which might have shone in the eyes of the ancients when they worshiped the beauty of a Greek god.

These two love-blinded beings were no other than a shaggy terrier, known by the unbaptized name of Toddles, and a sick child, who lived under the same roof, and was at the mercy of the same shiftless landlady.

"Toddles," said Thorpe one day (the dog was lying with ears cocked, listening for the landlady's foot on the stairs with the approaching meal), if I were a little more gifted and you were a little less hungry, there would be more money between us, my friend."

Toddles was unabashed by this slur on his gastronomic powers; he even cheerfully assented by wagging his tail, which in his recumbent position made a flopping sound on the bare floor.

In a few moments the door opened and the landlady's head thrust itself forward.

"Please,sir, Mattie Smith's dying!"

"All right," said John Thorpe, quietly, without, however, removing the pipe from his mouth or his eyes from the mixing of flake white on the palette; "I'll come."

His apparent callousness was due to his landlady's peculiarity. He had discovered long since that "a passionate prodigality of expression" was her usual method of speech.

He found the child much exhausted with a violent fit of coughing, but she was able to turn upon him a dim little smile, followed by the shadow of a nod, as awkwardly enough he poured her some medicine from a big labeled bottle, which, with an old jar filled with daffodils, shared the uneven surface of the very rickety table in the center of the very small room.

Thorpe remained a moment gazing at the flowers, his hands in his pockets, his head bent.

He seemed to form an inference from their presence, for he presently said:

"So Lady Mary has been here today, I see. What time was she here? Never mind, don't speak," he added, quickly, as the child endeavored to frame a word, and thereby commenced coughing.

Lady Mary was one of the many daughters of an Irish earl. Distraught by her daily readings of the sufferings of the poor, she determined to see on her own account what could be done, and her seeing ended in a large amount of doing.

In arranging some little matters of comfort for Mattie, when the child first came under her notice, she found it necessary to consult Mr. Thorpe.

During the interview a look of keen inquiry shone in the blue gray depths of Lady Mary's Irish eyes, and more than once the dark flashes fell and veiled their perplexity, for her quick sense told her the unmistakable gentleman was there, through all the disguise of shabby clothes and so poor a dwelling.

As for Mattie, his name was always on her lips.

It was in the child's room Lady Mary from time to time encountered him. He and Toddles had long had the habit of betaking themselves there, and making for Mattie her happiest hour in the day.

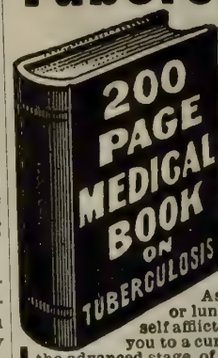
Lady Mary's racy manner gradually thawed the reserve of her new acquaintance.

To talk intimately, even with those few old friends who valued his personality among their dearest possessions, was rare with Thorpe, but this new friend, with the charm of her womanly tact, gradually drew from him the story of his life, made up for the most part of the sadness of negative, of the things he had not done, of the career he had not made, of the happiness which, for conscience sake, he had not found.

One day, after a visit of Lady Mary's, Mattie announced a piece of news. "I am going," said she, her eyes shining and the bright blush coming to her cheek, "to the seaside. Lady Mary says she will take me. What are waves like, Mr. Thorpe, and will there be big fishes and real boats?"

Thorpe walked to the window and looked out over the chimney-pots, where a cat prowled in the smut-blackened air. The sordidness of the view was, however, just then not

Tuberculosis Book FREE



This valuable medical book tells in plain, simple language how Tuberculosis can be cured in your own home. If you know of any one suffering from Tuberculosis, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Company, 3260 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free, and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

FOR THE VEGETABLE GARDEN.

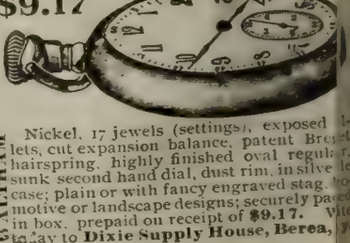
There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 252 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

SHIRT WAIST EMBROIDERY PATTERNS.

This embroidery pattern is No. 513, made by the Paris Modes Company. It is a wheat design in shadow and outline embroidery for shirt waist. It comes imprinted on light paper and is tranferred to the cloth by pressing it with a hot iron. The pattern is good for two impressions.

We are sending out this pattern as a circulation premium in connection with the **Universal Magazine.** Anyone who will send 25 cents to pay for the **Universal Magazine** for one year may select Embroidery Pattern No. 513 as a **free premium. The Universal Magazine** is thirty-two pages, published monthly, and contains a large amount of interesting reading matter. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

$9.17



ELGIN OR WALTHAM Nickel, 17 jewels (settings), exposed lelets, cut expansion balance, patent Breguet hairspring, highly finished oval regulator, sunk second hand dial, dust rim, in silver case; plain or with fancy engraved stag motive or landscape designs; securely packed in box, prepaid on receipt of **$9.17.** Write today to **Dixie Supply House, Berea,**

Dress Economy

Beautiful cotton dresses need not be expensive.

Simpson-Eddystone Black & White Prints

are charming calicoes of the highest quality, fast color, and pretty new patterns that make up into beautiful dresses of moderate cost and long-wearing quality.

If your dealer hasn't Simpson-Eddystone Prints write us his name. We'll help him supply you.

The Eddystone Mfg. Co., Philadelphia
Established by Wm. Simpson, Sr.

uppermost in his mental vision. He turned round with a sigh.

"Ah!" he said, "it's grand for you, little girl, but it's sad for us, eh, Toddles?"

The dog jumped down from his post on the child's bed where he had been lying, looking absolutely ugly as he blinked away at the bead eyes of Mattie's rag doll. He then proceeded to set up a howl of impatience for his supper, thereby compelling his master to accompany him back to their own almost barer apartment.

Among Lady Mary's charitable undertakings was now included the desire to convert John Thorpe's irrational logic into that which she was pleased to term rational sense. She informed him that his attitude with regard to old Anthony's money was of an inconsistency quite unique; that to bear out his theory he ought to refuse to wear clothes or to eat food unless he knew the people who supplied him to be gaining their livelihood by honest means.

She smiled with a certain derision at his favorite formula, "Equality, fraternity and liberty," though she hastened to explain she was on the side of "fraternity and liberty," but "equality" was surely contrary to the laws of God, for in the fitting out of the temperaments and talents of humanity could anything be more unequal than Nature herself?

Lady Mary was conscious of thinking as he made this statement how poorly equipped in temperament and talents for the battle of life was his eccentric new friend, whom she occasionally dared to deride. At a later date in their friendship she, with a woman's privilege, changed her mind, and if she surrounded the sterling worth of John Thorpe with the halo almost of heroism, was she not amply atoning for her former affection, even though, woman-like, she weighed down the favoring balance too heavily?

Thorpe's Mentor, unavailing though she feared were the attacks on his theories, was unconsciously the cause of an undermining process. The week after Mattie had been risked off to sea breezes, a tall, lanky figure, followed by the shaggiest of terriers, might have been seen sauntering along the queer little sea wall of Appelby-on-Sands. Thorpe's keen eye soon discovered Lady Mary in spite of her secluded corner and the shelter of a large sunshade, which she tilted a little backward at the sound of approaching footsteps, thereby throwing into delightful ocntrast its rose-colored lining the dark mass of hair under the dainty hat. A spectator near watched her stroll on a few yards with her tall companion, when they both suddenly stopped with the air of people whose attention is deeply arrested.

Were they on the brink of some momentous decision, or were they merely listening to a lark just risen and pouring down over them a very rain of song? The morning was glorious. A high tide was rolling in in densities of blue, the perfect color broken here and there, far out as eye could see, by the foam-white crescents of the waves. Two boats of the little fishing fleet were scudding merrily into harbor, the tawny-brown of the sails weather-beaten into patches of deep orange and dull red.

The before-mentioned lark, aware he was a lark and not a spirit (his little wings felt at length a sensation of fatigue), suddenly stopped his triumphant ascension heavenward and fluttered rapidly down to his nest. At this moment Toddles, who had caught sight of his master, came bounding up in wild excitement, loyally leaving the teasing of Mattie and the disporting of himself in deserted bathing-machines. The sea air had much invigorated his system, but his state of joy was just then hardly opportune. Toddles' dog nature, however, remained blissfully unaware of the critical moment. He seized a corner of Lady Mary's dress and waltzed around, immediately diverted by the sight of her long-handled parasol, at which he made a dive, with the amiable desire of carrying for her an object as long again as himself. Lady Mary snatched him up in her arms and walked away from her companions. There was more color in her face than the wind had brought there, and the aforesaid spectator wondered if it signified temper (she would be a charming enemy); if so, was it the dog or the gentleman?

But presently the latter came up and after a few moments they walked apparently by common consent, disappearing at length mere specks in the distance over the breezy downs.

That was a very long walk for Toddles. For once he wished he had never gone. He was accustomed to attention. He received none whatever.

When Lady Mary became the wife of John Thorpe, old Anthony, if he were allowed to know, in that hot place where his heir at one time believed him to be residing, must have felt a sensation of soothing coolness, for the use of his fortune in Lady Mary's hands was sufficient to justify the reversal of a ten-fold curse.—Hearth and Home.

A Problem Solved

Home Made Gas Light From Crushed Stone and Water

VOLUME for volume, this rural gas actually gives twelve times more light than the best city gas.

Like city gas, it is used in handsome brass or bronze chandeliers and fixtures of endless variety.

A simple twist of the wrist turns on a brilliant flood of light in any room in the house, day or night.

It has already driven the oil lamp with its grease, smoke, soot and smell, out of 176,000 town and suburban homes.

Takes some member of every one of these 176,000 homes, fifteen minutes once a month, to make all the gas the household can use.

***

The magic is all in the wonderful gas-producing stone.

This stone is manufactured in huge electric furnaces, in a temperature of over 6,000 degrees Fahrenheit.

When ready to use, it looks and feels like crushed granite and is then known as Union Carbide.

Union Carbide is packed at the factory and distributed through warehouses all over the country in sheet steel cans in which it may be kept for years.

In these packages it is safer to handle and store than common coal, as it will not burn and can't explode.

***

The gas which this wonderful stone yields is genuine Acteylene.

And Acetylene, carried in iron pipes to ornamental fixtures, burns with a soft, brilliant, pure white light.

On account of its color, it is the easiest of all lights on the eyes, and is a boon to those afflicted with eye strain troubles.

It is not poisonous and one might sleep all night in a room with an open burner without harm.

For these reasons it is used extensively as an illuminant in hospitals, factories, mines, light-houses and government army posts.

To produce Acetylene, it is only necessary to mix Union Carbide with plain water in a small tank-like machine that is usually set in one corner of the basement.

The formula is simple, and the work can be handled by most any school boy.

Once a month he must fill the little machine with Union Carbide—the machine does the rest—it makes gas only when the lights are burning and stops making gas when they are turned off.

Anybody that can cut and fit pipes can install the generator, pipes and fixtures in two days without injuring walls or floors.

With such an installation you can make this glorious beautifying light in your own home for less money than same amount of light from kerosene would cost.

***

If you happen to live in the country, you can do as thousands of farmers have done—run the gas pipes to lights placed on your porches, in your horse and cow barn, or even in your barn yard and have all of them fixed up to light with a touch of an ignition button on post or walls.

Such a lighting scheme is not only a boon to the housewife and children, but it's a mighty handy convenience for the man of the house when he must do his chores after dark, or when he is called out in the night to attend a sick animal.

All these lights will be permanently fastened to ceilings, walls or posts, and enclosed in tight globes.

For this reason they are many times safer than lamps or lanterns that are so often tipped over with disastrous results.

Write us today how large your place and where it is located. Then we can mail our booklets and tell you how little it will cost to make this light yourself.

Just address UNION CARBIDE SALES CO., Dept. B, 156 Michigan Ave., CHICAGO, ILL.

The Fashions in Hosiery.

"The woman who has sufficient money to be well and fashionably dressed is most careful to have her hosiery match the color of her gown," says Grace Margaret Gould in Woman's Home Companion for September. "For instance, if she is wearing a broadcloth costume in a raisin tint, her stockings are of just the same shade, with instep elaborately embroidered in self-color. However, with an evening gown of white lace or chiffon she may wear white silk stockings embroidered in any of the delicate pastel shades, such as blue, cameo-pink or delicate yellow. For the woman of average means the black lisle-thread or black silk stockings are always in good taste to wear with an afternoon or evening gown. Either plain or embroidered in black, they are equally in good style.

"However, the girl who is going to any evening entertainment, where she plans to wear a white gown with perhaps a sash or ribbons of some light shade, such as baby blue or pink, may have her stockings the same color as her sash, rather than black, if she so chooses. Either one is fashionable."

The Doctor's Limit.

Mrs. Crawford—"Did you manage to coax your doctor to recommend a trip to that mountain resort you wished to visit?"

Mrs. Crabshaw—"Yes; but I can't go, for I couldn't get him to add that a few new dresses would do me a world of good."

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Punctuality on the Farm.

Some one has aptly remarked that "Better never late" is a much better maxim than "Better late than never." And it is certain that this is as forceful on the farm as in any phase of commercial life. When we stop to think of it, there is a proper time for almost everything; and if we delay, the chances are that this special opportunity will never come again.

Of course we all know that the secret of the dairyman's success lies in punctuality. There is a regular hour for everything connected with the business, and the more closely the farmer lives up to the exact hour, the more profitable will be his herd.

Stock raising also demands precision, and the peeping chicks and squealing pigs soon proclaim, if their supper is not forthcoming at the usual hour. But we do not so fully realize the crying need almost as insistent along the lines of cultivation

There is such a thing as being too punctual. We have all seen those who, in the desire to be leaders, cut their hay before it is ready, and lose at every turn by a reliance more upon the time-honored schedule than upon the climatic conditions of the season at hand. Because you were through haying before the Fourth one year is no reason why you should have rushed the thing through this year. Study the condition of the crop as well as the weather, and then do your best to unite them profitably.

But it is usually the case that if your ground is ready to sow wheat and the proper season has arrived, further delay will bring loss. If the garden is ready to cultivate, do it now; otherwise a rain may come and the weeds get a start; unexpected company may arrive and the opportune moment thus pass.

Spraying pruning, picking and marketing fruit all call for a certain degree of promptness. Procrastination is a vice sure to bring disaster. Besides, the dread of the work is much worse than the work itself. The habit of doing promptly is the best lubricant to avoid friction.

A good watch helps much along the easy way. Have a time for all routine work, and then work up to it. Of course there are exceptional instances when a schedule must be varied. Yet much of the work is more easily done by adhering to the fixed program.

Regularity at meal time not only promotes health, but promotes the good nature of the cook. The man who expects the dinner bell to ring promptly at noon and is ready for it saves himself much valuable time besides having a chance to eat the meal when it is at its best. It is vexatious in the extreme to hurry around to have a meal on time and then have the man of the house wait to go another round or have a little chat with the hired man before coming to the meal. The average housewife takes pride in having her meals served in good shape. Possibly she is tired as well as hungry, and wants to rest as well as to have the victuals before they get cold. The habit of loitering grows with the years. Curb it on the start. Make it a rule to do the duty which lies nearest, and to do it promptly. The same moment never comes twice in a lifetime. A very little while after the ground ceases to be too wet, it becomes too dry. Nature never stands still, and all true agriculture is founded on her rules.—Bessie L. Putnam.

The Buckeye Saw Mills.

This is a complete line of saw mills, engines, saw mill machinery, edgers, trimmers, cut-off saws, lath mills and special machinery—the most up-to-date saw mills on the market. Different sizes to suit all conditions. See ad. of Weber Implement Co., and address the firm at 415 North Main street, St. Louis, Mo., and ask for illustrated catalogue.

Economy in Boys' Clothes.

Every mother who has an active healthy little boy to clothe, knows something of the number of garments that are needed to keep him looking respectable. Pantaloons become ragged in an incredibly short time, jackets wear out at the elbows and fray out around the edge, and stockings show great holes at the knees. In fact there is no article in a child's wardrobe that is so expensive as stockings if new ones are purchased when they wear out.

I know an economical little mother who never buys any stockings for her two little boys except their Sunday ones. When they are worn so they need mending, they are carefully darned and taken for everyday. All the other stockings that they wear are made from the upper parts of those that the mother and older sister have worn until the feet are beyond repair. They are then cut by a pattern which is straight in front and has a seam extending down the back of the leg around the heel and under the middle of the foot, using the leg of the stocking and discarding the foot. The seam is stitched on the machine, then opened and cat-stitched down on either side. They require very little time to make, and adjust themselves to the feet so they are quite comfortable.

Do not trim the blouses intended for every day wear with ruffle. You can make two plain waists while you are ruffling one, and the same thing applies to the ironing. Buy percale and gingham instead of common calico.

The mother who studies economy will make the little boys pants instead of getting the ready-made article, for the cloth in the latter is usually poor and the making worse. If you have the cast off garments of the father, uncle or other adult member of the household at your disposal, the little boy may be provided with neat and comfortable garments at a trifling cost. A pair of trousers will contain plenty of good material for a small pair when the owner considers them worn out. Perhaps the little man does not like to wear garments that his playmates may recognize as having belonged to some one else. Wash the goods and dye it any pretty dark color you wish with diamond dye and no one can tell from its appearance that it was not made of new material. Cut them by a nicely fitting pattern, dampen every seam and press it and they will not have the "home-made look that is always objectionable. If you are a novice in this kind of work, examine a tailor-made garment closely and you will have no trouble in putting them together and finishing them properly. —E. J. C.

$10,000 GUARANTEE AGAINST LIGHTNING.

Every one who is interested in roofing his house or barn will be glad to learn about Steel Shingles, which last a lifetime.

As some people have the mistaken impression that such roofs are apt to be dangerous on account of lightning, the Edwards Manufacturing Company of Cincinnati, Ohio, have issued a guarantee backed by a $10,000 bond deposited with one of the strongest banks of Cincinnati.

This bond guarantees that if lightning damages a roof covered with Edwards Reo Steel Shingles, the Edwards Mfg. Co. will refund the amount paid by purchaser for the shingles.

These steel shingles come in 5 to 10 ft. stamped sheets, and can be laid with a hammer and nails. They last four times as long as wood shingles.

We advise our readers to write to The Edwards Manufacturing Company, 919-939 Lock street, Cincinnati, Ohio, for their new big catalog and freight-prepaid prices. These people are the largest manufacturers in their lines in the country and have a special proposition to up-to-date farmers who will represent them.

Her Leap-year Proposal.

"You've been courting me now for a number of years ,George," remarked a girl to a young man, "and I want to make a little leap-year proposal."

"I—I am not in a position to marry just yet," stammered the youth, but"—

"Who said anything about marriage?" interrupted the girl. "I was going to propose that you stop coming here and give somebody else a chance."—Philedalphia Inquirer.

THE ACETYLENE LIGHT.

A Great Modern Convenience For Farm Life.

There is a distinct advance in the standard of living in the country. Aside from those well known and much talked of innovations, the telephone rural free delivery improved farm machinery and domestic conveniences there has in the last ten years, developed a demand throughout the whole United States where intelligent farmers are fully alive to modern progress, for a better means of illumination. Improved lamps and lanterns have been developed, but the progress in this line has not been great for the very good reason that about every known means of burning oil so as to secure the best illumination had already been worked out.

It is not probable that any great

Sketch showing how an Acetylene Generator is connected in the cellar with pipes run through walls and out of sight.

further progress will be made along these lines. There has, however, come into the farm home a new means of illumination which gives to the farmer the very best light which the world affords. Recent investigations in Washington show that Acetylene is the nearest approach to sunlight of any illuminant, and as the sun is the standard by which the world sees best, the farm can now have the best light known.

There is scarcely a farm community in which Acetylene is not used by some of the progressive farmers, and light for light, it is cheaper than kerosene burned under ordinary conditions. The first investment in the generator and piping is soon forgotten and really should not be considered, in view of the fact that it is practically a part of the house and is becoming as important to the house as the chimney. No one thinks of

Matches can be abolished on the farm. The pull of a chain will light permanent Acetylene jets.

charging the cost of building a chimney up to the wood or coal bill for running the kitchen stove, and so it is equally absurd to figure that the Acetylene generator and the piping of the house is really a part of the lighting bill. Every house and every building built in the city today is piped for gas and wired for electricity. The gas bill or the electric bill is really the cost of lighting; the rest is the cost of building.

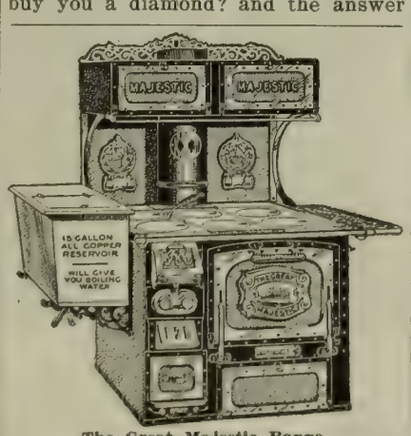
Since the farmers have recognized this, they have not hesitated to put in Acetylene generators, but now has come a new and splendid further advance. Acetylene can be piped to any part of the farm buildings where light is needed, and the pipes need not be placed very much underground, either. By properly distributing the gas jets in the farm buildings, light can be had of splendid quality, at any time, at any point. This does away with the lantern, and as little attachments are now made by which, as the gas is turned on, it is immediately lighted by an electric spark, all danger from matches is eliminated. The result is that the danger of fire is reduced to a minimum and the convenience of the system is beyond all comparison.

Think of the pleasure of the farmer, driving home at night; he enters the barn door and can have the place instantly illuminated without troubling to go to the house for a lantern or fumbling for matches, and in addition, running no risk of fire.

The whole system is so safe, so economical and so manifestly convenient that it is more than probable that every progressive farmer will sooner or later adopt Acetylene for the household and then extend the system, lighting his barns and outhouses with great economy and convenience. Further particulars can be had by addressing Union Carbide Sales Co., Dept. B, 156 Michigan ave., Chicago, Ill.

A Farmer's Wife's Demand.

It is a joke going the rounds of the daily papers that farmers have bought so many diamonds for their wives and sweethearts that the price has advanced to such an extent city people can no longer buy any. On reading this to a farmer's wife the farmer said: "My dear, would you like me to buy you a diamond? and the answer



The Great Majestic Range.

was, "I would very much prefer a Majestic Range." And she was right. The Majestic Range is a household treasure and, in actual value worth many diamonds. To understand this fully and clearly write to Majestic Mfg. Co., Dept 39, St. Louis, Mo., and ask for a copy of the interesting booklet, entitled "The Story of Majestic Glory."

The Fireless Cooker.

By an Expert Cook.

A great many women smile incredulously when the name "Fireless Cooker" is mentioned, and it really is somewhat misleading. Heat retainer would have been a better appellation, since the principle of so-called fireless cooking is simply to retain the heat by perfect insulation after the boiling point has been reached. If the housewife doubts the possibility of this, let her wrap a pot of hot coffee in a dry towel and she will find that it will keep warm for some time without fire. If this be true of such a simple experiment, she can judge what the heavy, scientifically constructed boxes with tightly closed buckets will do.

The Norwegian "automatic kitchen," or fireless cooker, attracted attention at the Paris Exposition in 1867, but it failed to come into general use until recent years. New interest in this method of cooking was awakened in the United States in 1905 by the experiments made under the direction of the Commissary-General of the War Department. These experiments were the result of a report from United States Consular Clerk George H. Murphy of Frankfort, Germany, where the fireless cooker had been successfully used for some years.

To the overworked housewife, it is undoubtedly the greatest boon of modern times. Imagine starting your soup or vegetables to boil or bread or meat to bake of a morning when you are getting breakfast and not seeing them again until they are taken "piping hot and done to a turn" from the cooker at dinner time. And, in many cases, the fireless cooker, without effort on the part of the housekeeper, is capable of producing results which could not be obtained on an ordinary stove. Especially is it the most perfect method of cooking all kinds of meats since the juices are retained and the meat rendered more palatable and digestible than by any other method of cooking. The Rapid not only cooks in from one-third to one-fourth less time than any other cooker on the market, but its excellent roasting device opens up many new possibilities in fireless cooking. The roasting is done by heating the radiators sizzling hot on a gas or coal stove. Then one stone is placed under the aluminum pail containing the food to be roasted and the other stone is placed on a rack in the pail. The food is put into the pail for roasting without previous heating, though for boiling it is first heated on the stove; the lid of the pail is closed and the cover of the roaster put on. No further attention is needed and the meat is taken out brown as a crisp and delightfully done.

Stylish Children's Dresses.

I have five little girls, and as we are in moderate circumstances, their clothes must largely be "hand-downs." Can you suggest any pretty dress-goods that make dresses really durable enough for my other children to wear after the first one outgrows them? MOTHER OF PEARLS.

We know of nothing better for your purpose than Simpson-Eddystone Prints, made by the Eddystone Mfg Co., Philadelphia, and sold by dry goods dealers all over the United States. These are the standard calicoes that have been noted so many years for their durable quality. I happen to know that the quality has been maintained to the present, while the pretty patterns have been kept-up-to-date. The colors are absolutely fast, even after repeated washing.

These goods can be made up into about as stylish children's dresses as you can find anywhere. The cost is so extremely moderate I am sure you will be glad to know about this material.

A Cure For Consumption

Dr. J. Lawrence Hill Is Actually Curing Consumption, Bronchitis, Catarrh, Asthma, and All Throat and Lung Troubles.

He Gladly Sends A Trial Package By Mail To Prove That Even The Worst Cases of Consumption Can Be Quickly Cured At Home.

Jackson, Mich., Special.—A remarkable announcement, based on positive proofs, has been made by one of the foremost specialists and physicians in this country, Dr. J. Lawrence Hill.

Everyone who has Weak Lungs, Catarrh of the Bronchial Tubes or Catarh in any form, Chronic Bronchitis, Asthma, Chronic Hacking Cough, Loss of Flesh, Night Sweats, Hemorrhages, Soreness or Pain in the Chest or under the Shoulder Blades, or any other Deadly Symptom of Consumption, should send their name and address with twenty cents in stamps or silver to help pay packing, etc., for a Trial Package of Dr. Hill's New Rational Remedy. This treatment quickly checks further progress of the disease and produces new resisting power, appetite, flesh and good health. All throat and lung sufferers should fill out coupon below and send at once for a trial package which the doctor sends by mail prepaid.

Trial Treatment Package Coupon

Dr. J. Lawrence Hill,
607 Hill Building, Jackson, Mich.

I am suffering from throat and lung trouble, so please send me your large trial package in plain, sealed wrapper, that I may try it and see for myself if it will do what you claim it will. I enclose 20c. to help pay for packing, etc., and as an evidence that I am not sending for the trial package out of idle curiosity.

SELECTED POETRY.

DAT OL' GRAY MEWL.

Dat ol' gray mewl, he jes' so slow
He's gittin' no ercount at all;
Ah jes' kin kind o' mek him go;
Ah has to drag him from his stall.

Ah hitch him up to drive erbout,
He moves so slow Ah think he's died;
Dese oddeh niggahs' mewls step out
En pass us jes' laik we wuz tied.

He won' pace mo' dan half er piece,
He jes won' trot er little bit;
Ah'll sell dat mewl en git er beas'
Dat's got some life lef' in him yit.

Er nice youn mewl dat step so high
He mek dem niggahs tek mah dust,
En when dey sees us plowin'—My!
Dey'll envy me plum fit to bust.

He plow so fast he tek dey bref—
But sho! I'se talkin' laik er fool.
Dat critter walk me plum to def!
Ah spec Ah'll keep dat ol' gray mewl.
—Chicago News.

WHEN OLD AGE COMES.

If God grant me old age.
I would see some things finished; some outworn;
Some stone prepared for builders yet unborn,
Nor would I be the sated, weary sage
Who sees no strange new wonders in each morn.
And with me there on what men call the shelf
Crowd memories from which I cull the best—
And live old strifes, old kisses, some old jest;
For if I be no burden to myself
I shall be less a burden to the rest.
If God grant you old age,
I'll love the record writ in whitened hair,
I'll read each wrinkle wrought by patient care,
As oft as one would scan a treasured page,
Knowing my heart each sentence graven there,
I'd have you know life's evil and life's good,
And gaze out calmly, sweetly on it all—
Serene with hope, whatever may befall;
As though a love-strong spirit ever stood
With arm about you, waiting any call.
If God grant us old age,
I'd have us very lenient toward our kind,
Letting our waning senses first grow blind
Toward sins that youthful zealots can engage,
While we hug closer all the good we find.
I'd have us worldly foolish, heaven wise,
Each lending each frail succor to withstand,
Ungrudgingly, ev'ry mortal day's demand;
While fear-fed lovers gaze in our old eyes
And go forth bold and glad and hand in hand.
—Burges Johnson, in Harper's Magazine.

ILLUSION.

God and I in space alone,
And no body else in view,
And where are the people, O, Lord?" I said:
"The earth beneath and the sky o'erhead
And the dead whom once I knew."
"That was a dream," God smiled and said,
"A dream that has ceased to be true.
There were no people, living or dead,
No earth beneath and no sky o'erhead,
There was only Myself and you!"
"And why do I feel no fear?" I said,
"Meeting You here this way!
For I have sinned I know full well,
And is there Heaven and is there Hell,
And this the Judgment Day?"
"Nay, those were but dreams," the great God said,
"Dreams that have ceased to be.
There are no such things as fear and sin,
And you yourself—you have never been;
There is nothing at all but Me."
—Anonymous.

WOMAN.

Untamed and forever the tameless,
The frail, yet forever the free,
Unshamed and forever the shameless,
The top of creation is she.

All civilizations have passed her
And left her barbarian still,
And the man who has dreamed he is master
Is simply the slave of her will.

She simpers and glances demurely,
And looks like a saint as she goes;
As sweet as a lily, yet surely
She's leading some man by the nose;

For her's are the primeval resources
Of strong, unregenerated sense;
Duplicity marshals her forces
And art is her subtle defense.

Oh, man, you may marvel and wonder,
May reason and argue and fret;
Oh, man, you may bluster and blunder—
You never have conquered her yet!

You lecture and tutor and teach her,
But still she is ever the same,
The free, irresponsible creature
That nothing can fetter or tame.
—Chicago News.

A MYSTERY REVEALED.

I said to him, "Oh, wisest one
Of all that dwell
On sands, why shunnest thou the world
Within thy shell?"

"Go to!" he cried. "I see that thou
Where breezes blow
Hast never lingered. Broken vows
Thou then shouldst know.

And vanity. Of summer girls
I will not blab;
But briefly, they have made of me
A hermit crab."
J. E. R. in New York Herald.

AT THE COUNTER.

They stood behind the counter, two rather pretty girls,
With ruffles on their shoulders and Lillian Russell curls.
And oh! their hearts were merry and their tongues were running fast
Of their lovers and their dresses, and their pleasures now and past.

When there wandered to the counter, with a tired and worried face,
A quiet little woman, who asked to look at lace.
One of them looked her over with a cool, contemptuous stare,
Then chatted on "O Daisy, I wish that you'd been there!"

"I 'spose that Charley looked too cute?" You bet that he's alive!
And my dress was that pink satin that we sold at ninety-five.
And I had that woman make it that made the dress for Grace."
"If you please," there came a weary voice "I want to look at lace."

"And Mary Jinks was there. O, girls, you ought to have seen her hair!"
It was curled and frizzled to death—and don't you tell—but I don't care—
I don't believe that half of it grew on her head at all.
And her costume—well! before I'd wear such a garment to a ball!

And how she ever gets a fellow with that lookin' face?"
"Will you kindly," said the weary voice; "will you let me see some lace?"
"I saw that fellow—you know—that was over in the silks;
He's just too gone for anything on that stuck-up Susy Wilkes.

I never"—Here the customer, up-plucking heart of grace.
Spoke boldly: "Please to wait on me. I I want to see some lace."
The salesgirl paused, impatient such persistence to discover.
"There's only veilings here," she said; "the lace is three rooms over!"
—Post-Dispatch.

WAITING FOR THE BUGLE.

We wait for the bugle; the night dews are cold,
The limbs of the soldiers feel jaded and old;
The field of our bivouac is windy and bare,
There is lead in our joints, there is frost in our hair;
The future is veiled and its fortunes unknown
As we lie with hushed breath till the bugle is blown.
At the sound of the bugle each comrade shall spring
Like an arrow released from the strain of the string;
The courage, the impulse of youth shall come back
To banish the chill of the drear bivouac:
And sorrows and losses and cares fade away
When that life-giving signal proclaims the new day.
Though the bivouac of ages may put ice in our veins,
And no fiber of steel in our sinew remains;
Though the comrades of yesterday's march are not here,
And the sunlight seems pale and the branches are sere.
Though the sound of our cheering dies down to a moan—
We shall find our lost youth when the bugle is blown.
T. W. Higginson, in Globe-Democrat.

SQUANDERED LIVES.

The fisherman wades in the surges;
The sailor sails over the sea;
The soldier steps bravely to battle;
The woodman lays axe to the tree.

They are each of the breed of the heroes,
The manhood attempered in strife;
Strong hands that go lightly to labor,
True hearts that take comfort in life.

In each is the seed to replenish
The world with the vigor it needs—
The center of honest affections,
The impulse to generous deeds.

But the shark drinks the blood of the fisher;
The sailor is dropped into the sea;
The soldier lies cold by his cannon;
The woodman is crushed by his tree.
—Bayard Taylor.

CONSOLATION.

We mop our brows and curse the heat
And say some things that are not sweet;
We moan and groan and lift our cry,
And some lay down and want to die;
But, oh, what compensating bliss—
There's still one hotter place than this!
We fuss and fume and do our best
To keep our nerves in wild unrest;
We champ and chew and cuss the weather
And all join in and cuss together,
Until there comes that thought, I wis—
There's still one hotter place than this!
Let heat waves come, they're bound to go;
In time the cooling breezes blow;
And when we choke and burn with fire
And in our shirtsleeves still perspire,
One comfort over all don't miss—
There's one place hotter far than this!
—Baltimore Sun.

THE LITTLENESS OF LOVE.

Love is just a morning glory, doomed at noon to die;
Love is only half a story, told in passing by;
Love is gold so delicate, the lightest flame might melt it.
Love's nothing! But—God help the man who's never known or felt it!
—Helen Rowland.

THE AVIATOR'S LOVE SONG.

The night birds home are winging,
The lark his song is singing,
Auroral shafts are bringing
The dawn—oh, fly with me!
The day is swiftly coming,
The early partridge drumming,
The spark coil gently humming—
Come fly, oh, fly with me!

The never-fail magneto
Now sings its faint falsetto
And sparks each plug, you bet—oh,
Then fly, my love, with me!
The bent shaft has been trued up,
The damaged canvas glued up
And all the set screws screwed up—
So why not fly with me?

The brass work has been polished,
All faults have been abolished
The wheel that was demolished
Is fixed—then fly with me.
The morning haze is blurring
The sun; no wind is stirring;
The motor she is purring—
Make haste to fly with me.
New York Sun.

THE LURE OF THE DESERT LAND.

Have you slept in a tent alone—a tent
Out under the desert sky—
Where a thousand thousand desert miles
All silent 'round you lie?—
The dust of the aeons of ages dead,
And the people that trampled by!
Have you looked in the desert's painted cup,
Have you smelled at dusk the wild sage musk,
Have you seen the lightning flashing up
From the ground, in the desert dusk?
Have you heard the song in the desert rain
(Like the undertone of a wordless rhyme)'
Have you watched the glory of colors flame
In its marvel of blossom time?
Have you lain with your face in your hands, afraid,
Face down—flat down on your face—and prayed,
While the terrible sandstore whirled and swirled
In its soundless fury, and hid the world
And quenched the sun in its yellow glare,
Just you, and your soul, and nothing, there?
If you have, then you know, for you've felt its spell,
The lure of the desert land.
And if you have not, then I could not tell—
For you could not understand.
—Madge Morris in Lippincott's Magazine.

THE BURDEN OF THE DAY.

Who shall rise and cast away,
First, the Burden of the Day?
Who assert his place and teach
Lighter labor, nobler speech,
Standing firm, erect, and strong,
Proud as Freedom, free as Song?

Lo! we groan beneath the weight
Our own weaknesses create;
Crook the knee and shut the lip,
All for tamer fellowship;
Load our slack, compliant clay
With the burden of the Day,

Higher paths there are to tread;
Fresher fields around us spread;
Other flames of sun and star
Flash at hand and lure afar;
Larger manhood might we share,
Surer fortune—did we dare!

In our mills of common thought
By the pattern all is wrought;
In our school of life, the man
Drills to suit the public plan,
And through labor, love and play,
Shifts the Burden of the Day.

Ah! the gods of wood and stone
Can a single saint dethrone,
But the people who shall aid
'Gainst the puppets they have made;
First they teach and they obey;
'Tis the Burden of the Day.

Thunder shall we never hear
In this ordered atmosphere?
Never this monotony feel
Shattered by a trumpet's peal?
Never sire that burst and blow
From eternal summits, know?

Though no man resent his wrong
Still is free the poet's song!
Still, a stag, his thought may leap,
O'er the herded swine and sheep,
And in the pastures far away
Lose the Burden of the Day!
—Bayard Taylor.

"THERE SHALL BE NO NIGHT THERE."

When I walk out beneath the starry skies
And feel night's solemn beauty o'er me steal,
I question oft what meaning underlies
The words that yet so much to us reveal.
No night in heaven? No calm and silent night,
To heal the fret and fever of the day,
Distill its balm upon the restless heart,
And bear us on sleep's shadowy wings away?
No far, mysterious stars; no changeful moon,
With light more graceful than the glare of noon,
No night to mark the time when toil should cease,
And weary hands could lie in folded ease?
What wondrous realm is this that knows no night?
Where eyes grow never weary of the light,
And hearts that ache with sorrow and distress,
Ne'er long to welcome sleep's forgetfulness?
What boon to blest immortals can be given,
To take thy place, oh night, sweet night, in heaven?
The deepest meaning, if I read aright,
Is that in heaven they have no need of night!
—Author Unknown.

THE LANGUAGE OF FLOWERS.

This is a beautiful study, and it is elegantly explained by the most satisfactory methods. There are twenty-four post cards, and each post card shows a different flower, grouped in such a way that the sentiment that each flower represents is spelled out by the flowers. For example, the violets of the violet card spell "Faithfulness;" the roses

"Love;" clover, "Be Mine;" etc. Each post card is different, finished in many colors and glossed.

THE UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine, published at 25 cents a year, and the post cards can be selected as a free premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

THE BUILDERS OF THE NATION.

"The City folk, they whirl about
In cab and tram and train,
They grumble at the days of drouth,
They grumble at the days of rain.
To comfort wed and easy ways,
They fear to soil a hand;
But the men who build the Nation
Are the men upon the land."
—Essex Evans.

MAGNIFICENT SUBSCRIPTION PREMIUM.

The National Farmer Hat.

The sizes are from 6⅝ to 7¼. They are hats suitable for men or boys. They are of good material, well made and stylish. These hats are sent direct from the manufacturer to the subscriber in a tube and sent by mail prepaid. These hats are black and steel gray. We send black unless steel is called for. These hats wear as well and last as long as any $2.00 to $3.00 hats on this market. They will give entire satisfaction. We believe this hat will make a first-class subscription premium. The subscription price of The National Farmer and Stock Grower is One Dollar for three years. We cut out one year, and in place of the third year we include the hat. Therefore, send us One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail one of these fine, wool crusher National Farmer hats as a premium. Be sure to mention the size and color.

SUBSCRIPTION BLANK

To be Filled Out if Order is Given.

THE FIRST DAY.

I sleep, who yesterday was tired,
I, who was very weary, rest;
I have forgot all things desired,
Or what were bad or what were best;
Wan roses lie upon my breast
And make a pillow for my head;
I know not am I banned or blest,
Who am most quiet—being dead.
Perchance tomorrow God may come
With awfulness of mouth and brow,
And bid me speak, who would be dumb,
My sins of yesterday; but now,
I have forgotten deed and vow,
I have been soothed and comforted,
And clothed with peace, I know not how.
Who am most happy—being dead.
A moment since one touched my hair—
There were hot tears upon my face:
Tomorrow I may wake and care
And hunger for a lost embrace;
But now, one dim; delicious space,
My joys are done, my tears are shed;
I may lie still, who have the grace
Of all forgetting—being dead.
—Theodosia Garrison.

I THINK OF YOU.

I think of you when daylight dies
And shadows steal along the lane;
I think of you when morning skies
Look gladly on the world again;
I think of you when midnight bells
Make sad refrains their solemn themes;
And when I'm deep in realms of sleep
I think of you in dreams—in dreams.
I think of you my loved and lost,
And wonder shall we ever meet?
I think of you and count the cost
Since side by side our two hearts beat.
I think of you through all the years
That go and come, and come and go,
And when I'm deep in my last sleep
I'll dream of you I know—I know.
—John Ernest Warren.

THE TWO MYSTERIES.

Ye know not what it is, dear, this sleep so
deep and still,
The folded hands, the awful calm, the
cheek so pale and chill;
The lids that will not lift again, though
one may call and call,
The strange white solitude of peace that
settles over all.
We know not what it means, dear, this des-
olate heart-pain,
This dread to take our daily way and walk
in it again;
We know not to what other sphere the
loved who leave us go,
Nor why we're left to wonder still, nor why,
we do not know.
But this we know, our loved and dead, if
they should come this day—
Should come and ask us "What is life?"
not one of us could say;
Life is a mystery as deep as ever death
can be,
Yet, oh! how sweet it is to us, this life
we live and see.
Then might they say—these vanished ones
—and blessed be the thought,
"So death is sweet to us, beloved, though
we may tell you naught;
We may not tell it to the quick, this mys-
tery of death—
Ye may not tell us, if you would, the mys-
tery of breath."
The child who enters life comes not with
knowledge or intent,
So, those who enter death, must go as little
children sent;
Nothing is known, yet I believe that God
is overhead,
And as life is to the living, so death is to
the dead.
—Mary Mapes Dodge.

THE OLD STERN-WHEELER.

When I read the summer folder of some
Eastern river boat,
Boasting that she is the speediest, and
grandest craft afloat—
"Two or three big steel propellers," and
perhaps turbine at that—
My thoughts they sort of wander to a
steamboat, broad and flat,
A steamboat built for comfort, without so
many wheels
(Though, if she heard a challenge, she was
sure to show her heels).
Yes, the throbbing stern-wheel packet that
used to make the trip
Down along the muddy waters of the good
old Mississip.
Oh, the dreamy churn that soothed you as
you stretched out near the wheel,
And watched the paddles churning up a
catfish or an eel!
And the foamy wake went winding like a
serpent, yellow green.
And the panorama passing in an ever-
changing scene;
The moss-grown wrecks and levees and the
landings high above,
The shouting of the rousters as they'd lift
and tug and shove,
The singing of the bow line as the men
would let it slip—
Were things not soon forgotten down along
the Mississip.
I have rode on river steamer in the North
and in the East,
And I felt on pins and needles all the way,
to say the least.
There was too blamed much discipline and
too blamed many airs,
The crew, all rigged in uniform, looked
just as fierce as bears;
While the captain in his buttons and his
military cap,
Looked like he'd call for irons if you gave
his back a tap
And said, "Come, have a julep, old man,
you need a nip!
Like you'd ask the river captains down
along the Mississip.
Right along the Mississippi and the stern-
wheel thumping slow,
And the dreamy song that reached you
from the stokers down below;
The noise in the card room and the tin-
kling in the bar,
The scent of sweet molasses mingled with
the smell of tar;
Some levee village passing like a far-off
gleaming speck,
And the planters talking politics out on
the upper deck—
Oh, that was river travel, and they'll never
beat the trip,
Aboard an old stern-wheeler down along
the Mississip.
—Victor A. Hermann, in Judge.

BENEATH THE HARVEST MOON.

Come forth ye poets long and gaunt,
And sing the gladsome tune
Of those who sit and plight their troth
Beneath the harvest moon;
Weave in the waving shocks of corn,
The stubble of the field,
The bounteous gifts of nature and
The yearly bumper yield.
Paint in the picture of a lass
With eyes that shame the sky,
The lover broad of shouldesr and
The shadows flighting by;
Entwine them with a golden cord
Plucked from the autumn wheat,
And just to make it somewhat real,
Let zephyrs young and sweet
Play hide and seek within her hair
While o'er the winding lea,
The hidden brooklet brings again
A youthful memory.
Sing well, ye poets, of the love
That flames within two hearts,
And make some mention also of
The flights of Cupid's darts,
Leave off where they enraptured are—
The lover and the lass—
Where they forget the world at large
While several people pass;
Say nothing of their being caught
A'sneaking off to spoon,
By folks who never vowed their troth
Beneath the harvest moon.
—Frank W. Taylor.

MOST BEAUTIFUL PICTURES.

Subscription Premium With the Universal Magazine.

We have five thousand sets of beautiful pictures. They are called the Asti-Heads, being reproductions from paintings by the famous artist, A. Asti. These pictures are 8½x11 inches and reproduced in the richest and most delightful colors. When properly framed, they constitute beautiful adornments to any room in the finest houses. They represent four types of womanly beauty. This is the most elegant supplement or subscription premium we have ever offered.

Send us 25 cents in one-cent postage stamps and we will send you the four beautiful Asti-Head pictures, and we will also send you the nice, new **Universal Magazine** for one year. This is a good publication, containing many new and interesting stories, selected poetry, etc. It is our own publication and will surely please you.

Address, **The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.**

Children's Clothing.

It is every mother's imperative duty to see that her children are dressed sufficiently well to withstand the cold, and no mother should be thoughtless in this matter, for in exposure may lurk disease and death.

The children should be carefully fitted in shoes, as shoes too small or too large for a growing child are apt to cause trouble with the feet that will follow it through life, and their shoes should be kept soft by rubbing frequently with a little vaseline on a soft cloth. It is of utmost importance to keep children's feet dry and warm in winter. Thick shoes and stockings should be the rule, and, for stormy weather, overshoes and leggings. Change their stockings often, as the perspiration absorbed from the feet produces a cold and disagreeable feeling, and, above all, see that the ankles are well protected, as it is said that wrists and ankles that are not well protected are the cause of many unexplained colds and spells of sickness. Their stockings, gloves and woolen underwear should be kept as soft as possible, and they may be kept soft as long as they last by washing them through a clean suds made by stirring enough Pearline in soft water to make a nice lather, and their gloves should be washed often, as they may carry disease germs, and it becomes the duty of parents and nurses to prevent a promiscuous use of these small articles.

Children's clothing should be adjusted as comfortably as possible, and a body garment should always be much fuller in front than in the back, for if they are made tight across the chest the shoulders are constantly drawn forward, and so the expansion of the chest and the play of the lungs are restricted and proper breathing becomes impossible. It is well to give this matter serious thought, for children are growing and changing form, and their garments should be made so they can be altered easily, and the child will not suffer discomfort from wearing ill-fitting garments.—A. M. H.

The Chinese Baptists.

The following Chinese quaint imperial decree, translated by the "Shanghai Mercury," was recently issued from the palace in Peking: "Owing to the scarcity of rain Prince Kung and others have been detailed to pray at the Takaotien on our behalf by dedicating incense and also Prince Tsai Hsun and others to the Shih yin-kung and other temples to pray by dedicating incense and now plenty of rain has come for which We feel thankful. Therefore We have to show our thanks to the said temples. We detail Prince Tsai Hsun to the Takaotien on the 7th of July on our behalf dedicate incense and We detail Prince Puhung to the Shaochengmiao, Duke Tsai Tse to the Hsuanjeumiao ,Tsai Fu to the Yihomiao on the same day to dedicate incense and to perform ritual service to return thanks for the rain with desires for further rainfall to console the farmers."

Where Women Cannot Pray.

"Speaking of the women voting," says the London Chronicle, "there are some parts of the world where the women are not even allowed to pray. Some Hindoo congregations deny their women this privilege, and among the Ainu the women can pray only in rare cases as the deputies of their husbands. The natives of Madagascar, however, stretch a point and permit their women to intercede with the powers of evil, but prayer to their supreme being is strictly a masculine prerogative. And no doubt the ladies of the house make the best of their opportunities."

The Children's Friend.

"Judge" Rosa Bender, the superintendent of one of the model family houses on the East Side of New York, is so called because, with sympathy and acumen, she settles all the disputes of the 800 tenants in her charge.

"Judge" Bender was talking the other day about the host of children in her enormous model house.

"They delight me," she said. "They are continually doing and saying the quaintest things. For instance, a little chap told me the other day that his yellow dog Salome had died.

"'An' I bet the angels wuz scairt,' he said, 'when they seen Salome comin' up the golden stairway, for Salome wuz allus cross to people what hadn't much clo's on.'

"Another little boy," pursued Judge Bender, "said last month to his mother:

"'Ma, get me a little baby sister, will ye? I'm awful lonesome.'

"'Yes, my child, I will,' the mother answered, with a glad smile. 'I promise you either a sister or a brother.'

"A baby sister is there now, but that boy often growls in the middle of the night at her:

"'Say, if I'd knowed what a yeller ye wuz goin' to be, I wouldn't have ordered ye.'"

CANCER CAN BE CURED.

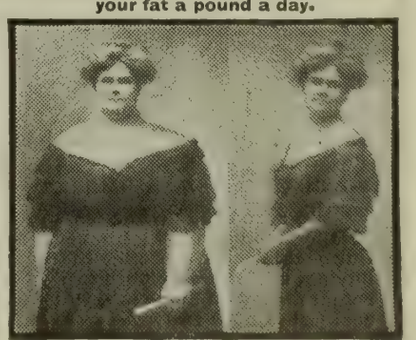
Scores of testimonials, from persons who gladly write to those now suffering, all tell of perfect cures. My Mild Combination Treatment destroys growth and eliminates the disease from the system. **Free book,** "Cancer and Its Cure," and 125-page book of testimonials from **cured** patients in every State in the Union. No matter how serious your case, how many operations you have had, or what treatment you have taken, don't give up hope, but write at once for my books.

DR. JOHNSON REMEDY CO.,
1233 Grand Ave., Suite 103, Kansas City, Mo.

Fat is Dangerous

It is unsightly, uncomfortable, spoils the figure, causing wrinkles, flabbiness and loss of vigor.

Let me send you my Proof Treatment absolutely Free; you can safely reduce your fat a pound a day.



Note what my treatment has done for others:

Mrs. Eva M. Reynolds, Box 114, Lehigh, Webster Co., **Iowa,** writes: "When I commenced your treatment I weighed 285 pounds, I now weigh 165 pounds, and never felt better in my life."

Mrs. W. D. Smith, Box 34, Abbott, Mex., writes: "I have lost 51 POUNDS by your treatment. I used to have heart trouble and shortness of breath, now I am well and can walk and work with ease."

Miss Dicie Wilson, Box 78, Franklin, Tenn., writes "I have lost 69 POUNDS by your treatment and I feel like a new person."

I could fill every page of this journal with testimonials from grateful patients.

It is dangerous, unsightly, uncomfortable and embarassing to be too fat. Excess fat weakens the heart. The liver, lungs, stomach and kidneys, become diseased, the breathing becomes difficult and the end comes in HEART FAILURE and sudden death. You can save yourself from these **DANGERS.**

I want to prove to you that my treatment will positively reduce you to normal and no matter where the excess fat is located, stomach, bust, hips, cheeks, neck, it will quickly and safely be removed without exercising or dieting. **Your figure will be beautified; flabbiness and wrinkles disappear.** Rheumatism, asthma, shortness of breath, kidney and heart troubles leave as the fat goes away. I will send you without a cent of expense on your part, my PROOF TREATMENT FREE. It reduces fat at the rate of a pound a day and does it safely and permanently.

FREE

Don't miss this offer. My PROOF TREATMENT is FREE. It will make you feel better at once. I will also send you **Free** my **new book of advices,** together with testimonials from many well known people. **Write to-day.**

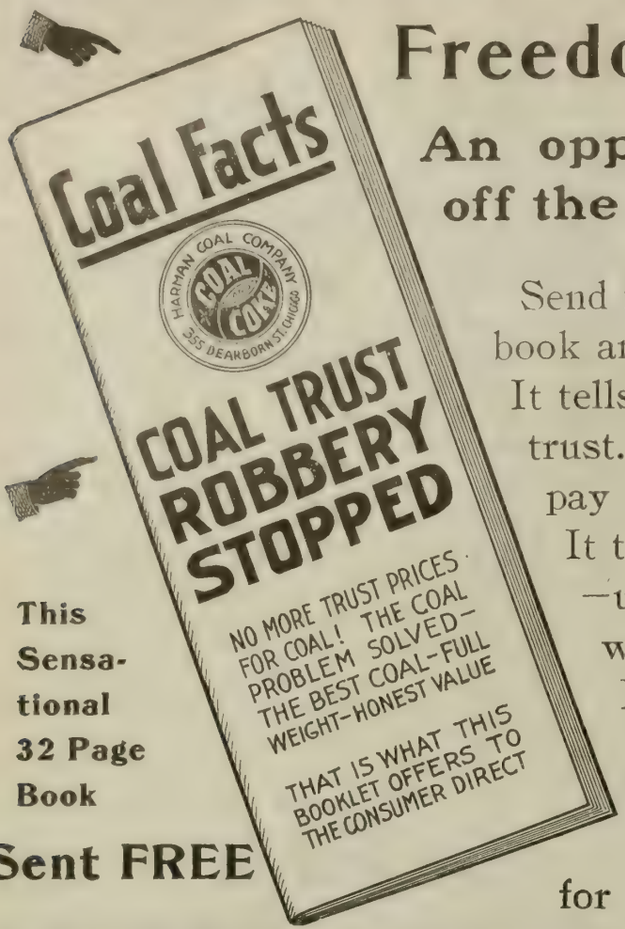
ROBBERY STOPPED!

Freedom From the Coal Trust

An opportunity for everybody to throw off the shackles of the greedy Coal Trust.



Coal Facts
HARMAN COAL COMPANY
COAL
COKE
355 DEARBORN ST. CHICAGO
COAL TRUST ROBBERY STOPPED
NO MORE TRUST PRICES FOR COAL! THE COAL PROBLEM SOLVED—THE BEST COAL—FULL WEIGHT—HONEST VALUE
THAT IS WHAT THIS BOOKLET OFFERS TO THE CONSUMER DIRECT

This Sensational 32 Page Book Sent FREE

Send for the free book "Coal Facts" today. Read this book and you will never buy another pound of trust coal. It tells you about the terrible, crushing ways of the coal trust. It tells you how **YOU** have been compelled to pay much more than you should pay for inferior coal. It tells you **WHY** coal prices have been going up—up—up; why you have been robbed year after year—why you have been getting coal hardly fit to burn. Every man who burns coal should send for this great free book **and read it.** All along you have known that SOMETHING was wrong. This book tells you just WHAT is wrong. Send for it **today.**

Coal Trust Prices Smashed

Don't be Robbed longer by the coal trust. Here is your chance to buy your coal **direct from the mine** and at the wholesale price. No matter who you are or where you live, you need not longer be throttled by the coal trust. You can defy the coal trust and buy better, cleaner, brighter coal than you ever bought before and at a smaller price than you ever paid the coal trust.

Whether you want coal for your stoves or whether you own a steam thresher, a steam plow, a creamery, a brick kiln, a steam plant or anything else that burns coal, you can buy direct from the mine. Everybody should find out all about this greatest coal offer. The free book "Coal Facts" tells you all. Just ask for this book and it will be sent you free, prepaid. Even if you never intended to buy any coal from us you should get this book and read it.

Save From $1 to $3 a Ton

We mean just what we say. We can sell you coal from $1 to $3 a ton cheaper than the coal trust ever sold it to you and we send you better coal. Our coal is so much better than the stony, slaty, dusty coal you have been buying, that there is no comparison, and while you save from $1 to $3 in actual money on every ton, you in reality save much more than this, for our coal lasts longer and gives more heat.

We save you money and give you better coal because we save you every penny that it costs to handle the coal. We ship your coal direct from the mine—in a bee line from the place where it is taken out of the earth to the spot where you live. There is no switching of cars, no handling, no shoveling into bins and out again and no laborers to pay. When you buy your coal from the trust you pay the mine profit; then you pay the jobber a profit; then you pay the jobber's laborers; then you pay the dealer's profit; then you pay the dealer's laborers, and finally you pay a large sum for a little pile of coal and a big pile of profit. That is the reason we can save you so much money. That is the reason why you should send for our free book "Coal Facts," and learn all about this sensational plan of selling coal. This book tells you how easy it is to save $20, $40, $60 and more every year on your coal. And while you are saving you get better coal than you ever burned before.

HARMAN COAL CO., Dept. 3136, 355 Dearborn St., Chicago

Without obligating me in the least, please send me your free Coal Book, "Coal Facts," and explain your method of selling coal direct from the mine, whereby I can save from $1 to $3 a ton. Also explain your free ton of coal offer.

"PLAYING TWO GAMES AT ONCE."

That is the appropriate title of the picture. The young man plays chess with the father that he may have the opportunity to make love to the daughter. It is a most attractive subject, and our illustration very poorly represents the magnificent picture. The original is a painting in oil by one of the greatest painters. It was a World's Fair attraction and hundreds of thousands of people admired it. We have secured a beautiful colored reproduction of the great painting, and it is 16x20 inches. It will adorn and beautify any home. With a very inexpensive frame it can be made "a thing of beauty and a joy forever." We have also a companion picture entitled "The Wooing," one of the most delightful garden scenes, by the same painter. These two pictures have been selected for our fall and winter picture supplements. Anyone who will send us fifty cents by post-office money order to pay for The National Farmer and Stock Grower for one year can select these two pictures as a free gift. We will send them postpaid and packed in a tube, so that they will arrive in perfect order. New subscribers will be surprised. Old subscribers will receive the pictures on paying 50 cents to place one year more to their credit. Read about the other picture on page 30, where a blank form will be found for the purpose of sending in the order.

and Stock GROWER

Save the Corn Fodder.

With a nice field of young clover in sight many are turning their stock onto their newly-seeded ground this fall, instead of turning part of their good corn fodder to some account. It is ruinous to closely graze clover fields which were sown last spring, besides there is not much substance in this feed. Save your clover fields by saving your corn fodder. Many still shy at cutting up fodder. It does take work, and good, hard work at that, but it pays. Nearly 40 per cent. of the corn crop is in the leaves and stems, and nearly all kinds of live stock like it. Pay as much attention to the quality of your corn fodder as you do to the quality of your hay, and you will have nutritive and palatable feed that will fully take the place of your timothy hay.

Fodder to be good must be handled right; it must be cut while it is at its best. Cut it right now while the leaves are still green, and put it up in good shocks. Shredded fodder makes easy feeding with minimum waste, and whatever refuse there may be is left in good condition for the manure heap. But cut up a few hundred shocks, whether you shred or not, and then save it in good condition. Fodder left standing in the shock in the field until snow comes is on a par with bleached hay. Haul in this fodder this fall. Stack it well, near the feeding yards, or, better still, stack it under a good shed or in the barn. A good Northern Illinois farmer tells me that one acre of good, bright corn fodder will go as far as two acres of timothy hay, and he can readily sell his hay at $14 a ton. The time for putting up corn fodder is short, and the essential thing to do is to save properly what is put up.—L. C. Brown.

Cotton Exporting Countries.

The year 1907 is the latest in which figures are given in the Year Book of the Department of Agriculture for 1909. There were a number of exporting cotton countries, including some reshipments, as follows: Peru, 48,174 bales; Persia, 91,431; Netherlands, 111,005; Brazil, 129,307; France, 203,533; Germany, 269,548; all other countries, 465,265; Egypt, 1,421,818; British India, 2,211,332; United States, 8,384,108. Total, 13,335,521 bales. The countries receiving over a million bales each were France, Germany, Italy, Japan and Great Britain. Germany received 2,323,-684 bales and Great Britain 4,302,-404 bales.

How Late to Seed Rye and Wheat.

A correspondent in Hardin county, Illinois, wants to know how late it will do to seed wheat in that section; and a Stephenson county, Illinois, correspondent asks the same questions about rye.

If moisture conditions are favorable, I would not hesitate to sow winter wheat in Hardin county (Southern Illinois) as late as October 10th, although that date is about as late as I would want to risk it. The date of sowing fall grains should be controlled more by the moisture conditions of the soil, rather than by the day of the month. Some farmers are sticklers about planting corn at just a certain time and seeding other crops at a given time. That is all right, providing we would have the most favorable conditions for germination and quick growth at just that time. But it happens more frequently that we do not have just those ideal conditions, so the sensible thing to do is to watch for the first favorable opportunity and then get busy. Of course, with very late seeding there is always the risk that the crop will be checked before it has made much of a growth, but even that is better than seeding earlier under unfavorable conditions and getting only a partial stand.

Rye, as a rule, may safely be seeded a little later than wheat. In Northern Illinois fall wheat is sown between September 1st and 20th, but rye is frequently sown as late as the first week in October. I advise testing seed rye for germination. Many samples do not test over 5 per cent., due most likely to bin burning. I also advise careful cleaning and severe grading of all seed rye.—L. C. Brown.

Our Corn Premiums.

Our readers are generally aware that The National Farmer and Stock Grower sent out considerable seed corn as subscription premiums. This seed corn was either Boone County White, grown by Mr. L. B. Clore, of Indiana, the grand sweepstakes winner at two National Corn Shows in succession, or Reid's Yellow Dent, grown by Mr. D. L. Pascal, of Iowa, who is famous as a winner of a state prize for the best ear of corn grown in Iowa.

The National Farmer and Stock Grower offered that if any of our patrons grew corn from premium seed furnished them by us and would exhibit the same at their own State Fair—for every championship premium won by said corn we would pay the exhibitor fifty dollars; for every first prize twenty-five dollars; for every second prize ten dollars; and for every third prize five dollars; provided these prizes were won in the year 1909 with corn grown by our subscriber from the seed corn furnished by us to him as a free premium.

Furthermore, we agreed that these prize offers were good in every state where a State Fair is held, and also good at any Interstate, National or International Show. If any of the premiums are won at the National Corn Show of 1909, we agreed to double the amounts. Thus, ten ears of corn at a State Show winning a first prize will receive from us twenty-five dollars; and if winning a sweepstake prize, will receive fifty dollars from us. Then, if winning a first prize at the National Corn Show, the exhibitor will receive fifty dollars additional from us, and, if winning a sweepstake prize, will receive $100 from us, or a total of $225 in all.

Being informed that corn grown from seed furnished by us as a free premium is being exhibited at State Fairs, and that it is possible some of it may be exhibited at the National Corn Show, we take pleasure in saying that we will be delighted to pay any number of awards to which any of our patrons may be entitled. Our offers were made in good faith, and all payments will be made promptly upon the certificate of the Secretary of the Fair in which the awards are made. We will also require a certificate from the exhibitor to the effect that the corn exhibited was actually grown from premium seed furnished by us.

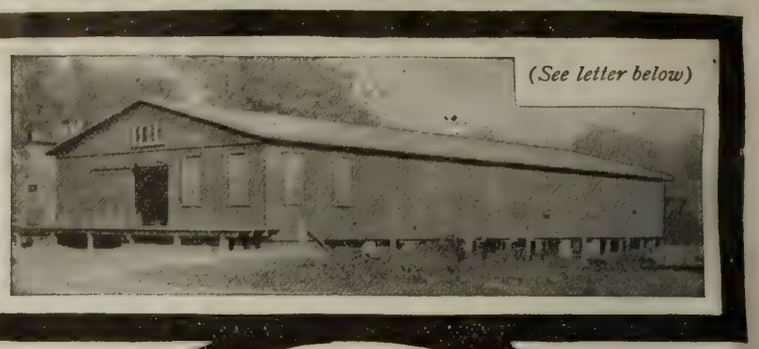
National Yields of Wheat.

According to the Crop Reporter issued by the United States Department of Agriculture, the average Russian yield of wheat for ten years ending with 1908 was 9.3 bushels per acre; United States, 13.9; Hungary, 17.9; Austria, 18.3; France, 20.8; Germany, 28.4; Great Britain and Ireland, 32.6. The average crop was 20.1 bushels per acre. The United States and Russia make a poor average showing of the countries named, but they export the most wheat. Great Britain and Germany, although making the largest yields per acre, import the most wheat.

Statement by the President.

"The tariff on hides was taken off because it was thought that it was not necessary to the man who raised cattle and that the profits of the cattle business were sufficient without imposing a duty on, and that the duty imposed was likely to throw the control of the sale of hides into the hands of the meat packers in Chicago. In order to balance the reduction on hides, however, there was a great reduction in the import duty on shoes—from 25 to 10 per cent.; on harness from 40 to 15 per cent."

In the matter of killing prairie dogs on forest reserves experience has proven that the poisoned grain should be put out very early in the spring; in fact, just as soon as the animals appear from their winter quarters, for the best results may be obtained before green grass becomes available.



Amatite TRADE B MARK ROOFING

Colchester, Connecticut, September 4, 1908.

Barrett Manufacturing Company:

Dear Sirs: The Amatite Roofing on my own grain store is giving much better service than I could believe it would at such a moderate price. It is by far the cheapest roofing on the market, when you consider the wearing qualities. Am going to use it on my other building. (Signed) AMOS C. CASE.

This is a type of hundreds of letters which we get regarding Amatite.

It is better made; has better waterproofing material and weighs more per square foot than any other roofing of the same price.

And Amatite has one distinction which makes it stand out above all others—it has a *real mineral surface* which does away entirely with painting.

No other ready roofings compare with it from the standpoints of low cost, no maintenance cost and absolute protection. Sample and Booklet on request.

BARRETT MANUFACTURING COMPANY

Write for our prices and description before buying.

KANSAS CITY HAY PRESS CO., 425 Mill St. Kansas City, Mo.

Where Alfalfa Will Grow.

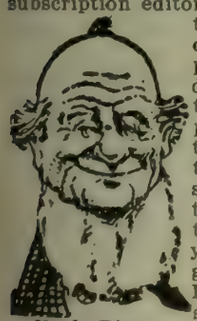
One by one the oracular statements of so-called alfalfa experts have been shown at fault. One said: "It will grow wherever corn will grow;" and as promptly men from New York and Louisiana rise and say: "It will not grow over a hardpan or gumbo subsoil;" at once a New York man reports a good field of alfalfa with roots fifteen feet long that pass through six inches of hardpan so hard that it had to be broken with a pick-axe in following the root. A Kansas man writes that he has eighty acres that has stood five years and promises to continue indefinitely, yielding 4½ tons from three cuttings a year, and the whole of it on gumbo soil where corn raising was a failure. Another declares: "It must have a rich, sandy loam," and forthwith from the deserts of Nevada, the sand hills of Nebraska, and the thin, worn, clay soils of the South come reports of satisfactory yields. Such results are significant, indicating better returns than any other crop brings from these varied soils, and that few farmers are justified in postponing the addition of alfalfa to their agriculture because of supposed hindrance of soil and climate.—From Coburn's "The Book of Alfalfa."

Where Barley is Grown.

Six states appear to have a monopoly of the barley crop. In the year 1908 Minnesota raised 32,500,000 bushels; California, 25,427,000 bushels; Wisconsin, 24,750,000 bushels; South Dakota, 24,592,000 bushels; North Dakota, 18,330,000 bushels; and Iowa, 13,500,000 bushels. All the balance of the United States, 41,157,000 bushels. Total, 166,756,000 bushels.

OUR CREDIT SUBSCRIPTIONS.

We desire to invite attention to our blank form, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.



Uncle Piper.

National Yields of Oats.

According to the Crop Reporter issued by the United States Department of Agriculture, the average oat yields per acre for ten years were as follows: Russia,19.4 bushels; France, 28.1; Austria, 28.6; United States, 29.8; United Kingdom of Great Britain and Ireland, 44.7; and Germany, 47.3. The three great crops of wheat last year were: United States, 807,156,000 bushels; Germany, 530,131,000 bushels; and Russia, 834,502 bushels. The world's crop was 3,560,524,000 bushels, and in excess of either corn or wheat

The Modern Kind of Roofing.

There was a day when the words "ready roofing" meant some kind of painted paper which was only good enough for hen coops.

Later it meant a tough felted fabric which would last for five to ten years, provided it is covered with a heavy coat of paint at regular intervals.

The third step in the progression is the advent of Amatite Roofing which is made with two heavy layers of pitch (the material which forms the basis of most roofing paints), and a top surface of mineral matter. A roofing so constructed naturally requires no paint to protect it; and accordingly Amatite Roofing is intended to be left unpainted. It may reasonably be expected to last for ten years or more, and in all that time will require no attention whatever.

The price is astonishingly low and our readers who buy roofings from time to time should become familiar with its merits.

A sample will be sent free for the asking to any inquirer. Address nearest office of the Barrett Mfg. Co., New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans, London, Eng.

Frequent Changes Best For Crops.

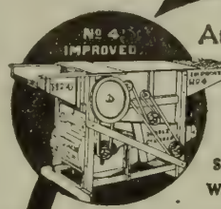
Practical men know that it will not do to grow the same crop upon the same ground for many years in succession. Each particular crop has its own peculiar insect enemies, and each crop seems to present conditions favorable to certain fungus diseases. This really is the prime reason why short rotations are practical on well managed farms.

Grain growers have not given this insect and fungus subject as much attention as have fruit growers, but experiment stations this season have sounded a warning which grain growers must not ignore. Fruit growers know that success in getting fruit means one prolonged warfare from the moment trees are set out until the orchard is out of bearing. The young trees must be protected; but the real, strenuous fight commences with the first crop of fruit. Spraying is essential. The orchardist who attempts to grow apples or any other fruit, without spraying is simply wasting his efforts. Where permanent crops are grown, such as from orchards, there is a much greater likelihood of hurtful insects and fungus, and extraordinary efforts must keep them in check. Many farmers, who have family orchards, have given up in despair. They gather no fruit worth picking, simply because their orchards have become breeding places for every known enemy to the fruit and tree. Commercial orchardists fully recognize the importance of keeping their trees clean, and they have taken advantage of every preventative that science has suggested.

HOW TO MAKE 100% PROFIT

FROM YOUR PEA AND BEAN CROP

Pea and Bean Seed is worth from $2.00 to $3.00 per bushel. **DO YOU SAVE IT?** If you don't you must, in order to get 100% profit from your crop.

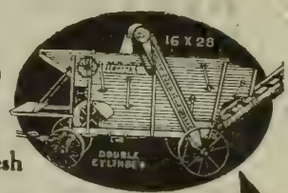


At such a price per bushel the seed is too valuable to use as feed. — Too valuable to attempt to thresh with a regular grain thresher, that will split one-third to one-half of the $2 to $3 seed.

To get all the profit, you must be able to take every seed from the vines and pods and to produce it in a whole, clean, marketable condition, the

OWENS

Pea & Bean Threshers



are designed and built especially for this purpose. We ship them to Pea and Bean Growers under a bona fide binding guarantee, that they will thresh any and all kinds of Peas and Beans directly from the vines, without splitting the seed.

We have a proposition to make, if you are a grower of Peas and Beans, a proposition that you ought to hear about and that you cannot fail to be interested in. It is the most liberal and fair proposition that ever a manufacturer made, so it is worth your while to write us —but do it soon—today if you can.

Grain growers have to take another course, largely. Instead of methods to exterminate pests and fungus, they must discourage breeding places by making conditions intolerable. Depredating insects will not remain long in any place where the food is not to their liking and fungus thrives only under certain peculiar conditions. Gardeners, who manure very heavily, know that an excess of unrotted manure induces smut and maggots, both of which are fatal to many garden crops.

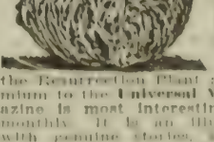
My attention was directed to the misuse of some fields in Ogle County, Ill., which had been in corn for several years without change. The root worms had done serious damage, and the fields were very unthrifty. One of the same fields was observed last year, at which time I suggested to the owner that change to some other crop would help matters. This year the field is in much worse condition.

Wheat in Ohio, Indiana and Illinois has been attacked this season by a fungus heretofore almost unknown. It has seriously affected the yield and quality of the crop, and it is giving growers much concern. It is what is commonly called "spot disease." My attention was first called to it by Mr. Orr, of Akron, Indiana, who stated that his own fields, as well as his neighbors, were attacked just a week or so previous to harvesting, and their crops did not come up to expectations.

These are serious matters, and we do not know precisely how to handle them; but frequent changes of crops, will at least discourage insects and give us different conditions, which may help keep these fungus in check. We might take a lesson from orchardists—burn all straw and stalks where these fungus are known to exist, and this will lessen the chances of its spreading to following crops.—L. C. Brown.

THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.



We have adopted the Resurrection Plant as a subscription premium to the **Universal Magazine**. The magazine is most interesting and is published monthly. It is an illustrated publication with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.

The Zone of Thermal Equilibrium.

Thermal refers to heat, and equilibrium refers to stability. The zone of thermal equilibrium is a layer of soil, rock or other thing, in the earth, where the temperature is the same the year round.

Most people do not know that such a zone exists, but it does exist, and its existence is of great value to the farmer and to others.

It usually begins about eighteen feet below the surface of the soil, where the varying effects of summer and winter are not felt. In other words, the summer's heat and winter's cold are felt to some extent to a depth of about eighteen feet in the soil. Below that one would not know that either summer or winter existed. That is the zone of stable temperature or thermal equilibrium, as the scientists like to call it. It continues to a depth of about eighty feet, at which point the internal heat of the earth begins to make itself felt in a very slight degree.

The temperature of this zone of stable temperature is supposed to be the average of the temperature at the surface throughout the year. Millions of summers and winters have affected this zone till a general average has been established.

In northern Illinois this temperature is about 50 degrees summer and winter. Some of the creameries have sunk wells to a depth that gives them water at 50 degrees. The writer has tested some of these waters with a reliable thermometer and found them at the temperature stated.

Further north, in Wisconsin, the temperature of this zone of stable temperature is about 45 degrees, and this gives excellent water for dairy purposes. Hundreds of miles north of the British line the wells even in midsummer have in them water that is just at the freezing point, and the inhabitants drink water that is iced without expense to themselves. There the ground is a natural cold storage place, and no delivery of summer ice is required.

In Canada, and in some parts of the northernmost states of the Union, this zone is being utilized to cool cheese curing rooms, in which it is desired to have a temperature of from 50 to 60 degrees. Rows of tile are laid very deep in the ground, and through these rows of tile air is drawn for a distance of a hundred feet or more. At one cheese factory the air in summer, though at a temperature outside of 90 degrees, comes into the curing room from below at a temperature of 60, and in the winter the reverse is true. Then the air outside may be at zero, but the curing room is at about 60 degrees, being tempered by the air from below.

Doubtless there are today houses built that are using this great natural force to control temperature, and a little searching would find them out.

What possibilities are opened up by the existence of this zone! The time will come when many of our homes will be supplied with apparatus to supply a 60-degree air summer and winter, which would mean warm houses in winter and in the summer houses delightfully cool, the needed 10 degrees extra being secured by sunshine let in. In winter but little fuel (or electricity) need be used to provide the desired temperature. Thus we shall finally outwit the ice trust and the coal barons.

Hunting For Champion Apple Packer.

Who is the champion apple packer of America? This is a question that the promoters of the Colorado National Apple Exposition are trying to settle to their own satisfaction and the satisfaction of the many shipping concerns that will be represented at the coming apple exposition. To discover this person it has been decided to give a cash prize of $150. A demonstration will be held in the city of Denver at some time during the Apple show and an endeavor will be made to ascertain who can do the best packing for commercial or show purposes. This is an idea that should be given great consideration by such persons who believe that they understand all the methods and curves of apple packing. The person who gives best demonstration of his ability to prepare for the market or for exhibition a box of apples will be declared champion apple packer of America. This will be some honor besides the cash consideration of $150, which will amply reimburse the packer for his trouble. Then, too, the demonstration will be a great educator to the growers and shippers. The exposition will be held January 3 to 8, 1910, at Denver. The secretary is Clinton Lawrence Oliver, 1725 Stout St. Write to him for premium list.

St. Louis Cash Oats.

Cash oats at St. Louis on September 30 sold as follows: No. 2 grade, 40 cents; No. 2 white, 42½; No. 3 oats, 39 cents; No. 4 oats, 38½ cents a bushel nominal. On June 1 cash oats sold at 58 cents; June 30, 50½; July 31, 40 to 42½; August 31, 37 cents, and September 30, 40 cents. Here we have a decline of 18 cents a bushel in three months.

Swine-raising Notes.

Most of the so-called hog cholera is caused by worms, and to expel worms from swine there are many good remedies manufactured and sold at reasonable prices.

Directly a farmer has produced a fine hog, finished on corn, weighing 250 pounds, he has obtained the ideal market hog, also the ideal hog from the standpoint of economy in production. Economy in production is left behind and the top of the market is also left behind as weight increases. It may be hard to get a supply of young pigs, but unless there is an unusual demand for heavy hogs there is no cash inducement to feed any longer.

"No one ought to complain now about hog prices," said Fred Anderson, a wealthy farmer of the early-day class of Oldsburg, Kas. "Present prices look mighty good to me. I remember hauling hogs seventeen miles just as good in quality and weight as the kinds that are bringing $8.50 to-day and selling them at $1.80. Of course corn is higher now, and other kinds of feed cost more, but after making due allowance, there is a big difference."—From Clay, Robinson & Co.'s Live Stock Report.

The Chicago International.

While attending all these state, interstate and national shows, fairs and expositions remember there is one greater than all in the Chicago International. It the clearing house and supreme court of all live stock shows. Remember the dates, November 27th to December 10.

"I never could believe that Providence had sent a few men into this world ready booted and spurred to ride, and millions ready saddled and bridled to be ridden."—Richard Rumbold.

The Handy Marker.

The Farmer's Handy Marking Outfit advertised in this edition is a very useful combination for a farmer to have in his workshop. It is the real thing—an up-to-date marking outfit which can be used for all purposes advertised. The cost is quite reasonable. The advertiser also wishes to engage agents to sell the marker in their special territory. See double-column advertisement of the Montrose Supply Co., Montrose, Mo., on page 24.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening,** postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

MR. A. J. MILTON, Cattle Salesman for CLAY, ROBINSON & CO., Live Stock Commission Agents at the St. Louis National Stock Yards.

CONCERNING THE CATTLE TRADE.

Stock Cattle and Feeders—A Great Market For Light-weight Cattle of High Quality.

(By MR. A. J. MILTON, Chief Cattle Salesman for CLAY, ROBINSON & CO. at the St. Louis National Stock Yards.)

We have been getting a good many feeders on this market, and the quality has been good. We have been getting a number of heavy, fleshy feeders, weighing from 1,000 to 1,200 pounds, which are suitable for short feeding.

We believe these feeders are selling as reasonable on this market as they are at any of the markets at the present time. We get a class of cattle here at this season of the year that are natives and are not branded, and are quiet, gentle and good-doing cattle and that will please the feeder.

The good lighter cattle, such as yearlings and calves, are very scarce. The people holding their good-quality light cattle in the country, as the most of them have an abundance of feed. The bulk of lighter cattle that are coming are only fair quality. Heavy feeders that are weighing 1,000 to 1,200 pounds are selling from $4.50 to $5.00, according to quality and flesh; good-quality lighter cattle are selling from $4.15 to $4.50. Medium cattle, lightweights, are selling from $3.50 to $4.00; fair 800 to 900-pound cattle, $3.75 to $4.25.

Those who contemplate buying cattle to feed from sixty to ninety days should purchase cattle with as much flesh as possible. At this time the flesh can be bought much cheaper than it can be put on. The heavier the cattle are when placed on feed the quicker they can be turned back to market at a profit.

As we have houses at all the leading feeder-cattle markets, we are in position to fill all orders to the very best advantage, both as to price and quality of stock. If you wish further information or advice, please write to Clay, Robinson & Co. at any of the central markets—Chicago, Kansas City, South Omaha, East St. Louis, South St. Joseph, Sioux City, South St. Paul, Denver or East Buffalo. In every case your letters and orders will receive most careful attention and you can be assured of first-class service on any of the markets.

Light, Fat, Handy Cattle.

Since my arrival at this market I have been surprised and delighted with the wonderful local butcher demand for light, fat, high-quality steers and heifers. Last June I sold 286 head of 668-pound Texas heifers fed in Nebraska at $6.90 per 100 pounds and established a record for that class at the market. I naturally supposed that the meat would be shipped East, but I understand that every one of the sides and quarters were disposed of in the butcher shops of St. Louis. Texas baby beef is hard to find, but the number is increasing. Native heifers averaging 700 to 900 pounds are now quoted on this market at $6.00 to $6.75 per 100 pounds, and strictly choice steers, 850 to 1,000 pounds, at $6.50 to $8.00 per 100 pounds, according to quality and condition. Of these light, clean-cutting cattle this market receives several loads every week, but the actual demand calls for several thousands. A few weeks ago nineteen head of 933-pound native white-face, yearling steers from Boone county, Missouri, sold at the magnificent price of $8.25 per 100 pounds, ar $76.97 per head. In the past history of the cattle trade I have known such cattle to sell at $4.00 per 100 pounds. It is a wonderful condition when the market actually pays a higher price for the cattle that are most easily and cheaply produced.

Such cattle as these sold at $8.25 per 100 pounds are generally marketed as yearlings; are fed from birth, or as soon as a good cattle feeder can collect them, to the day of slaughter. They are not heavy eaters and their feed bills are not high. Such cattle usually come from Missouri or Illinois, but Arkansas, Oklahoma and Texas can raise them and fatten them, and the market here is in nice, economical shipping distance.

When I first came into the cattle trade the top of the market was being paid for 1,600 to 1,700-pound steers; but now, even at Chicago, it is only once in a while that such heavy cattle come to market.

Before closing this article I wish to speak of the uniform excellence of the service of Clay, Robinson & Co. at all the markets. Our Chicago house recently sold seventeen head of horned Montana steers at $7.00 per 100 pounds, which topped the week's market in same class by 40 cents and was the highest price paid since 1902. Our Sioux City house landed $8.25, the highest price paid for hogs in that market since 1903. At Chicago, on Monday, September 13, a load of Indiana steers, 1,684 pounds average, sold by Clay, Robinson & Co., brought $8.40 per 100 pounds, topped the market by 15 cents, and was unbeaten since 1902. I could go further on this line, but this is enough for our present purpose.

A. J. MILTON,
Cattle Salesman at the St. Louis National Stock Yards for Clay, Robinson & Co.

A Squeeze in September Oats.

At Chicago on September 30, in the cash oats market the price was boomed to 50 cents a bushel, which was an advance of 5½ cents over the previous day's close. The option market opened at 46 to 48 cents, advanced to 50 cents, and then declined to 48 cents. This was the closing-out day for September oats. On June 30, September oats sold at 43⅞; July 31 the price was 38⅜; August 31 the close was 37 cents. Without any speculative force in the market, September oats would probably have closed about 40 cents. The speculative contest brought them up to 48 and 50 cents. In looking this matter in the face the question naturally arises, "Where does the farmer come in?" The answer is that in a one-day advance he cannot act quick enough to derive any benefit, but in a continual advance a farmer can always sell on the basis of the market.

Speculation in Wheat.

At Chicago, in the speculative market, on September 30 there was some true speculation in wheat. The September wheat option being closed out that day; opened at $1.06 and in the ordinary course of events would have closed near the same figure, but an Eastern trader, known as the Albany Miller, stepped in and bought 615,000 bushels at Chicago and 400,000 bushels at New York, advancing the price to $1.20, which was the close. The reason for this advance was that he was short of wheat which he had contracted to deliver and had to pay any price that would buy the wheat. He was taking his medicine for speculation on the idea that wheat would be cheaper before the September option closed.

At the same time it is worthy of remark that at St. Louis No. 2 cash wheat sold at $1.20 to $1.21, and a car of seed wheat at $1.22, without any speculative features whatever.

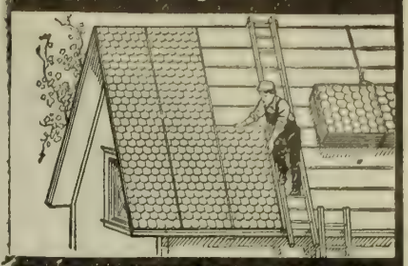
St. Louis Cash Corn.

At St. Louis, September 30, cash corn No. 2 sold at 62¾ to 63 cents a bushel; No. 2 yellow, 63 to 63½, and special car 64 cents; No. 2 white, 65 to 65½; No. 3 corn, 62½ to 63 cents; No. 3 yellow, 62½; No. 3 white, 64 to 64½. On June 1 cash corn sold at 74 cents; June 30, 71½; July 31, 69½ to 71, and August 31, 67 to 68 cents, and September 30, 62¾ to 63 cents. Here is a decline in price of 11 cents a bushel from June 1 to September 30, brought about by the anticipated large crop of corn.

Discovery of the North Pole.

The most interesting subject of the present day is the North Pole discovery, first by Dr. Cook, and afterwards by Commander Robert E. Peary. This great event is already graphically described on post cards. See the list on page 25.

Lay a Fireproof Roof



Edwards "REO" Steel Shingles

are stamped in sheets of finest Bessemer steel, 5 to 10 feet long, covering width 24 inches, either painted or galvanized. Can be laid with hammer and nails. Cost ½ as much as best cut wood shingles, and about the same as high-grade 3-ply composition roofing but outwear either, four to six times.

$10,000 Guarantee Bond Against Lightning We will refund amount paid for our steel shingles if your roof is damaged by lightning. Protect your family, and live-stock, and save money besides. Cheapest kind of fire insurance.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.**

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Wasting Money in Wide Rations.

American farmers have wasted hundreds of millions of dollars in feeding too wide rations to their live stock. This applies to all kinds of live stock, from the hen to the horse.

For the most part this has been done ignorantly and was formerly excusable, because men knew little of the components that made up each ration. But now the light of science is so widely diffused along agricultural lines that it is not necessary for the wasteful methods to continue.

Animals use protein and carbohydrates and fat in their rations in varying proportions, but these proportions hold a certain relation to each other. It is found that fat has about two and a half times as much value as force producer as have the digestible starches in the food. Therefore in the computing of a ration this extra value of the fat must be accounted for, and it is added to the carbohydrates. The sum is divided by the amount of the protein (digestible protein) in the food to obtain what we call the ratio of the muscle-forming elements to the force-producing elements.

Thus, if a food on analysis is found to contain four per cent. protein and sixty per cent. carbohydrates and fat, we divide the latter by the four per cent. and find the ration to be one to fifteen, which is a very wide one. Timothy hay often runs as high as one to nineteen.

It is known that the ration of food used by animals varies from one to four to one to seven, but not outside of these limits. Now, if food that is fed has a ratio of one to nineteen, almost two-thirds of the carbohydrate element is utterly wasted, as it goes through the animal without being taken into the system.

But we know that in the winter time thousands of idle horses are fed for months on nothing but timothy hay. Think of the waste! If a much smaller portion of timothy hay were fed and some other food like bran were given to balance it, the rest of the hay could be sold at a clean profit.

We know that multitudes of horses are every year fed timothy and corn, which is an exceedingly wasteful combination to feed. The corn itself will run about one to ten, which indicates a waste of at least thirty per cent. of the digestible carbohydrates. The timothy being still wider in ration, is in no sense a balance for the corn, but is out of balance on the same side as the corn.

East of the Rocky Mountains the problem is to get a ration sufficiently narrow. West of the Rockies the problem is how to get a sufficiently wide ration, as in that region alfalfa and bran are abundant.

East of the mountains we must use more bran, alfalfa, clover, cotton-seed meal, linseed cake, and such foods rich in protein and low in carbohydrates to balance the corn, timothy and straw fed to farm animals.

The study of rations is not an easy one for men that have not been accustomed to study, but it is one that must be entered upon by all of our farmers if they are to avoid the continued waste of money in the feeding of too wide rations.

Feeding New Corn.

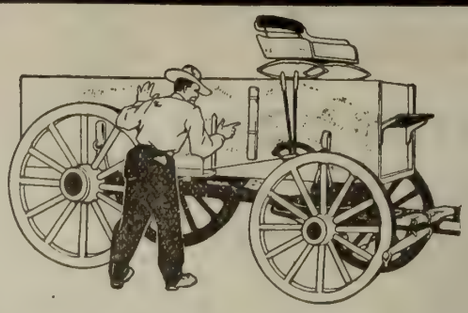
Many farmers in the corn belt instinctively associate the thought of new corn with "hog cholera," and the belief is common in some localities that the use of new corn will cause the disease. This may indirectly be somewhat true, as the sudden change to new corn is not unlikely to produce a feverish condition which would encourage the thriving of any latent disease germs. It is undeniable that swine appear to be more generally afflicted with disease about the time new corn is made use of, but an examination might show that such a condition is rather to be expected. When the new corn is given they greatly relish the soft, succulent, fresh food, and, if permitted to do so, will eat enough to change their probable constipation to acute diarrhoea and put them in a condition which invites other ailments.

Much of the so-called cholera which comes in the autumn is but the diseased condition brought about by a sudden change from a limited, dry diet to a plethora of the appetizing new corn. The temptation to rush hogs off to market before cold weather approaches should not encourage the farmer to make too sudden a change in his methods of feeding. When the earliest corn is in full roasting-ear stage it may be given, stalk and all, in moderate quantity, without any change at first in the usual feeding. As the corn hardens, it may be given more liberally, but by a gradual increase. By the time the corn is fully matured the hogs will have become well accustomed to it. The judicious use of new corn is purely an application of the judgment which should prevail in feeding at all times.

Hogs that have had access to plenty of green pasture are less liable to be disturbed by green or new corn than those previously kept in dry lots. Where they have been pastured on rape or green, succulent food of that character, the risk is greatly diminished. Pumpkins are excellent feed for hogs about to be put on green corn. They supply succulence and their seeds serve well as a vermifuge.—From Coburn's "Swine in America."

Where Rye is in Abundance.

Half the small crop of rye raised in this country is produced in Pennsylvania, Michigan and Wisconsin. These three states produced 16,589,000 bushels in the year 1908, out of a total of 31,850,000 bushels in the United States. Rye is not a national crop here like it is in Germany, where the crop was 422,692,000 bushels; Austria, 162,629,000 bushels; and Russia, 783,100,000 bushels. No wonder they eat rye bread in those European countries.



You Need Paint

A good paint is one of the cheapest things you can buy, just as a poor paint is one of the most expensive.

A good paint properly applied to your buildings not only preserves them from the weather but saves the necessity for repainting frequently. A poor paint not only fails to protect the buildings but must be renewed more often. The cost of painting is one-third paint and two-thirds labor. Therefore a good paint is a double saving just as a poor paint is a double loss.

SHERWIN-WILLIAMS PAINTS

are paints made by the largest manufacturers of paints in the world: They make a right quality product for every purpose. They can furnish the right paints for painting barns, out-buildings, houses and fences as well as wagons, buggies and agricultural implements.

A coat or two of paint applied in time and in your spare time will prolong the life of each and every one of these things.

There is a Sherwin-Williams dealer in your town who can tell you just the right Sherwin-Williams finish which will exactly meet the requirements you have in mind. Send for booklet "Paints and Varnishes for the Farm"—its free.

The World's Tobacco Crop.

In 1907, according to the United States Department of Agriculture, the world's tobacco crop was 2,333,107,000 pounds. The United States crop, including Porto Rico, was 711,126,000 pounds out of a total of 816,188,000 pounds credited to North America; South America, 115,578,000; Europe, 66,752,000; Asia, 709,560,000; Africa, 23,194,000; and Oceanica, 1,526,000 pounds.

Missouri Agricultural College.

Splendid literature is being issued by the Missouri Agricultural College, giving requirements for entrace to the different courses, and full particulars of all studies, description of buildings, animals, etc. Those who are not informed should write to Prof. F. B. Mumford at Columbia, Mo., and ask for the booklet entitled "Education For Agriculture." All Missouri farmers should have this in their homes; it is like bringing the college into the home neighborhood.

With the Missouri State Fair and the Illinois State Fair open at the same time we are reminded that the first week in October used to belong to the Great St. Louis Fair, the Fair that educated the farmer of Illinois and Missouri.

Cheese is as much a factory product as shoes. A man might travel a thousand miles and never see a farm on which cheese is made as a regular business.

More Grain Profits BOOK

Pay me on time, or cash, my factory price, but be sure to try a Chatham, anyhow. Clean your grain—before you sell it—or before you sow it. $1,000,000 lost by Farmers in every state each season by selling dirty grain is a low estimate. You are "docked" on the price because of dirt in every bushel. Cleans wheat for market. Takes oats, cockle, garlic, mustard and chess out of wheat. Cleans red clover—takes out buckhorn plantain. Cleans alsike clover and alfalfa. Cleans beans, oats, barley. Grades corn. Cleans timothy seed.

Tells 100 ways Chatham Pays You.

The Value of Land.

One of our occasional writers mentions that he has been asked to advise a farmer whether to sell or not to sell a farm for which the owner has been offered two hundred dollars an acre. This farm is in northern Illinois, and in answering the question our correspondent approaches the subject from the standpoint of the earning power of that particular farm. Although the advice in the main is in the direction towards selling out, it was not given with that emphasis which the subject calls for, and it is one of the many articles which we have not yet printed.

That any good sized tract of farm land as far west as Illinois can be sold at two hundred dollars an acre is one of the marvels of the century. The farmer who has to confront the proposition of making a profitable income on a sixty-dollar an acre land that is devoted to general farming has all he can stand up to, and the man who buys the best farm in the country at two hundred dollars an acre cannot undertake to farm it with much hope of success although in the end the property may be cut up into small tracts or town lots, and so wind up the transaction as a profitable investment.

Land is appreciating in market value because of the increase of population. In the year 1850, the available area of this country was 2,995,772 square miles, and the population was 23,191,876 people. In the year 1908 the Bureau of Commerce and Labor places the available area at 3,026,789 square miles, and the estimated population is 87,189,392.

Thirty-five years ago men on horseback driving herds of cattle were enabled to travel from the Rio Grande river to the Canadian border without crossing a fence line, and today on the same trails a herd cannot be driven fifty miles without meeting with fence impediments. The millions of people have come out west, and at this period, we have arrived at the end of the free land, and it is only here and there that land can be had for less than it is worth, and we may rest assured that during the next twenty-five years the time will arrive when every landless man will have to face the purchase of land on a basis as dangerous to him from the investor's standpoint as the purchase of an Illinois farm at two hundred dollars an acre.

It is one thing for the owner to have land values increase under his feet by reason of this increase in population. It represents the profit of the pioneer who was on the ground first, but it is another thing for the landless man to see those values go up beyond his reach and beyond the times. The land area is fixed; here and there a few more acres will be made available, but the population is increasing towards the hundred and fifty million mark, and land values will conform to that basis. It will not require half the time to increase from one hundred million of population to one hundred and fifty millions that it did to increase from fifty to one hundred millions, and that was done in thirty years. The land bargain counter is fast disappearing, and young men had best look out to get a foothold before all the reasonable price goods are sold out.

Milk Producers' Association.

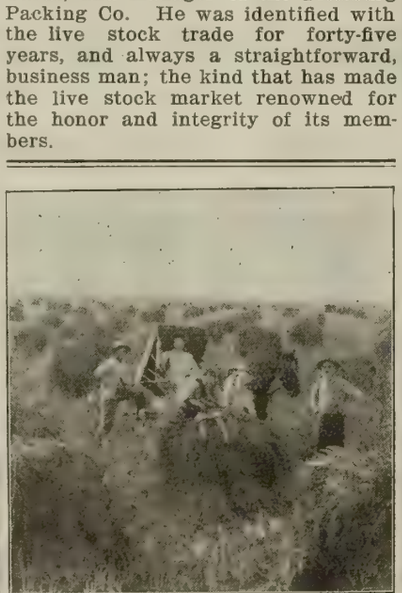
On September 4th, Hon. D. I. Furbeck, of Allenton, Mo., President of the Milk Producers' Association, went to Edwardsville, Ill., to meet with the milk producers shipping from that point. After a very interesting session he received the following in membership: Cyrus Long, Worden, Ill.; John Zeka, Edwardsville; Jeff. Hogan, Edwardsville; W. J. Grainey, Edwardsville; Henry L. Schmidt, Route 5, Edwardsville; E. C. Bardelmaier, Worden, Ill.; Neil H. Schafer, Fruit, Ill.; J. E. Dustmann, Alhambra, Ill.; H. Rohrkaste, Fruit, Ill.; J. Steinhage, Edwardsville, Ill.; J. L. Schafer, Fruit, Ill.; Fred Hinke, Fruit, Ill.; Henry Schmitt, Edward Hueter, Edwardsville, Ill.; and Henry Wehlage, Fruit, Ill.

On September 27th the President and Mr. Jeff. Hogan, of Edwardsville, made a round of the city dairies and arranged the price of September milk, a report of which will be sent by mail to the members in good standing.

The annual meeting of the association will be held at St. Louis, Monday, November 22d, when officers will be elected for the ensuing year and an effort will be made to establish a much stronger organization. Further particulars in regard to the annual meeting will be published in next editon.

Death of Simon O'Donnell.

At Pittsburg, Pa., at the age of 65 years, whole-souled Simon O'Donnell passed to his rest honored by all who knew him. He was an associate of S. W. Allerton since 1866, and was president of the Pittsburg Stock Yards, and manager of the Pittsburg Packing Co. He was identified with the live stock trade for forty-five years, and always a straightforward, business man; the kind that has made the live stock market renowned for the honor and integrity of its members.



ARKANSAS RICE.—Fortunes in It. Scenes in an Arkansas rice field. This industry has grown up in a few years in a country in which rice was heretofore unknown. See card on page 23. For particulars address E. W. La BEAUME, 1327 Pierce Building, St. Louis, Mo.

A Solicitation For Subscriptions.

This is the time of the year for subscribers to open their hearts and renew their subscriptions. We hope our friends and patrons will favor us by looking over the premium offers relating to the National Farmer and Stock Grower, and give us the opportunity to credit them up with at least one more year.

The National Corn Show.

Don't forget that the National Corn Show opens at Omaha, December 6th, and continues to the 18th. For quick information address T. F. Sturgess, Secretary, Omaha, Neb.

FARM AND RANCH LANDS.

ARKANSAS.—For Sale: 160 acres good land; five Brood Mares, eight young Mules, one Jack, one Stallion. A bargain at $4,000.00. **Dr. J. H. McCurry,** Grubbs, Ark.

ARKANSAS.—Fortunes in Rice Growing. An industry that originated seven years ago is making the prairie lands of Arkansas produce splendid incomes. Write for free booklet entitled "Arkansas Rice." Address, **E. W. LeBEAUME,** 1327 Pierce Building, St. Louis, Mo.

ARKANSAS.—Good farm of 400 acres near Searcy; land is nice and smooth; 300 acres in cultivation; fenced; two dwelling houses, barns, wells, orchard, etc. Price, $12.50 per acre. **L. E. Moore,** Owner, Searcy, Ark.

COLORADO CROPS—WHERE CHEAP LAND and scientific agriculture are making farmers rich; choice locations under proposed reservoir ditches. **W. A. Brookshire & Co.,** Lamar, Colo.

KANSAS.—1,000 Farms and Ranches in forty Kansas counties for sale or exchange. **What Do You Want?** Make plain in first letter what you wish to buy, sell or exchange. Lists and information free. **F. H. Brown,** Opera Block, Winfield, Kansas.

MICHIGAN.—I sell Farms in Oceana, the best county in the United States; fruit, grain and stock. Write for list. **J. D. S. Hanson,** Hart, Mich.

MINNESOTA.—100 improved farms in Central Minnesota; all sizes; cheap prices; easy terms; always a good title. Write for Land List No. 27. Mention this paper. **C. D. Baker, Fergus Falls, Minn.**

MISSISSIPPI.—An ideal stock farm in Mississippi of 717 acres, seven miles from railroad depot and five miles from the Mississippi river. Has 200 to 300 acres fenced for cattle or hog pasture; fifteen bearing pecan trees; large dwelling house and other buildings. Good school near. Address, **Mrs. Jennie Maddox,** Locust Ridge, Tensas Parish, Louisiana.

MISSOURI.—For Sale: 800-acre farm; note what I say—it's a great bargain; improvements worth $15,000; abundance of fruit; will grow 60 to 80 bushels corn acre; did grow 32,000 bushels corn on 400 acres in one year; grows red clover, timothy and blue grass the best; high-class Lafayette county, Missouri, farm; two hours from Kansas City; eight St. Louis; twelve Chicago; practically all good corn land; farms adjoining held $100 to $125; price, $75 acre; easy terms. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI.—No Better Land Than This Anywhere on this Continent. Rich soil, producing bumper crops. Fine climate. Ideal country for grain and stock raising, corn and hogs, blue grass. Don't pioneer. Get a splendid farm at half the price of less productive lands in other sections. Come to Callaway county, the brightest spot in Missouri. Write me to-day for my big list of Farm Bargains. **W. Ed. Jameson,** Box No. 20, Fulton, Mo.

MISSOURI.—CALLAWAY COUNTY BLUE GRASS LANDS FOR SALE. Write me or come to Fulton, the town of schools and state institutions, and I will sell you any kind of a farm you want, any distance from town, at prices that will please you. Write me your wants and a quick reply will follow. Make my office in Fulton your headquarters. You are always welcome. **E. F. Tucker, Fulton, Mo.,** Real Estate, Loans and Insurance.

MISSOURI.—For Sale: Finest 1,500-acre farm in Jackson county, Missouri; improvements worth $65,000; ten miles Kansas City, Mo., by rock road; R. R. station on farm; land, improvements in good condition; 2,580 acres well fenced, cross fenced; four good houses; eight splendid barns; rich corn land, finely watered; all good corn land or fine blue grass land; 1,500 acres blue grass; $40 acre; one-third cash, balance long time, 5 per cent.; other high-class farms in Western Missouri and Eastern Kansas. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI. — 1,285-acre timber tract, $10,000; fine oak and hickory; 1,000 acres good plow land; large iron bank; six miles from railroad town. Wonderful bargain in farm tracts; no better soil. **S. L. Powers,** Wappapello, Wayne county, Missouri.

MISSOURI.—Central Missouri Farms. For Stock, Grain and Grass Farms that will prove profitable as Homes and Investments, write for new list. Farms described and priced. Easy terms. Low prices. **Hamilton Realty Co.,** Fulton, Missouri.

OREGON.—Learn how to live for pleasure and profit in Oregon; Clackamas county, "the Gem of the Willamette Valley, offers rare opportunities to homeseekers and investors; mild climate, with no extremes; good markets for fruit and farm products; land is cheap; soil fertile; water and timber abundant; close to center of large population; splendid schools and factories. For information and literature write **Dept. C, Commercial Club,** Oregon City, Ore.

OKLAHOMA.—Million acres Osage Indian Reservation opening. Send quarter for information. **Osage Development Co., Tulsa,** Oklahoma.

OKLAHOMA.—Two Fine Bottom Farms For Sale. 110 acres; all first bottom; one mile north of Guthrie, Ok.; 160 acres, two miles from Red Rock, Ok. For full particulares write **H. A. McCandless, Perry, Ok.**

TENNESSEE.—Send for booklet on farming and full description and price of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS.—One Thousand Acres; 75 per cent. agricultural, the balance grazing, with an inexhaustible supply of excellent water. Price, $15.00 per acre; half cash; deferred payments to suit the purchaser. Situated 10½ miles from Sabinal. Also **Twenty-six Hundred Acres,** 11 miles from Sabinal; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. **Fourteen Hundred Acres** grazing land, watered by springs, $3.50 per acre. All in Uvalde county, Texas. Address, **Albert D. Evans,** North Fort Worth, Texas.

THE MILD CLIMATE OF VIRGINIA

Offers splendid opportunities **for farming,** stock raising, dairying and **fruit growing.** Winters are short. Climate **healthful.** Markets near. Lands reasonable **but advancing** each year. Write **for information** to **G. W. Koiner,** Commissioner of Agriculture, Richmond, Virginia.

VIRGINIA.—VIRGINIA FARMS. Poultry, Fruit, Dairy, Grain, Stock, Truck Farms and Colonial Estates. Low prices; delightful climate; abundant pure water. Large Eastern markets. Timber lands a specialty. Write for free illustrated catalogue. **WILES LAND COMPANY, Inc., RICHMOND, VIRGINIA.**

BIG LAND OPENING

Nov. 18, South Texas, Orange Hill Colony Lands. Five acres up. Send today for reservation blank and descriptive literature. ORANGE HILL LAND CO., 229 Lincoln Trust Building, St. Louis, Mo.

CASH FOR YOUR FARM OR BUSINESS,

No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

RAILROAD LANDS
VERY CHEAP.
FREE TRANSPORTATION.

To quickly build up population along the Washington and Choctaw Railroad in new reservation just thrown open, I will sell a little of our 100,000 acres of $25 and $50 lands at $17.50 per acre.

Magnificent opportunity for settlers, investors and speculators. Easy terms, as low as $1.00 per month. Any size tract from ten acres up. Gulf Coast Lands the most productive in the world—ten acres will yield an income of $5,000 a year. Sweet, pure water; cool, pleasant summers and mild, balmy winters; beautiful lands, adapted to farming, truck and fruit growing, or live stock, poultry, bees and dairying; no swamp, no stones; irrigation not needed; only part of the United States absolutely free from local diseases. Sixty miles from the coast; 21 hours from St. Louis; 29 hours from Chicago; with best shipping facilities. Don't buy lands anywhere until you investigate this. Send me your name—a postal card will do—and I will send you complete details, also a railroad pass free on Washington and Choctaw Railway, whether you buy or not.

M. G. WINEGAR, General Manager, 6155 Times Bldg., St. Louis, Mo.

Specialterms to live land agents capable of buying two sections or more for spot cash.

Ponds and Lakes on the Farm.

The American farmer has been chiefly engaged in the earning of bread for himself and family and the clearing up of his land. Often, too, the mortgage weighs so heavily upon him that his mind is, as it were, imprisoned, and he can not go forth to new adventures. But happily for many of our farmers there has come a degree of prosperity that leaves them free to consider the beautifying of their farms and the improvement of the neighborhood in which they live.

Winding streams cross multitudes of our farms. There the land is rolling and hilly the streams are multiplied, each stream having numerous branches. In many cases the land immediately adjoining the streams are so rocky and filled with ledges as to be of no value for agriculture. The possibilities for the making of ponds and lakes are in such cases great.

A Chicago man known to the writer bought several hundred acres of wild land about twenty-five miles from Chicago. A winding stream ran through it. Two years ago he hired a civil engineer to place a dam across the stream at a place where the banks were high and close together. The dam cost but little, but the water began to rise and overflow some low, boggy, nearly worthless land. Soon it covered thirty acres and became a lake rimmed with green grass and clumps of beautiful trees. Then the man cut up part of his land into lots and is selling them to people for residence purposes, while he retains the most of his land for other purposes.

Many a farm would be made more beautiful if there were a lake or pond on it. Such a pond could be stocked with fish. In fact, there are at the present time in this country many ponds and lakes that have been artificially stocked with fish, which yield the owner from spring to fall a supply of fresh fish—"fish just out of the water"—which are always far superior to the iced fish that have been kept for some days, and which the farmer seldom gets anyway.

If the pond or lake is well located and of fair size it can be used for boating to the delight of the members of the farmer's family. It can be made non-dangerous, by having the depth of the water such that drowning will not result in case of a turn over of the boat. The writer was recently rowing on an artificial lake that is a third of a mile long and half as wide. He was particular to measure the depth of the water at all points and found it not more than four feet deep at its deepest point. On this lake children could boat at will, except possibly the smaller children. Two and a half feet of water gives good depth for boating.

Where the winters are sufficiently cold, artificial ponds give opportunities for skating and ice cutting. Pleasure and profit are thus combined.

As a help to the landscape effects, the landscape artist can testify. A sheet of water is like a great mirror, reflecting the many hued lights that fall upon it from the sky, the sun, the clouds, the trees and the flowers. As a thing of beauty it can be made a joy forever.

Too Much Late Corn.

At this time (September 25) there is a great deal of immature corn all over the corn belt in Indiana, Illinois and Iowa north of the 41st parallel. When live stock feeding was carried on extensively in this region, soft corn was not so serious a matter, but no one wants to buy and store soft corn. The last Iowa crop report says: "As usual, it will take good, seasonable weather, without frost, up to October 15, to bring all the corn crop through safely." On September 20th it was estimated that at least one-third of the Iowa corn crop was in condition to be injured by frost. Through Indiana and Illinois the conditions are not so bad, but still there is too much soft corn.

Most of the blame for this soft corn must be laid to planting late varieties. There is a very common notion that any 110 to 120-day corn will get ripe between the 41st and 42d parallels. That might be true if every day was favorable to the crop, but such conditions are rarely met, and due allowance must be made for unfavorable growing conditions. It is safe to allow a margin of from ten to fifteen days in the rated ripening period of most varieties of corn, and for this reason it must be evident that 120-day corn is too late for this region. I have never seen a 120-day corn mature a full yield within that period. It usually strings out from ten to fifteen days longer. "Reid's Yellow Dent" is commonly called a 110-day variety, but four years out of five it needs 120 days to mature. "Farmers' Interest" is a 120-day corn, but I have known only one year in eight that it has matured in Northern Illinois. These varieties grow very rank foliage and they are vigorous foragers of plant food, and these things affect maturing.

Grain buyers tell me that soft corn conditions are getting worse every year. Last fall frost held off until October 19, still there was a great deal of immature corn, and there is much in the same region this year again. It seems farmers stick to the big, late-maturing sorts, in spite of all these things.

The only objection made to planting earlier varieties is a matter of yield. Of course yield is just what we are all after—the greatest number of bushels of sound corn. I have studied this question of yields for many years. In Putnam county, Ill., one of the best corn counties in the state, the highest yield I heard of last year was made by "Griffith's Early Dent," a rated 90-day corn. It made 93 bushels per acre, and every ear was sound and dry at husking time. In DeKalb county the largest yield I know of was made by a field of "Silver King," a rated 90-day white corn. In both of these counties there were many fields planted with this sort that made from 60 to 70 bushels per acre. In Wisconsin, where 90 days of corn weather is about all that can be expected, "Silver King" and "Wisconsin No. 8," commonly yield from 50 to 60 bushels, and "Silver King" frequently runs as high as 75 bushels per acre. In Minnesota and South Dakota, where such varieties as "Murdock" and "Minnesota No. 13" are grown, 75 bushels per acre yields are not uncommon. These splendid yields of early sorts, in the farthest north regions of the corn belt, show that it is not always the biggest ears that pan out the most bushels of good corn per acre. I have acutally seen more soft corn in Illinois than I ever saw in South Dakata, and I have seen farmers in the field husking up there when our corn was still growing.

There is still another feature about most of the early sorts of corn. They are easier husking and the ears run more nearly uniform. "Silver King" and some other early sorts have a long shank, which inclines the ear, and for this reason you seldom find a mouldy ear. The ears are located at about the right distance on the stalk for easiest husking. Most of these long shank sorts do not break from the shank quite so easily as say "Reid's Yellow Dent," but you seldom find an ear on the ground.—L. C. Brown.

A Wonderful Catalogue.

Catalog No. 319 issued by the Chicago House Wrecking Co. is a wonder. The index is on colored paper in the center. The index refers to 3,000 different items. There are 24 departments, such as furniture, belting, hardware, plumbing material, machinery, mill work, shafting, roofing, lumber, wire fencing, etc. There are 440 pages and it weighs a pound and a half. A fair estimate of the cost of getting up the first copy of this catalog is ten thousand dollars, and any of our readers can get a copy by writing for catalog 319. It is issued for the purpose of selling goods, and it does not fail to do so. In building material alone it is a revelation—twelve pages of doors, six pages of windows, every kind of porch, brackets, columns, etc., seven pages of mantels, twenty-seven pages of house designs, plans and estimates, and so on through the book. Write to Chicago House Wrecking Co., 35th and Iron streets, Chicago, and ask for Catalog 319.

Red peanuts are selling wholesale at three cents per pound.

There's *room* for every farmer on the continent in the new lands of

The Great Southwest

It's a *deep-soil* section, which requires merely the *fertilization* of *labor* and *intelligence.* There isn't a month in the year when *some* crop can't be grown. Southwest farms often *pay* for themselves in *single seasons.* They grow onions and tomatoes that sell as high as $300 an acre--*cotton* that runs a *bale* an acre--*alfalfa* so *luxuriant* that as many as five *crops* can be taken off the *same* ground *annually.*

Some sections produce *cane;* others are *ideal* for *fruit raising;* oranges flourish on the Gulf Coast. Men get *wealthy* and stay *healthy* in a *climate* that *never breaks* and which never reaches great *extremes* of either *heat* or *cold.* There are good *schools* for *children; conveniences* and *comforts* in *nearby* towns.

Let me send you free some interesting books about the Southwest. They will inform you of opportunities waiting for you there and will open your eyes to new possibilities. Write today for literature descriptive of the section you are most interested in. Low rate Success-Seekers' Excursion first and third Tuesday of each month.

JOHN SEBASTIAN, Passenger Traffic Manager,
90 La Salle Street Station, Chicago or 90 Frisco Building, St. Louis.

The Thing That Interests Dairymen Today

is not which Company **has made the most failures** in its attempts to make successful Cream Separators, or which Company has abandoned or discarded the most inventions because (by its own admissions) of the inferiority of those inventions.

The questions which interest dairymen are:

Which is the best Cream Separator in 1909?

And which will continue to be the best Separator in 1910?

The **United States Separator holds the World's Record** for close skimming.

Its record has not been equaled by any Cream Separator, although numerous attempts have been made to equal it.

The **United States** has a **solid one piece frame.** No bolts, screws or rivets to work loose.

Gearing enclosed in dust-proof case. Gearing runs in oil bath.

Closest skimmer in the world. Simple and easy to clean.

Light running. Longest life.

The **United States** has the best point of all—**perfect separation**—and also has **more other good points** than any other Separator.

Selling Agents in every dairy section in the country, will grant a free trial.

Send for Catalogue No. **125.**

VERMONT FARM MACHINE COMPANY

BELLOWS FALLS, VERMONT

The Milk Situation at Chicago.

An article in the Chicago Sunday Tribune of August 29th gave the milk situation at Chicago as follows:

Chicago consumers are paying an average of 7 cents a quart for milk and have an annual milk bill of $41,000,000. Milk consumption in the last ten years has doubled in quantity. Every day the city receives 240,000 gallons of milk in eight-gallon cans, while 160,000 gallons come in bottles from the country bottling plants. This is a grand total of 400,000 gallons of milk for each of the 365 days in the year.

The last winter period of prices for the Chicago milk producer involved November and December of 1908, and January, February, March and April, 1909. The farmer who sold his milk in Chicago at that average price of $1.30 a can, less the average 16.5 cents freight, received 3.5 cents a quart net, which is 14 cents a gallon. The Chicago middleman, who bottled it and delivered it at 7 cents a quart, received the other 3.5 cents.

Again, as to the producer, the scales for the five months of 1909, including May and September—October being in doubt in the next contracts—have allowed the shipper by can only 2.5 cents a quart net, or 10 cents a gallon. The Chicago bottler has received the remaining 4.5 cents on the 7-cent quart.

GET MY PRICE **This Ad Saves Dealer, Jobber, Catalog House Profits.**

Buy direct from the biggest spreader factory in the world. —My price has made it—No such price as I make on this high grade spreader has ever been made before in all manure spreader history. I save you $50. Here's the secret and reason: I make you a price on one based on a 25,000 quantity and pay the freight right to your station. You only pay for actual material, labor and one small profit, based on this enormous quantity on a

GALLOWAY

Get my bran new proposition with proof—lowest price ever made on a first class spreader, with my agreement to pay you back your money after you try it 12 months if it's not a paying investment How's that for a proposition? If I did not have best spreader I would not dare make such an offer. 20,000 farmers have stamped their O. K. on it. They all tried it 30 days free just like I ask you to try it—30 DAYS FREE.

Drop me a postal, and say—"Galloway, send me your new proposition and Big Spreader BOOK FREE with low prices direct from your factory." I also make a new complete steel gear Spreader—70-bu size.

H. Guthbergson, Gladbrook, Iowa. "Works fine. Spreads all kinds of manure better than any spreader I ever saw. So simple, nothing to get out of repair as compared with other spreaders."

T. F. Stice, Oswego, Kans. "Often pull it with my small buggy team. Does good work. Have always used the ——— before. Galloway much the best. If going to buy a dozen more they would all be Galloways."

WM. GALLOWAY COMPANY, 1289 Galloway Station, WATERLOO, IOWA

The National Dairy Show.

The Fourth National Dairy Show opens October 14th and continues until the 24th at the New Auditorium, Milwaukee, Wis. It will be by far the best show ever held. The special features include working dairy herd, milking machines, four-horse delivery teams, and a working creamery in charge of government experts. There will also be meetings of the National Creamery Buttermakers' Association, International Milk Dealers' Association, American Dairy Farmers, Official Dairy Instructors' Association, Wisconsin Cheese Makers' Association, National Association of Ice Cream Manufacturers, National Dairy Union, Cow Testers' Association. There will be the usual exhibits of dairy apparatus and appliances. All enterprising dairy farmers will find it to be a very interesting and instructive show. Reduced rates are announced. The way to find out is to ask your local agent.

Prizes For Dairy Butter.

Rather late in the day we are informed that prizes for dairy butter will be awarded at the National Dairy Show, which opens at Milwaukee on October 14th. This is the first time the National Dairy Show has recognized the original branch of the dairy industry, but this year gold and silver medals and diplomas will be awarded to exhibitors of this class of butter. Only five pounds are required, and this may be in prints, or, better, in a solid packed package. This should be well wrapped in many thicknesses of paper and shipped express charges prepaid. The butter will become the property of the Show.

In making the announcement of this dairy-butter contest the Manager of the Show refers to the establishment of creameries, cheese factories and milk-shipping stations as having stopped almost entirely the making of dairy butter and relieving the housewife of this work, and yet in the same paragraph states that there are yet many owners of dairy cows so situated that the making of butter at home and marketing it direct to a critical trade is the most profitable outlet available.

The previous neglect on the part of the National Dairy Show to have classes for dairy butter indicates the true condition of affairs. The milk producer who can ship milk or cream to a big city, or who can conveniently ship cream to a creamery or condensary, or who can unload his milk product at a local station without sacrificing it, is in far better business than if he organized a buttermaking equipment of his own and added this unnecessary and very likely unprofitable labor to the work of the farm.

And yet there remains the country town in which the sweet milk, the buttermilk and the butter delivery are from one wagon, and in another situation the high-class buttermaking farm, with a reputation, sells the perfect butter to the critical trade of a big city above the price of the very best creamery product.

We recognize that the management of the National Dairy Show is doing the right thing in encouraging the remnant of the buttermaking industry, and will rejoice if there is a large and superior exhibit in this class.

Free Sample of Congo.

Careful buyers, instead of making their decision in the hardware store while the dealer is talking, prefer to get samples and study the matter over quietly and thoroughly at home. In the case of roofings this is easily done. The United Roofing and Manufacturing Company, who make Congo Roofing, are willing to forward samples of all grades of their roofing, together with booklet telling about their famous guarantee bond, free of charge, to anyone interested. The receiver is under no obligation to buy.

The manufacturers of Congo Roofing believe that their material stands investigation pretty well, and are satisfied to let it talk for itself.

If you are in the market for roofing, you need not hesitate to ask the company to send you a free sample. Address the United Roofing and Manufacturing Company, Philadelphia, Chicago or San Francisco.

Dairy Show Low Rates.

The various passenger associations have made important announcements during the week regarding the concessions in rates in favor of the National Dairy Show in Milwaukee, October 14th to 24th. The Trunk Line Association has announced an excursion rate of one and one-half first-class fare for the round trip, going and returning over the same route. The selling dates of tickets under this rate and the one-route condition will be October 17th, 18th and 19th, with the return date extended to the day following the closing of the show, October 25th.

The railroads in the Western Passenger Association have made a far more liberal concession and will sell excursion tickets at the rate of one and one-half fares for the round trip, the minimum excursion rate being $3.00. This covers all points withing a radius of 100 miles of Milwaukee, and tickets will be on sale on all lines in the Western Passenger Association October 14th, 15th, 16th, 18th, 19th and 20th. Visitors to the Dairy Show holding tickets purchased in the Western Passenger Association territory can return up to and including October October 26th, making practically two-weeks' limit for the validity of tickets and giving all who wish to an opportunity of staying through the entire show.

The word reaching us indicates a widespread interest in the forthcoming National Dairy Show. In several sections excursion parties are being worked up to take in the show. Minnesota is planning on a special train, and milk shippers near Chicago are going to run a special excursion party, and other sections have the matter in hand. Any community where there are three or four or more, who wish to go, could advantageously arrange to go together. This adds to the pleasure and interest of the outing.

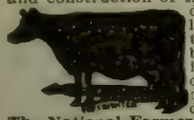
St. Louis Root Quotations.

Golden Seal, $1.75 per pound; Ginseng—wild at $5.50 to $6.00, and cultivated at $5.25 to $5.75; Lady Slipper, 18c.; Seneca, 32c.; Pink, 22c.; Black, dry, 7c.; May Apple, 5½c.; Snake, 39c.; Angelica, 5c.; Wahoo—bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 5½c.; Blueflag, 5c.; Sassafras—bark of root, 5c.; bark of tree valueless; Wild Ginger, 10c.; Spikenard, 3c.; Skullcap, 7c.

Home-grown horse-radish at $2.50 to $4.00 per barrel is a late St. Louis quotation.

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send **The National Farmer and Stock Grower** for two years and we will send the book, **Profitable Dairying,** as a premium. Address,



HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Moisture in Butter.

The New York Produce Review says: "Of the 123 samples of butter at the last Danish surprise scoring (the 395th) there were six with 16 to 17 per cent. water and one with 17 to 18 per cent. As the average water percentage was 14.49, it is evident that the Danish buttermakers have not mastered the secret—as some of our American makers claim they have—of controlling the moisture percentage within 0.5 per cent. The lowest percentage—12 to 13—was found in three samples, while fifty had between 14 and 15 per cent. The moral is, aim at 14 per cent. and you will be on the safe side of 16."

Improves Quality, Therefore Classed as Adulterated.

"We do not advocate high moisture in butter, but we believe the water content of some of our butter can be increased at least two per cent. without injuring the quality. A higher moisture during the winter months especially would improve the quality. There are at the present time two or three tests for moisture that are simple, accurate and inexpensive. We urge, therefore, that each creamery provide itself with a test. Do not try to increase the water content of your butter unless you have a test and know the amount of water incorporated. Butter with sixteen or more per cent. of water is classed as adulterated, and a heavy fine is the penalty for violation. It is impossible to control the water content within one-half to one per cent., and we, therefore, do not recommend that the buttermaker try to incorporate more than 14 to 14.5 per cent." This is from a Pennsylvania Experiment Station Bulletin.

Pennsylvania Butter Marking.

The butter which scored the highest was made from whole-milk cream, which was held in factory twenty-one hours. Twenty per cent. of commercial starter was added after separating and ripened at 67 degrees Fahrenheit until evening, when it was cooled to 54 degrees Fahrenheit and churned the next morning. The butter was churned at 54 degrees and washed at same temperature. The butter was washed at twenty revolutions and worked eighteen in a Disbrow churn. A small amount of water was left in churn during the working. The time required to churn was thirty-one minutes. The condition of the butter from churn was firm and dry.

Adulterated Milk.

Henry George, a Kentucky dairy farmer, shipped milk to Cincinnati, thereby becoming engaged in interstate commerce. The United States Department of Agriculture found that his milk was watered, and, although the butter-fat content was away above the standard, the solids not fat were short. The consequence was that Henry George was fined $15 and costs. In this case the opinion of the Department of Agriculture as to what constitutes standard milk was stated as follows:

"In the opinion of the Department of Agriculture, milk is the fresh, clean, lacteal secretion obtained by the complete milking of one or more healthy cows, properly fed and kept, excluding that obtained within fifteen days before and ten days after calving, and contains not less than eight ond one-half (8.5) per cent. of solids not fat, and not less than three and one-quarter (3.25) per cent. of milk fat."

Dairy and Creamery Notes.

The Mercantile Trust Company closed a deal with the Colonial Creamery Company, by which a modern new building is to be erected for its occupancy on the southeast corner of Twenty-first and Pine streets, St. Louis, Mo. The Colonial Creamery Company at the present time has an establishment at Main and Dickson streets, but the development of the business in St. Louis has necessitated the erection of a larger and more modern plant.

In view of the wholesale death rate said to depopulate so many cities and caused by milk from farmers' diseased cows, it is surprising to learn that in this country the census will very likely enumerate about ninety millions of living human beings. It is a pity that the pure-food law cannot put some restraint upon the tuberculosis exaggerations.

At recent butter-scoring contests in their own states, C. B. Martin, of White Cloud, Mich., won first prize with a score of 97, and Ralph Martin, of Font, Pa., won the first prize with a score of 94.

At the Iowa State Fair butter exhibit, H. E. Forrester, of Lake Mills, won the highest prize with a score of 97½, and L. O. Knutson, of Manley, won the highest in the gathered-cream class with a score of 97.

New Jersey Borden prices for milk, October, 1909, to March, 1910, $1.96⅜ per 100 pounds, or $1.67 1-6 for forty-quart can. This is the highest price the Bordens ever paid by the corporation.

The prices set by the Milk Producers' Protective Association for milk delivered in Chicago is for each eight-gallon can as follows: October, $1.40; November, $1.60; December, $1.60; January, $1.50; February, $1.50; and March, $1.40.

A valuable book has been issued for free circulation among dairymen. It is published in the interest of Pratts dairy foods and remedies, but it is all the better for that. It is worth having, worth writing for and well worth studying. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a copy of "Pratts New Cow Book."

On Thursday evening, October 14th, President Taft has an appointment at the El Toro Hotel, Grand Canyon, Colorado, but it will not prevent him opening the Dairy Show at Milwaukee. He will press the button and electricity will do the rest.

From 400 to 500 cows will be exhibited at the National Dairy Show. Dairy farmers will find it to be a very instructive exhibit.

Farmers' National Congress.

The twenty-ninth annual session of the Farmers' National Congress will be held at Raleigh, North Carolina, November 3d to 9th, 1909. For programme address Geo.M.Whitaker, Secretary, 1404 Harvard street, N.W., Washington, D. C.

50 CENT BUTTER BEFORE CHRISTMAS AND WHAT IT MEANS

"50 CENT BUTTER BEFORE CHRISTMAS"—is the prediction freely made by the big leaders in butter production, based upon their close knowledge of trade conditions.

Butter at anywhere near such a price means that a De Laval Cream Separator WILL PAY FOR ITSELF BEFORE THE END OF THE YEAR in its savings over any gravity or setting system.

It means that a De Laval Cream Separator WILL PAY FOR ITSELF BY SPRING over any competing make of separator in use or on the market.

It means that an Improved De Laval Cream Separator WILL PAY FOR ITSELF WITHIN A YEAR over the older style De Laval Cream Separators in use.

It means that no one separating cream from the milk of even a single cow CAN AFFORD to continue to do so a day longer than can be helped without an Improved De Laval Cream Separator.

And buyers should remember that a De Laval Cream Separator—on which there is just one reasonable price for everybody—can be bought at a fair discount for cash down or on such liberal time that it WILL PAY FOR ITSELF out of its own savings.

That means that NO ONE need go a day longer without a De Laval Cream Separator than may be necessary to order and receive it, and that they CANNOT AFFORD to do so.

It emphasizes the urgent importance of seeing the local De Laval agent or communicating with the Company directly AT ONCE, with a material dollars-and-cents loss EACH DAY of delay in doing so.

Then WHY delay another day?

None better. Prices reasonable. My herd won seven out of nine first prizes at Lexington, Ky., 1908. Have added some imported stock that won at the Royal Show, England, 1907
CHAS. FORD,
Mortonsville, Woodford County, Kentucky

The Agricultural Blue Book.

The Agricultural Blue Book and Live Stock Breeders' Directory, edition of September, 1909, is issued. It contains a list of business firms, 3,000 strong, arranged alphabetically by states, and each firm is engaged in such business as will interest farmers and stock raisers, fruit growers, dairymen, poultry raisers, etc. The list includes manufacturers of agricultural implements and machinery, dairy apparatus, stock medicines, veterinary supplies, nurserymen and all classes of people in towns and cities whose names are legitimately useful to farmers in the conduct of their farms, plantations and estates.

The Agricultural Blue Book and Live Stock Breeders' Directory also contains a list of 10,000 names of experimental farmers, live stock and plant breeders, fruit, grain growers, dairymen, poultry specialists, ranch owners, etc. It is a select list, arranged alphabetically by states in addition to name and address; gives the special line of agriculture or stock raising the farm or ranch may be devoted to. Nearly all the copies printed are subscribed for in advance, but we have a few left for special orders from farmers or from business interests allied to the farming industry. We are also engaged in selecting additional names, addresses and other information to enlarge and perfect future editions of this work.

We invite all fruit, vegetable, plant and live stock breeding specialists to send in their names, and all general farmers owning 100 acres or more to send in their names and addresses. We guarantee to publish all suitable information that may be properly sent into us for that purpose. In like manner we extend an invitation to all business men allied with farming to send in their letterheads or business cards, that they may be properly represented. It is not our intention to give any business firms free advertising, but it is our intention to let the farmers know their name, address and occupation, and have it always where it can be found. Advertising and subscription rates are reasonable and will be made known upon application. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

American Royal Cattle Department.

The four cattle departments of the American Royal Show are under the direct superintendence of the national association of breeders of those cattle and officials of these associations manage the exhibits. C. R. Thomas, secretary of the American Hereford Cattle Breeders' association, is superintendent of the Hereford division, and his assistant is J. W. Rouse, known to all Hereford breeders. R. O. Cowan, whose name has been identified with Shorthorn progress, is superintendent of the Shorthorn division, with Roy Groves as his assistant. R. W. Brown, secretary of the Galloway association, is superintendent of the Angus division.

Blooded Stock Notes.

We are glad to welcome another breeder who is intelligently breeding Poland-China swine in Arkansas. Mr. John McLaughlin, proprietor of the Blue Ribbon herd at Marmaduke, Ark., has some richly-bred stock fit to go into the best herds in the country. Hogs arriving on the market from Arkansas are better bred and better fed and bring more money now than they used to do, and for this reason they have received some recommendations in government reports. It is easy to buy fine pigs to grow into useful boars and sows when such breeders have them right where they are most needed.

Mr. N. H. Gentry, President of the Royal Show, is also Superintendent of the Swine Department. Berkshires, Chester Whites and Duroc-Jerseys will be represented, with Frank S. Springer, W. W. Waltmire and C. L. Carter, respectively, the Superintendents of the divisions. The Royal Show at Kansas City opens October 11th and closes on the 16th.

On September 1st, at the St.Joseph market, Clay, Robinson & Co. sold a load of hogs shipped by E. Lloyd, of Glenwood, Iowa, that were eleven months old and weighed an average of 301 pounds. They brought $8.10 per 100 pounds, the top of the market for the day and next to the highest price ever paid to that date on the St. Joseph market.

At St. Joseph, the champion load of Hereford steers were shown by A. E. McGregor, of Morrowville, Kansas, and weighed 1,488 pounds. They were sold for $9.75 per 100 pounds.

Messrs. C. J. Smith & Son, of Stubblefield, Ill., breeders of Shropshire sheep, report that they have made very satisfactory sales through advertising in The National Farmer and Stock Grower, and that they have sold all they care to sell this fall.

Mr. J. P. Vissering, of Godfrey, Ill., writes: "I can please stockmen who desire to obtain the big-type Poland-Chinas. They are sired by 1,000-pound boars and are out of stretchy sows—the kind that sell themselves and do not have to be disposed of at auction. My prices you can stand. I make a specialty of selling by mail, and if, upon arrival, the stock does not please, you can return them; you take no risk. If you have failed to get the big type, more detailed information will be cheerfully given. Write for it to-day."

Truman's Pioneer Stud Farm of Bushnell, Ill., are exhibiting 40 head of Shire and Hackney horses at the Illinois State Fair. At Iowa State Fair they won first premium in every class showed in, also 4 championships, 2 cups, 5 medals, and second in classes where they had already taken firsts, a record not before equalled by any exhibitor.

WHAT BANKERS and CAPITALISTS SAY.

Life insurance stock is always in demand, as it is considered the highest-class stock in the market and sure investment and sure as government bonds, and pays the largest dividends. We offer some of our stock at $20 per share until further notice. Buy some for your wife and girls for a nest egg. A great many insurance companies that have sold stock from $20 to $100 per share has a market value to-day from $1,500 to $15,000 per share. Our offer is only for a short time, as we wish to distribute some in the rural districts. Write for full particulars to National Reserve Life Insurance Company, 313-315 Ligget Bldg., St. Louis, Mo.

An Independent Crop Report.

The American Steel & Wire Co., of Chicago, have agents and traveling salesmen visiting all crop districts, and make up a useful and reliable crop report issued weekly. Hereafter we will be able to publish extracts from this report, and will keep it on file for reference.

St. Louis Wool Market.

Many grades of wool are sold upon the St. Louis market. Top price for best medium domestic fleeces, 28½ to 29½ cents; top for Texas, 26 to 28 cents; Western top grades, bright medium, 27 to 28 cents.

THIRTY (30) HEAD
OF STALLIONS, GELDINGS, MARES AND JACKS
AT PUBLIC AUCTION
ON NOVEMBER 10, 1909,
—at the Barn of—
W. C. BARHAM & SON, Milan, Tenn.

The Best Collection of High-bred and Registered Saddle and Harness Horses ever offered at PUBLIC OR PRIVATE SALE IN TENNESSEE.

Nashville, Tenn., Sta. B, R. F. D. No. 7.

The Greatest and Best Market.

(By Joseph A. Maxwell, Pioneer Mule Dealer of the St. Louis Market.)

The question is often asked "Why is the St. Louis National Stock Yards Horse and Mule Market the greatest in the world?" It always has been and always will be. Counting from the beginning at St. Louis, it is the oldest established market and sells more horses and mules than any other.

All the elements which enter to make a great market are combined here. Aside from its central location, which is no small point in its make-up, being, as it is, the very "Hub" of those localities peculiarly adapted to raising the best grades of horses and mules, and which raise the bulk of America's mules, it has that essential element which must enter to make a truly great market: Its ability to dispose of mules of every grade, every size and of every description, at prices from one dollar to five hundred, or whatever they are worth. Mules are sold here to go to every part of the world, hence the saying: "The mule has made Missouri famous."

The dealers are always ready and willing to buy if there is a prospect of making any profit on them. There are many, of course, which do not make the desired profit, but they are always ready buyers for mules of any description.

Only once during its history has it been impossible for parties shipping to this market to dispose of their mules at a price the same day they arrived, as is customary. The rule is, to buy them as soon as they are offered, and the shipper goes home that same day with his proceeds in cash in his pocket, no matter whether the receipts for the day have been one mule or five hundred mules.

This one exception was in the year of the panic, when for several weeks there was no demand at all, and the dealers were all heavy losers because of having to carry over large stocks of high-priced mules on feed until the market again opened.

The panic, however, passed into history. The market bristled up again and resumed its former activity and has been booming along ever since.

Last month (August) was one in which any class and every description of mules could have been and were sold, from the very poorest to the best. The buyers for mules were more numerous than August ever saw before.

Last winter saw the largest run of horses and mules ever on this market, and although the trade seemed dull for the dealers, the commission men kept the market nicely cleaned up with each week's close.

With the mule dealers, what one will not buy the other will, and this makes it without doubt the greatest horse and mule market in the world.

The dealers and firms doing business in the yards are Maxwell & Crouch, Gillen & Heiman, Joseph A. Maxwell, E. D. Pendleton, Atterbury & Edwards, Sparks Bros. Mule Co., of which Mr. Henry Sparks is President, and the latest acquisition, though not the least, Sparks Mule and Horse Co., consisting of John, Clark and Charles Sparks, the well-known pioneer dealers of Kansas City. They are with us now and to stay, recognizing the superiority of the horse and mule market of the St.Louis National Stock Yards.

More About Early Oats.

About ten years ago "Fourth of July" oats were very popular. They produced well and turned out grain at an amazing rate as compared with the quantity of straw. They were splendid for feeding, but were not the best sellers. They were early; they escaped the ravages of rust, but they were crowded out by the larger, white varieties. In 1907, many were induced to grow the "Sixty-day" or "Kherson." These give very satisfactory crops in spite of very unfavorable conditions. The acreage devoted to these varieties was increased in 1908, and again in 1909, and I believe they have come to stay this time.

A central Wisconsin farmer tells me they do well in that section, but their looks are against them. He says, however, that these early oats have a place on many grain farms. They do best on rich, bottom land where larger varieties would lodge, and they may be sown later than other varieties. A farmer near Jerseyville, Ill., tells me they yielded 60 bushels per acre for him this season and did better than other sorts. These reports go to corroborate other reports that these oats do well all over the oat belt, and are much better adapted to southern Illinois, than the large, white varieties.

A correspondent in Williamson county, Ill., calls attention to the percentage of straw of the "Red Rust Proof" oats. His crop this season made 5,260 pounds of grain and only 4,200 pounds of straw. This was the weight of the straw in the bundles and did not include the weight of the straw left in the stubble. This is a matter of much importance to grain growers. The function of the straw is to produce and sustain the head, and when this is done with a minimum expenditure of plant food, we are saving fertility for following crops. The percentage of straw reported by this correspondent is unusual. The nearest I have come to it is with "Sixty-Day" oats. These run to head and they do not give the men on the straw pile much to do. I have one report where the weight of grain exceeded the straw which was baled, and, strange to say, this farmer does not like these early oats, because they do not give enough straw.

I am having many inquiries about winter oats and winter barley; and two inquire whether it will do to sow the ordinary varieties of oats in corn this fall. I do not know of any oats or barley that may be sown in this latitude in the fall and be depended upon, and I would not advise any one to chance his main crop on fall sowing. I have advised sowing an acre or so in corn stalks or in corn stubble, merely in an experimental way, expecting that only a few heads would survive till spring. This may be done with little expense, and who can tell. It may mean the start of some valuable winter sort. But don't risk your main crop of oats, barley, or anything else under conditions which are unnatural.

Another correspondent asks whether "National" is as early an oat as "Kherson." "National" is about twenty days later than "Kherson." It is the same season as "Swedish Select" or "Big Four," and matures in 116 to 120days.—L . C. Brown.

Always ship to the St. Louis market.

ST. LOUIS THE GREATEST HORSE AND MULE MARKET. Scene on Jones Boulevard. A car-load of mules just ready for shipment to Fort Fairfield, Maine, near to the borders of New Brunswick. The farmers of Missouri raised most of these mules, and they were bought for use on the potato farms of the state of Maine. See article by Jos. A. Maxwell concerning the mule market at the National Stock Yards.

Don't Have a Blind One

Sales of Range Horses.

The sales of Western range horses at the St. Louis National Stock Yards will continue through October. The first sale on the 5th will be over before this paper reaches our readers, but there will be another sale on Tuesday, October 19th, and one on Tuesday, November 2d. At these sales the average number is about one thousand head, and they are the best range horses offered at any market. On Tuesday, September 21st, the top of the market was $100 around for a splendid load of 1,100-pound mares and colts; the next price was $93 around for a load of two and three-year-old mules; and the next price $80 for a load of mares and geldings. Some thin and inferior lots sold from $20 to $30, and the average of twenty-five loads was close to $50 around. In view of the scarcity of horses the few remaining sales of the season ought to be well attended. These sales are conducted by the Campbell & Reid and Western Sale Stables Company at the St. Louis National Stock Yards. Further particulars can be had by addressing J. J. Searcy, Secretary, National Stock Yards, Ill.

The Horse's Judgment.

Here is a story of an equine geographer, who was the cause of saving his master some distance in traveling. A gentleman in the habit of riding a good deal found that whenever he approached a certain gully his sagacious horse invariably opposed his wishes to cross at the particular spot he had been accustomed to, always endeavoring to lead off to another part of the gully, where no passage was known to exist by his rider. Resolving to see whither the cunning rogue would go, he gave him the rein, and soon found himself carried over the gully by a route that he had never before followed. Still, however, thinking that the former way was the nearest, he was curious enough to have both measured, when he found the horse's judgment correct, the way being the nearest by several hundred yards.—Spirit of the West.

Dealers in Draft Horses.

Walker Bros., dealers, breeders and importers of draft horses and mammoth jacks, formerly at Glencoe, Oklahoma, have moved their stables to the Fair Grounds, Oklahoma City, where they have twenty-five stallions and jacks for sale. They did this to obtain a better and more central location. They have been in business twenty-seven years. They raise horses, or import them young, which they develop and acclimate. It is a very important matter for the buyer to obtain an acclimated horse that is ready for service on the day of delivery.

Public Sale of Horses and Jacks.

At Milan, Tenn., at the crossing of the I. C. and L. & N. Railway, a public sale of thirty head of high-bred horses and jacks will be held on November 10th by W. C. Barham & Son and Mr. W. B. Jordan. The offerings include the saddle stallions Dewey, London Dare, Black Chester Dare, Dignity Squirrel, also a grand trotter Nipowall, a son of Gambetta Wilkes, and others of equal breeding. There are two magnificent saddle mares, five extra fine geldings, yearlings, etc.

The jacks include Big Fred, coal black with white points, 15½ hands, and a fine performer; also Monaco, a fine breeder. At the sale a competent veterinary surgeon will be on the ground to certify to any defects. It will be an advantage to write at once for the catalogue and get all the information concerning the sale.

At the Kentucky State Fair, our advertisers, J. F. Cook & Co., of Lexington, won more premiums than any other jack exhibitor. They won first on four-year-old, first on two-year-old, cup for the best herd, and the jack championship. The two-year-old champion was said by the best judges at the Fair to be the finest jack they had ever seen.

At St. Louis, crab apples, Michigan Hyslops, Siberian and Transcendent are quoted at $1.50 to $1.60 per bushel basket, and at $4.50 to $4.75 per barrel.

For Sale! 50,000,000 ft. of New Lumber!

Here is a chance to buy Lumber at 30 to 60 per cent less than is usually asked for it. It is absolutely brand new and first-class in every particular. We bought 50,000,000 feet from lumber mills at half the usual prices and we are giving the public the benefit of it. There is absolutely no possibility for you to go wrong in this matter. Never in twenty years has Lumber been offered at such low prices as we are selling it for now. If you do not take advantage of this chance, you are certainly missing a splendid opportunity. We will quote you freight prepaid price to your railroad shipping point.

Training the Colt's Feet.

The feet of the colt should receive as much attention as possible, is the opinion of an expert horseman. We should supply ourselves with a few tools and they do not need to be expensive. Possibly a rasp, a chisel, a mallet and a pair of hoof snips will suffice for a farmer. Then if you have an eye for defects and will give them attention you will soon have the satisfaction of having shapely feet for the horse. This is far more easily accomplished while the animal is young. We should watch the colt's feet that they are not growing longer or wider on one side than the other. A few well-directed strokes with the rasp on point and sides of feet will be of much benefit, as the coronet, or hoof, is very thin, and getting too deep will cause much trouble. With older horses we must also be careful if the feet have been neglected and have grown out long and ill-shaped. —Spirit of the West.

HIGH ORDER.—A celebrated saddle stallion owned and exhibited by J. F. Cook & Co., Lexington, Ky. Photograph by Thomas A. Knight. HIGH ORDER is a mahogany bay, with star, snip, left hind ankle white, foaled 1904, 15.3½ hands high, weight about 1,125 pounds. HIGH ORDER is of unusually commanding presence best described as the accepted type of the up-to-date American saddle horse. This year at Shelbyville, Ky., he won first prize for stallion, any age, at the Blue Grass Fair he took the blue ribbon for finest stallion to halter. In the $1,000 saddle stake, where there were nine entries, he was third and the only stallion in the money.

St. Louis Horse Show.

Horse Show Week at St. Louis is from Monday, the 18th, to Saturday, the 23d. The show will be held in new Coliseum, which was constructed mainly for the purpose of furnishing such shows the building, arena and stabling facilities required for success. Now that the permanency of the St. Louis Horse Show is assured, great interest is being taken in the show by members of the Business Men's Association, and applications for membership are pouring in at headquarters. There are already nearly twice as many horses and season tickets engaged as there were last year.

Lawrence Jones, of Louisville, will be here with Gallant Lad and Gallant Lord, who swept everything before them in London. William E. Brown, of Indianapolis, will be here, too. The Vanderbilt stables and the Judge Moore stables of New York may be represented; also Mat Cohen, of Kentucky; Geo. Pepper, of Toronto; J. H. Parker, of St. Joseph. Lady riders and drivers include Miss Emily Bedford, of New York; Mrs. Jarvis Hunt, of Chicago; Miss Lulu Long, of Kansas; Miss Mildred Brown, of Indianapolis; Mrs. J. H. Parker, of St. Joseph. Mr. G. Lacy Crawford is President and James H. Bright, Secretary, of the St. Louis Horse Show Society.

The Farmers' Advocate of New Zealand says: "Good farm work or road exercise is as important for the stallion as for the mare to get success in breeding. It is the good farm work that makes the draught mares good breeders."

Pratts makes good.

You don't have to take our say so.

Try any of Pratts preparations on your poultry, your horses, your cows.

If it fails to do all we claim --your money back. No strings to this guarantee--no red tape.

Your simple word is all we require.

For instance: test Pratts Poultry Regulator. A 4-lb. package is sufficient for 30 hens 30 days. Your dealer will refund your money without a quibble if you take back the empty box and tell him Pratts did not make good the guarantee--healthier fowls and more eggs.

Same holds good for a trial of any other Pratts preparations:

Pratts Animal Regulator, Lice Killer, Head Lice Ointment, Roup Cure, Healing Ointment, Heave Cure, Colic Cure, Spavin Paste, Cow Tonic, Bag Ointment, Distemper Cure, Hog Cholera Specific, Liniment, Worm Powder, etc., etc.

Shall we send you copies of our valuable handbooks?

Pratts New Poultry Book—A manual of authoritative information and advice on poultry raising for profit.

Pratts New Cow Book—A valuable handbook about cows and the dairy.

Pratts New Horse Book—A book that no horse owner can afford to be without.

Pratts New Hog and Sheep Books—A guide to the proper care and raising of sheep and hogs.

Any or all of these books are yours for the asking. Write today.

PRATT FOOD COMPANY

JAMES H. CAMPBELL,
Veteran Commission Salesman,
General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Don't hesitate to write or ship to
James H. Campbell,
National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK — SHIP US YOUR CATTLE, HOGS AND SHEEP.

CAPTAIN JAMES H. CAMPBELL, Commanding Officer of the Equestrian Troop of the National Stock Yards at the St. Louis Centennial Parade.

The Centennial Parade.

One of the attractive features of the educational, historical and military parade in St. Louis during Centennial will be a brigade of more than a hundred horsemen from the National Stock Yards, East St. Louis, under the command of Captain James H. Campbell.

The horsemen comprise the representative horse and cattle men of the yards, and there are 120 in the troop. The riders will be attired in a special uniform for the occasion, which will much resemble the uniform of the old Chicago "Hussars," consisting of a steel-gray hat, with black band and white binding, gauntlet gloves, black coat and white trousers, with leather leggings.

The troop will march under the banner of the St. Louis Live Stock Exchange, and Captain Campbell, riding at its head, will carry an American flag.

Captain Campbell organized the horsemen at the request of William A. Moody, president of the Live Stock Exchange. Mr. Moody selected Captain Campbell for the task because of his military experience, as a soldier of the Confederacy in the war between the States, under General Sterling Price.

Captain Campbell participated in all the engagements in which General Price's army was engaged during the year 1864, notably, the battles of Poison Springs, Ark., and Jenkins's Ferry, and the assault on the fortifications at Pilot Knob, Mo.; Big Blue, Little Blue, and Westport, Mo., during the raid into Missouri.

Captain Campbell came to St. Louis from Saline County, Missouri, in 1874, and engaged in business at the National Stock Yards. He is the head of the Campbell Commission Company, and is one of the most successful cattle salesmen at the Yards.

Southwest Lambs on Top.

On September 30 the top price for lambs on the St. Louis market was $6.85 per 100 pounds. These lambs consisted of 71 head 67-pound average, raised in Christian county, Mo. Christian county is in the country called "Southwest," to indicate where formerly the stock consisted of "scrubs," but now the improvement in quality is shown by "Southwest" cattle and hogs selling at the highest price on the market.

Southern Cattle at St. Louis.

The following quotations represent the Southern cattle quotations at St. Louis October 1st: Good to choice steers, $4.75 to $5.25; medium to good steers, $4.00 to $4.75; common to medium steers, $3.00 to $4.00; good to choice heifers, $3.65 to $4.25; common to good heifers, $2.75 to $3.50; good to choice cows, $3.50 to $3.85; fair to medium cows, $3.10 to $3.50; cutters, $2.60 to $3.10; canners, $2.00 to $2.50. All quotations being at the price stated per 100 pounds.

Yearling Beef Steers.

Light, young, handy, fat, good quality native steers, weighing from 700 to 1050 pounds average, are selling remarkably well. The inferior grades sell low, but the good to choice cattle sell high. The official quotations October 1st on the St. Louis market were as follows: Common steer yearlings, $3.75 to $4.75; fair yearlings, $5.00 to $5.25; medium to good, $5.50 to $6.50; choice yearlings, $6.75 to $7.25, and strictly fancy yearlings at 7.50 to $8.00. Recently on the market fancy native steer yearlings did sell up to $8.25 and $8.50 per 100 pounds.

James H. Campbell,

Expert live stock saleman, is at the head of his own organization, with headquarters at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has the best market in the country to back him. Thoroughly competent and with a first-class organization, he is holding his old customers, by splendid sales and making new ones all the time. Mr. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to James H. Campbell personally and consign horses, cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Live Stock Receipts at St. Louis.

At the St. Louis National Stock Yards during the month of September cattle receipts were 155,983 head; hogs 160,331 head; sheep, 65,936 head, and horses and mules, 9,548 head. These receipts represent an increase of 18,159 head of cattle and 3,306 sheep, and a decrease of 7,451 hogs and 189 horses and mules, compared with September of last year.

Sheep and Lamb Prices.

On September 30 the sales of sheep on the St. Louis market were as follows: The better class of lambs, $6.50 to $6.85 per 100 pounds; good lambs, $6.15 to $6.50; fair, $5.25 to $6.00; inferior, $4.25 to $5.00; culls, $2.50 to $4.00. Good mutton sheep, $4.50 to $4.65; fair grades, $4.15 to $4.40; stock sheep, $3.25 to $4.00; culls and old ewes, $1.25 to $2.00; bucks, $2.75 to $3.25—all quotations being at the price stated per 100 pounds.

Butcher Cattle Quotations.

Butcher cattle in market are mainly cows and heifers which are brought for slaughtering purposes and include old and thin, but healthy cows classed as canners now selling on the St. Louis market at $2.00 to $2.75 per 100 pounds, a better class called cutters are selling at $2.85 to $2.40, medium to good cows $3.50 to $4.00, strictly good to choice cows $4.10 to $4.60, and fancy fat cows at $4.75 to $5.00. Heifers sold to butchers were quotable September 30 for common to fair, $3.00 to $3.50, medium $3.60 to $4.25, good $4.30 to $5.00, choice $5.10 to 5.90, and fancy 6.00 to 6.75. All quotations being at the price stated per 100 pounds.

Sale of Pure-bred Cattle.

Mr. W. C. McGavock, of Springfield, Ill., is preparing to hold his semi-annual sale at the St. Louis National Stock Yards. The dates claimed for the sale are November 16, 17 and 18. One day is to be devoted to the sale of Herefords, one to Shorthorns and one to Aberdeen Angus cattle. Mr. McGavock is now collecting entries for the sale and we hope he will be able to offer a good average lot of cattle. Owing to the excellent prices which stockmen are receiving for their fat cattle of good quality, they ought certainly improve their herds for the simple and only reason that it pays to do so. The market recognizes and pays for quality as much as 2 and 3 cents a pound over and above the scrubby and ill-formed cattle. Choice yearlings have sold as high in market at 8½ cents a pound. Mr. McGavock will put his usual energy and ability into this sale, and advertise it extensively that he may have a good buying attendance. His personal address is Springfield, Ill.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company

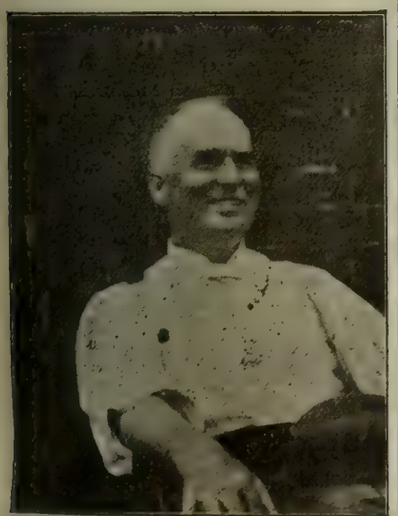
Mule Quotations.

In a general way, at the St. Louis National Stock Yards, 14-hand mules are quoted at $80 to $150; 14½ hands at $100 to $165; 15 hands at $125 to $200; 15½ hands at $135 to $225; 16 hands and upward at $150 to $275. These prices are for carloads as they arrive in good condition. Select mules, in pairs, good bone, colors, substance and weight, are quotable at $500 to $700 for the pair.



MR. R. W. BROWNING, of R. W. BROWNING & CO., Horse Dealers and Buyers on Orders at the St. Louis National Stock Yards.

First-class Horse Dealers.

Mr. R. W. Browning, of R. W. Browning & Co., of the St. Louis National Stock Yards, being interviewed recently in regard to the market, said: "We make a business of buying horses and filling orders for car-loads. We attend all the auctions and purchase horses that we believe will suit our trade, and assemble them in our barns ready for shipment. We are provided with ample facilities. This market has splendid barns and stabling, and we can handle several hundred horses a week without one load interfering with another, and the railroads receive our horses and transport them without delay. Nearly every car-load shipped out by us contains a variety; a pair of draft horses, a few chunks, some plain, serviceable, stout work horses, a few drivers, just according to our instructions. We furnish people who know what they can sell, and we try to fill the bill. The great advantage this market affords is the numbers and variety on sale. If we cannot fill an order one week we can the next; if we have special orders, we can get the country buyers to ship that class into the auction. We find the market to be up-to-date in every respect."

The postoffice address of R. W. Browning & Co. is National Stock Yards, Ill.

Heavy Native Steers.

This class of cattle at present time is scarce. At St. Louis during the last week in September fair to plain good steers, 1300 to 1400 pounds, over age, sold at $6.25 to $6.65 per 100 pounds; a better grade sold up to $7.00, and choice cattle, 1300 to 1450 pounds, over age, were quoted at $7.15 to $7.50 per 100 pounds.

Sale of Heavy Hogs.

During the last week in September, J. D. Underwood, a well-known stockman of Callaway county, Mo., was on the market with a load of hogs that included three head that weighed in all 1430 pounds and brought $8.00 per cwt., making $113.60 for the three hogs or $37.86 per head.

Great Increase in Sheep.

During the first nine months of the present year sheep receipts at the St. Louis market increased 102,755 head over the corresponding period last year. The sheep and lambs all sold well and the demand is increasing all the time.

Good Horse Book to Have.

Horsemen will obtain something worth having and worth reading if they will take the trouble to ask for a copy of Pratts New Horse Book. It will some time save them a world of trouble. This book is written in the interest of Pratts foods, tonics and regulators, but in doing so they have added features to make it more interesting and instructive. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Horse Book."

Range Horse Sales.

The Western Range Horse Sale, conducted by Messrs. Campbell & Reid and Western Sales Stables Co., on October 5 will be over before this edition is fairly distributed, but another will be held Oct. 19, which will probably have the largest number of range horses and mules on sale during the balance of the year. Opportunities to buy range horses are scarce, and considering the condition of the domestic horse market, they are liable to be good property.

Native Lambs at $7.25.

At the St. Louis Market, October 1, W. T. Waddell, a well known stockman of Pike county, Mo., had in a load of sheep that contained 41 head of lambs that averaged 74 pounds and sold at $7.25 per 100 pounds. This was the highest price of the week, and indicated an advance in the price of lambs.

Good Sales of Horses.

On Monday and Tuesday, 27th and 28th of September, Holland, Nugent & Maxwell Bros., horse commission salesmen at the National Stock Yards, sold 700 head. Their report to shippers says:

"Everything sold satisfactorily. Big horses are selling strong. Medium chunks are selling only fairly well. Oldish horses that will weigh 1,200 or 1,300 pounds, are not selling very good. They can be disposed of at fair prices, but they must be bought lower in the country to do any good on the market. Good finished Southerners are selling as well as they have any time this season. Medium grades, if good broke, are selling all right. Plain, common, old plugs, are selling low. Smooth-mouth Southerners are not selling high."

Holland, Nugent & Maxwell Bros. hold their horse auctions every Monday and Tuesday in the year and solicit consignments of horses and mules to be sold on the market at the National Stock Yards.

Horse and Mule Notes.

The Chicago Horseman says: "Like all other gaits in which a horse excels, a fast walk is usually the result of early and persistent training."

On Monday, September 6th, at Indianapolis, Ind., Maggie Winder, in the pacing section of the Western Horseman Futurity, took the first heat in 2:06½, the fastest time ever made by a three-year-old pacing filly. Her previous record was also a champion one, 2:08¼, made this year at Lexington.

W. A. Elgin, of Platte City, Mo., is again Superintendent of the Mule Department of the American Royal Show, which has assumed large proportions in recent years. Mr. Elgin is himself a champion mule raiser. The American Royal Show at Kansas City opens October 11th and continues to the 16th.

Shetland ponies will be a great attraction at the American Royal Show this year. Several large exhibits have already been arranged for. C. H. Clark, of Fredonia, Kansas, will give exhibitions of all kinds of hitches, single, double and tandem, and under the saddle. They will also take part daily in chariot races. John Garth, of Liberty, Mo., will also give exhibitions daily.

James C. Wright, of Smithville, Mo., for many years a prominent Director and Manager of Horse Shows in the West, has charge of the Light Harness and Saddle Horse Department of the American Royal Show this year.

St. Louis Horse Quotations.

There are a few plug horses that continue to sell at $25 to $45 per head; and strictly common Southern horses are selling at $45 to $65; a little better average class at $70 to $100. Strictly good to choice Southern horses were selling at $110 to $155. Driving horses are variously quoted at $150 to $275. Common to medium chunks were selling at $125 to $150, and good chunks at $160 to $190. Strictly choice chunks for stylish delivery horses sell at times considerably higher. Drafters of the fair class sell at $125 to $160, and good at $175 to $240. Strictly choice heavy drafters are quotable up to $300. This is on the basis of the closing market, September 30th.

For Intestinal Worms

In horses, sheep, cattle and hogs, a sure remedy is Cooper's Tablets. They act quickly and are easily given. Wm. Cooper & Nephews, 177 Illinois street, Chicago, Ill., can supply you.

HOW HE SELECTS HIS CREAM SEPARATOR

(From the American Swineherd.)

The ordinary farmer has no expert knowledge of cream separators, but knows in a general way that they are progressive and beneficial from the fact that their use is growing continuously, especially among the up-to-date dairymen over the country.

He naturally sees a great many advertisements. When anything is a success and profitable there are sure to be imitators and others, who are seeking in some way or another to secure a portion of the profits. They are not stopping to consider whether they have the best machines, whether they can do what the best machines can do, but determine to secure profits, if not one way, then another.

They hold out false inducements, alluring prices, and claim for the machines things that they can not fulfill; but the ordinary farmer does not know the truths or falsities of these claims, and how he is to discriminate surrounded by these conditions. This is the situation of a great many men who would like to buy a separator, but are not well posted on the machines, and therefore not able to decide from the advertisements and the talk of the sellers; in other words, not qualified to judge between the claims of the different machines.

The sensible view taken by a hard-headed, intelligent German farmer strikes us as being a pretty good plan for the ordinary farmer to follow.

He says: "I did not know anything about the merits of the machines from an investigation of them myself, because I am not an expert, neither am I an expert in medicine, and I therefore consult a doctor when anything is the matter that I do not understand in regard to myself or family. I therefore looked around and observed that the experiment stations, the agricultural colleges, the majority of the winners in the butter contests and a large proportion of the up-to-date scientific farmers were using the De Laval separator. Now this was as good an endorsement as I could hope for, acting just as these wise men who are experts in their lines and in the dairy business, whose experience and knowledge and wisdom enabled them to select the De Laval. This was all the evidence that I wanted of the value of this well-tried and highly-appreciated machine, and I bought the De Laval and am glad that I did so."

This certainly is a very sensible view, and it is always likely to lead one to the right conclusion. You take the experience of the competent and capable man, who is making a success of his business, and the result is you are benefiting yourself by using the other man's experience and without his cost.

We can say to the farmer who is at a loss to determine what machine to buy to take advantage of this sound, sensible, thrifty German and follow his plan, and you will land in the right spot.

This Insect Befriends the Fruit Grower.

An insect, slightly resembling the dragon fly, was received at the Division of Zoology of the Pennsylvania Department of Agriculture by State Zoologist Surface, accompanied by a letter having the name attached of a prominent Luzerne county physician, who wrote: "The enclosed specimen is highly destructive to my maple shade trees. Kindly inform me what to do."

The specimen proved to a Thalessa, which State Zoologist Surface pronounced "a destroyer of other insects, and, especially, of some of the worst enemies of trees." In this respect it is like the lady bug, which feeds upon the San Jose scale. The Thalessa has long antennae and a tail composed of three black hairs, like those of a horse's tail, each about three inches long. These form a long tube which it inserts in the holes made in trees by borers, and, having encountered a borer, it deposits its eggs in or near it. These eggs develop larvae which feed upon the borer and destroy it. Owners of fruit and shade trees, instead of destroying the Thalessa, should protect and preserve this useful insect.

Linseed Meal and Cake.

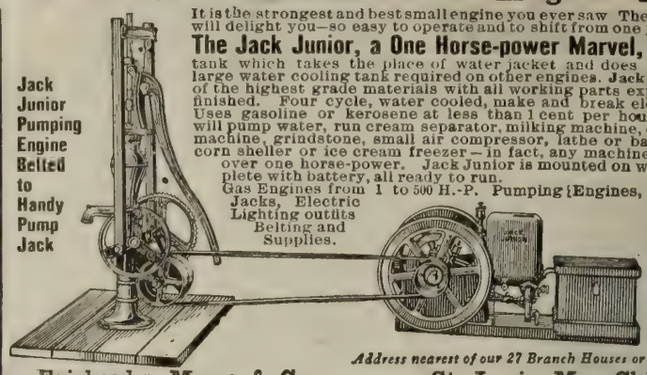
There is much to be learned about linseed meal and cake. We are pleased to see a handy booklet that is full of information on the subject. Sherwin-Williams Co. are manufacturers of linseed oil products and have made a study of the rations which are composed in part of oil meal. It is interesting to cattle, hog, horse and sheep feeders and especially to dairymen and poultry raisers. They have employed the best-informed people in the country to compound rations to be used profitably. Old Process Linseed Oil Meal and Cake has been a standard stock food for many years, and the Europeans were the first to have knowledge of its value. More recently this country has appreciated the fact that it is a good thing to keep at home. A booklet of sixty interesting pages cannot be described and reprinted in a few paragraphs; therefore, we advise our readers, one and all, to write for a free copy of the booklet on Linseed Meal and Cake issued by Sherwin-Williams Co., 689 Canal Road, Cleveland, Ohio. They are manufacturers of linseed meal containing 35 per cent. crude protein, as shown by government tests.

Lip and Leg Disease.

Sheepmen who are contemplating buying sheep for feeding purposes are hereby warned to use particular care in purchasing stock shipped from Eastern States. Be careful to avoid purchasing any sheep which show sores about the mouth or on the legs. Several loads of sore-mouthed sheep have already been shipped into this state under the impression that such sores were quite common among Western sheep and would not do any harm. In some cases these sores have turned out to be the beginning of an outbreak of lip and leg disease, and the owner of the flock has invariably taken a heavy loss. Under present conditions, farmers are advised to avoid all sheep which show any kinds of sores about the mouth and legs. Lip and leg disease is a money loser proper. It is difficult, if not impossible, to cure, and may be communicated to other animals. The veterinary force of this state is now entirely inadequate to do the work now on hand. It will be impossible, in the case of an outbreak of lip and leg disease, to devote much time to its control. Farmers of the state are urgently solicited to be extremely careful in buying stock sheep and thereby assist in preventing the introduction of this dreadful disease of sheep into this state.—D. F. Lucky, State Veterinarian.

The New York dried fruit market quotes evaporated apples, fancy, at 9⅜c.; choice at 8¾c.; prime at 8¼c.; common to fair at 6½ to 8c. Peaches, choice, at 5½ to 6c.; extra choice at 6¼ to 6¾c; fancy at 7 to 8½c.

Perfect One Horse-Power Engine At Last



It is the strongest and best small engine you ever saw. The work it will do will delight you—so easy to operate and to shift from one job to another.

The Jack Junior, a One Horse-power Marvel, has horizontal evaporator tank which takes the place of water jacket and does away with the large water cooling tank required on other engines. Jack Junior is made of the highest grade materials with all working parts expertly machine finished. Four cycle, water cooled, make and break electric ignition. Uses gasoline or kerosene at less than 1 cent per hour. Jack Junior will pump water, run cream separator, milking machine, churn, washing machine, grindstone, small air compressor, lathe or band saw, small corn sheller or ice cream freezer—in fact, any machine not requiring over one horse-power. Jack Junior is mounted on wood base, complete with battery, all ready to run.

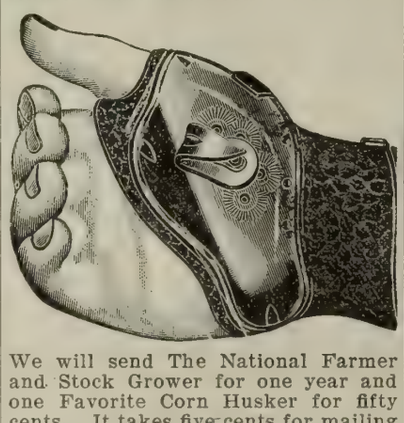
The Favorite Corn Husker.

This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a seasonable subscription premium. It is made for the right hand. The hook sets at any angle to prevent glancing. Opening or closing the small end of the plate adjusts a fit to any size hand and prevents chafing. The improved shape of the plate and leather make this hook the favorite.



We will send The National Farmer and Stock Grower for one year and one Favorite Corn Husker for fifty cents. It takes five cents for mailing and the Corn Husker is a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

It is reported that the gentleman who discovered the shortness in wheat and who took advantage of the situation has also posted himself on the cotton situation. It will be well for him to understand that people who eat bread do not have to eat cotton. The cotton market has a few boomers who can see as far ahead as Patten did in wheat.

A book was sent to us recently which was based on the statement that the farmers pay most of the taxes. And now comes the Assessor, who claims that the city of St. Louis alone pays one-third to one-half of all the state taxes collected in Missouri.

Cape Cod is still in the cranberry business—$6.50 a barrel at St. Louis.

BOSTROM-BRADY MANUFACTURING CO.,
1107 Pine Street, St. Louis, Mo.

A NEW EGG FARM.

Stoddard's book entitled **A New Egg Farm**, is, in our estimation, the best book for a young poultry raiser to study. It shows the way to profitable production of eggs and poultry. He compares the best locations for the business. Tells how to build the houses for layers, breeders, sitters or chicks, adapted to the colony system, the yard system and other methods. How to breed and manage. How to breed and select. Choice of breeds and crosses. Management for mild or severe climates. How to feed fowls and keep them at exercise without hard work. How to manage hundreds of sitters with little labor. How to raise brooder chicks and keep them alive and growing. There are 320 pages of useful, attractive, illustrated information. The book is nicely bound, and we will send this book by mail, postpaid, and include a year's subscription to **The National Farmer and Stock Grower**, for one dollar. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Sent Ducks and Won Case.

The lawyer told Mike Dolan, his client, that he had a good fighting case. Mike mused a moment and then said, tentatively: "Do you think it would do any good to send his honor a couple of ducks?" "No, no!" replied the lawyer, "I know him too well. If you did that he would decide the case aganst you, sure as fate." Two days afterward the case was heard and Mike won it out and out. So he called on his lawyer, and in the course of settling up affairs remarked: "Well, you see, sir, it was just as well I sent his honor those ducks."

"What!" exclaimed the astonished counsel, "you sent the ducks after what I said?" "Yes, I did," replied Mike, "only, after what you told me, I thought it just as well to send them from the man on the other side."—Detroit Free Press.

Hen and Incubator Compared.

The Poultry World of Mahnomen, Minn., remarks as follows:

"Did it ever occur to you that when you set four hens they are doing the work of one sixty-egg incubator? A laying hen will lose three weeks incubating the eggs and possibly six more with the chicks. During this time she would have laid on the average of five eggs per week or forty-five eggs during the nine weeks. These eggs at 30 cents per dozen would be worth $1.13. This multiplied by four gives you a product of $4.52.

"By using an incubator this would have been the savings in three weeks. If you set your incubator three times you would have a balance of $1.52 to pay for the oil used. Hatching chicks by the artificial method has many redeeming features aside from the one mentioned. Usually in the spring of the year, when you have eggs to set, you find no broody hens, and later on, during the warmer months, when you are wanting eggs, all you have are broody hens. It is not so with incubators, for you can set them at any time you choose at any season of the year.

"The old hen, unless precautions are taken, propagates lice, and will trample the eggs, killing the chicks, regardless of how much money you have paid for them. If allowed to run at large the chicks will roam away and some varmint will catch them, thus increasing your loss. Take it all in all, an incubator is the surest, safest, best and most economical way of raising poultry. It is worth your while to give it a trial, and see for yourself the satisfaction of this system of hatching and raising chicks."

The Conservation of Moisture.

The Fourth Dry Farming Congress will be held at Billings, Mont., October 26th, 27th and 28th, and there will be an astonishing exhibit of dry-land farm and garden crops, showing what can be done by the conservation of moisture. The word conservation in this case means storing, keeping, preserving and using the scant water supply of the dry country and holding the water in the soil as it falls, instead of allowing it to run off down the rivers to the sea. When the principles of dry farming are generally applied, much of the water usually flooding the lowlands will be stored in the uplands and be of incalculable benefit, instead of doing great damage in its wasteful career. The storage of the rainfall where it is most necessary is the greatest agricultural problem of the present day.

The Poultry Market in New York.

The following from a New York letter published in the Egg Reporter of September 20th gives a clear idea of the market:

"The receipts of spring chickens have been quite moderate. Plump, full-breasted broilers averaging two pounds each sold quite generally from 18 to 19 cents a pound, with mixed sizes ranging from 17½ to 18 cents. We may note sales of small Tennessee scalded springs at 16½ to 17 cents. Michigan scalded chickens are coming more freely and selling well at 19 cents in a wholesale way, while occasional lots command 20 cents. Milk-fed broilers have not sold as readily or at as relatively good prices as corn-fed. Some very fancy milk-fed broilers brought 22 to 23 cents at the middle of the month, but towards the latter part of August 21 to 22 cents was all that could be depended upon, and 20 to 21 cents has been full high for the past week.

"Old roosters have sold well at 12½ to 13 cents for either dry-picked or scalded. Old turkeys have been quite plentiful, but in the absence of any surplus of frozen the market was pretty well sustained at 18 to 21 cents.

"Spring broiling turkeys are commencing to come along, but are mostly too thin to attract much attention; fancy, weighing 3½ pounds each when plump and full-breasted, bring 25 to 26 cents a pound, but those weighing five to six pounds each are not salable over 23 to 24 cents; but scalawag turkeys are not wanted at any price.

"Western spring ducklings are selling at 15 to 16 cents where well grown, with small and immature bringing low and irregular prices. Long Island spring ducklings have kept on advancing for the past month until 20 cents was reached on the 14th inst. Nearby chickens have been very irregular; some very fancy Philadelphia roasters command 25 to 26 cents, while plump Philadelphia broilers will fetch equally as much. Mixed lots of nearby Jersey and Pennsylvania chickens sell at a rather wide range in prices, say from 18 to 21 cents, as in quality, etc."

Poultry Notes.

After buying feed at retail amounting to $88.50, one hundred Brown Leghorns made a profit of $1.37½ per hen per year. The eggs were sold at prices varying from 14 to 30 cents a dozen. There were eighty pullets and twenty yearling hens in the flock. This is from the experience of E. W. Baker, given in The Standard, published at Quincy, Ill.

In September, quoted as an extreme high price on the New York market, was a lot of dressed, dry-picked, iced fowls (hens) from Indiana that brought 19 cents a pound.

According to the Egg Reporter, published at Waterloo, Iowa, the receipts of eggs at New York City, 325,591 cases, were the largest on record excepting only the year 1906, when August receipts were 857,834 cases. However, in August of the present year the average price, 23⅛ cents a dozen, was 2¾ cents above last August and was the highest August average on record.

Dessicated eggs put up by the National Bakers' Egg Company of Sioux City, Iowa, are reported as being an important food item in the outfit of Commander Robert E. Peary in his journey to the North Pole. They were put up in one-pound cans by special request of the explorer.

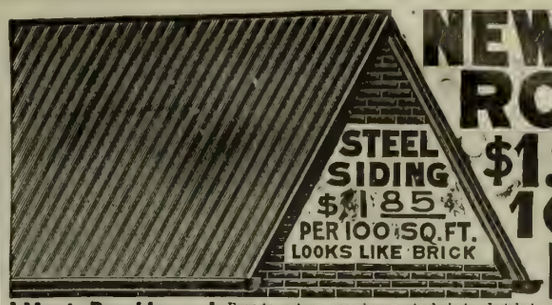
A report from New York City states that the bulk of the fresh country consignments of eggs received during the month of August were so inferior on account of the hot weather that spring storage eggs outclassed and outsold them on the wholesale market.

We have an idea, and think it a good one, that instead of increasing and multiplying the breeds of chickens, about one-third of the breeds could be dispensed with and forgotten with great benefit of all concerned.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is the Reliable Poulty Journal. There are other excellent poultry papers, but the one we take home to read and the one family is determined to read is the Reliable Poultry Journal. We have made arrangements whereby we can send The National Farmer and Stock Grower and the Reliable Poultry Journal, both papers, one year, for sixty cents. This is a bargain that is good now, but not for long. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Hay is pretty good property when freight bills do not cut too large a figure in the market delivery.



NEW STEEL ROOFING $1.60 PER 100 SQ. FEET

Most Durable and Economical Known Easy to put on, requires no tools but a hatchet or a hammer. With ordinary care will outlast any other kind. BATTLES WITH COAL TRUST

Chicago Dealer Stands Alone and Fights the Giant Combination

Mr. W. S. Harman, whose picture is shown herewith, is the president of the W. S. Harman Coal Company of Chicago, which is selling coal direct from the mines at the wholesale price, thus defying the coal trust and bringing down the wrath of that organization on his head.

Mr. Harman is probably carrying on a more vigorous fight against the coal trust than was ever before carried on by any individual single-handed against any other combination so supremely powerful.

Mr. Harman is in possession of the innermost secrets of the coal trust. These he has had printed in a booklet which he calls "Coal Facts," and which he is willing to send to those who may wish to read it and learn just how the coal trust has managed to go on stripping the pockets of the people for so many years.

Mr. Harman has for some time past been carrying on a heavy advertising campaign in the columns of farm papers. He advertises to save from $1 to $3 a ton on coal, and in addition he advertises to give a ton of coal free with each car.

W. S. Harman, the Young Chicagoan Who is Fighting the Coal Trust Single Handed.

The people have been quick to respond to the offers made by Mr. Harman, and he has thousands of customers located in every section of the country.

Mr. Harman entered the wholesale coal business with the one point always hung before his eyes: "Give everybody an absolutely square deal." This is Mr. Harman's business motto.

One of the things which Mr. Harman does, and does in every case, is to make good any shortage which occurs in a car of coal from any reason whatsoever. If the coal is stolen in transit Mr. Harman sends the customer a check for the entire amount which is missing. If the weight of the coal shrinks from the mine to the place of destination, a check is sent in full for the amount of coal which the car is short. This one feature probably has done as much to build up his business as any other, although it is only one of the many things which Mr. Harman does to satisfy each customer. Mr. Harman believes that a satisfied customer is better than all the advertising he can do.

Mr. Harman is still a very young man, but he is old in experience as far as the coal business is concerned. Despite his comparative youth he has given the coal trust a harder jolt than it ever received before, and, naturally, that organization has done everything in its power to put him out of business.

Mr. Harman's place of business is at 160 Harison street, Suite 3136, Chicago, Ill., and he states that whenever his friends, the consumers of coal, desire to do so, he would be pleased to see them at his office. Otherwise he would like to send them the sensational expose of the Coal Trust, the book known as "Coal Facts." This will be sent to anyone who writes for it. This is a booklet which really should be in the hands of every farmer or anybody else who burns coal.

It is a story of the villainous methods of the trust which makes the blood of the ordinary citizen boil.

The American Scale.

It is important that every farmer should own an accurate scale, as it will pay for itself in a short time. A good scale will enable him to know what he should get for his products instead of taking the other fellow's figures. It will enable him to keep exact tab on the condition and value of his live stock. It will be of immense use in every department of the farm.

In purchasing a scale, however, the farmer should be sure he is getting an accurate scale, as a cheap, poorly-constructed machine is worth nothing to him.

Scales are offered at all sorts of prices, but the best scale to buy is one made of the best materials with a record of years behind it and unlimited guarantee of the maker. Don't buy the first cheap scale that is offered, but buy one that will give real service; it will be far the cheapest in the end.

The Standard American Pitless Scale is manufactured by the American Scale Company, who will send to anyone interested most readable literature bearing on the profits and advantages of owning a scale and how to judge for yourself what scale you need. Write to the American Scale Company, 2111 Ave., Kansas City, Mo., for their free catalog.

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address Dr. G. M. Branaman, 1264 Walnut street, Kansas City, Mo.

Hay and Grain Notes.

The average condition of corn on September 1 was 74.6, as compared with 84.4 July 1, 79.4 on September 1, 1908, 80.2 on September 1, 1907, and 80.6 the ten-year average on September 1. A drop of ten points in one month followed by frost in September was a black eye for the corn crop.

On September 1st the United States Department of Agriculture estimated the hay crop of the present year to be 64,166,000 tons, as compared with 70,798,000 tons a year ago, when the yield was the largest ever recorded. A crop of 64,000,000 tons is above the average.

The Acetylene Light.

The best recommendation of the acetylene light is that it is used on railroad passenger trains. This is because it is clean, brilliant, and does not hurt the eyes, and because it is portable. Farmers will find it to be a subject worth investigating. Read the card on page 27, and write for the booklet entitled "Rural Gaslight." Address Union Carbide Sales Co., Dept. C, 156 Michigan Avenue, Chicago, Ill.

Vegetables at St. Louis.

Potatoes, sacked Northern at 45 to 55 cents a bushel in car lots on track; Wisconsin Burbank, coarse, 48 cents, choice 50 cents; Minnesota Early Ohio, 54 cents; Wisconsin rural, 55 cents; white Iowa rural, 56 cents. Onions, North Missouri red, 40 to 45 cents for flat to 50 to 60 cents Red Globe; Iowa sacked Red Globe, 57 to 60 cents for choice, sacked white 55 to 70 cents; nearby yellow onions delivered in sacks or barrels, 50 cents a bushel. Cabbage, home-grown, delivered loose, mainly 42 to 45½ cents per 100 pounds; Northern domestic on bulk, $8 to $8.75 per ton; Holland seed, $11 to $12 per ton. Sweet potatoes, Virginia yellow at $2 per barrel; home-grown Bermuda at 50c, yellow at 50c to 60c, Queen and Red Nansemond at 60c to 65c per bushel loose.

Folding Sawing Machine.

Folding sawing machines have been on the market and in successful operation for seventeen years. There is a fine catalog issued by Folding Sawing Machine Co., 164 E. Harrison St., Chicago, which can be had by writing for it. Ask for Catalog A-73.

Pea and Bean Threshers.

If you grow peas or beans, the J. L. Owens Co., 679 Superior Street, Minneapolis, Minn., have a proposition to submit to you concerning their No. 4 Thresher, or a larger one if you are disposed to consider it. You will also obtain their free book on Pea and Bean Culture, which will lead a farmer on the road to fortune.

St. Louis Cash Wheat.

On September 30, at St. Louis, cash wheat No. 2 red sold at $1.20 to $1.21½ per bushel destination weights, and a carload of seed wheat sold at $1.22. No. 3 red sold at $1.15 to $1.20, No. 4 red sold at $1.06 to $1.15. No. 2 hard winter (Nebraska) sold at $1.06 to $1.08, Turkey $1.10 to $1.11½, No. 3 at $1.04½ to $1.08, and No. 4 at 95 cents to $1.02. This list of sales is interesting as showing that on the cash market, where the grain is delivered, and all the money is paid over, there are many different grades and prices based upon quality, whereas in the speculative market there is but one grade and that is No. 2.

Peaches and Pears at St. Louis.

Opening trade of October peaches: Fancy high-colored Michigan, Elbertas steady and in fair receipt; small and ordinary fruit dull. Michigan at $1.50 per bushel basket for ordinary freestones (gold drops) and at $2.25 for fancy Elbertas. Home-grown at 60c to $1 per half-bushel basket.

Pears—Keifer pears plentiful and choice stock in fair demand—1 car Illinois bulk sold at $1.30 per 100 pounds on track and 1 car packed do, at $2.25 per barrel delivered. Southern Illinois small barrels Keifer quotable at $2 to $2.25 per barrel and choice do. at $2.50. Alabama hampers at 50c to 60c. Bushel baskets Seckel quotable at $1.25 to $1.75. New York Sheldon at $3.75 to $4.00 and Seckel at $4.75 to $5.00.

Free Gift Post Cards.

The Woman's World of Chicago, a paper which has come to the front during the past year, is offering a set of 15 post cards absolutely free. We hope all our readers will send for them. The publishers of Woman's World will do exactly as they say.

See card on page 32.

"Glimpses of Thrift-Land,"

A Fascinating Story, and a Handsome Monogram Pin or Lapel Button—Free

A new book that has just come out, called "Glimpses of Thrift-land," is attracting wide attention. It is a little souvenir gotten up by the International Harvester Company of America, which they are sending out to friends and patrons. We have never seen anything more novel and original than this charming story, told in rhyme and beautifully colored pictures. It is a sort of modern fable which introduces a fairy-like being who calls himself "Prospy" the Herald of "Prosperity."

"Prospy" is a Son of the Soil, a wonderfully constituted little individual, born of Sunshine, Rain and Fertile Soil. He appears before Farmer Brown with a body of yellow corn, a head-dress of red clover, bedecked with oats and alfalfa, carrying a long spear of wheat in one hand and a golden shield in the other. Strapped to his back is a supply of timothy arrows.

Farmer Brown pauses amidst the summer heat of hay-making and hears "Prospy's" strange story of the "Land of Thrift." Farmer Brown first scoffs at the fairy tale, but later becomes interested and finally allows his guest to show him the well-marked road to "Thrift-Land."

The story itself, the multi-colored pictures of "Thrift-Land" and of "Prospy" are all exceptionally entertaining.

It is quite impossible to do justice to the Booklet here, but any of our readers may easily secure a copy of it and we can assure you that it is well worth having as a keepsake. It is free.

A nice little Monogram Tie Pin or Lapel Button accompanies "Glimpses of Thrift-Land" if you send the International Harvester Company of America the name of anybody whom you think might buy a Cream Separator, Manure Spreader, Gasoline Engine, Wagon, Feed Grinder, Hay Press, Auto Buggy or Disk Harrow. The Tie Pin is made up in bronze, silver or gold finish—the Button is in gold finish only. State which you prefer.

All communications should be addressed to "Prosperity," care of International Harvester Company of America, Room 151, Harvester Building, Chicago, Illinois.

Practical Barn Plans.

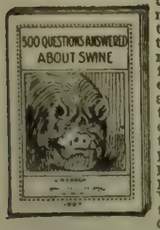
This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Angora and Milch Goats.

The Ninth Annual Angora Goat Exhibit to be held in connection with the American Royal Show will, as usual, be under the auspices of the National Association of Angora Goat Breeders, and the Secretary of the association, John W. Fulton, is Superintendent of the department. The Royal Show opens October 11th at Kansas City and continues to the 16th. So far as Angora goats are concerned, the American Royal is the greatest show on earth.

The Cooper Dip in England.

The following is the sheep record of the Royal Show of England in the present year: Total exhibitors, 183; users of Cooper's Dip, 172; nonusers, 11. Total sheep exhibited, 1,560; owned by users of Cooper's Dip, 1,475; others, 85. Prizes awarded, 578; won by Cooper dipped sheep, 547; others, 31. Percentage of prizes won by Cooper dipped sheep, 94.6. Number of breeds shown, 23; breeds in which prize winners used Cooper Dip exclusively, 17.

Paints For the Farm.

There is more swindling in paint than in almost any other material; therefore we have invited Sherwin-Williams Company, a strictly reliable firm, to furnish each of our readers with a free copy of their book entitled "Paints and Varnishes for the Farm." It will tell how to save money with the right paint. Address, Sherwin-Williams Company, 689 Canal Road, Cleveland, Ohio.

Sheep Notes and Items.

There will not be so many sheep and lambs fed in the West during the winter of 1909, and it will leave a good-size market opening in the native states for all the sheep that can be fed and all the lambs that can be raised.

The American Royal Show at Kansas City, October 11th to 16th, will have a broader sheep show than ever before, with Cotswold, Hampshire, Shropshire, Southdown and Oxford breeds represented.

At St. Louis sheep pelts are selling as follows: Lambs at 40 to 70c. each; shearlings at 10 to 30c. Dry Texas and Western at 14 to 15c. per pound. Goatskins, per skin, at 7½ to 10c. for small or kids to 30 to 35c. for choice large.

Poultry and Pet Stock.

The Poultry Show at the American Royal, Kansas City, this year, will be on a very elaborate scale. In 1908 the department was largely an experiment and the answer to many requests for its introduction. It had, however, prizes only for breeding pens. The popularity of the feature required its continuance. This year prizes have been added for individual birds, and the show will therefore be doubly valuable to the exhibitors and interesting to the visitors, arranged on the same plan as other big Poultry Shows. Thos. A. Southard, 4345 Genessee street, Kansas City, Mo., is the Superintendent of this department.

It is reported that in the District of Columbia, which includes the city of Washington, hens are allowed to be kept, but not roosters. The objections to the roosters is that they disturb the slumbers of people by unseasonable crowing. It is questionable if any such ordinance will stand good in law.

"Poultry," published at Peotone, Ill., mentions a Pennsylvania poultry raiser who, after five-years' trapnesting his hens, found but 13 females out of 700 that produced 197 to 238 eggs a year.

A Pittsburg housekeeper found on the shell of one of the eggs received from the grocer a penciled request from an Indiana farmer's son for the young lady who broke the shell to correspond with him. The young housekeeper complied with the request, and imagine her astonishment when the farmer's son replied that he was surprised to receive her letter, since he had penciled the request on the shell two years before. Pittsburg, however, is pretty strong in the storage-egg business.

A poultry bulletin by the Oregon Agricultural College concludes by reference to the egg yield, saying: "An average of 150 eggs per hen during the first year of laying is fairly good laying. Pullets in good health and vigor should average this number of eggs. During the second year they will lay about 25 per cent. fewer eggs, and each succeeding year correspondingly fewer."

A consignment of fifty head of one-day old chicks was shipped from Pittsfield, Maine, to Laramie, Wyoming, and forty-six arrived in good condition. Some died later, owing to improper feeding, but this is considered an extraordinary long-distance shipment and a case of remarkable vitality in young chicks.

Lakewood Farm, New Jersey, now a famous poultry plant with a 15,000-egg incubator, made a record in the year 1905 of 169 eggs per hen per year. The profit was $1.63 per hen.

St. Louis quotations: Pigeons and squabs—Live pigeons at 50 to 60c. per dozen. Squabs—Fancy homers, $2.25 per dozen for nine-pound; $2.50 for ten-pound; and $1.25 for small; common, 75c. to $1.25 per dozen.

Jacoba Irene at Dairy Show.

Hon. Jacoba Irene, who holds the world's record among Jerseys, will be in the show of dairy cattle at the National Dairy Show in Milwaukee, October 14 to 24. Jacoba Irene rounded out last year with a record of 954 pounds of fat to her credit. She is owned by A. O. Auten and commenced her world's conquering career by freshening December 11, 1905, and in the succeeding twelve months gave 11,391.1 pounds of milk, containing 619.9 pounds of fat; average test, 5.44 per cent. She freshened again December 10, 1906, and during the ensuing year gave 14,255.7 pounds milk, containing 792.1 pounds fat; average test, 5.55 per cent. Thirteen and one-half months later, January 26, 1908, she freshened again, and her record for this third year is 17,253.2 pounds milk, containing 954.1 pounds fat.

Hon. Jacoba Irene will have a number of distinguished companions in the Jersey section of the show—Rosair's Olga, Fourth Pride and Owl's Nutty Violet, holders of the world's record for three and four years, respectively, being among the entries.

Anti-Oleomargarine Rally.

During the National Dairy Show in Milwaukee there will be a monster anti-oleomargarine rally, to which an invitation will be extended to the heads of all Dairy and Agricultural Colleges in the United States and Canada. The rally will take place at a banquet to be held at the Hotel Pfister, Wednesday evening, October 22d. About 300 members of the American Association of Creamery Butter Manufacturers will attend. A number of addresses by men of national importance with debate to follow will be a feature of the banquet.

Broom Corn Selling High.

Broom corn is doing fine. At St. Louis, $180 per ton for good and $200 for a special grade called "Self-working," raised in Western Illinois.

At St. Louis, old Kaffir corn is selling at $1.40 per 100 pounds, and new grain bid $1.30, with none coming. This on October 1st.

I Guarantee to Cure ECZEMA TO STAY CURED!

It is also called SALT RHEUM, SCALD HEAD, TETTER, ITCH, WEEPING SKIN, MILK CRUST, PRURITUS—these are different names, but all mean one thing—ECZEMA.

DR. J. E. CANNADAY, THE DOCTOR WHO TREATS NOTHING BUT ECZEMA.

I prove every word that I have said—I give to every sufferer

A FREE TRIAL

Just to show you that you need my treatment. It is yours for the asking. If you have been to other Doctors, if you have taken patent medicine, and used lotions and salves till you are disgusted, write to me—I will send you ABSOLUTELY FREE OF CHARGE, A TRIAL TREATMENT. There are no strings to this statement. There is not one cent to pay—not a penny accepted. I know what my trial treatment will do; I know that it will convince you more than anything else on earth that you need my treatment.

Don't Miss This Chance for a Cure

If you are SUFFERING FROM ECZEMA you can only be cured one way—REMOVE THE CAUSE. What is the cause? ACID IN THE BLOOD. How do you remove it? By cleansing the blood of the ACID.

My treatment is soothing—relieves the dreadful itching at once and cures the disease quickly. You don't have to take treatment for months and months. ONLY ONE CASE IN TEN needs the second treatment—ONE IN FIFTY needs the third—think of that!

What Eczema Is

Eczema is a disease of the blood and affects all parts of the body—the face, lips, ears, hands, feet, genital organ, etc.

SYMPTOMS.—Yellowish red eruption; the pimples or patches may swell and the itching is so great the person will scratch the top off, then they bleed and dark scales form; there is an oozing of matter. In some the skin cracks and bleeds. Itching is terrible; a person suffering will scratch till they bleed. Scales form on parts of the body, where the clothing comes in contact.

Ten Years Guarantee

I positively Guarantee that every case cured by me will stay cured 10 YEARS! It must be good or it could not be sold this way.

Strong as Rock of Gibraltar

I am a graduate from two leading medical schools. I am the holder of a GOLD MEDAL taken in Competitive Examination. Does this not show that I am fully qualified? I will send you my book, showing endorsements of business men of all classes. Also testimonials and pictures from cured patients everywhere. Some of them may be YOUR NEIGHBORS.

MY BOOK

Is the most complete book ever sent out. I explain every form of the disease plainly and fully. I show pictures of many severe cases, which are extremely interesting. I send you names of thousands who have been cured and are grateful.

DR. J. E. CANNADAY
969 Park Square
Sedalia, Mo.

Reliable Beyond Question

This is a statement from the bank of my home town, where I have done business for years.

THE CITIZENS NATIONAL BANK OF SEDALIA.
CAPITAL $100,000.00
SURPLUS $75,000.00
UNITED STATES DEPOSITORY
SEDALIA, MO.

February 11th, 1908.

TO WHOM IT MAY CONCERN:

This certifies that Dr. Cannaday's patients, from all over the United States, have been placing their money in this bank while they tried his treatment on eczema. In all this time we have been called upon but five times to return the patients money. One died before the treatment was shipped; two did not get the treatment as it was lost in transit; one paid cash for the treatment three days later after getting her money; and one was not satisfied.

Dentistry as Applied to Trees.

State Zoologist Surface found a letter in the mail sent to the Division of Zoology of the Pennsylvania Departmtnet of Agriculture, asking how to prevent decay in a tree from making further progress. The writer said: "We have a cherry tree whose trunk has rotted considerably. What can be done to save the tree? Is it a good plan to cut out the dead part and fill up the hole with cement?"

Professor Surface replied: "The proper treatment for the cavity of your cherry tree is to clean this out, removing the decayed wood; then wash or spray the interior with an antiseptic, such as a two per cent. solution of formalin, or a very dilute solution of mercury bichloride, which is corrosive sublimate; then paint it with ordinary paint of any kind, and finally fill the cavity with any kind of cement, or use one part of Portland cement with about four or five parts of sand.

"This is practically nothing else than the principle of modern dentistry applied to the preservation of the tree. The dentist cleans out the cavity of a decaying tooth, applies an antiseptic to prevent further decay, and fills the tooth with some substance that by preservation will prevent the possibility of further decay. We are coming to see that the treatment of all living things for ills and afflictions is based upon the same fundamental biological principle."

Coca-Cola and Headache.

COCA-COLA has never relieved a headache that could not have been relieved by a good cup of tea or coffee. It is the caffeine contained in these three drinks that is refreshing to the nerves and relieves the headache, and yet you have heard people argue that COCA-COLA must contain morphine, whiskey, or some other injurious drug, because it relieves headache. Well, there are more ways of relieving tired, weary nerves than by benumbing them with cocaine, morphine, bromide, whiskey or coal tar remedies.

Tea, coffee and COCA-COLA relieve headache by refreshing the nerves and not by deadening them. In relieving headache COCA-COLA is superior to tea or coffee, not because it contains more caffeine, for it contains only from one-third to one-half as much, but because COCA-COLA is free from tannic acid. There is no necessity to argue, guess or conjecture what COCA-COLA contains, or does not contain. It has been analyzed by Chemists of the National, City and State Governments as well as by the Professors of Chemistry in the leading Universities, Colleges and Polytechnic Schools. They all find that it does not contain cocaine, whiskey, morphine, opium, bromide, or any narcotic drug. They find that it does contain about half as much caffeine as tea and coffee. Copies of the above analyses will be sent free to any reader of this paper who has any doubt whatever that COCA-COLA is not what it claims to be—a pure, harmless, delicious, refreshing, temperance drink.

Write to the Coca-Cola Co., at Atlanta, Ga., for a copy of their new book, setting forth scientific record of analysis of Coca-Cola and giving much other valuable information.

A Crow Cannot Count.

This weakness, says the New York Sun, was taken advantage of by a prudent farmer. Connecticut farmers this year have been driven to their wits' end to circumvent the crows. A farmer, Amos Brown, had a particularly fine piece of corn land and was harassed by crows, which dug up the kernels as fast as he could plant them.

He built a pen of rails in the middle of the lot, and concealed himself with an old-fashioned, double-barreled shotgun, determined to kill all he could and frighten the rest. As long as he remained in the pen, however, not a crow would show itself, and after waiting several hours he grew meditative and left the pen. No sooner was he outside the lot than down came a big flock of the black robbers.

Mr. Brown took another trip to the pen, this time accompanied by a hired man. After remaining a short time, the latter returned to the house. As soon as he was fairly out of sight down came the crows, and bang went Mr. Brown's gun and killed ten of the birds. This gave him unalloyed pleasure, and as he started out of his pen to pick up the dead crows and hang them up as a warning to the others, he shouted after the rest of the flock: "Ah, ye are cunnin' critters, but ye can't count worth a cent."

Had a Grip on the Subject.

A tall old lady, dressed in black, and with a very business-like manner, walked into a well-known London establishment, and, declining the service of the shop-walker, made directly for the crape counter. She had rather a thoughtful air as she examined the stock, and the obliging young shopman remarked affably:

"We have a very large stock of crapes, madam. Just allow me to show you some new French goods, very popular just now for every kind of mourning. Now, these light crapes are all the rage for half-mourning for cousins. May—may I ask, madam," he added hesitatingly, "for whom you are in mourning?"

"Husband," said the customer briefly.

"Ah, yes. Then I have just the material you require; the best style is—"

"Young man," interposed the old lady severely, "I am much obliged for your explanation. You may know a lot about the fashion; but as I buried my fourth husband yesterday, you may be sure I've got a grip of the subject."

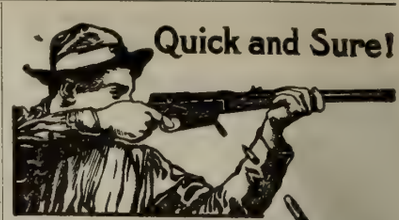
Land Must Be Well Located.

Peter Henderson said: "I would rather pay $50 a year per acre rent for the land where I want it than have it for nothing where I do not want it."

New Hog and Sheep Book.

All who are worrying about sheep diseases ought to obtain a copy of Pratts New Hog and Sheep Book. It contains the information they are looking for. It is written for stockmen, and is clear and concise. The advertisements relating to Pratts food and remedies are no disadvantage, and benefits may be derived therefrom. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Hog and Sheep Book."

Farmers are interested in Horse Shows for the reason that they supply the horses and the shows supply the standards. At the St. Louis Horse Show to be held October 18th to 23d there will be pleasureable entertainment and practical instruction. Some of the finest harness, saddle and utility horses in the United States will be exhibited at St. Louis.



Quick and Sure!

Remington AUTOLOADING RIFLE

YOU can shoot it 5 times "quick as you can think." You pull and release the trigger for each shot—the recoil does the rest.

It is wonderfully accurate too. And when you hit your game it is yours, because every shot is equal to a one ton blow.

Like modern military rifles, the action is locked by a turning bolt. But a Remington is the only rifle in the world which encases this *locked bolt* action in a Solid Breech Hammerless steel frame. And moreover, the Remington loads itself.

Take a modern Remington with you. Made in .25, .30-30, .32 and .35 Remington calibres.

"Big enough for the Biggest Game."

Circular upon request

THE REMINGTON ARMS COMPANY, Ilion, N. Y.
Agency, 315 Broadway, N. Y. City

The New Zealand farmers are complaining because their mutton sold in England is netting them only 4 cents a pounds.

Try Kerosene Engine 30 Days Free

Gasoline Prices Rising.

You can't run a farm engine profitably on gasoline much longer. Price of gasoline going sky high. Oil Companies have sounded the warning. Kerosene is the future fuel and is now 6c to 10c a gallon cheaper than gasoline. The Amazing "Detroit" is the only engine that uses common lamp Kerosene (coal oil) perfectly. Runs on gasoline, too, better than any other. Basic patent. Only 3 moving parts. Comes complete ready to run. We will send a "Detroit" on free trial to prove all claims. Runs all kinds of farm machinery, pumps, saw rigs, separators, churns, feed grinders, washing machines, Silo fillers and electric lights. Money back and freight paid both ways if it does not meet every claim that we have made for it. Don't buy till you get our free catalog. 2 to 24 h. p. in stock. Prices $29.50 up. Special demonstrator agency price on first outfit sold in each community. 2000 satisfied users. We have a stack of testimonials. Write quick. (20)

The Amazing "DETROIT"

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

MEN NO CURE—NO PAY In other words you only pay our small professional fee when CURED AND SATISFIED.

FREE Our 164 page book tells how you may be cured at home. Contains nearly one hundred "Home Treatment" Recipes, such as most Specialists would charge $2 to $5 each for. Gives many valuable "Pointers" Vital to Men—married or single. Sent sealed all charges paid.

MEDICINE SENT ON TRIAL

Not a patent medicine or "dope" mixture, but a course of several different medicines prescribed to meet the complications and special needs of your individual case. Write to-day. Send no money.

COTTON BELT ROUTE

The St. Louis Centennial.

As this paper is issued, the city of St. Louis is celebrating the hundredth anniversary as a city, although the town of St. Louis was founded in 1764, which is 145 years ago. The first settlers came from New Orleans. At that time the settlement belonged to Spain, but the people thought they belonged to the French. St. Louis was afterwards the northern capital of Louisiana. The formal transfer to the United States was on March 9, 1804. General Harrison, who was afterwards President, organized the new local government. St. Louis was a small Spanish settlement under a French Governor when the War of the Revolution was fought to a finish, but later it was large enough to send a regiment of soldiers to the Mexican War under Colonel Doniphan. St. Louis opened up its first railroad in 1854. And the first steamboat to land was in August, 1817. The St. Louis permanent settlement is thirteen years older than Chicago, twenty-three years older than Cincinnati and forty years older than Kansas City. St. Louis is fifty-five years older than Indianapolis. Louisville, Ky., was first settled fourteen years after St. Louis. St. Louis at first was better acquainted with Montreal than with the Pacific coast. In those days the principal trade was in furs. The main purpose of agriculture was to feed the hunters and the families. The centennial of St. Louis will be celebrated by wonderful festivities, each one following the other.

Care of Toilet Accessories.

It is quite important to keep all toilet articles sweet and clean from a sanitary point of view as well as for the sake of perfect cleanliness, and brushes and combs are possibly the most neglected in this line. Such a simple thing as an uncared for hair brush may be the means of communicating a serious disease of the scalp from one to another and hair brushes and combs should have at best a weekly cleaning, and there is nothing better for cleaning brushes and combs than gasoline but the only safe place to use the fluid is out of doors, and this fluid will not loosen the bristles. The silver backs of brushes can be cleaned by rubbing them with flour or whiting and polishing with chamois leather. If lamps are used on the toilet table, keep them in perfect order, and if the lamp burners are old, boil them in strong soda water and you will find a great improvement in your light and chimney. The covers for the toilet table and the pretty embroidered pieces may be kept beautifully white and clean by putting them in a strong pearline suds, allowing them to remain for half an hour and then rubbing them gently between the hands, and if there are colors in the embroidery they are improved by washing in the suds, but these pieces must be washed, rinsed and pressed as soon as possible. Before using a new tooth brush, put it to soak in cold water to keep the bristles from falling out, and after using nail and tooth brushes place them in such a position that all the water will drain from them, and the tiny nickel hooks make very satisfactory resting places for tooth brushes. If a girl cannot afford expensive toilet articles, she can keep everything that belongs to her in order, and perfect order is itself beauty. In this age of cheap bargains nearly every girl may satisfy her tastes in this line and have dainty and pretty articles for her toilet table and cheap articles that are kept shining look far better than fine ones that are carelessly kept.

Wardrobe Notes.

No matter how carefully the winter clothes may have been folded and cleaned when they were packed away early in the spring, there will be wrinkles and spots found on the cloth when they are brought to the light again. Wrinkled goods can be effectively freshened by holding over a steaming tea kettle, and velvet collars and trimmings respond quickly to steam, which raises the nap to look like new. The best way to dust a heavy woolen garment is to hang it upon the line and beat it with limber switches or with a rattan rug beater as quick, light strokes will not injure the shape or break the stitches. To clean light colored coats or jackets, cover a small portion of the cloth at a time with powdered French chalk and brush vigorously with a stiff brush and when all has been cleaned, shake and brush till all the powder is removed. The best way to clean any woolen garment that is soiled enough to be washed is to remove all the dust, then clean the spots and put the garment in strong suds, made by stirring enough pearline in warm soft water to make a nice lather and a little ammonia should be added if the garment is very soiled. This suds is excellent for cleaning any woolen garment from the heaviest fabrics to the dainty, soft flannels worn by young children. You can clean and freshen light colored pieces by mixing well together one pint of bran and a tablespoonful of Fuller's earth, and dark furs can be cleaned with hot bran without the Fuller's earth. Rub the mixture well into the fur with the hands until the garment seems perfectly clean, then shake and brush until all the bran is removed. You can mend a rent in kid gloves or a silk or woolen garment by placing a piece of court plaster of the same color as the article to be mended under the torn place, then place under a weight, and when buying kid gloves, buy a spool of cotton thread of the same color for darning them, as silk thread cuts the kid.

New Gasoline Engine.

A high-grade gasoline engine of one horse power at a moderate price has at last been placed within the reach of every farmer.

There are a thousand and one things for which a one horse power engine can be used to great advantage. Fairbanks, Morse & Co. have placed on the market the "Jack Junior" engine, (little brother of "Jack of All Trades"). It is a one horse power horizontal evaporator tank engine, entirely self-contained, which with the battery box is mounted on a wood base. By filling the tank in the iron base of the engine with gasoline and the evaporator or hopper with water, the engine is ready to run.

This is a four-cycle engine practically frost-proof. All parts are carefully designed and are very accessible. The engine is large enough to do very effective work pumping, running cream separators, churns, and other small machines; it is durable and will give excellent service.

Fairbanks, Morse & Co. are probably the largest manufacturers of gasoline engines in the world. They will be glad to send the book describing fully the New Jack Junior one horse power engine to all interested parties. See advertisement in this issue. Address, Fairbanks, Morse & Co., Chicago, Ill., and ask for Engine Book B A 692.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock, 890 Carrier Building, East Hampton, Conn., says that if any of our readers afflicted with a Kidney or Bladder trouble will send their address to him, he will gladly and without charge direct them to the splendid remedy he so successfully used at home in his own case.

Pratts New Poultry Book.

Pratts New Poultry Book is worth having as a gift, and many that we have to buy are not as good. It is written in the interest of Pratts Poultry Regulator, and that is good reading also. It is the farmer who can make the most money out of poultry, and this book is a manual of information concerning the raising of poultry for profit. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Poultry Book."

Dairy herd testing associations are becoming fashionable in New Zealand.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet,** postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Universal Magazine Bracelet.

Mushroom Culture.

For many years the writer has been interested in the study of the wild mushrooms of our fields and woods, and has had some slight experience in the raising of the so-called tame mushrooms. He is convinced that this is a matter that in the future will receive in this country the attention it receives in Europe, where all kinds of foods must be looked after with due regard to their value.

There are several varieties of wild mushrooms continually going to waste in our pastures. The farmer is better provided with mushrooms than the townsman, because around the towns there are really few mushrooms, this being due to the fact that few pastures exist. The writer has never been able to find many mushrooms in the tall grass, but has found them only where the grass has been kept short by browsing of cattle or by frequent cutting on our lawns. Why mushrooms are not abundant in tall grass the writer does not know. The pasture seems to be the ideal place for them.

In the pastures the principal mushrooms to be found in the late fall are agaricus campestris (the mushroom of commerce), agaricus arvensis (which is just as good, and is often sold for the first-named one), and agaricus melleus, or honey colored mushroom, which is very abundant all over the West at this time of year, and is delicious in any way it may be cooked. In time we shall know how to cultivate these wild forms, but at the present we do not, but have to confine ourselves to growing agaricus campestris (field agagic).

The spawn of this mushroom can be bought in bricks weighing about one pound. In some of our markets the price is 25 cents a brick. In large quantities it should be bought cheaper. It is supposed to be put up in England. It is the same as that used in France, but in the latter country smaller buttons are canned, which have made the French product more famous on our market than the English product.

The methods of growing mushrooms are various, but the principles are simple. Horse manure, loamy soil, little moisture and a temperature of 50 to 70 degrees are needed. Partly decomposed horse manure is best, and it is usual to use that which has been worked over till its temperature has sunk to about 70 degrees. This is to prevent the fire-fanging process in the manure from destroying the spawn. But it may be assumed that even unfermented manure will produce good results, since we often see large quantities of these mushrooms growing in horse pastures where the droppings have been exposed to the elements and not fermented.

The mushroom beds can be made in the cellar or stable or greenhouse, where the temperature will remain above freezing. Care should be taken not to give too much water. The writer ruined his first bed of mushrooms by turning the hose on it when it was beautifully white with the threads of the growing mushrooms.

In making a bed, pile the horse manure tightly in a place where it will not be too wet, cover with about two inches of soil, put in small pieces of mushroom brick a few inches apart, and, if water seems necessary, give only a light sprinkling. The air of a cellar will give a large amount of moisture. Protect the growing mushrooms from rats and mice, which know their food value.

THE UNIVERSAL PREMIUM BROOCH.

This is the sweetest, prettiest, most beautiful brooch we ever saw. No exceptions. It is delicate and refined. It is richly washed with old gold and will stand all kinds of tests and examination. The brooch was selected by us from a thousand brooches. The richest lady in the land can wear it and it will appear equal to any she has on. It is suitable for a child and rich enough for a grown woman. We have adopted the Universal Brooch as a subscription premium to the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one Universal Brooch as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

This is a splendid line of goods and all they wish you to do is to write for their "Free Book of Stoves" and when it arrives you will have the best opportunity. Address the nearest house, Montgomery Ward & Co., Chicago, Ill., or Kansas City, Mo.

Unbalanced Land.

Plants use potash, nitrogen and phosphorus in certain proportions. The land is called upon year after year to give up to the plants so many pounds of potash, so many pounds of nitrogen and so many pounds of phosphorus. With the exception of the nitrogen the supply of these materials is a fixed one, and every time the draft is made on the soil there remains the original amount reduced by the amount of the draft.

It is like the putting of a certain sum of money in the bank, and reducing it by drafts at certain intervals. It is evident that if the amount is not replenished from time to time the end is certainly coming.

A balanced soil would be one that could be farmed for a long period of years and yield all the elements required. But there are few soils so balanced. Most soils are out of balance, or are so deficient in certain plant food elements that one of those elements soon becomes exhausted. Then the land is described as having been "run out," though it often happens that the other two elements are in the soil in abundance.

In the main, it may be taken for granted that every soil is out of balance and will in a few years need some one element applied to it. The first thing to find out is the lack in one element. This cannot be told by growing plants on it, as sometimes a virgin soil has enough of the least abundant element to give good crops for a few years. The chemical analysis of the soil only will show what are the proportions in which the food elements are present. That is the trouble with the pot method of finding out what the soil needs. It is effective in doing this only when the soil is so badly out of balance that the deficiency is already so great as not to yield enough of the deficient element for a single crop.

One man known to the writer said this spring: "My land is deficient in something, for it does not produce the crops it used to produce. I am going to apply nitrogen, in the hope that I can hit it." He did, but his crops are still meager, though he has cultivated the ground well, and there has been an abundance of moisture in his locality. But his cucumber vines set few cucumbers, his tomato vines are meager and sparse in growth and have not set the quantity of fruit such vines commonly set, and all his plants and flowers are in a very unsatisfactory condition.

It is apparent that he will have to try again, probably this time with potash. The failure of his thrifty cucumber vines to produce cucumbers would seem to indicate the loss of potash, or at least its large deficiency.

What land will really do any one time can be found by growing plants in plats, or even in pots, said plats or pots to be variously fertilized. But this kind of information is of value only if the farmer intends to keep up the balance of his land by putting on each year quantities of fertilizer—potash, nitrogen, phosphorus—in the same proportions taken off by the plants.

But an analysis of the soil may do even more, for it may show that the farmer will need to put onto his soil only one plant food element, and he will be saved the expense of putting on two other kinds not at present needed.

St. Louis Apple Market.

Opening of October sales and quotations per barrel: Car lots mixed apples at $2.40 to $3.10 and fancy maiden blush, welthy, 20-ounce pippin, york imperial, etc., up to $3.50; rail receipts Southern Illinois Ben Davis small barrels quotable at $1.25 to $1.75; Illinois River receipts at $1.25 to $1.50 for poor to $1.75 to $2.00 for No. 2 and $2.75 to $3.25 for choice to fancy; Mississippi River receipts at from $2 to $3 for best offerings and at $1.25 to $1.75 for inferior stock.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write today.

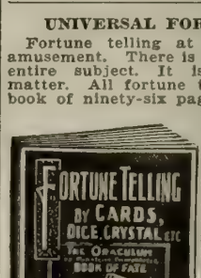
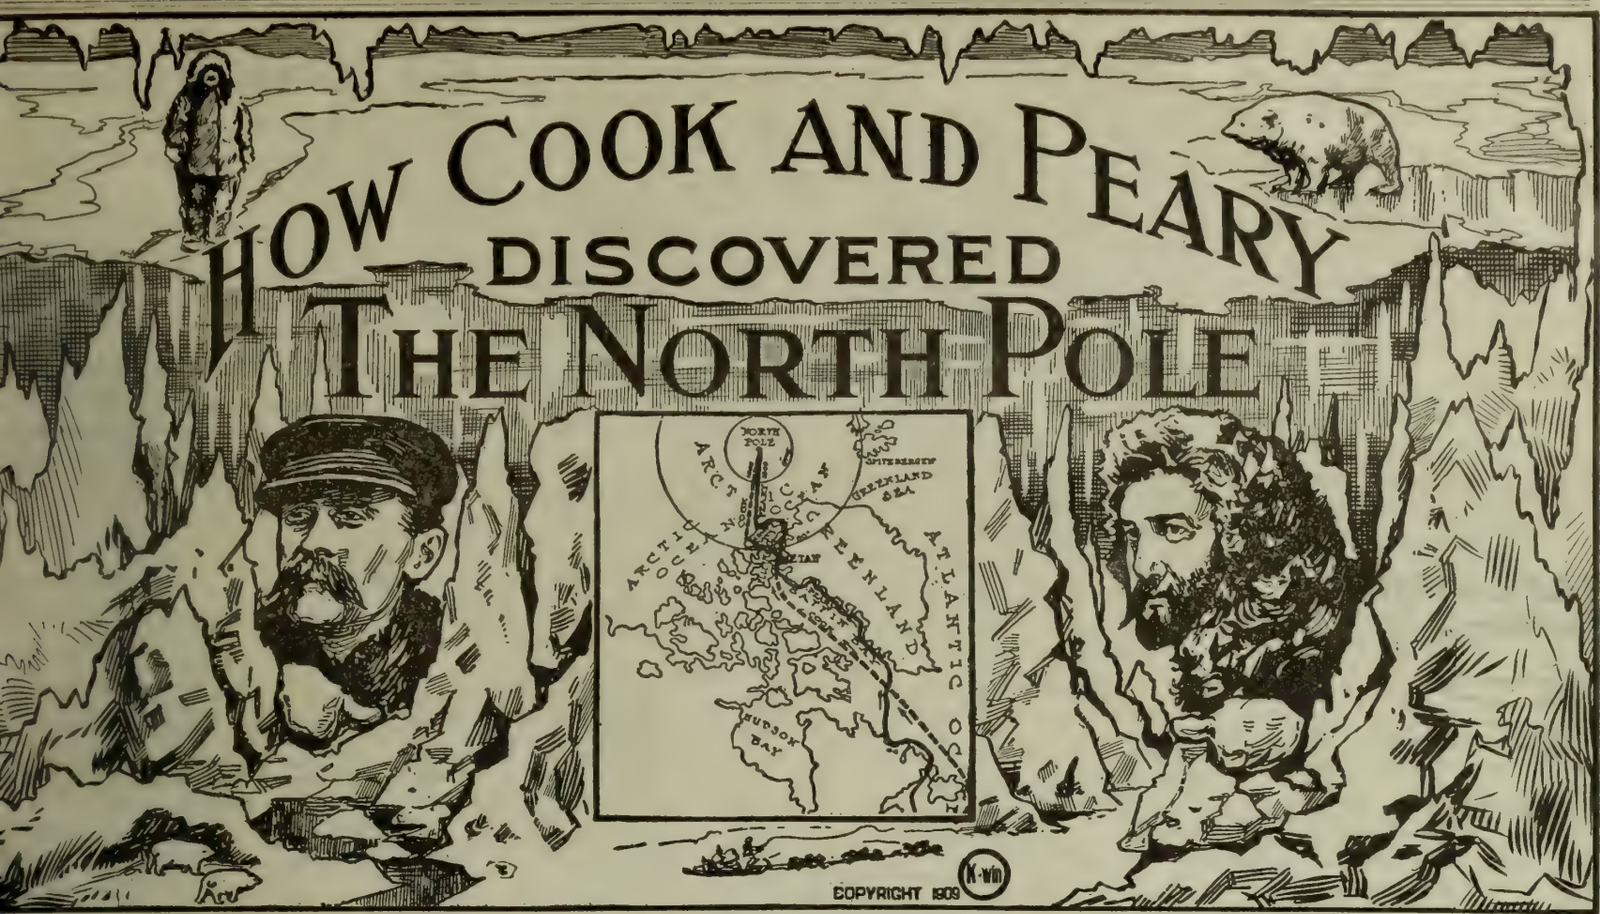
To anyone who will send us a money order for 30 cents we will send the **Universal Magazine** for one year, and we will send one copy of the book "Fortune Telling" by mail postpaid. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**





At an enormous expense we have arranged for a series of ***50 photographic views*** reproduced on ***Souvenir Post Cards*** of the now famous North Pole expeditions of Dr. Frederick Cook and Commander Robert E. Peary. This set of Post Cards is ***offered free*** to advertise the Woman's World, and consists of the following photographic scenes:

DESCRIPTION OF SET.

1—President bidding Peary "Bring back the pole."
2—Peary's good ship, the "Roosevelt," and throng bidding him farewell at Oyster Bay.
3—The Steamer Roosevelt, the ship in which Commander Peary sailed July, 1908, for race to the earth's top, now reported successful.
4—Peary on deck the steamer Roosevelt just before sailing to discover the North Pole.
5—Capt. Bartlett and crew on the Steamer Roosevelt. "X" indicates Capt. Bartlett.
6—Commander Peary in arctic dress, just as he appeared when he started to find the North Pole.
7—Commander Peary on Steamer Roosevelt en route to the Pole.
8—Commander Peary at work laying out his plans previous to his start to discover the Pole.
9—Mrs. Robt. Peary and her two children.
10—Commander Peary's youngest son just prior to leaving Oyster Bay on his way to discover the North Pole.
11—Robt. E. Peary and one of his Eskimo dogs, on board the Steamer Roosevelt.
12—Peary's ship fast in ice packs in the polar region.
13—Almost superhuman difficulties overcome by Peary in reaching the North Pole.
14—Halted by drifting ice.
15—How Peary stored provisions in his caches along his route.
16—Sight which brought joy to the heart of the polar explorers. The sun rises always on Feb. 19th, after six months of night.
17—Traveling under difficulties by Peary and Cook.
18—Peary's party in a hard climb.
19—Peary and the sailing master on board the Roosevelt.
20—The dog that helped Peary find the North Pole.
21—Group of Peary's Eskimos.
22—Difficult camp in the Arctic.
23—Steamer Roosevelt banked with snow.
24—Steamer Roosevelt after a hunt. Showing animals killed on a hunting trip.
25—Steamer Roosevelt in the ice.
26—Dr. Frederick A. Cook in arctic dress.
27—The Steamer Bradley in ice.
28—Schooner John R. Bradley.
29—Dr. Cook starting on his dash to the Pole. Showing how the Eskimo dogs carried his food and other supplies.
30—Forging northward by sledges.
31—An Eskimo dog sledge and polar exploration.
32—An Eskimo man. The kind of men who accompanied him on his journey.
33—Ice hummocks in pathless waste.
34—Icebergs off of Greenland.
35—Greenlander girl.
36—A polar camp, showing snow houses such as were built by Dr. Cook.
37—Dr. Cook showing how he fought, hauling in a walrus. Incidents of Explorer Cook's experience in arctic region. The capture of a walrus saving starvation to the parties.
38—Aluminum sledges used by Dr. Cook for final dash.
39—Rudolph Franke, the last white man with Explorer Cook before he discovered the North Pole.
40—Dr. Cook's bodyguard, who were the last to be with him.
41—Interesting home group of Dr. Cook's wife and children. Mrs. Marian H. Cook, wife of explorer, and their children, Helen, aged 4, and Ruth, aged 10.
42—Shows the Cook party on icefloes in arctic seas.
43—J. R. Bradley loaded with supplies as he started for the North Pole. How the schooner was packed to the gunwales with provisions for the equipment.
44—Schooner John R. Bradley ready for the arctic voyage.
45—Muskox animals that gave Dr. Cook food, which Cook encountered; 101 of these animals were killed.
46—Showing Explorer Cook just prior to his trip to the North Pole. The Maltese cross marks Dr. Cook in the picture.
47—Dog train. (Method by which Cook traveled to North Pole.)
48—Crew on the Schooner John R. Bradley.
49—Combination picture, entitled "Whose Little Girlie Are You."
50—Shows how Peary and Cook at the North Pole hoisted the Stars and Stripes.

This set of 50 Post Cards commemorates the greatest event in the world's history since Columbus discovered America. The views are actual photographs. Copyrighted and each card also contains a description of the scene shown. The post cards are beautifully reproduced in Juotone fashion and celluloid finish.

HOW TO SECURE FREE.

Just send us your name and address on the coupon below and we will send you a set of 15 of the most beautiful gold embossed post cards, Christmas, New Year's and other designs, you ever saw. These post cards are yours ***as a free gift*** from us just for answering this advertisement. ***If you like them*** we will request you to show them to four neighbors and ask them to pay you 25 cents each. We will then send each of your neighbors a set of cards just like yours and a full year's subscription to the great Woman's World, and send you, all postage paid, the complete set of 50 North Pole Souvenir Post Cards. If you do not like the 15

gold embossed cards which we will give free to you and after receiving them do not care to show them, all well and good, they are yours anyway. Send your name and address on coupon below today.

WOMAN'S WORLD, 107-111 Clinton St., Dept. 200A, CHICAGO

FREE POST CARD COUPON.

204 A

Woman's World, 107-111 Clinton St., Chicago.

DEAR SIRS:—Please send me without obligation on my part the 15 gold embossed Souvenir Post Cards. I have the privilege of showing these post cards to four people and if they each pay me 25 cents you will send each the Woman's World for an entire year and also a set of the cards just like mine and then you will send me the complete set of North Pole Post Cards as advertised, all postage paid. Enclosed find 4c. stamp to help pay postage, etc.

HOUSEHOLD SHARPENING SET

AGENTS ARE COINING MONEY

Here's something brand new and the biggest money in 10 years. There is not a Sharpening Set in your neighborhood. It will sharpen anything from a pin to an axe, including scissors, knives, tools, etc. Send me your name and address.

S. R. MILLER, Pres., 193 Royal Bldg., Detroit, Mich.

THE BEST POULTRY PAPER.

We are often asked which is the best poultry paper published in the United States, and the answer is, The Reliable Poultry Journal. There are other good papers, but this is the best. The subscription price of The Reliable Poultry Journal is 50 cents a year, and the subscription price of the **Universal Magazine** is 25 cents a year. We have made arrangements whereby we can send the **Universal Magazine** and The Reliable Poultry Journal, both papers, one year, for 50 cents. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Naming Children.

It is too bad that of all the people concerned in the naming of a child the one most concerned has nothing whatever to say about it. Why Mr. and Mrs. Papageorge should decide that George was the name for their son to bear is hard to determine, but such was the case, and so he goes through life, answering, shamefacedly enough at times, to the name of George Papageorge.

The surname Rose in itself is not objectionable, but when parents of that name see fit in their admiration for a hero to throw all discretion to the winds and name their son Dewey, thus forcing him to go through life meekly signing himself Dewey Rose, the combination is nothing short of ridiculous.

The man who signs himself A. Feather is not to be comiserated, for it is a case of indolence on his part as well as on his parents' (perhaps we might better call it indecision) which has left him with a single initial instead of a name. Failing to agree upon a name, the parents bestowed upon him as a cognomen the first letter of the alphabet, thinking he could select his own appellation as he saw fit. But he never saw fit and is still merely A. Feather.

Ridiculous these instances may seem, but true they are. It is sometimes carelessness or ignorance and often freakishness that leads parents to so mislabel their offspring. But if they receive nothing else worth while from their father and mother, it seems that a good name, which will never bring ridicule upon them, should be their portion.—J. T. V.

Which Son is Yours?

When the train stopped at a small railway station a woman and her son, about eleven years old, took the empty seat in front of me. After lowering the shade and placing the baggage in the rack, the lad paid the fare to the conductor and pocketed the receipts. All the way he was carefully observant of his mother's comfort, yet he was a real boy at heart and took a childish interest in watching the passing scenery. When the couple neared their station the lad again helped his mother with her wraps and attended to the satchels. Upon alighting, several women greeted the mother, and instantly off came the boy's cap in gallant recognition.

Strangely enough, another mother with a son about the same age took the vacated seat. First the woman saw that her son was comfortably seated, then she took off his cap, smoothed his hair and raised the curtain that he might the better see out the window. Next she climbed upon a seat to place a telescope and their wraps in the rack. She attended to paying the fares, and when the candy vender passed through the train she supplied the boy with sweetmeats. Every moment she was fussing over the child, and her training in selfishness for eleven years already showed fruitful results, for he was a whining, inconsiderate little fellow, demanding always the best for himself, regardless of the comfort of others.

These boys are the men of tomorrow. It is an easy matter to look forward and see what place each will occupy in life unless something stronger than any mother's influence comes in to change the present trend of affairs.—Janet Thomas Van Osdel.

Tomatoes For Winter Use.

Canned Whole.—Select ripe, firm tomatoes and pour boiling water over them to loosen the skins. Let stand a moment in this water, then pour cold water over them and peel. Fill fruit jars with the whole tomatoes, then pour boiling water over them until the jars are full to the top and seal as usual. Next place the jars upright in a boiler and pour in boiling water until it reaches the necks of the jars. Put on the cover of the boiler and let stand for twelve hours. Tomatoes canned in this way will keep all winter and are almost as fresh as when picked from the vines. They keep their firmness and slice up nicely for salads.

Tomato Preserve.—Cut out the stem end from ripe tomatoes and cut the tomatoes into chunks without peeling. Let boil until thoroughly cooked (usually about twenty minutes, but longer if a very large amount of tomatoes is cooked at once); then run through a colander to clear of skins and seeds. Put this juice over the fire and boil for an hour, then add an equal amount of sugar and one sliced lemon for each two quarts of the juice. Boil slowly for five hours, stirring frequently, as it burns easily. Put in Mason jars and seal. The combination of lemon and tomatoes is liked by most people.

Chili Sauce.—Prepare the ingredients in this proportion: To each one-half peck of tomatoes add eight green peppers from which the seeds have been removed and five medium-sized onions. Peel the tomatoes and onions and chop all fine. To this add one-half pint vinegar, two cupfuls sugar, three teaspoonfuls salt, two teaspoonsful each of cinnamon and cloves. Boil down until fairly thick, put in bottles, cork and seal with paraffine.

Piccalilli.—Slice fine equal parts of cabbage and green tomatoes, sprinkle well with salt and put all in a cheese cloth bag to drain over night. Boil the desired amount of vinegar, depending upon the amount of tomatoes used, and to it add cloves, whole peppers, and sugar to taste. Drop about five-cents' worth of mixed spices tied in a bag into the vinegar, add the tomatoes and cabbage, and boil until the tomatoes are tender. Remove the bag of spices and put in jars and seal.—Janet Thomas Van Osdel.

The Fireless Cooker.

If you were to ask the average woman to describe the ideal cooking apparatus, she would, in nine cases out of ten, answer: "Something that would make no heat, muss nor odor, that would require no watching of the fire nor stirring of food to prevent scorching or boiling over and which she could leave with the certainty that a stray draft would not cause a conflagration." A few years ago this would have been termed a "foolish dream," but to-day anyone who is familiar with the fireless cooker knows where she can turn to find its realization.

In the minds of many there is a prejudice against the term "fireless cooker," and in reality it is not a fireless cooker, but meredy one so constructed as to retain the heat and continue the process of cooking after the food has been brought to the boiling point or heat been applied in some other way.

The principle of cooking by insulation is not a new one and was known and used in Europe before it became common in this country.

A farmer's wife, writing in The Journal of Agriculture, says of the fireless cooker: "It is the greatest help to women of the age and the greatest saver of fuel, time and labor. My dinner is all in the cooker now, and it has been for three hours. My kitchen is nice and cool and I have taken a good rest. No running to see about fires, just leave it alone and when wanted all will be 'piping hot.'"

It cooks such foods as meats, soups, cereals and many vegetables more perfectly than could possibly be done on an ordinary stove, and, with the Rapid, one can also have delightful roasts, bread and puddings.—By an Expert Cook.

"A physician heals others for the purpose of 'heeling" himself."—Chicago News.

I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. I wore many different kinds of trusses. Some were tortures, some positively dangerous, and none would hold the rupture. The doctors told me I could not cure it without a surgical operation. But I fooled them all, and cured myself by a simple method which I discovered. Anyone can use it, and I will send the cure free by mail, postpaid, to anyone who writes for it. Fill out the coupon below and mail it to me today.

Free Rupture-Cure Coupon

CAPT. W. A. COLLINGS, Box 11 Watertown, N. Y.

Dear Sir:—I wish you would send me your New Discovery for the Cure of Rupture.

SHIRT WAIST EMBROIDERY PATTERNS.

This embroidery pattern is No. 513, made by the Paris Modes Company. It is a wheat design in shadow and outline embroidery for shirt waist. It comes imprinted on light paper and is tranferred to the cloth by pressing it with a hot iron. The pattern is good for two impressions.

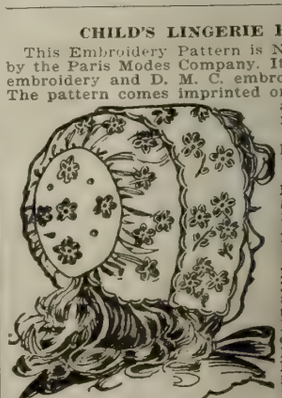
We are sending out this pattern as a circulation premium in connection with the **Universal Magazine**. Anyone who will send 25 cents to pay for the **Universal Magazine** for one year may select Embroidery Pattern No. 513 as a free premium. The **Universal Magazine** is thirty-two pages, published monthly, and contains a large amount of interesting reading matter. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

STEM WIND **Gold Watch AND RING GIVEN FOR SELLING POST CARDS**

We positively give both a Famous Alton Watch Stem Wind, beautifully engraved Solid Gold Laid case, American movement, factory tested, guaranteed five years; also a Solid Gold Laid Ring set with a Cubic Gem, sparkling like a $50 diamond, for selling 20 packages of beautiful high grade Art Post Cards at 10c per package. Order 20 packages and when sold send us $2 and we will positively send you the watch, ring & chain. **ALTON WATCH CO. Dept. 325 CHICAGO**

CHILD'S LINGERIE HAT.

This Embroidery Pattern is No. 526, made by the Paris Modes Company. It is for eyelet embroidery and D. M. C. embroidery cotton. The pattern comes imprinted on light paper and is transferred to the cloth by pressing it with a hot iron. The pattern is good for two impressions. Anyone who will send us 25 cents to pay for one year's subscription to the **Universal Magazine** can select Embroidery Pattern No. 526 as a free premium. The **Universal Magazine** is a nice, clean, interesting, thirty-two-page, three-column monthly paper, and it will please everyone. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Superior Prints

Ordinary calicoes could never have stood the test of more than 65 years, and be more popular today than ever before.

Simpson-Eddystone Solid Black Prints

have endured all these years as the perfect cotton dress-goods, because of their superior quality of cloth and absolutely fadeless color.

If your dealer hasn't Simpson-Eddystone Prints write us his name. We'll help him supply you.

The Eddystone Mfg. Co., Phila., Pa.
Established by Wm. Simpson, Sr.

Danger in the Use of Celluloid.

Celluloid has so many valuable properties that it is now made into many articles of common use, such as combs, buttons, thimbles, knife handles, shirt fronts, collars, piano keys, billiard balls and ornaments. It is impervious to water, and will outwear ivory when put to certain uses. Thus it can be seen that there is scarcely a household in which there is not some celluloid in use. But celluloid is merely a dried solution of gun cotton and oil and is intensely inflammable. Herein lies its danger, as many people do not know of this quality and heedlessly bring it in contact with a match or intense heat. Men wearing celluloid collars and shirt fronts have been severely burned by a spark from a cigar lighting on that portion of their apparel and causing it to instantly burst into flames. A young lady was giving her hair a shampoo, dried it above a gas flame, and while drying it combed it out with a celluloid comb. The comb came too near the gas flame, there was an explosion and the girl's hair was a mass of flame. Many a case of house burning has been caused in some way, and persons using celluloid in any form should take warning of the danger that lies in its use because of its inflammable nature.—Janet Thomas Van Osdel.

How to Get Rid of Rats.

A persistent animal like the rat, which has spread himself all over the world, is not to be exterminated or materially reduced by the occasional visit of ferrets and dogs. Poisons are often objectionable, if not a failure, while traps, however cunningly devised, will be effectual only until the little rodent has developed an intelligence equal to the occasion and learned how not to get into them.

The old doe rat will carry a young one in her mouth away from danger as a cat carries a kitten, and when not encumbered with young will often travel a considerable distance, making a wide circuit in search of the most congenial abode or to gain wider knowledge of the premises or surrounding buildings. Old rats will soon learn to avoid barrels and boxes, as they will avoid traps whenever their suspicion is aroused; but a box the dimensions of a small store room, containing also considerable rubbish, has no terrors for them and they will enter it freely. Such a box or room is a little world to so small an animal, and much too large for a rat to circumvent or to see danger in as far as he would with a trap. Here lies the weak spot in the cranium of the cunning little animal.

My remedy, therefore, is to build rat houses in cellars, barns, stables, hotels and ships, where the rats will delight to congregate, closing the openings at will, leaving one opening which will lead to an adjacent cage where their escape will terminate and which should be removed with the contents still alive, for it must be remembered that rats, like foxes, have a dislike in running around just where their own kin have been slaughtered.—W. J. Armstrong, in Country Gentleman.

The Ugliest Family in England.

It is not unusual in life to see an awkward fellow making a false step. He attempts to recover himself and makes another; the second is followed by a third, and down he comes. Here is an illustration of what we mean:

A gentleman once said to Lord North: "Pray, my lord, who is that extremely ugly woman sitting over there?"

"That's my youngest sister," said his lordship.

"Good gracious!" said the gentleman. "I don't mean her, I mean the next."

"That is my eldest sister," replied the nobleman.

"I protest," cried the unhappy gentleman "I don't mean her, but the third."

"That is my wife," said Lord North.

"The devil!" ejaculated the poor fellow.

"You may well say that," said Lord North, "for she is as ugly as sin. But console yourself, my dear sir, we are the ugliest family in England."—Golden Penny.

City Disappointments.

A Philadelphia man was in great distress one morning not long since by reason of the delay in serving his breakfast.

"I wish you'd go to the kitchen," said he to his wife, "and see what the trouble is. I've an appointment at 9."

The wife complied with his request. When she returned to the dining room the husband observed a strangely melancholy expression on her face.

"Well," asked he, impatiently, "did you tell the cook that I wanted my breakfast immediately?"

"I did."

"And what did she say?"

"She said," responded the wife, "that 'we all have our disappointments.' "—Harper's Weekly.

A Conservative Guess.

There was an old farmer up near Windsor, Vermont, who was noted for his skill in guessing the weight of hogs both live and dressed. He had a great reputation and was very jealous of it, so jealous, in fact, that as he grew older he would rarely venture a guess, fearing he might make a mistake. He lived on his reputation.

One fall he raised a very large hog and killed and dressed it. A neighbor came along just then.

"Jim," he said, "did that there hog meet your expectations? What did ye put him down for, anyhow?"

"Well," replied the old farmer with vast conservatism, "that hog didn't weigh as much as I expected and I hardly thought it would."

Slaves of the Lamp

HERE are *eight* lamps—to be *cleaned!* They are Parlor Lamp, Dining Room Lamp, Upstairs Hall Lamp, Kitchen Bracket Lamp and three Bedroom Lamps; besides all these there is the Lantern, maybe.

Consider for a minute what *unpleasant* work these lamps call for *daily.*

Think of all the different processes to go through while the stale Kerosene disgusts, soils and sickens.

And *this* must be done 365 *days* in *every* year, wherever Kerosene lamps are used for lighting.

Get on your thinking cap, madam!

What does all this everlasting *daily* Lamp Slavery cost?

—In time, comfort, appetite, health and the day's happiness—what *does* it cost those who live in country homes?

Would any sane person choose to do that *kind* of work, year in and out, for 2 cents per lamp, if they could avoid it?

Well, 2 cents per lamp means 16 cents per day, *exclusive* of breakages, new wicks, and waste of Kerosene.

Sixteen cents per day amounts to $58.40 per year, *without cost of Kerosene.*

—Then the soot and smell—the burning up of life-giving Oxygen in the air—the giving out of poisonous Carbonic Acid Gas from lamps, to be breathed and rebreathed by children, parents and guests in the homes.

Then the mean *yellow* light, the clouding chimney, the unevenly charred and smoking wick which *will* go wrong when you most need good light.

All *this* because "Mother used Kerosene lamps."

Why don't you *stop* it?

You may if you *will*—and save money.

How would you like to roll all these dirty, disagreeable and daily processes into a *once-a-month* session of *fifteen* to *thirty* minutes?

Thirty *minutes* per month instead of 30 *hours* per month.

You *can* save 29 hours lamp-cleaning per month—if you want to.

You can *dispense* with Kerosene lamps and the dangerous Kerosene Can *forever* if you'll just *be modern* and use *Home-made* Acetylene Gaslight instead.

* * *

An up-to-date Acetylene Lighting Plant can now be completely installed in the average country home—ready to light up,—in two day's time—without injury to ceilings, floors or walls.

Not only light for every room in your house, but light in your out-buildings, barns and barnyard, and, what is more, light that can be turned on by the pull of a chain *without the use of matches.*

That's *modern* Acetylene Lighting.

No more lamp-cleaning, filling, chimney-wiping, wick-trimming, breakages, soot nor smell of vile Kerosene.

Instead, Acetylene Light from permanent, handsome, polished brass brackets on the walls and neat brass chandeliers from the ceilings—city-like, elegant, up to date and out of the way.

Can't tip over (like Kerosene Lamps) where there are children—can't do anything but give you brilliant, beautiful, *white* light, whenever you merely pull a chain on wall bracket or chandelier.

Acetylene Light which does *not* need mantels, wicks nor chimneys.

Acetylene Light which is so pure, so free from soot and color-fog that you can distinguish pale blue, pale pink or pale yellow under its rays as clearly *at night* as you could in broad daylight.

Once a month the hired man must clean out and re-fill the generator in the basement with Union Carbide, the material from which Acetylene is made. Takes him 15 minutes to 30 minutes *per month* to do this if he isn't lazy—30 minutes per *month.*

"The cost of all this?" you ask. So *small,* comparatively, that the plant soon *pays for itself* through what you *save* on labor, chimneys and wicks and on the difference between the cost of Union Carbide and the Kerosene you are now using.

Shall we give you more *precise* figures about this "Rural Gaslight" — Acetylene?

Write us today how large your place and where it is located. Then we can mail our free booklets and tell you how little it will cost to make this light yourself.

Just address UNION CARBIDE SALES CO., Dept. C - 156, Michigan Ave., CHICAGO, ILL.

Water Facilities.

In summer especially and at all times the quantity and quality of water is regulated on most farms by the well and the pumping equipment. Disease and shrinking in weight affect all live stock on the farm when the water is lacking. To provide deep wells with never-failing, pure water and to do the pumping, the machinery and equipment of the American Well Works, Aurora, Ill., is always adequate. Our readers who are needing such facilities are losing money every week until they are supplied. All who are interested should write for the large illustrated catalogue of the American Well Works, Aurora, Ill., mentioning this paper as having advised you to write.

Butter Selling Well.

Elgin butter at 30 cents two weeks in succession, and 4 cents a pound higher than last year.

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Enough Sleep For Children.

Jean Williams, M. D., who is conducting a department of advice to mothers for the Woman's Home Companion, says in the October issue:

"Let me say a few words to the mothers who forget that their growing children need long sleeping-hours, in order that healthy growth shall be continued and a well-organized nervous system become established. It is especially important that good judgment shall be exercised during puberty. Great physical demands are made at this period, and the wise mother makes every effort to avoid for her children unnecessary dissipation of energy.

"It is not easy to state definitely the number of hours of sleep required, as there are individual requirements that will materially modify any rules; still we may safely say that in the great majority of cases after early infancy, when the normal child sleeps more of the time, at least twelve out of the twenty-four hours should be spent in sleep. Until six years of age the daily nap should be added to this. The twelve hours of sleep should continue until the tenth year, and longer if the child is delicate or of especially sensitive nervous organization. From ten to fourteen years, ten hours of sleep are usually required, and often twelve would be advantageous; from fourteen until full maturity the sleeping-hours are, as a rule, more irregular than at any other period of life, and then the effort must be made to compensate for the short hours by longer indulgence when opportunity offers, remembering that few have the endurance to cope with the complexities of modern life and thrive on less sleep than a daily average of eight hours."

Goods That Hold Color.

The color of my thin summer dresses faded terribly when I got in the least bit of perspiration last summer. Isn't there any kind of cotton dress goods that will hold its color? DISAPPOINTED.

Yes, indeed! Simpson-Eddystone Calico Prints in Black and White, Silver Grey, Solid Black and Fast Hazel Brown, made by the Eddystone Mfg. Co., Philadelphia, will not fade from perspiration, sunlight or washing. And the pretty patterns! They enable one to make such stylish dresses.

It seems almost too good to be true that you can secure cotton goods that will make such inexpensive dresses, and yet be really serviceable, but I have found these Prints to be superior to anything else in cotton dress goods at anywhere near their price. They may be secured at almost any dry goods store.

Good Taste in Veils.

"The mission of the veil is to keep the hair in order and to enhance the brilliancy of the complexion," says the Woman's Home Companion for October. "It should not be striking in itself. Heavily-spotted nets and lace veils of conspicuous pattern should be for this reason tabooed. They are trying to rise above their sphere, trying to be something on their own account, and so they conceal the face, and incidentally ruin the eyes.

"Nevertheless, it is the veil with the large, conspicuous mesh that Fashion is specially favoring both in Paris and New York just now.

"For the perfect complexion the best veil is perhaps the plain, fairly large-mesh net which is hardly noticeable and only serves to keep the hair in place. Most of us, however, require in the hard light of out of doors some simple beautifier, and for us the spots and lines of the patterned nets are a boon.

"The most generally becoming veil has a black figure on a white ground; the white net coming close to the skin heightens its fairness, while the black spots accentuate its brilliancy. A veil of this type is becoming according to the size and arrangement of its spots. The black chenille dots with a generous space between act like the old-fashioned "mouche," the touch of black court-plaster at the side of the chin or near the outer corner of the eye, so much affected by the clever beauties of the time of Marie Antoinette. When these spots come closely together the white spaces are not sufficiently large to do their work and the effectiveness of the spots is almost, if not entirely, nullified."

Knew Who Was Governor.

While Governor Willson, of Kentucky, was house-bound last winter, owing to a strained tendon in his leg, he was attended by Jim, who had been general factotum to many Governors and who was a source of much fun among State House attaches.

The lame leg caused the Governor to move his office temporarily to the mansion, where he received many delegations.

On one occasion Mrs. Willson had waited luncheon for thirty minutes, and she told His Excellency that he must come down and eat with her.

"My dear," said Mr. Willson, "just as soon as I see that delegation of men down stairs I'll be with you."

Mrs. Willson was determined, and said: "Jim, you go down and tell them to wait."

"Jim," frowned the Governor, as that worthy started off to obey the mistress of the mansion—"Jim, you know who is Governor, don't you?"

"Yas, sir," grinned Jim with seeming innocence, "yas, sir, I'll go down and tell the gentlemen to wait, sar."—Lippincott's Magazine.

His Affection Grew With Age.

The Connecticut farmer was riding back from the cemetery with his nephew, after burying his wife.

"Well, she's gone," said the bereaved husband.

The nephew nodded dutifully.

"She kep' good care of me for forty years," said the relict

The nephew said that was so.

"And do you know," said the mourner, "toward the last I almost got to like her."—Cosmopolitan.

A Good Excuse.

"Tommy, I am sorry, but I will have to whip you for fighting when I told you you mustn't. What were you and Jimmy White quarreling about?"

"Why, mom, he said you were ten years older than his mother, and I told him he was a liar."

"Well, Tommy, I don't approve of your fighting, but under the circumstances—Here's a quarter for you and I'll ask your papa to take you to the moving picture show to-night when he comes home."—Baltimore American.

Had to Know More.

As a South Jersey country physician was driving through a village, he saw a man amusing a crowd with the antics of his trick dog. The doctor pulled up and said: "My dear man, how do you manage to train your dog that way? I can't teach mine a single trick." The man looked up, with a simple rustic look, and replied: "Well, you see it's this way: You have to know more'n the dog, or you can't learn him nothin'."—Christian Endeavor World.

More Than a Gold Brick.

"Mike," said Plodding Pete, "dere's wuss t'ings dan gold bricks."

"What's happened?"

"De lady up de road said dat if I'd chop an armful of wood she'd gimme a cake."

"Didn't she keep her word?"

"Yep. She handed me a cake o' soap."—Washington Star.

Do You Hear Well?

If deaf or partially deaf make a personal trial of the Stolz Electrophone. Simply mail us the coupon below and we will send you at once our Home Test Offer free of charge. This makes the selection of the best hearing aid easy and inexpensive for you.

The Electrophone in use—almost invisible.

The latest improved Stolz Electrophone cost $40,000.00 to perfect. It is a scientific, tiny, "almost invisible" electric telephone device. It throws the sound waves direct on the hearing nerves and so restores instant hearing power naturally. It is absolutely harmless and renders such ugly and often harmful makeshifts as drums, horns, tubes, etc., entirely unnecessary. It quickly overcomes roarings, buzzings, whistlings and other distracting ear noises, and so constantly exercises the hearing nerves that it usually restores the unaided hearing itself in time—six months on the average. Mail us the coupon and let us send you a perfect hearing aid exactly the same as that provided many world-famous bankers, rulers, presidents, etc., etc. Mail the Coupon now—while our home test offer is in force—get an Electrophone—use it everywhere—in the home, church, theatre, factory, street or office—and see for yourself how perfectly it will make you hear without strain or effort.

Read This — Then Fill in Coupon

E. P. Rogers, 159 LaSalle St., Chicago, says: "I have used your Electrophone since July, 1908. It enables me to hear speakers over 50 feet away. Without it I could not hear their voices. It has improved my natural hearing at least 50 per cent. and has stopped the head noises."

Ask Rogers, or W. M. Hoyt, Wholesale Grocer, 1 Michigan ave., Chicago; or, better still, write for long list of satisfied users, who will answer inquiries. We will mail you a copy FREE OF CHARGE. Address main office.

Garden Notes.

When cabbage heads commence to burst the safest thing is to use them at once. They will keep better in the kraut barrel than elsewhere.

The giant radish from Japan, known as "sakurajima," is all that is claimed for it so far as size is concerned. Both root and foliage are simply immense. The quality, however, lacks the crisp taste of the icicle. Even in summer it seems more like a winter radish in taste and texture, though winter may improve it for eating raw. Our own personal taste could scarely pronounce the cooked vegetable superior to the turnip, though in process of cooking there is something suggestive of the cabbage in its odor. As a plant for making a display at the country fairs, it seems to us of higher value than for table use; though in one sense what is claimed for the wonderful novelty.

Burn the weeds now standing in the garden. This will not only add new fertilizer to the soil but will leave it smooth and free from stalks and stems.

Plan to change the location of the different vegetables next year. Because cucumbers did well in a certain corner is not sufficient reason for continuing them in that corner until the soil is exhausted. It is better to change frequently. The special nature of the soil may render it just the thing for growing one vegetable even if certain chemical properties which made it fine for another have been exhausted through continuous use.

Now is a good time to make an inventory of your successes and failures. What varieties proved a success? What changes do you wish to make next year? Systematize your plans now while the matter is fresh in your mind.—Bessie L. Putnam.

A Practical Farm Level.

Surveying and engineering costs a surprising amount of money, and much of it can be saved and good work done with the farm level manufactured by Bostrom-Brady Co. Farms cannot be laid out, lines correctly marked or any kind of ditching, terracing or grading done satisfactorily without one. These implements require but little practice in order to become accustomed to their use and benefit. See advertisement on page 18, where price is given, or if more information is necessary, address Bostrom-Brady Mfg. Co., 1107 Pine street, St. Louis, Mo.

The Consolidated School.

The general trend is towards the consolidation of schools in the rural districts. In Minnesota there is a general law providing for this. In Ohio the plan has been tested for years of transporting the children in covered vans, and it works nicely. Local tests have been made in other parts of the country, and with beneficial results.

Among the advantages may be noted the superior educational facilities. The same money that has been distributed among six or eight little country schools with "a few little girls taught by another little girl" put into a graded school with capable teachers will accomplish much greater results at less cost.

There is the advantage gained by recitation with several in the class, the friendly rivalry which induces to real work, the enthusiasm aroused by the large class, some of whom will see phases not thought of by the rest. The experienced educator will tell you that twenty is an ideal number for a class. It is easily handled, and the many sides of the topic will be fully shown by various members. In the small country school classes are correspondingly small, yet each should be given its stated time for recitation. The work is usually by a less skilled teacher, and the sum total of expense much greater than by the plan of consolidation.

Farm children have the advantages of libraries, and other accessories of the up-to-date city schools. Principals note that when rural pupils first enter such a school they are awkward and ill at ease, and show the lack of balance in their work. But they soon surmount these deprivations and make a good record. The plan works for general culture as well as a liberal education; and while like all reforms, it meets some repulses, the movement is steadily growing.

Children's Shoes.

The farmer when buying a horse is especially careful to see that its feet are sound, well knowing that a defect in this line will render it of little value to him. Yet too often he is quite forgetful of the fact that his children are becoming permanently crippled by inattention to this detail in dress.

The narrow toes and high heels which fashion dictates may become the source of all sorts of trouble with young people, whose feet are still in the stage of formation, and which may thus be permanently cripled. Corns and bunions assert themselves in a form which must be recognized; but the arch of the foot may be lost, with the grace belonging to it, leaving the delicate adjustments for the support of the body in a hopeless chaos.

A loose shoe is not necessarily a well fitting one. It may induce a shuffling gait as unhealthful as disagreeable. When buying shoes look to it that your shoeman understands the business of fitting, if you do not yourself. Shun the high heel and narrow toe for children. Insist on something modeled after the common-sense last, even if it is a little higher in price.

A shoe that does not leak is an essential in cold or wet weather. We all know that dry feet are an essential to health. Cold, wet ones are almost a certain forerunner of cold and its resultant severer forms. It is easier to pay shoe bills than doctor's bills and infinitely more satisfactory. If the child has access to a well kept walk and dry playground, light shoes with good rubbers may be sufficient. But if it must traverse a country road, muddy or drifted with snow, it is quite another matter, and the firm calf-skin shoe will prove more serviceable and cheaper in the end. Many children, too, are careless about putting on rubbers every time they wish to step outside, and this plan obviates that difficulty.

Teach the child to properly care for his shoes. If they are kept clean and well greased the lifetime of a pair will be prolonged at least fifty per cent. When they need half-soling, hunt up a shop where this can be done and done neatly. There is no need of regarding this as any reflection on either your character or your purse. The notion that it is a disgrace to wear patched shoes is an absurd one.

Remember that two pairs of shoes worn alternately will prolong the life of both, as well as rest the feet. No two pairs of shoes fit exactly alike, and the temporary rest by the substitution is appreciated, while the chance of the shoe to relieve itself of the moisture induced by perspiration works toward prolonging the life of the leather.

If rubbers are worn, teach the child to guard against overheating them. Heat will kill the life of rubber almost as surely as oil; and we all know that the latter is fatal to their service. See that they are not too tight. If so, they soon break; and when a rubber once commences to break, its days may well be said to be numbered. If a rent must be mended, first draw the edges together with woolen yarn, and then use the prepared cement for mending rubber. The yarn will not cut out like thread, and the work will hold much longer. Rubbers are unhealthful worn indoors. If boots are necessary, provide slippers to be substituted when the wearer enters the house. As warm, dry feet are the key to good health, guard them more carefully than you do even your purse. In fact, in so doing you are guarding the purse also.—Bessie L. Putnam.

PILES Quickly Cured

Instant Relief, Permanent Cure—Trial Package Mailed Free to All in Plain Wrapper.

We want every man and woman suffering from the excruciating torture of piles to just send their names and address to us and get by return mail a free trial package of the most effective and positive cure ever known for this disease. Pyramid Pile Cure.

The way to prove what this great remedy will do in your own case, is to just fill out free coupon and send to us and you will get by return mail a free trial treatment of Pyramid Pile Cure.

Then after you have proven to yourself what it can do, you will go to the druggist and get a 50-cent box.

Don't undergo an operation. Operations are rarely a success and often lead to terrible consequences. Pyramid Pile Cure reduces all inflammation, makes congestion, irritation, itching, sores and ulcers disappear—and the piles simply quit.

For sale at all drug stores at 50 cents a box.

FREE PACKAGE COUPON

Fill out the blank lines below with your name and address, cut out coupon and mail to the PYRAMID DRUG COMPANY, 154 Pyramid Bldg., Marshall, Mich. A trial package of the great Pyramid Pile Cure will then be sent you at once by mail, FREE, in plain wrapper.

UNIVERSAL PALMISTRY BOOK.

This is by the famous Elmo Jean La Seer, President of the National Institute of Palmistry. It is an illustrated book of ninety pages. There are twenty-six chapters, all intensely interesting and instructive. We have adopted this book as a subscription premium in connection with the Universal Magazine. The Universal Magazine is a nice, bright, cheerful illustrated monthly magazine of thirty-two pages, three columns to the page containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 30 cents we will send the Universal Magazine for one year and one copy of the book "Palmistry" by mail postpaid. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

MAY MANTON PATTERNS.

Very Elegant Fashion Service, With Full Instructions For Ordering and Making.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Girl's Box-plaited Dress.

No. 6436.—Box-plaited dresses are always pretty for the younger girls, and this one is made with body and skirt portions in one, held in place by means of a belt. In the illustration the material is one of the plain novelties with trimming of plain color, but serge and cashmere are shown in a great many new shades, and both will be much used; plaids and checks show almost infinite variety, and there are, indeed, a great many different materials appropriate for such a dress as this one. For the trimming every contrasting material or ready-made banding is pretty, and the dress can be made either suited to the morning or school wear or to afternoon occasions, as it is treated in one way or in another. Just as illustrated it makes an excellent, sturdy frock for the first school days. If it were made of rose-colored, pale green or blue cashmere and trimmed with oriental banding, it would become completely transformed and adapted to occasions of greater dress.

The dress is made with front and back portions and is box plaited at the center front and center back, and the skirt portion is laid in inverted plaits at the under arms. The neck is finished with the fancy collar, there are epaulettes over the shoulders, and the closing is made invisibly at the back. The sleeves are in two pieces each with rolled-over cuffs. The collar is finished separately and adjusted over the neck.

The quantity of material required for the medium size is 5¼ yards 24 or 27, 3⅝ yards 32, or 2⅝ yards 44 inches wide, with 1 yard 27 inches wide for bands.

The Pattern 6436 is cut in sizes for girls of four, six, eight and 10 years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Misses' Princesse Dress.

No. 6412.—Princesse costumes are favorites for young girls as well as for the grown-ups just now, and this one includes all the latest features. There are panels at front and back which give an effect of slenderness; there are the plaited portions at the sides which suggest the new low hip line; there are pretty tucked sleeves, and the neck is cut out to allow the use of a chemisette. In the illustration lightweight wool novelty is trimmed with bands of silk and made with chemisette of Valenciennes lace. The dress is appropriate for almost all girlish materials, for it can be made from a dark-colored cashmere and become adapted to school wear, or it could be made from a pale-colored one and be appropriate for more dressy occasions; it could be made from voile or from satin cloth; indeed, from any material that is thin enough to be tucked successfully. For the chemisette either lace or embroidery or contrasting silk will be found appropriate, and if a very elaborate effect is wanted the sleeves can be made to match the chemisette in pace of the dress.

The dress is made with the panels, the gored upper portions of the skirt and the straight plaited flounce. The closing of the dress is made at the left of the back, the chemisette at the center. The sleeves are in one piece each, tucked on indicated lines.

The quantity of material required for the sixteen-year size is 10½ yards 24, 6¾ yards 32, or 5½ yards 44 inches wide, with ½ yard 18 inches wide for the chemisette and 1½ yards of banding.

The Pattern 6412 is cut in sizes for girls of fourteen and sixteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Girl's Box-plaited Yoke Dress.

No. 6407.—The yoke dress is always a pretty one for the younger girls and it is to be noted among the smartest of the incoming models. This one is made of plaid wool material with trimming of velvet ribbon and chemisette of tucked taffeta, and is designed for the first cool days. The same model will be appropriate, however, for any seasonable material, for it can be utilized for the washable ones of the later summer, and it can be made from pongee or from similar material as well as from wool fabrics. For the trimming any banding or soutache applied in a simple design will be found appropriate, and for the chemisette any pretty contrasting material. Made from challis or cashmere with trimming of silk bands, the dress will be an exceedingly useful one for the cool days of the late season and for the opening of autumn, while as illustrated it is somewhat more sturdy, adapted to harder usage.

The dress consists of the blouse and the skirt. The blouse is box plaited and joined to a round yoke. This yoke is covered with material for a portion of its width but with plain silk over the upper edge, and this silk and the collar are banded with rat-tail cord. The skirt is made with the yoke and a straight box-plaited portion, which are joined and seamed together. The sleeves are in one piece each, finished with rolled-over cuffs.

The quantity of material required for the medium size (twelve years) is 7⅛ yards of material 24, 6 yards 32, or 4⅝ yards 44 inches wide, with 11½ yards of banding and ¼ yard of silk for collar and upper portion of the yoke.

The Pattern 6407 is cut in sizes for girls of eight, ten, twelve and fourteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Fancy Blouse.

No. 6435.—The blouse which shows no visible closing is always a pretty and attractive one, and this model includes the new deep, narrow chemisette that is so becoming. It is made with the new sleeves, too, that are cut off to show pretty close-fitting ones of thin material, and it is equally well adapted to entire gowns and to the separate blouse. In the illustration it is made of silk cashmere with trimming of banding, chemisette and under sleeves of tucked chiffon. Almost all the incoming materials are soft enough to be tucked, however, and for the chemisette and under sleeves lace, net and muslin, and, indeed, all pretty materials of the sort are appropriate.

The waist is made over a fitted lining and consists of fronts and back with the chemisette. The lining is closed at the center front, the waist invisibly at the left of the front. The sleeves are tucked to give a novel and becoming effect and arranged over the linings, which are faced to form the under sleeves.

The quantity of material required for the medium size is 3⅞ yards 21, 24 or 27, or 2 yards 44 inches wide, with ½ yard 18 inches wide for the chemisette and under sleeves and 2¼ yards of banding.

The Pattern 6435 is cut in sizes for a 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please be sure to give size of pattern ordered and write your own name and address clearly that no mistake can be made to cause delay.

Kindly address all pattern orders to **Hale Publishing Co., 3550 Vista Ave., St.Louis,Mo.**

CONGO
NEVER LEAK ROOFING

WE OFFER to the consumer the best Ready Roofing proposition on the market to-day. We don't make Congo just to sell to a floating kind of trade and then forget about you.

We make Congo *to wear*—to give satisfactory service. We not only want your trade, but your good will.

We want every buyer of Congo to be a *satisfied customer.* That's our best advertisement.

To this end we have made Congo just as good as a ready roofing can be made. We have tested it in every possible way, and by long continued service. We are so satisfied that Congo is the longest wearing ready roofing on the market that we have made arrangements with the National Surety Company to issue a Guarantee Bond *with every roll of Congo.*

These bonds cost us money, but they add not a cent to the cost of Congo to you.

Before the National Surety Company would assume this responsibility, they convinced themselves beyond a reasonable doubt that Congo would do all we claimed for it. And there isn't another Ready Roofing on the market to-day that carries a like guarantee.

Don't you think that a roofing in which the manufacturers show such confidence is worth investigating?

Send us your name and address and we will mail you a Congo sample free with our booklet telling all about it.

Sick Headache And Indigestion

The Former Is Very Frequently Caused By The Other.

The pneumo-gastric nerve connects the stomach region directly with the brain, and when the stomach is out of order the head is almost certain to be affected through reflex or sympathetic nervous irritation.

The headache of dyspepsia and indigestion is of every variety, from the dullest and least defined to the most acute pain. Sometimes the whole mass of the brain seems racked with anguish; at others, the ache is confined to the back or front part of the head. The first form is usually of a confused character, and is often accompanied by dimness of vision, and a mild vertigo, or so-called "rush of blood to the head." The victims of this symptom complain of a "swimming" or "lightness" in the head, and dizziness, or a sensation of motion while the body is still, and specks or flashes of light before the eyes.

Persons subject to indigestion and other forms of stomach trouble are very frequent sufferers from headache, and in numerous cases a sick headache is the only noticeable symptom of indigestion present; in others, there are stomach manifestations as well.

The majority of people regard this headache as a separate disease, instead of a symptom of stomach-disease, which it usually is; and they attempt to treat is separately, and make the mistake of endeavoring to obtain relief through the use of headache powders, tablets, pills and seltzers, the use of which is extremely dangerous, as many of them contain such powerful depressent drugs as acetanilid, phenacetine, antipyring, caffeine, etc., which depress the heart, brain and nerve centers, and lower arterial pressure; and many a person with a weak heart has become dangerously ill shortly after taking one of these headache remedies. They also interfere with the digestive processes, and actually make the dyspepsia worse than before.

In order to get rid of the headache of indigestion—and most headaches are caused by stomach trouble—one should endeavor to reach and remove the cause, and the headache effect will soon be relieved.

STUART'S DYSPEPSIA TABLETS do not cure the symptoms; they cure the cause of the headache, which permanently removes the symptoms. They digest every atom of food in the stomach, cure all forms of stomach trouble, and the headache, and every other disagreeable symptom and untoward effect is quickly gotten rid of.

Don't make the mistake of trying to cure your dyspeptic or nervous headache through the use of headache powders, tablets, etc. Use common sense, good judgment, and one or two of Stuart's Dyspepsia Tablets, and you will be agreeably surprised at the rapidity with which the headache will be relieved and cured simultaneously with the relief and cure of the stomach disturbance.

Purchase a package from your druggist today, and send us your name and address, and we will forward you a trial package free. Address F. A. Stuart Co., 150 Stuart Building, Marshall, Mich.

What Bothered Him.

A peculiar instance of connubial affection occurred some time ago in Vermont, according to the Boston Globe. An aged couple, who, through half a century of married life, had wrangled with each other, were in all probability soon to be separated. The husband was taken sick, and was believed to be near his end. The old wife came to his bedside, and, after carefully examining and taking stock of his condition, exclaimed: "Why, daddy, your feet are cold, your hands are cold, and your nose is cold!"

"Wa'all, let 'em be cold."

"W'y, daddy, you're goin' to die."

"Wa'al, I guess I know what I'm 'bout."

"Daddy, what's to become of me if you die?"

"I dunno, and I don't care. What I want to know is, what's to becum of me?"

Making Handkerchiefs at Home.

The woman with an eye to Christmas gifts should begin at once on hand-made handkerchiefs. It is possible to give much finer ones than can be bought for more than double the cost, and the work of preparation, if started in time, need not be a tax on the nerves.

There is a variety of ways in which dainty handkerchiefs can be made at home. Those with quarter-inch hemstitched hems with a line or two of drawn-work border above it appeal to the woman who prefers this kind of stitchery to plain embroidery.

Books can be had giving full directions for different drawn-work stitches. If one happens to own some of the handkerchiefs worked by the Mexicans, the designs can be easily copied by anyone who is accustomed to such fancy work.

Another simple and easily-made handkerchief of good style has a tiny embroidered scallop as shallow and delicate as possible. Run the scallop with darning cotton on both edges of the scallop and buttonhole closely and evenly.

Embroidered Initials.

The only other embroidery need be a small medallion in one corner, containing the initials of the person to whom the handkerchief is to be given. This can be a delicate floral wreath or some conventional scroll work, done in fine satin stitch.

If this seems too much trouble, small initials in block letters should be embroidered in one corner. It is important that every style of these hand-made handkerchiefs be marked, as it gives the individual touch and adds much to their appearance.

If there are to be a half a dozen handkerchiefs for one person, two of each kind would afford variety. A handsome gift would be the tiny scallop described, with block initials in one corner, all worked in color.

The mercerized cottons can now be had to wash well, and in pretty lovely shades. When the work is kept delicate and fine, and soft blues, pink and lavender are used, such handkerchiefs are hard to tell from the imported ones that are in such favor with smartly-dressed women. There is a tone of the old Alice blue that is especially good, to be preferred to baby or turquoise tones.

Plain Hemstitching.

Plain hemstitching handkerchiefs without the drawn-work border are lovely, with a tiny wreath of forget-me-nots in one corner, or a somewhat larger oblong spray of the same flower. The marking can go within the wreath. It should be in the corner diagonally opposite the spray.

Handkerchiefs with edge of needle-point are particularly good style just now. The edges of the handkerchiefs are first rolled and the roll loosely buttonholed with stitches about an eighth of an inch apart.

Into five of these stitches make another row of loose buttonholing, then a row of three more stitches, then one to finish the point. In working the row of three it will be necessary to throw the thread in the opposite direction. Take several small stitches on the side of the point to bring the thread back to the first row, then make the second point in the same way.

Use a fine linen thread for this edging. Some persons do it with mercerized cotton, but the other wears better and looks lacier.

The chief attraction of the home-made handkerchief is the sheerness and fineness of the linen. Buy the best quality you can afford. It runs into many dollars a yard, but a nice, sheer grade can be had from $1.25 or $1.50 a yard.

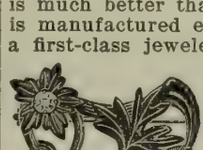
Linen is of different width, sometimes yard-wide,sometimes narrower. When the former, a dozen handkerchiefs can be made from three-quarters of a yard, allowing nine inches square to each piece. This is big enough for those with the needle-work edge or scallop. For the hemstitched ones a twelve-inch square should be used.

Draw threads each way to insure the squares being correct and to prevent waste. This can be more easily done by slightly moistening the linen along the lines to be drawn.

Some women make handkerchiefs of mull or other soft materials. This never is as effective as fine handkerchief linen, and the cost is little less.

The National Farmer Brooch.

This is to interest our lady friends in securing subscriptions for The National Farmer and Stock Grower. The Brooch is richly gold-plated, except the leaf on the right, which has a silver finish. There is a dazzling brilliant in the center of the flower on the left. The Brooch itself is much better than the picture. It is manufactured expressly for us by a first-class jeweler. Money cannot buy any more elegant or beautiful Brooch. It is rich; not cheap or common. Where one is taken we expect to send a dozen. The pin is not sold alone, but we will send The National Farmer and Stock Grower one year to any address and The National Farmer Brooch on receipt of a postoffice money order for 60 cents. If not highly pleased the money will be refunded. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.



Sickness Not Catching.

Much sobered by the importance of the news he had to communicate, youthful Thomas strode into the house and said breathlessly:

"Mother, they have a new baby next door, and the lady over there is awful sick. Mother, you ought to go right in and see her."

"Yes, dear," said his mother. "I will go over in a day or two, just as soon as she gets better."

"But, mother," persisted Thomas, "I think you ought to go in right away; she is real sick, and maybe you can do something to help."

"Yes, dear," said the mother patiently, "but wait a day or so until she is just a little better."

Thomas seemed much dissatisfied at his mother's apparent lack of neighborly interest, and then something seemed to dawn upon him, for he blurted out:

"Mother, you needn't be afraid—it ain't catching."—Companion.

Putting It Too Storng.

Sue—"So many men nowadays marry for money. You wouldn't marry me for money, would you, dearest?"

He (absently)—"No, darling, I wouldn't marry you for all the money in the world."

Sue—"Oh, you horrid, horrid wretch!"—Boston Transcript.

Stomach Troubles Vanish Like Magic

Would you like to eat all you want to, and what you want to, when you want to, without a chance for trouble in your stomach?

Would you like to say farewell for the rest of your life to Dyspepsia, Indigestion, Sour Stomach, Distress after eating, Nervousness, Catarrh of the Stomach, Heart Fluttering, Sick Headache and Constipation?

Then send me 10 cents to cover cost of packing and I will mail you absolutely free one of these wonderful Stomach Drafts. They regulate the bowels, relieve soreness, strengthen every nerve and muscle of your stomach, relieve you at once and make you feel like a new man or woman. So write today enclosing 10 cents for the postage, etc., and get one of these wonderful Stomach Drafts that are celebrated because they cure where medicines fail. Write Dr. G. C. Young, 18 National Bank Bldg., Jackson, Mich.

CANCER CAN BE CURED.

Scores of testimonials, from persons who gladly write to those now suffering, all tell of perfect cures. My Mild Combination Treatment destroys growth and eliminates the disease from the system. **Free book,** "Cancer and Its Cure," and 125-page book of testimonials from cured patients in every State in the Union. No matter how serious your case, how many operations you have had, or what treatment you have taken, don't give up hope, but write at once for my books.

DR. JOHNSON REMEDY CO.,
1233 Grand Ave., Suite 103, Kansas City, Mo.

THE UNIVERSAL PREMIUM SCARF PIN.

The illustration presented herewith is a picture of the Universal Scarf Pin. This is

manufactured by a first-class jeweler and is up-to-date in every respect. The eyes are imitation rubies, and the diamond in the mouth is also imitation. The pin is plated with old gold and will stand the acid test. The richest man in the land can buy a more expensive pin, but he cannot buy a better-looking one. We have adopted the Universal Scarf Pin as a subscription premium to the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one Universal Scarf Pin by mail prepaid. We will refund the money to anyone who is not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

UNIVERSAL FEATHER PIN.

This is a daisy of a pin, stylish, rich and beautiful. It is heavily washed with the moon-gold finish, with a little brilliant sparkling like a star. An attractive pin for all purposes. We have adopted this beautiful pin as a premium in connection with the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illus-

trated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashion, patterns and poetry a splendid publication for the money. To anyone who will send us 30 cents in nice, new one-cent stamps we will send the **Universal Magazine** for one year and one Universal Feather Pin prepaid. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Greatest Premium Offer Ever Made

Without exception this is the greatest and most liberal Combination Free Premium Offer ever made.

We offer as one premium four useful and beautiful articles, namely: A 40-piece Gold Decorated Dinner Set, initialed in Gold; a pair of fancy Nottingham Lace Curtains, a Mission Tablet or Tabouret, and a 7-piece Water Set. Not one, but *all* of these four articles are included in this offer, and every premium is guaranteed to be just as represented and to give satisfaction, and a two and a half million dollar company stands back of this guarantee.

FORTY-PIECE GOLD DECORATED INITIAL DINNER SET

This handsome set of dishes consists of forty different pieces, as follows: Six large dinner plates, six medium-size pie or dessert plates, one meat platter, one vegetable dish, one sugar bowl, one special bread or cake plate or decorated plaque, six large size cups and six saucers to match, six individual butter dishes, six oatmeal, fruit or sauce dishes—a total of forty pieces. Each piece is beautifully decorated with gold sprays and each piece is gold-lined and in addition each piece (except cups and saucers) will be further decorated with owner's name in gold, burnt into the china.

MISSION TABLE

This is a handsome little Table or Tabouret, finished in the popular mission style. Suitable for tea set stand, for jardiniere, or any ordinary decorative purpose.

HOW TO SECURE ALL FOUR PREMIUMS FREE

Any woman or girl can secure all four of our magnificent premiums *without one cent of expense* on her part by simply rendering us a little assistance in her locality, which should take only a few hours' time.

Fill out and send us the free coupon shown below. We will then send you, all charges paid, 24 Art-Nouveau Pictures in Colors, size 16 by 20 inches, and 24 sets of Gold Embossed Souvenir Post Cards. We will ask you to distribute one picture and one set of Post Cards on a very attractive offer, collecting 25 cents and giving the Picture and Post Card Set as a receipt. After you have distributed all 24 Pictures and Post Card Sets, send us the $6.00 collected, with names of people to whom you distributed the goods, and then we will ship you immediately the 40-Piece Gold Initial Dinner Set, the Nottingham Lace Curtains, the Mission Table, and Seven-Piece Glass Set—all four at one time for this little service. Our 25-cent offer is so very attractive, with the Pictures and Post Card Sets thrown in extra just as receipts, that usually the first twenty-four people you see will gladly accept. This is positively ALL you will be asked to do to entitle you to our four elegant premiums.

NOTTINGHAM LACE CURTAINS

Pure white pattern, woven in a fancy scroll flower pattern, heavy lace border. Good weight, two and a half yards long and full thirty inches wide. Overlocked stitched edge. A nice, genteel pair of lace curtains.

ADVANCE PREMIUM

Every woman or girl answering this advertisement *in good faith* will be sent at once a beautiful Lincoln Penny Stick Pin—one of the new Lincoln Pennies covered with celluloid attached to stick pin.

SPECIAL GUARANTEE

We guarantee our premiums to be exactly as represented and to please. We guarantee to give all four for distributing only 24 Art-Nouveau Pictures in colors and 24 sets of Gold Embossed Post Cards in connection with our attractive 25-cent offer. We pay all postage. We guarantee the distributing to be easy, simple and quick work, and if found otherwise goods can be returned at our expense. We are an incorporated company, capital two and one-half million dollars, and furnish bank, Dun, Bradstreet and commercial references to all who answer this announcement. George Harvey, Pres't., 107-109-111 Clinton St., Dept. 105, Chicago.

7-PIECE GLASS SET

Made of A-1 crystal glass, six full size Tumblers and one large size Water Bottle; manufactured and patterned after an expensive cut-glass set costing from $10 to $20.

Send us this Coupon if you want these four grand premiums on our free offer.

FREE COUPON

GEORGE HARVEY,
President,
107-109-111 Clinton Street, Chicago.

Send me, charges paid, your 24 Art-Nouveau Parlor Pictures in colors, and your 24 sets of Gold Embossed Souvenir Post Cards, to distribute on your plan. If this distributing is not simple and easy, I can return at your expense. If I do distribute them on your plan, you agree to ship me, prepaid, the 40-piece Gold Medal Gold Decorated Dinner Set, the Lace Curtains, the collapsible Mission Table, and the 7-piece Glass Set.

AMERICAN BEAUTY ROSE PICTURE FREE.

This illustration very indefinitely represents a most beautiful and delightful premium picture—a reproduction of a masterpiece. This magnificent picture is in the richest of color. It is 16x20 inches. It is finished equal to an oil painting. It will adorn and beautify any room in which it may be placed. If it is neatly framed it will be "a thing of beauty and a joy forever." Without framing it will last for several years. The illustration gives no idea of the size and beauty of the picture. We are using the AMERICAN BEAUTY ROSE PICTURE for the purpose of introducing our new publication, the UNIVERSAL MAGAZINE. This is a nice, bright, thirty-two-page, three-column publication, which will interest all the family. Send us 25 cents in silver for one-year's trial subscription to the UNIVERSAL MAGAZINE and we will send you free by mail one AMERICAN BEAUTY ROSE PICTURE securely packed in a tube, and safe arrival guaranteed. Address HALE PUBLISHING CO.,3550 Vista Ave., St.Louis,Mo.

"PLAYING TWO GAMES AT ONCE" AND "THE WOOING."

We wish also to invite attention to two pictures advertised on page 24, which we will send as a premium to anyone sending 50 cents to pay for The National Farmer and Stock Grower for one year. These are beautiful pictures, rich in color, interesting and pleasing subjects, suitable for Christmas presents. Don't neglect them; they will please you.

and Stock GROWER

Alfalfa Makes Bone, Blood and Muscle.

"The feeding value of alfalfa is largely in its chemical compound known as protein; its extreme digestibility is another desirable quality to be considered, and not least is its appetizing character. Not only do all animals like it, but when given in moderate quantities it seems to increase the general appetite for more fat-making feeds. Steers beginning to 'fall off' on a heavy diet of corn will come to their appetites after being fed only a few pounds of alfalfa daily, and will eat and assimilate more corn than before. Alfalfa alone is not a fat-making feed. Animals fed upon it grow in weight, but the weight is principally of bone, blood and muscle. It is without a sufficiency of fat and carbohydrates, and these should be added in such feeds as corn, corn meal, Kaffir corn or Kaffir corn meal, or to a limited degree even in corn stover, sorghum or millet. When alfalfa is fed alone all the protein cannot be digested, and, therefore, it is always economical to add some carbonaceous foods, if animals are to be fattened."—From Coburn's "The Book of Alfalfa."

Fall Preparing Soil For Spring Use.

The market gardener long ago learned the necessity for preparing in the fall the soil he is to use in the growing of the early spring crops. Many others, however, even though growing considerable quantities of spring products, neglect to make preparation of the soil in the fall.

There are two reasons why the soil should be prepared in the fall. One is to permit the manure to rot before its elements are to be demanded by the plants, and the other is to permit the frosts of winter to assist in the thorough pulverization of the ground.

It is safe to say that the same amount of manure applied in the fall will give 50 per cent. more results than if applied in the spring at about the time the seed is being put into the ground.

Most of the readers of this article have to depend on barnyard manure for fertilizing their garden areas. If such apply the manure to their gardens now and have it plowed in it will be in process of disintegration from now till spring, and by that time will have filled the soil with manurial elements which the tender rootlets of the new baby plants will find a great help in developing the plants.

In this relation, it is not alone the three fertilizer elements—the potash, the phosphorus and the nitrogen—that are to be considered. There is another element that is not recognized as a manurial element that plays an important part, and that is the carbon in its cellular form. This does not enter into the structure of our economic plants, but we know it is used by the minute bacteria in the soil, as they have no leaves by which to take the carbon from the air. Therefore an abundant supply of carbon in the soil, which supply is obtainable in the breaking down of plant tissues, aids the minute forms of life that in turn take nitrogen from the air and render it into a form that can be utilized by peas, beans, clovers, and all others of the legume family.

In other words, the bacteria in the soil in the spring play an important part in supplying plant food, and to have these bacteria abundant and vigorous is to increase the prosperity of our growing crops. The deficiency of these bacteria is often the cause of spring-applied fertilizers not giving the results we might expect of them.

Clays especially are improved by receiving this treatment in the fall. A well-drained clay soil exposed repeatedly to sun and frost becomes more and more friable, and this is helped greatly by the application of barnyard manure in the fall.

In the application of potash to garden soils, the time from winter to spring is the best time to utilize in the scattering of the effects throughout the soil. Some forms of phosphates have to be applied several months previous to use. This is emphatically the case with raw ground bone, which is one of the most desirable forms in which phosphates can be secured.

What is true of the soil for early spring crops is also true of the land that is to be set in strawberries next spring, and of the land that is to be planted to the new orchard trees. Previous preparation of soil is a factor that it does not pay to neglect.

Danger in the Unclean Orchard.

It is dangerous to send the orchard into winter with all kinds of untidy conditions prevailing in it.

A mass of weeds encourages the field mice to build at the roots of the weeds. This is true also of tall grass, especially if it be matted. When the snow comes and forms a crust, the mice will be short of food and will then proceed, under the cover of the snow crust, to gnaw the tenderest bark of the trees. More than once hundreds of trees in a single orchard have been girdled by mice and ruined, which fact was not made apparent till the melting of the snow showed what had been done. But this never occurs where the orchard area has been kept clean, for mice do not come into a clean orchard to do much damage in winter. If they come at all, it is to trees that are nearest their hiding places.

On account of mice it is generally dangerous to pile about the trunks of trees corn stalks, straw, or other rubbish likely to encourage the mice to dwell close to the trunks of the trees. If this were not so, we might advise the use of such things for winter protection.

The unclean orchard is frequently a disseminator of disease. The twigs and branches, if not the leaves that fall to the ground, are often the harbors of both fungous disease germs and of insects. Some insects annually hibernate by boring into a twig and then cutting off the twig, which falls to the ground and protects them till the next spring. A good raking of the orchard area, followed by the burning of the rubbish, will help protect the orchard against these little enemies, which are, however, very powerful.

The greatest danger appears to be in the orchards that consist largely of old trees but in which many young trees have been recently set out to take the places of old trees that have passed their days of usefulness. In such cases the owner has been protected by the very rough bark of his old trees. He does not realize the existence of mice till it is too late.

There is a current impression in some localities that mice will not gnaw trees that are over three years of age. This impression, however, is an incorrect one. The writer, after a great deal of correspondence on the subject, finds that even ten-year-old trees are frequently fatally injured by the attacks of field mice and rabbits.

Keeping the orchard clean should include not only the orchard area. It should include the fences and hedges in the immediate vicinity. If the orchard adjoins a wood, this, too, must be taken into consideration, as rabbits frequently come from the wood when driven by hunger and will gnaw even quite mature trees.

Every man owes it to his neighbor to keep his orchard clean, as a dirty orchard is a menace to every other orchard in the locality. If all the orchards in a locality are kept clean there will be a great reduction in the number of field mice and other living things that do damage to orchards.

"Hogging Off" Corn in Dry Weather.

Coburn's "Swine in America" says that "hogging off" corn is most advantageous when the weather is dry. It is not judicious to keep hogs in the fields after heavy rains. If the season is a wet one it will be better to keep them out of the corn field, as turning them in is likely to waste the corn and do injury to the hogs and to the land. On dry ground, however, the droppings by the hogs amount to a distribution of valuable manure. In case this is liable to be washed off the land by rains after the corn has been harvested it will be well to go over the field with a sharp disk or spike-toothed disk harrow to loosen the surface soil so that the manure will be the better retained and absorbed.

IT PAYS TO BALE YOUR HAY WITH AN I.H.C. HAY PRESS

HAY should be baled no matter whether it is to be fed or marketed. Careful tests that have been made prove the fact that baled hay well kept is worth from 25 to 50 per cent more for feeding purposes than hay that is exposed to the weather in stacks and ricks. When it becomes a question of saving 25 to 50 per cent of your hay crop it is worth while for you to stop and consider, is it not? Baled hay is more valuable because there is no waste—no dust—it has more feed value. It is kept in better condition for feeding purposes and is more convenient to handle.

An I. H. C. Pull-Power Hay Press

will enable you to save the 25 to 50 per cent of your hay crop that is going to waste. It will enable you to make a good profit out of your own labor by baling your hay when you have the time.

I. H. C. hay presses are simple, strong and very powerful. They are made on the pull-power principle; that is, the pressure is applied to the hay by a pull instead of a push. They are so designed that they give greater pressure with the same amount of power than any other press of equal size. The presses are the full-circle type, which avoids frequent stopping, turning or backing of the horses.

The I. H. C. one-horse press is made with 14 x 18-inch bale chamber, and the two-horse press is made with three sizes of bale chamber—14 x 18, 16 x 18 and 17 x 22 inches. Call on our nearest local agent and ask him to demonstrate the I. H. C. hay presses to you; or, if you prefer, write us for catalogue and full particulars.

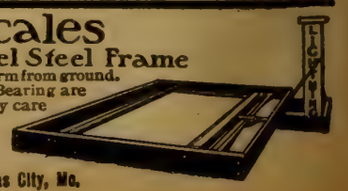
Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This Scale will last a life time with ordinary care Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.



KANSAS CITY HAY PRESS CO., 425 Mill St. Kansas City, Mo.

The Favorite Corn Husker.

This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a seasonable subscription premium. It is made for the right hand. The hooks sets at any angle to prevent glancing. Opening or closing the small end of the plate adjusts a fit to any size hand and prevents chafing. The improved shape of the plate and leather make this hook the favorite.

We will send The National Farmer and Stock Grower for one year and one Favorite Corn Husker for fifty-five cents. It takes five cents for mailing and the Corn Husker is a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Feeds For Different Periods.

"The constituents most desirable in feed for swine depend greatly upon the use to which the animal is to put them. A newly-born pig's body is largely water, and to grow he must have food that will produce tissue. That is why the milk, primarily designed to furnish proper nourishment for growing animals, needs to be, as it is, so rich in nitrogenous substance. Later, when the time comes that he is intended for quick fattening, he should, naturally, be supplied with feed containing much fat-making material, and it is that quality which has given corn its high place in finishing hogs for slaughter. It is readily seen, therefore, that different kinds of feed will be needed to furnish the most beneficial results, according to the stage of growth of the animal, the energy required for its maintenance and the end to which the animal is destined; yet it does not necessarily follow that a ration should be one-sided or be dominated by one element to the exclusion of a variety. Losing sight of this is a mistake that has been made more frequently in the use of corn than any other feed; not so much, perhaps, because it is rich in carbonaceous matter, as by reason of its convenience and cheapness in the regions where it flourishes."—From Coburn's "Swine in America."

Application of Fertilizers and Manures.

The writer this summer had an illustration of what nitrate of soda will do when applied in excessivve quantities. It will both kill and help. It kills the plants immediately in its vicinity, but helps enormously the plants a little way off. In the applying of some of this fertilizer two large lumps could not be easily pulverized. They were taken and put near some flowers. One lump was placed in a piece of very hard ground in which some nasturtiums were weakly struggling for existence. The other lump was placed within a foot of a clump of dahlias in very hard ground.

The nasturtiums immediately over the lump of fertilizer remained small and sickly during all of the season. This was expected, as the salt in the fertilizer would prove destructive at close range. But as the season advanced and the good rains dissolved the chemicals, the lateral movement of the washings as well as the lateral growth of roots made the nitrate available for the nasturtiums about three feet away. They grew with a luxuriance astonishing, producing enormous leaves and multitudes of them, with giant running stems. But the flowers were too few. It was, however, a good demonstration of the stimulating effect of nitrogen in the growth of plants. It also shows that we need not fear very greatly the over-application of a fertilizer, as its destructive effect will be very limited.

The lump of nitrate of soda applied near the clump of dahlias effectually prevented the growth of the plant. A few struggling leaves hugged the ground, but they were bright, glossy and thrifty-looking. A clump of dahlias four feet from the clump got the chief benefit, though the first-mentioned clump stood between it and the fertilizer. It grew enormously, branched numerously, had deep-green, glossy leaves and set a multitude of buds which developed into fine flowers. It was notably the most vigorous clump of dahlias in the garden. The soil was a heavy clay. The experience convinces the writer that he need not fear the free application of this fertilizer if it is kept four feet from the plants, while a reasonable amount of fertilizer can be applied even up to the stems of the plants.

It must be remembered that in the case of some of the chemical fertilizers we have to contend with a partial composition of salt, which, as all know, destroys life when used in excess.

Probably this effect would have been less marked had the fertilizer been applied several months before the seed was sown. The time element is an important one in the application of fertilizers. Where the ground is not leachy, the application of all fertilizers should be some months in advance of the time when the growing plants will demand plant food. In many cases, especially the case of potash and phosphorus, it is better to apply the fertilizers in the fall where early spring use is desired. The nitrates, however, so easily escape in the drainage waters that they should not be applied far in advance of the time of rendering service. But in the case of green barn-yard manure it will take some time to render the nitrogen in the plants available for plant food. Therefore, green barn-yard manure may be applied at any time in the fall and winter, especially if it is to be plowed under in early spring.

Loss of the Chile Pepper Crop.

A cold wave reaching the states of Puebla, Zacatecas, Aguas Calienties and Guanajuato, in Mexico, early in October, is reported as having caused the absolute loss of the chile pepper crop, so that not one shoot is left in the chile-producing states of the Republic. This is a crop that is marketed round the world, and the loss will cause much suffering in the country which depends so much upon the revenue derived therefrom. It is hoped that the first reports will turn out to be exaggerated.

Harvest Valuable Crops With Mower.

"Its perennial nature and the reports of its wonderfully productive and nutritive qualities might naturally lead the farmer, without better acquaintance, to suppose that in alfalfa he has perpetual pasturage; that he will open the gate to his live stock in the spring, send for the butcher or buyer in October, and then winter in luxurious leisure. But he finds that the easiest is not always the most profitable way. Pasturing with any stock is an expensive and extravagant method of gathering a valuable crop from high-priced land. Where land is cheap and pasture is wild, stock are not expensive help in gathering a cheap crop; but it is easily demonstrated that when land values are high and a crop value is in a like altitude, man with machinery can do the harvesting more economically than can a cow, a steer, or even a sheep." — From Coburn's "The Book of Alfalfa."

Paint is as Necessary as Fertilizer

Everyone knows that a field must be fertilized to produce a good crop. Everyone knows that farm buildings must be painted to preserve them. It is not a question of whether or not you shall paint, but which paint will be the best investment.

We know as well as you how many cheap paints there are offered, and we know perhaps better than you how little good these paints will do you. You must have the name and reputation of a manufacturer of standing because you do not claim to be an expert judge of paints. You cannot afford to experiment by testing paints in actual use to determine their value.

SHERWIN-WILLIAMS PAINTS

are time-tried and time-tested. They are the net result of years of experience in producing just the right paint for every purpose. Therefore the paints we recommend for painting farm buildings, barns, agricultural implements, etc., have just the right quality, consistency and ingredients to produce the best possible results in every instance.

Before painting, no matter what paints you use, it will pay you to talk with the Sherwin-Williams dealer in your town about what you want to paint. Meanwhile it will be money in your pocket if you will write today for our little booklet, "Paints and Varnishes for the Farm." It's free.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Nut-growing Industry.

It appears that the pecan tree begins to bear at three years old, but at first the yield is very small. A Florida orchard started in 1905 had eight trees bearing in 1908 and forty in 1909. Paying crops, however, are not expected under nine years, or full crops under twenty. Pecan trees are known to net $50 to $75 annually.

Fresh from tasting the English walnut as it is sold at perfection in London, the Englishman picked up a pecan that had fallen from the tree at Fort McKavitt, Texas, and he said: "This is the only nut I have ever tasted that is in a class with our good old walnut."

BARBARA McHENRY, 2d, and GLENFOIL THICKSET, 2d—Champion Aberdeen-Angus cow and bull at the Iowa State Fair, Minnesota State Fair and Sioux City Interstate Fair. Exhibited by W. A. McHenry, of Denison, Iowa. This is a fine pair. He is an aged champion and she a two-year-old. At the Iowa State Fair eight of the best herds of the breed were in the contest. At the American Royal Show, GLENFOIL THICKSET, 2d, was grand champion bull, and BARBARA McHENRY, 2d, was senior champion cow, and her sister was grand champion.

G. M. DITTO, BOX 39, JOLIET, ILLINOIS

MILK FARMERS' MEETING.

Ninth Annual Meeting of the Milk Producers' Association to be Held at St. Louis, Monday, November 22d.

The Milk Producers' Protective Association of Missouri and Illinois will hold the ninth annual meeting on Monday, November 22d, at one o'clock p. m. Members are requested to report at the Secretary's office before the meeting is held. Usually the rooms of the Produce Commission Association are used for meeting purposes, and it is probable that in this respect there will be no change.

This association was organized in 1901, when January, February and March milk sold at 13 cents a gallon; April milk sold at 11 cents; May, 9½ cents; June, 10½ cents; July, 11½ cents. Better prices were obtained as this organization was perfected, and 15 cents per gallon was paid during the later months in the year 1901. It has been successful ever since in keeping in touch with and holding up the market. Under cover of the negotiations by the Milk Committee, many contracts were made by members in the last two years at an average of 14 cents for the entire year, being 12 cents for six months and 16 cents for six months, and the highest price paid in the open market was 17 cents a gallon.

At the last annual meeting Mr. D. I. Furbeck was re-elected President; Mr. F. X. Speidel, of Knorpp, Mo., was elected Vice-President; and Mr. Wm. A. Fischer, of 409 Franklin avenue, St. Louis, Mo., Secretary and Treasurer.

Shippers on the Burlington Route are represented by Wm. Nolle, R. D. D. 4, St. Charles, Mo.; on the Missouri Pacific and M., K. & T. and Frisco Lines by D. I. Furbeck, Allenton, Mo.; on the Bonne Terre Route and Iron Mountain by F. X. Speidel, Knorpp, Mo.; shippers on the C. & A. by A. M. Shultz, Shipman, Ill.; on the Big Four by L. S. Dorsey, Moro, Ill.; on the Wabash and Clover Leaf Routes by Joseph Hogan, Edwardsville, Ill.; on the Burlington Eastern Route by R. E. Forwood, Piasa, Ill.; on the B. & O. by Ben Schomaker, Carlyle, Ill.; on the Southern Route by Nic Erlinger, Bartelso, Ill.

On September 4th, Hon. D. I. Furbeck, of Allenton, Mo., President of the Milk Producers' Association, went to Edwardsville, to meet with the milk producers shipping from that point. After a very interesting session he received the following in membership: Wm. H. Schafer, R. F. D. 5, Edwardsville, Ill.; John Zika, R. F. D. 5, Edwardsville, Ill.; Joseph Hogan, Edwardsville, Ill.; W. J. Grainey, Edwardsville, Ill.; Henry L. Schmidt, Edwardsville, Ill.; Conrad Heuter, Edwardsville, Ill.; J. Steinhage, Edwardsville, Ill.; Henry Wehling, Fruit, Ill.; Fred Hinke, Fruit, Ill.; Neil H. Schafer, Fruit, Ill.; J. L. Schafer, Fruit, Ill.; H. Rohrkaaste, Fruit, Ill.; Henry Schmidt, Edwardsville, Ill.; Cyrus Love, Worden, Ill.; E. C. Bardelmaier, Worden, Ill.; J. E. Dustman, Alhambra, Ill.; and Wm. J. Schafer, Fruit, Ill. These names were published before, but the list contained some errors, which are now corrected.

During the first three weeks of November it will be the duty of the members to assemble together, hold meetings and appoint delegates to act as representatives at the monthly meetings and from whom officers shall be elected.

At the annual meeting all milk producers are invited to take active part in the meeting.

All communiactions intended for action at the annual meeting should be addressed to Wm. A. Fischer, Secretary, 409 Franklin avenue, St. Louis, Mo.

Sort Out the Brood Sows.

The success of the next pig crop will depend very much upon the judgment used in selecting the brood sows which will produce the crop. Some make a practice of keeping only old sows, while others keep only the thrifty, young ones. I believe in both; that is, I keep every old sow that has been proved a prolific breeder and a good mother, and then if I do not have enough, I select the most likely gilts. Old sows which have been properly bred and cared for bring strong, lusty litters, and they usually show better litters at weaning time than young sows. Old sows are not apt to be subject to so many troublesome ailments as young sows, consequently their pigs keep thriftier. However, no matter how well supplied one is with matured brood sows, it is well to pick out some of the likely young ones and have them coming on to take the places of any others which may drop out of the breeding herd. Pick out the brood sows now and begin to fit them for their business next spring.—L. C. Brown.

The Price of Corn.

Cash corn No. 2 sold at St. Louis on October 30th at 61½ to 62 cents a bushel; No. 3 new corn sold at 58 cents; mostly new sold at 55½ to 56 cents. At Chicago the December option was quoted as closing, October 30th, at 59¼ cents, against 58 cents on September 30th; 56¼ cents on August 31st; 55 cents on July 31st; and 58 cents on June 30th. The May, 1910, option was quoted at 55⅝ cents on June 30th, 60¼ cents on September 30th, and 61¼ cents on October 30th. It appears as though with active trading corn may advance a point or two before the close of the December option.

A Forty-cents Oats Market.

Cash oats at St. Louis sold at 40 cents a bushel on October 30th, which is the same as on September 30th. At Chicago, the December option closed at 39¾ cents; May, 1910, option at 42¼ cents; and July, 1910, at 40 cents. It does look like an even movement in oats since July 31st, when the cash quotation was 40 to 41½ cents.

Great Automobile Works.

The Times Square Automobile Company have St. Louis headquarters near the Union Station, corner of 18th and Pine. This is a great organization, and although many of the machines have been used, they have new cars also of the best makes. It is a very large and reliable concern, affording buyers the opportunity to get the worth of their money and a first-class auto at the same time. Please mention The National Farmer and Stock Grower if you write or call. It will help the trade.

Free Book For Dairymen.

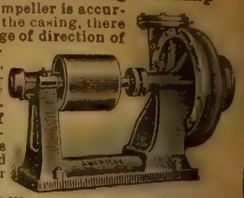
A valuable book has been issued for free circulation among dairymen. It is published in the interest of Pratts dairy foods and remedies, but it is all the better for that. It is worth having, worth writing for and well worth studying. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask or a copy of "Pratts New Cow Book."

Broom corn in car-load lots is selling at $210 to $230 per ton on the St. Louis market.

More Water

Than is delivered by any other style of pump and 25 to 33⅓% more water than is raised by any other pump of the same type is produced by the

"American" Centrifugal Pump



It's because the impeller is accurately machined to the casing, there is no sudden change of direction of the water in passing thru the pump, and the entire mechanical efficiency contributes directly to the raising of water. "American" Centrifugals are guaranteed rigidly. Ask for our new catalog.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmers' instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, Hale Publishing Co., 3550 Vista Ave., St.Louis,Mo.

FOR THE IMPROVEMENT OF LIVE STOCK.

The Large Amount of Money Generously Devoted to the Advancement of Live Stock Production by Clay, Robinson & Co.

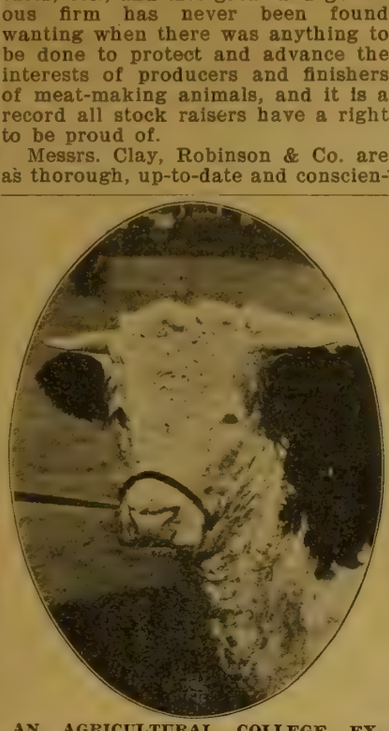
Noticing that the live stock commission firm of Clay, Robinson & Co. was offering special premiums for exhibits at the American Royal Show of 1909 to a considerable amount of money, we turned to the premium lists of the Chicago International Live Stock Show for further information on this subject, and found that for Agricultural College live stock exhibits no less than one thousand dollars was paid in special premiums by this enterprising and generous firm every year.

Upon investigation we find that the special premiums offered and paid by Clay, Robinson & Co. at the Chicago International Show alone, including the present year, amount in all to the total of ten thousand dollars, and that at all the live stock shows over a period of years it can be said without the slightest exaggeration that the money thus donated has amounted to a grand and magnificent total of twenty-five thousand dollars.

Messrs. Clay, Robinson & Co. do this in a regular, consistent way for the purpose of encouraging the production of better live stock, and their premiums are usually offered to be competed for by the Agricultural Colleges of the various states for the best exhibits of fat cattle, hogs and sheep of their fitting. Clay, Robinson & Co. bear in mind that the college student of the present is the farmer or instructor of the future, and that the right way to help the farmer is to encourage him when he is young, that he may derive benefit from his early education all through life. The cash prizes donated by Clay, Robinson & Co. have stimulated the colleges to more active endeavor year by year, and their exhibits form a most interesting part of the great International Shows.

In keeping with his generous offerings of premiums to be awarded for live stock exhibits, Mr. John Clay personally maintains a chair of agricultural journalism at one of the leading Agricultural Colleges. The Clay, Robinson & Co. special premiums have been donated for the encouragement of students, judging contests, corn shows, Farmers' Institutes, etc., and this great and generous firm has never been found wanting when there was anything to be done to protect and advance the interests of producers and finishers of meat-making animals, and it is a record all stock raisers have a right to be proud of.

Messrs. Clay, Robinson & Co. are as thorough, up-to-date and conscientious in their work as salesmen at the markets of St. Louis, Chicago, Kansas City, Omaha, St. Joseph, Sioux City, St. Paul, Denver and East Buffalo, as they are in the encouragement of the farming and live stock interests and represent in the highest degree the enterprise, honor and integrity of live stock interests.



AN AGRICULTURAL COLLEGE EXHIBIT—HEAD OF DEFENDER, grand champion steer at the Chicago International Show of 1906 and exhibited by the Iowa State College in 1907. Winner of one of the special prizes donated by Messrs. Clay, Robinson & Co., live stock commission agents, for exhibits by Agricultural Coolleges.

Sir Richard Cooper Trophies.

Sir Richard Cooper, Bart., Berkhamsted, England, in addition to being the proprietor of the famous sheep dip manufactory which bears his name, is one of the leading sheep breeders of that country. In order to stimulate competition among the breeders of this country, he offers seven silver cups, each valued at $50, one to be awarded to the best collection of five head of each of the following breeds shown at the 1909 International: Shropshires, Hampshires, Oxfords, Southdowns, Cotswolds, Lincolns and Dorsets. These classes are listed in the International premium list and will cause active competition.

McGavock's St. Louis Sales.

A four-days' sale of pure-bred cattle will be held under the management of W. C. McGavock, of Springfield, Ill., at the Special Sale Pavilion, National Stock Yards, Ill., November 16th, 17th, 18th and 19th. Nearly two hundred registered cattle of the Aberdeen-Angus, Shorthorn and Hereford breeds will go under the hammer on this occasion, and never before were there so many, and never before have there been so many reputable breeders represented in a St. Louis sale.

Tuesday, November 16th, fifty Aberdeen-Angus, consisting of ten bulls and forty cows and heifers, will be offered. The leading strains of the breed are well represented, and by reference to the list of consignors, which will be found in the advertisement, it will be seen that some of America's best breeders are contributors. Those desiring herd headers or bulls that will sire the market-topping steer, for which this breed is famed, will find them here, and the forty females catalogued present absolutely the best opportunity that has ever been offered to buy high-class Angus females in a St. Louis sale.

Wednesday and Thursday, November 17th and 18th, ninety Shorthorns, consisting of twenty bulls and seventy cows and heifers, will be sold. There are forty Scotch cattle catalogued, and this is more of this celebrated strain than are catalogued for the best of sales. No such Shorthorn sale has been attempted by Mr. McGavock anywhere, and it is very seldom that breeders are given the opportunity to bid upon so many choice cattle. Not only is the offering nearly half Scotch, but the greatest bulls of the breed are represented by their get—Imp. Golden Drop Victor, Imp. Pride of the Realm, Imp. Cock Robin, Choice of All, one of the greatest sons of Choice Goods; Golden Prince, an Acanthus son of Imp. Bapton Sovereign; Ceremonious Archer, the International champion; White Hall Count, Anoka Sultan and White Hall King, three of the best sons of White Hall Sultan; Imp. Langford Eclipse, Imp. Scottish Pride, are all represented by their get in the auction, as well as other noted bulls, both imported and American-bred.

Friday, November 19th, fifty Herefords, about equally divided as to sex, will be sold. Many prize winners will be found among them, and no more famous blood lines were ever catalogued for a Hereford auction. The breeders presenting them are among the most reputable in the land, and whatever may be your wants in the line, you will find it at the National Stock Yards in this auction. On nearly every page is found the blood of the $10,000 Dale, or that of the great Beau Donald and Beau Brummel, and these are the strains that have been winning the prizes and commanding the prices.

A full list of the consignors will be found in the advertisement, and for catalogues address W. C. McGavock, Sale Manager, Springfield,Ill.

The Market For Wheat.

St. Louis is the soft-wheat market, and there appears to be no other. On October 30th St. Louis was selling No. 2 red wheat at $1.21 to $1.24 per bushel and No. 3 at $1.19 to $1.22½, and No. 4 at $1.05 to $1.17. Hard winter wheat was selling at $1.06 to $1.10. The Chicago Board of Trade was quoting December wheat at $1.05⅛; May (1910) wheat at $1.04¾; and July (1910) wheat at 97⅞ cents a bushel. These figures inform farmers what the St. Louis market was on the last day of October and what the traders in Chicago think of the future market values of wheat, all of which is subject to radical changes.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock (clothing dealer), 890 Carrier Building, East Hampton, Conn., says if any reader afflicted with a kidney or bladder trouble will write to him he will direct them to the splendid home remedy he so successfully used. He is glad to do this and does not wish you to send him money.

Try Kerosene Engine
30 Days Free

Gasoline Prices Rising.

You can't run a farm engine profitably on gasoline much longer. Price of gasoline going sky high. Oil Companies have sounded the warning. Kerosene is the future fuel and is now 6c to 10c a gallon cheaper than gasoline. The Amazing "Detroit" is the only engine that uses common lamp Kerosene (coal oil) perfectly. Runs on gasoline, too, better than any other. Basic patent. Only 3 moving parts. Comes complete ready to run. We will send a "Detroit" on free trial to prove all claims. Runs all kinds of farm machinery, pumps, saw rigs, separators, churns, feed grinders, washing machines, Silo fillers and electric lights. Money back and freight paid both ways if it does not meet every claim that we have made for it. Don't buy till you get our free catalog. 2 to 24 h. p. in stock. Prices $29.50 up. Special demonstrator agency price on first outfit sold in each community. 2000 satisfied users. We have a stack of testimonials. Write quick. (20)

FEED MILLS

Picking Seed Corn Out of the Field.

A McLean county, Illinois, farmer tells me he has quit selecting his seed corn from the stalks. He says that for eight years he went into his field during the last of September and selected the earliest-ripened ears, with the result that his corn began to mature earlier and produce smaller ears, due to the shorter growing season. He thinks it is a mistake to constantly pick the earliest ears, unless, of course, one is working for an earlier strain, or is selecting seed which is to be planted farther north. He now selects his seed as he husks, and he finds that his crop ripens more evenly when planted with that kind of seed.

There is a wide difference in the common practices of selecting seed corn from the field. When the same variety of corn is grown year after year, it is important that one starts with a variety which is adapted in habits and ripening period to the region where it is to be grown. When this is done one should pay more attention to desirable characteristics of the ear than to mere earliness. Many hold that this can be done only by picking the seed ears direct from the stalks and then studying both together. Others say that by selecting the ears from the wagons, at husking time, one gets all of the most nearly perfect ears, and it is a matter of small importance on what sort of stalks they were grown. When selecting from the wagon one gets all the good ears, no matter under what soil conditions they were produced.

I myself believe that, unless one is breeding or selecting with reference to particular characteristics, that selection of seed ears at husking time will give seed which will produce more nearly uniform ears and a greater number of bushels per acre.—L. C. Brown.

Missouri Wins the $500 Silver Cup.

In the live stock judging contest held at the American Royal Live Stock Show, the live stock judging team from the Missouri Agricultural College made the highest score, and in doing so won the beautiful $500 silver Loving Cup offered by the Stock Yards Company of Kansas City.

Iowa, Nebraska and Kansas Agricultural Colleges all had strong teams competing for this much-coveted prize, but the Missouri team won by a large margin and will carry home the cup. The highest scoring man in the whole contest was C. M. McWilliams, of Knox county, Missouri. The second highest man was John E. Ryland, of Lafayette county, Missouri. The same kind of instruction received by these young men in the Agricultural College will be open to students of the Short Winter Course in Agriculture which begins November 1, 1909.

Early Damage to Trees by Rabbits.

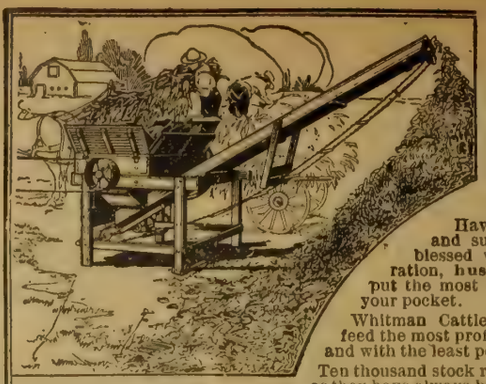
A fruit grower of Southern Pennsylvania, who planted an apple orchard last spring, wrote to Prof. H. A. Surface, State Zoologist, Harrisburg, that for the past two months rabbits have been "barking" the trees, and some of the trees have been already seriously injured. He asked for a "solution" that could be rubbed on the trees to stop further damage, and inquired as to the merits of gas tar for that purpose. He said that one of his neighbors had used grease or tallow with success.

Professor Surface answered as follows: "Replying to your recent letter, I beg to say that it is unusual for rabbits to peel trees at this time of year, but I am satisfied that the methods of preventing this destruction during the winter would be efficient and safe now. Among these are the following, stated in order of preference by myself:

1. Painting with white lead and raw linseed oil, made as thick as house paint.
2. Painting or spraying with the boiled lime-sulphur wash containing considerable sediment.
3. Rubbing the trees with tallow, blood, a freshly-killed rabbit, or the entrails of any animal.
4. Protecting by means of wire netting.
5. Use of poison, traps, dogs and gun.

"As a matter of fact, No. 5 should be combined with any one of the others. During the winter rabbits will often leave the trunks of trees alone if freshly-cut branches are dropped on the ground where they can not fail to get them. I do not know if this would work in summer, but recommend a trial.

"A gentleman has just written to me that he used coal tar successfully for borers, but did not state the kind of trees on which he used it. I am seeking further information on the subject. If coal tar or gas tar did not injure the trees, it would be effective in preventing damage by borers and rabbits, but I do not think it is safe to recommend this as a preventive, for, in my opinion, there is some danger of damage to the trees, excepting under unusually favorable conditions. I once saw what was formerly a nice orchard that had been killed by the application of mixed tar and linseed oil."



Have As Much Horse Sense As Your Horse

A horse, when feeding on a meal of grain ration, if it be within his reach will take a mouth of grain and then hay and mix the two before swallowing, proving the basic wisdom of the coarse ration.

Have as much horse sense as your horses and supply your cattle who haven't been blessed with horse wisdom with the coarse ration, husk, corn and cob together, that will put the most flesh on their ribs and most dollars in your pocket.

Whitman Cattle Feeding Machines enable you to feed the most profitable ration, at the lowest initial cost and with the least power to operate.

Ten thousand stock raisers have proven them the best still as they have always been. It isn't how much an animal eats but how much makes flesh that counts. Corn prepared with a Whitman Machine—in the Whitman way makes pound for pound twice the flesh that shelled corn will—and costs no more to prepare than it does to husk corn by hand.

Let us tell you the facts about this wonderful machine, facts that mean money in your pocket—and direct you where to see them. Whitman Machines are sold only by the best dealers in each community—send for information now—today.

The Storing of Seed Corn.

The storing of seed corn is not successfully accomplished by everyone. The storing of ears of corn for seed is a very different thing from the storing of corn for the use of stock or for selling in the general market.

A few important principles need to be kept in mind when storing corn to be used for seed. One of these principles is that the seed must be thoroughly dried before it is subjected to freezing weather. If one visits the greatest of the corn seed establishments he will find the drying question one of great importance. There expensive houses are built for the purpose of drying corn and in them fires are maintained for weeks to keep the corn drying steadily. The writer has visited many of these drying houses and noted the care with which many things have to be guarded in drying large quantites of corn at one time.

It is not enough to keep the corn drying house warm during the drying period. It must be also extremely well ventilated, so that the moisture coming out of the corn may be carried into the outer air. If the drying house be not well ventilated the result is that as soon as the temperature falls the moisture condenses and settles on the corn, thus opening the way for molding. In one large drying establishment the writer noted that no corn was piled against the side of the house, but that the racks were all some distance from the walls. He asked the cause of this and was told that experience had shown that when corn is piled up or placed on racks next the wall it is likely to mold because the air being warm in the building, draws a great deal of moisture from the corn, which is condensed to some extent near the walls on cold days and causes the corn to become moist and ultimately to mold.

This is a point worth keeping in mind, as the principle exists in a small drying establishment as surely as in a large one, though it is not so obvious. When corn is dried by heating, it is a process of drawing the moisture out of the corn and storing it in the air in the building, and this moisture must then be gotten into the outer world and some dryer air admitted.

It is known that fully-dried corn will stand a large degree of cold. This is largely due to the fact that so much moisture has been taken out of the germ that not enough has been left to rupture when the moisture in the germ becomes frozen. Well-dried corn will come through almost any kind of weather and germinate when planted. But, as a usual thing, corn has in it so much moisture that when that moisture is frozen the germ tissues are ruptured and the life in the germ destroyed.

In the storing of seed corn conditions must be such that the drying process can go on without a re-condensing of the moisture. The old-fashioned way of drying seed corn by hanging in festoons by the open fireplace was an ideal one, as there was an abundance of warmth, while the chimney gave perfect ventilation. Moreover, no condition arose that again subjected the corn to a long-continued moist atmosphere.

Missouri Oats Crop.

The oats crop of Missouri in 1909 was raised on 698,653 acres, against 717,286 acres in oats in the year 1908. But this year the yield was 18,808,576 bushels, against 11,901,440 bushels in 1908. The increase in yield this year was practically 10 bushels per acre.

Get Best Prices For Your Stock.

IF you have Cattle, Hogs or Sheep to market, the question of what firm to consign to is an important one. It's a dollars-and-cents proposition to you. All commission firms charge exactly the same, so it narrows down to finding out which one is likely to get you most money for your stock. You owe it to yourself to investigate, to consider and to decide according to the facts. We claim to have absolutely the best salesmen--that is, the best price getters, and the best facilities, without any exception, of any commission firm in existence. That's a broad claim, but it's easy for you to find out whether or not we are telling the truth. Ask your banker. Ask any stock feeder or shipper who is acquainted on the leading markets. We have been established for nearly twenty-five years. We can't afford to misrepresent. Our annual business, at all markets, exceeds $75,000,000.00, and it was built up by square dealing.

All we ask is a chance to prove our claims. If you have stock to ship during the next three months, fill out and mail us the coupon and we will send you (free) for that length of time our 12-page illustrated weekly market paper "THE LIVE STOCK REPORT."

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.

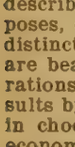
Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

Won a Second Prize.

We have taken great pleasure in sending to Mr. J. M. Gresham, of Rural Route No. 2, Smyrna, Tenn., a check for ten dollars to pay one of The National Farmer and Stock Grower Special Seed Corn Premiums. Last April Mr. Gresham paid his subscription to The National Farmer and Stock Grower, and we sent him a half-pound package of Pascal's Grand Champion Reid's Yellow Dent Corn as a premium. This corn being sown and harvested, he selected a ten-ear lot, which was exhibited at the Tennessee State Fair for 1909 and won second prize, which amounted to $5.00, and we added $10.00 according to our offer, because the prize was won by corn raised from our premium seed. We are very well satisfied to pay these premiums when justly earned, and will do so promptly.

Paints For the Farm.

The correct title of the book is "Paints and Varnishes for the Farm." It is issued by the Sherwin-Williams Co., of 689 Canal Road, Cleveland, Ohio. It is addressed to the progessive farmer who desires to become a practical painter. It tells what paint to buy, how to open the can, and how to obtain the best results. It explains what paint to use, how much surface a gallon of paint should cover, and describes the paints for different purposes, explaining matters clearly and distinctly. Accompanying the booklet are beautiful plans for interior decorations which show astonishing results by the use of simple suggestions in choosing colors. It also explains economies in painting, especially in regard to barns and outbuildings. We advise all our readers to address Sherwin-Williams Co., 689 Canal Road, Cleveland, Ohio, and to ask for a copy of the booklet "Paints and Varnishes for the Farm." They will be agreeably surprised with the results.



Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

A Boomerang Argument.

It is not an uncommon thing to hear people who mean well, but are poorly informed, argue that COCA-COLA, the popular, temperance drink, must contain cocaine, whiskey or morphine or some other narcotic drug because it keeps them awake. Such people are ignorant of the fact that narcotics do not keep you awake, they put you to sleep. Cocaine, morphine, whiskey and other narcotic drugs depress the nerve cells of the brain and produce sleep. In large doses they produce unconsciousness. On the other hand, COCA-COLA, tea and coffee, all of which owe their refreshing property to a substance called caffeine, are refreshing to the nerve cells of the brain, and, therefore, increase the activity of the mind, thus keeping you awake instead of putting you to sleep.

But why argue a matter which has already been settled by chemical analysis? The Chief of the Bureau of Chemistry of the Agricultural Department at Washington has analyzed this temperance drink, and reports that it does not contain narcotics. The official State Chemists of Georgia, Virginia, Texas, Minnesota, Illinois, Pennsylvania, Alabama, and many other states, give the same verdict. The Professors of Chemistry of Alabama Polytechnic Institute, Tulane University, the University of South Carolina, Columbia University, University of Illinois, and other leading educational institutions throughout the United States, give the same verdict. The Chemists of the City Boards of Health of numerous cities throughout the country, as well as the leading Commercial Chemists, give the same verdict. All agree in giving COCA-COLA a clear bill of health. COCA-COLA is not only not injurious, but is much superior to tea and coffee as a refreshing beverage, in that it is free from tannic acid—the only material which makes tea and coffee at all objectionable.

For free booklet of chemical analyses of COCA-COLA, address The Coca-Cola Company, Atlanta, Ga.

Producing Nitrogen.

A small advertisement in this edition relates to legume bacteria cultivated for the purpose of enriching the soil to furnish nitrates to plants. A small quantity is advertised at a nominal price to enable a farmer to experiment for himself and to prove to himself the great value of this discovery. It is covered under the patents of Earp-Thomas and is called Heyl's Concentrated Nitrogen Producer.

The Harvester World is the name of a magazine issued by the International Harvester Company, which records the work and progress of the company. It appears to be intended as a link to bind all operatives of the company together in their work. The adoption of a monagram combination of I. H. C. on all parts of their machines indicates that they stand by every machine sent out. The International harvester people—trust or no trust—does not appear to be engaged in any false pretenses, and that is why people have no prejudice against them.

The cotton ginners report ginning 6,943,000 bales of cotton up to November 1st, which is considered to be 70 per cent. of the entire crop. This would indicate a crop of 9, 918,571 bales.

FARM AND RANCH LANDS.

ARKANSAS.—Fortunes in Rice Growing. An industry that originated seven years ago is making the prairie lands of Arkansas produce splendid incomes. Write for free booklet entitled "Arkansas Rice." Address, **E. W. LaBEAUME,** 1327 Pierce Building, St. Louis, Mo.

ARKANSAS.—For Sale: 160 acres good land; five Brood Mares, eight young Mules, one Jack, one Stallion. A bargain at $4,000.00. **Dr. J. H. McCurry,** Grubbs, Ark.

ARKANSAS.—Best farms and timber lands in the U. S., and at the lowest prices. Homeseekers' Guide mailed free. State Maps, 10c. **Moore,** "The Land Man," Searcy, Ark.

MICHIGAN.—I sell Farms in Oceana, the best county in the United States; fruit, grain and stock. Write for list. **J. D. S. Hanson,** Hart, Mich.

MISSOURI.—For Sale: Finest 1,500-acre farm in Jackson county, Missouri; improvements worth $65,000; ten miles Kansas City, Mo., by rock road; R. R. station on farm; land, improvements in good condition; 2,580 acres well fenced, cross fenced; four good houses; eight splendid barns; rich corn land, finely watered; all good corn land or fine blue grass land; 1,500 acres blue grass; $40 acre; one-third cash, balance long time, 6 per cent.; other high-class farms in Western Missouri and Eastern Kansas. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI.—Central Missouri Farms. For farms that will prove profitable and satisfactory as homes and investments, write for new list. Farms described and priced. Very productive grain, stock and blue grass farms. **Hamilton Realty Co., Fulton, Missouri.**

MISSOURI.—For Sale: 800-acre farm; note what I say—it's a great bargain; improvements worth $15,000; abundance of fruit; will grow 60 to 80 bushels corn acre; did grow 32,000 bushels corn on 400 acres in one year; grows red clover, timothy and blue grass the best; high-class Lafayette county, Missouri, farm; two hours from Kansas City; eight St. Louis; twelve Chicago; practically all good corn land; farms adjoining held $100 to $125; price, $75 acre; easy terms. After January 1st, 1910, the price of this land will be $100 per acre. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

OREGON.—Learn how to live for pleasure and profit in Oregon; Clackamas county "the Gem of the Willamette Valley," offers rare opportunities to homeseekers and investors; mild climate, with no extremes; good markets for fruit and farm products; land is cheap; soil fertile; water and timber abundant; close to center of large population; splendid schools and factories. For information and literature write **Dept. C, Commercial Club,** Oregon City, Ore.

OKLAHOMA.—Million acres Osage Indian Reservation opening. Send quarter for information. **Osage Development Co.,** Tulsa, Oklahoma.

OKLAHOMA—FARMERS of small means, **Oklahoma** sells two million acres school land in November and December on forty-years' time, which gives you chance to own home. Big opening of 4,000,000 acres Indian land, four-years' time. One crop pays for land. Send 25c. for descriptive booklet telling all about it. **M. N. Due,** Publisher, Dept. 31, Okeene, Okla.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS.—For any information regarding Farming and Ranch Lands in the most rapidly developing and finest section of the great Lone Star State write **Geo. L. Abbott,** Land and Live Stock Commission, Lock Box 16, San Angelo, Texas.

TEXAS.—One Thousand Acres; 75 per cent. agricultural, the balance grazing, with an inexhaustible supply of excellent water. Price, $15.00 per acre; half cash; deferred payments to suit the purchaser. Situated 10½ miles from Sabinal. Also **Twenty-six Hundred Acres,** 11 miles from Sabinal; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. **Fourteen Hundred Acres** grazing land, watered by springs. $3.50 per acre. All in Uvalde county, Texas. Address, **Albert D. Evans,** North Fort Worth, Texas.

STOCK RANCH, 2200 ACRES

And grazing bargain in Taney Co., Mo. Some of you people who are running stock on high-priced land should BUY this; price, $3.50 per acre; fine timber, set to grass; 1,000 acres tillable when cleared; big springs, flowing streams; mild winters; cheap land getting scarce; here is your chance; big list Missouri, Kansas, Arkansas, Oklahoma, free. Pocket map either state, 15c. postage. Get busy on this cheap land. LOTT, "The Land Man," 301 Finance Bldg., Kansas City, Mo.

Texas Stock and Grain Farm

588 acres, one mile from **Wichita Falls, Texas,** a live town of 9,000 people, large manufacturing and commercial interests, six railroads, natural gas, etc. 300 acres under **IRRIGATION FROM SPLENDID PRIVATE IRRIGATION PLANT, AFFORDING AN ABUNDANCE OF WATER AT ALL SEASONS.** Balance of land rolling pasture, all in cultivation and grass; rich, red, sandy loam soil, excellently adapted to corn, wheat, cotton, oats, all vegetables, **ALFALFA** and fruits of all kinds. Twenty-acre thrifty peach orchard, strawberries and small fruits.

Good farm house, tenant house, barns, etc. Fenced with wire.

Land is rich and lays excellently, and is one of the finest stock, grain and general-purpose farms in the **SOUTHWEST.** Fronts one mile on railroad and public highway.

We can sell this farm at a sacrifice. Owned by a non-resident. It is worth $75.00 per acre. Terms reasonable.

For price and detailed information, address **ALFRED RICKETT'S REALTY COMPANY, 608 Chestnut Street, St. Louis, Mo.**

THE MILD CLIMATE OF VIRGINIA

Offers splendid opportunities for farming, stock raising, dairying and fruit growing. Winters are short. Climate healthful. Markets near. Lands reasonable but advancing each year. Write for information to **G. W. Koiner,** Commissioner of Agriculture, Richmond, Virginia.

VIRGINIA.—VIRGINIA FARMS. Poultry, Fruit, Dairy, Grain, Stock, Truck Farms and Colonial Estates. Low prices; **delightful** climate; abundant pure water. **Large Eastern** markets. Timber lands a **specialty. Write** for free illustrated catalogue. **WILES LAND COMPANY, Inc., RICHMOND, VIRGINIA.**

RAILROAD LANDS VERY CHEAP, FREE TRANSPORTATION,

TO quickly build up population along the Washington & Choctaw Railroad, in new reservation just thrown open, we will sell a little of our 100,000 acres of $25 and $50 lands for $17.50 per acre. Magnificent opportunity for settlers, investors and speculators. Easy terms, as low as $1 per month. Any size tract from 10 acres up. Gulf Coast land the most productive in the world; 10 acres will yield an income of $5,000 a year. Don't buy lands anywhere until you investigate this. Send us your name, a postal card will do, and we will send you complete details, also a railroad pass free. WASHINGTON & CHOCTAW LAND CO., 6155 Times Bldg., St. Louis, Mo.

CHEAP LANDS IN THE SUNNY SOUTH.

100 Town Lots, size 66 feet by 155 feet, in the Town of Yellow Pine, Ala., on the Mobile and Ohio Railroad and Washington and Choctaw Railroad. 25 lots are now offered for Ten Dollars per lot as an inducement to Northern Settlers. Only one lot sold a person. Title perfect. Address, **R. Del Buono,** Yellow Pine, Ala.

CASH FOR YOUR FARM OR BUSINESS,

No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

"LAND"-4¢

I want every man who is interested in securing land, either for a home or as an investment, to send for my book—"Land." It is full of facts you ought to know about. Government land, and land offered for sale in various sections of the country. These facts about climate, crops, rainfall, cost, etc., will help you to intelligently and profitably choose land in Oregon, Washington, California, Idaho, Wyoming, Texas, Florida, Louisiana, and many other states, as well as in Mexico, Cuba, Central America and Canada. Send 4c today to help pay for mailing.

F. E. DOBBINS, Land Commissioner 814 Finance Bldg., Kansas City, Mo.

The Universal Book of Original and Selected Poetry.

This book consists of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. This is our own publication. It is not sold by anyone else. We issued the Universal Poetry Book for the purpose of using it as a subscription premium in connection with our own new successful paper, the Universal Magazine. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions—a splendid publication. Anyone who will send us 25 cents to pay for one-year's subscription to the Universal Magazine can select one copy of the Universal Poetry Book as a free premium and we will send it prepaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

THE COARSE FEEDING RATION

Prepared by the Whitman Machine, Now Generally Used by Progressive Stock Feeders.

Economy of labor is just as important on a farm as it is in factories, and the success of many stock feeders is due to the thorough manner in which the stock foods are handled and fed without pulling, hauling and handling beyond that which is absolutely necessary. For many years there was no machine on the market that would prepare the corn crop for the feed yards in an expeditious and satisfactory manner. At the same time it was not considered desirable to feed the corn cob as well as the husk, the stalk, the leaves and the grain. About the time that the Agricultural College experts discovered that the corn cob also was a beneficial part of a balanced ration a machine was invented which most thoroughly filled the bill, this being the Whitman Corn Crushing Machines advertised on page 6 of this edition, and designed to crush the entire corn product into perfect fattening ration, putting more fat upon the stock, keeping their digestive powers in healthy condition, utilizing material otherwise going to waste and doing it at a minimum of cost.

Directly the Whitman machine was placed upon the market it was pronounced by stock feeders a great success. We have before us eighty or more testimonials, each saying in substance that the machine was better than was represented. But the Whitman Agricultural Company are ever studying how to make their goods more valuable, and have just perfected a new five-foot machine that will meet the practical requirements of all stock raisers and feeders. The machines are made in different sizes, suitable for owners of small numbers of stock, and for the largest operators.

The Whitman Company's catalogue will be sent anyone who writes for it without any charge whatever. All inquiries for catalogues, etc., should be directed to The Whitman Agricultural Company, Dept. M, St. Louis, Mo.

SUSAN CUMBERLAND—Junior champion Shorthorn female at the American Royal Show, and first-prize junior yearling heifer. Exhibited by D. R. Hanna, of Ravenna, Ohio.

GREATEST OF ST. LOUIS SALES

at

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS, NOVEMBER 16, 17, 18 and 19, '09.

TUESDAY, NOVEMBER 16th.

Fifty Attractive and Highly-bred Aberdeen-Angus.

Ten Bulls and forty Cows and Heifers from the herds of S. Melvin, Greenfield, Ill.; J. H. Rea & Son, Carrollton, Mo.; Lyman B. Mitchel, Danvers, Ill.; Jas. Rhodes, Bethany, Ill.; V. E. Lawrence, Salisbury, Mo.; C. J. Bear, Monticello, Ill.; E. A. Schwarm, Loogootee, Ill. There are Blackbirds, Prides, Queen Mothers, and others represented. The offering, judged from either an individual or pedigree standpoint, is absolutely high-class, and never before were the breeders and farmers of this territory permitted to bid upon such a grand offering of this breed.

WEDNESDAY and THURSDAY, NOVEMBER 17th and 18th.

Ninety Select Shorthorns.

Twenty Bulls and seventy Cows and Heifers, comprising not only my most attractive St. Louis sale, but the greatest offering that I have ever gathered together of the breed anywhere. Forty head are Scotch, and this is as many or more of this great strain than are catalogued for the best of auctions. Many are from imported dams, and the imported sires represented by their get are Imp. Golden Drop Victor, Imp. Pride of the Realm, Imp. Cock Robin, Imp. Langford Eclipse, Imp. Cisely's Pride, Imp. Uppermill Omega, Imp. Choice Archer. There are also sons and daughters of White Hall Count, Anoka Sultan, and White Hall King, three great sons of Imp. White Hall Sultan; Choice of All, one of the best sons of Imp. Choice Goods, Ceremonious Archer, and others of note. There are catalogued two full sisters to the $1,000 and highest-priced animal in the recent George & Stanton sale at Aurora, Ill. The consignors are N. H. Gentry, Sedalia, Mo.; E. C. Holland, Milton, Ia.; S. M. Quaw, Wausau, Wis.; R. S. Coinon, St. Louis, Mo.; Prewitt & Sons, Clarksville, Mo.; Jno. W. Shaw, Harrisburg, Ill.; E. M. Cooley, Oblong, Ill.; C. F. Dawson, Central Lake, Mich.; W. C. McGavock, Springfield, Ill.; and Gaius Paddock, Moro, Ill.

FRIDAY, NOVEMBER 19th.

Fifty Highly-bred, High-class Herefords.

There are twenty Bulls and thirty Cows and Heifers. They are from the herds of J. C. Adams, Moweaqua, Ill.; H. N. Thompson, Woodstock, Ill.; C. W. Thompson, Woodstock, Ill.; C. W. Davis, Woodstock, Ill.; Dow Van Buskirk, Roann, Ind.; Edw. B. Clark, Golconda, Ill.; and N. J. Hiltabrand, Lostant, Ill. There are quite a number of show cattle listed that have been winners at recent Fairs and Shows, and no better-bred offering was ever catalogued for a sale anywhere. Not only are they the get of champion Bulls, and Bulls that have sired champions, but several also from dams that have produced champions.

For catalogues, address,

W. C. McGAVOCK, Sale Mgr., Springfield, Ill.

Elgin Butter Quotation.

The official quotation of the Elgin Board of Trade, as furnished us by by the Elgin Dairy Report, was 31 cents per pound, as compared with 31 cents on October 25th of this year, 28 cents a year ago, 24 cents two years ago, and 26 cents on same week three years ago. In New York on same date choice creamery was selling wholesale at 32 to 32½ cents, which means at retail 40 to 45 cents a pound to families that can afford it.

Fairs and Expositions.

The Nineteenth Annual Convention of the American Association of Fairs and Expositions will be held at the Auditorium Annex Hotel, in the city of Chicago, Thursday evening, December 2d, 1909, at six o'clock. The session will begin with the annual dinner, according to the custom of the past few years. This is a very important body and has been the means of bringing many Fairs to a paying basis by looking after the interests that are mutual. Hon. T. J. Wornall, of Liberty, Mo., is President; and Mr. Charles Dowling, Secretary of the Indiana State Board of Agriculture, is also Secretary of the association.

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

OVER 1,000 AUTOS ON SALE at

BARGAIN PRICES.

We have, constantly, more than 1,000 new and used cars on the floors of our four big houses and are by far

THE LARGEST DEALERS IN THE WORLD.

TIMES SQ. AUTO CO.

ST. LOUIS, Cor. PINE & 18th St.

Kansas City 1701-1703 Main St. | Chicago 1332-1334 Michigan Av. | New York 215-217 W. 48th St.

The editor of The National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated and is a handy, useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Agriculture as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Grand Prize

(Highest Award)

HAS BEEN AWARDED TO THE

United States Separator

at the

Alaska-Yukon-Pacific Exposition

SEATTLE, WASHINGTON

¶Again the **stamp of official approval** has been placed on the cream separator which the dairyman has found to be **most profitable, easiest to run, easiest to clean,** and **handsomest in appearance.**

¶Again the "would-be" competitors of the United States Separator **go down in defeat.**

¶If you want to see for yourself why the United States Separator was awarded the **Grand Prize,** go to our local agent nearest you. He will show you.

¶Or ask us, direct, for information.

THE VERMONT FARM MACHINE CO.

BELLOWS FALLS, VT.

[Please mention National Farmer and Stock Grower.]

THE IMPORTED JAP, 75,265—Ideal Jersey bull. Winner of first prize, St. Clement's Show, Island of Jersey, 1905 and 1906; son of Eminent's Raleigh, sire of sixteen prize winners, and seventeen daughters with high butter tests; his dam was Fontaine's Gold Medal, champion female, St. Clement's Show, 1906; also Gold Medal winner in butter test. THE JAP has scored 98.02 per cent. of a perfect scale of points by Jersey cattle standards. THE JAP is the herd bull at Meridale Farms, Meredith, Delaware county, New York; owned by Ayer & McKinney, of 300 Chestnut street, Philadelphia, Pa.

BERNICE—Grand champion Shorthorn cow, Iowa class, Iowa State Fair. BERNICE is a two-year-old, and her picture was taken at the Fair. She was exhibited by F. A. Edwards, of Webster City, Iowa. She bids fair to become a great cow.

DALE'S VISCOUNT—A yearling Shorthorn bull first in class and junior champion Shorthorn bull at the Iowa State Fair; also prize winner at other Fairs. Exhibited by D. R. Hanna, of Ravenna, Ohio.

The Dairy Butter Contest.

As stated in a previous issue of this paper, the dairy butter contest was an afterthought at the National Dairy Show, but they managed to get together twenty entries, which scored from 85 to 94½. The creamery class produced 489 tubs, and the highest score was 97. The dairy butter gold medal was awarded to P. Daingaard, of Camp Point, Ill., and the silver medal to Allan G. Doren, of Oxdensburg, N. Y. Other exhibitors in the order of merit were: Thomas Clement, of Big Bay, Mich.; D. A. Trombull, of Monmouth, Ill.; Thomas Foster, of Bennington, Vt.; Mrs. Fred Heil, of Wausau, Wis.; J. A. Beckman, of Great Bend, Kas.; Mrs. W. S. Morgan, of Minneapolis, Minn.; Mrs. A. W. Lehmann, of Woodland, Wis.; A. T. Aydelotte, of Campbellstown, O.; Mrs. C. H. Moen, of Grand Forks, N. D.; Mary Crock, of Greenville, Minn.; George Maurer, of Waterloo, N. Y.; John W. Wilber, of Dearborn, Mich.; Samuel Gray, of Hasting, Ill.; E. C. Salesburg, of St. Johns, Ill.; C. C. Bartlet, of Wheaton, Ill.; E. J. Bintler, of Lisbon, Mich.; Howard Greene, of Genesee, Wis.; Hugh H. McLean, of Rockford, Minn.

Dairy and Creamery Notes.

At Philadelphia, the price of milk for the winter is 4 cents a quart, to be reduced in May to 3½ cents a quart. This is open-market milk.

The Milk Reporter of Sussex, N. J,. says that at a trial in the Supreme Court at Salem, N. Y., recently, the jury rendered a verdict of $6,000 in favor of the state against the Montgomery County Creamery Company for violation of the agricultural law. The violation consisted in the addition of skimmed milk to whole milk and shipping the mixture to New York City for consumption as whole milk.

Commencing October 1st, New York dealers will pay 3¾ cents a quart for milk, which is $1.50 per ten-gallon can.

First prize for market milk at the National Dairy Show was won by Howard Green, of Geneseo Depot, Wis., score 96; second prize won by J. Gilbert Hickox, of Whitefish Bay, Wis., score 95. First-prize market cream, Mr. Hickox; score 95½; second, Leavenworth Bros., of Grand Rapids, Mich.

First prize for certified milk at the National Dairy Show was won by A.F. Bennett, of Novelty, Ohio; score, 95; second, Wm. Rowlands & Co., of Waukesha, Wis.; score, 92. First-prize certified cream was won by G. Van B. Roberts, of Highland, N. Y; score, 99; second, Burnside Dairy, of Eccleston, Maryland; score, 96¾.

In the class for creamery patrons milk at the National Dairy Show, Geo. B. Fisher, of Viroqua, Wis., won the prize with a score of 93½. He was awarded the Jersey calf presented for the contest by President Colon C. Lillie.

According to the Chicago Milk News, the price of milk at Chicago in November and December is $1.35 per eight-gallon can, the shipper paying the freight.

Mr. Emil Bracht, of Oklahoma City, distinguished himself by winning two Jersey cattle grand championships at the State Fair. He had plenty of competition.

How to make your live stock the envy of your neighborhood—

Use **Pratts**

Animal Regulator
AND
Poultry Regulator

Do you want to make your hens record-breaking layers? To make your cows give more and richer milk? To get more work out of your horses and keep them in prime condition? To make hogs take on weight rapidly?

Two Cream Separating Systems.

An Experiment Station bulletin issued in New York state rates the advantages of the centrifugal cream separator over the gravity system as five to one in the saving and quality of cream. So far as we know, the gravity system is only useful as a step in the right direction because it leads directly to the possession of a centrifugal machine. The milking of the first, second or third cow may not call for a centrifugal machine, but directly the ownership of the third cow is reached the benefits derived from the centrifugal machine will very soon buy another cow. The writer of this item used Cooley creamer cans before the centrifugal separators were invented, and has no prejudice against the gravity system.

Creamery Butter Exhibit.

At the National Dairy Show the entries of creamery butter consisted of 489 tubs. In this contest 93 is considered a good score, and 175 entries scored that figure or better. The three highest scores were by A. J. Anderson, of Otisco, Minn., 97; Thor Moe, of Winthrop, Minn., 96½; and A. L. Oestrich, of Watertown, Wis., 96. Those scoring 95 were R. J. Brigham, of Troy Center, Wis.; A. A. Mueller, of Ixonia, Wis.; C. A. Randen, of Courtland, Minn.; W. A. Stewart, of Eagle, Wis.; J. L. Wahlstrom, of Harris, Minn.; and Fred Zastrow, of Cambria, Wis.

Milk Powder Seized.

The New York Produce Review give us St. Louis news as follows:

"Nearly a ton of 'Cremflor,' a powdered milk, was seized recently in St. Louis in possession of W. E. Beckman & Co., by United States Marshal. While inspecting the company's supplies, Food Inspector Wharton found ten barrels of this powdered milk. It had been shipped to St.Louis by the Ekenberg Milk Products Company, of Cortland, N. Y. Wharton took samples and it was found, upon analysis of the samples, that 75 per cent. of the butter-fat had been removed and that the powder was made of skimmed milk. This was not made known on the labels and the ten barrels were adjudged misbranded. Before orders came for the seizure two barrels had been sold. The remaining eight were seized and are now in possession of the federal authorities. Proceedings have been instituted against the powder and will be heard at this session of the United States District Court."

Dairy and Creamery Notes.

Hoard's Dairyman says: "Whenever a farmer puts a cow into a box stall or other place to give birth to her calf, he should be wise enough to give the same a thorough disinfection first and then cover it with fresh, clean straw or shavings. One of the frequent serious losses that come in the way of navel infection among calves is caused by allowing the calf to be dropped in a dirty stall, and letting it stay there without fresh, clean bedding. One cannot be too particular in this respect if he wishes to retain his calves."

Dead weight of unprofitable cows and underfeeding good cows go hand in hand in closing out mismanaged dairy herds, and many of them are rich men's playthings, mismanaged by incompetent employes, who believe that short-fed dry rations ought to fill the milk pail.

The objection which some of the milk-condensing companies have had to milk from silage-fed cows appears to have been removed. It has been removed because silage-fed cows are in the majority, and it has become a matter of receiving milk from silage-fed cows or going without.

At the Alabama State Fair the Bates Farm of Hamburg, Perry county, won both Jersey cattle championships. Eminent's Squire, a yearling, was champion bull, and Princess Mary B., a heifer calf, was female champion.

At Carthage, Mo., October 18th, the dispersal sale of Jersey cattle belonging to the estate of Geo. W. Koontz realized an average of $119.65 for seventy head, big, little, old and young. Chas. Miller, of Fairview, Mo., paid $235 for Marie's Butter Print, the top-price cow.

At the National Dairy Show the famous Jersey cow, Jacoba Irene, gave birth to a lusty young bull calf, sired by a son of the World's Fair dairy contest champion Loretta D. The illustrious calf will have a nice time living up to some of the records in his family.

The grand champion Jersey bull at the National Dairy Show was Derry's Jolly Lad, a yearling, exhibited by Jno. F. Boyd, of Rushville, Ind. The grand champion Jersey cow was Majesty's Oxford Lass, exhibited by G. G. Council, of Vandalia, Ill.

ALBERT S. ENNIS, 712-21 Missouri Trust Bldg., St. Louis, Mo.

A Successful Exhibitor.

Mr. Thomas H. Ezell, Proprietor of Mill Creek Stock Farm, R. F. D. No. 7, Nashville, Tenn., reached his home early in October with his string of Starlight jacks and jennets in good condition. He attended six County and State Fairs, winnnigg 118 premiums, 71 of which were first prizes, including sweepstakes and championships, and in many shows won both first and second prizes; also won at the Tri-State Fair at Memphis, Tenn., the $50 Breeders' Cup, the only cup offered on the circuit, winning in that city 17 first and second prizes out of 22 shows, losing only five ribbons. Mr. Ezell also captured the $50 Breeders' Cup that was offered at the Tri-State Fair in 1908. Mr. Ezell has a card in the breeders' columns of The National Farmer and Stock Grower, and he sells prize-winning stock at reasonable prices.

Blooded Stock.

Walker Bros., of 1221 East Seventh street, Oklahoma City, Oklahoma, were very successful at the Oklahoma State Fair. They won fourteen premiums on draft and coach horses, including the coach stallion championship. It was the greatest display ever shown at the Oklahoma State Fair.

Mr. Chas. Ford, of Mortonsville, Ky., has won 100 prizes in the State Fair campaigns of Ohio, Michigan, Kentucky and Tennessee this year with his magnificent Tamworth swine. He has now 150 head of pigs for sale of his own breeding from champion boars and sows. See his revised advertisement in this issue.

Attention is invited to the card of Mr. W. Warren Morton, of Russellville, Ky. He is advertising Tamworth swine. Mr. Morton is a breeder of prominence and reputation, having won thirty-two ribbons at the St. Louis World's Fair, including the grand champion prize on boar. In 1908 he won all the first and sweepstake prizes that were offered on Tamworths at the Ohio, Indiana and Alabama State Fairs. He will give purchasers good satisfaction in the stock he will send them.

At the Berkshire Congress held recently at Nashville, Tenn., the grand champion Berksire boar was Lee's Artful Premier, XII. He weighs 800 pounds and was exhibited by Mr. J. W. Russwurm, of Nashville, who is Secretary of the Tennessee State Fair. Sons and daughters of the grand champion also won many premiums.

On October 12th, at Pawnee, Ill., Ed Baxter sold at auction forty-seven head of Duroc-Jersey swine at an average of $38.40. The top price at the sale was $105 for a sow bred to a famous boar, B. & C.'s Colonel.

Mr. J. W. Kirby, of Kirby Stock Farm, Marmaduke, Ark., breeder of Poland-China swine, has something extra to offer in pigs, in pairs, by two of the best boars of the breed and out of the largest sows. His litters run from seven to twelve strong, healthy pigs. He has also a few bred gilts for sale.

Mr. C. M. Chambers, of Bartlett, Iowa, is again advertising young bulls and heifers of the Red Polled breed of his own raising. He was a prize winner at the Nebraska State Fair, although he exhibited but one bull.

Mr. W. A. Hinkle, of Rural Route 7, Decatur, Ill., is advertising his Jumbo strain of recorded Chester White hogs. He is an exhibitor, and at the late State Fair at Springfield, Ill., he won fifteen ribbons with seven pigs, including three best out of five in Chester White boars under six months in a class of twenty-eight in competition with show herds of Ohio, Iowa and other states. He has a fine lot of pigs for sale.

THE FARMERS' AND STOCKMEN'S BUSINESS DIRECTORY FOR THE YEAR 1910.

We are issuing an edition of the "Farmers' and Stockmen's Business Directory." It is not a Directory of Farmers, but it is a Directory for farmers' use. It contains names of individuals and firms engaged in occupations which are allied to the general farming, stock raising, horticultural, dairy and poultry interests. For instance, it contains names and addresses of seed growers, and seed stores, of nurseries, agricultural implement and vehicle manufacturers, dealers in dairy, poultry and veterinary supplies, also live stock commission merchants, dealers in farmers' produce, etc. It is a simple compilation for farmers' use; something to refer to and use for business purposes. All names are arranged alphabetically by states.

We publish this book impartially; we seek out the names and addresses of the people engaged in suitable occupations and mention the line of business the firm is engaged in without charge. The book already contains 4,000 names and addresses. We only admit reliable firms and guarantee the reliability of all advertisers.

"The Farmers' and Stockmen's Business Directory" is issued as a subscription premium to The National Farmer and Stock Grower. The subscription price is 50 cents a year. Any subscriber can select the "Farmers' and Stockmen's Business Directory" as a free premium, providing he sends 50 cents to pay for one additional year's subscription to the paper. Any business house can get a copy the same way. All advertisers receive a free copy. The size of printed page is 8 inches by 4¼ inches; exactly 8 inches double-column, newspaper measure. We are not soliciting any advertising, but will publish single-column advertisements at the flat rate of $2.50 per inch, and place them in the state where the name of the firm appears. Advertisements taken for this edition will appear in all editons issued in 1910. No special circulation is guaranteed. We will offer this book all through the year 1910 as a premium to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Fine Stock to be Sold.

The Shorthorn cattle offerings to be sold at East St. Louis on November 17th and 18th include three bulls consigned by Mr. Gaius Paddock, of Madison county, Illinois. The Paddock homestead was settled in 1818, and is one of the most elegant homesteads in Illinois. The Paddock herd of Shorthorns is one of the oldest and best of the breed, descended from Imp. General White, Imp. Mary, Imp. Village Maiden and Imp. Master of the Clan. These are great names in the Shorthorn family. His offerings at the sale will be worth investigating.

At the prices beef cattle are selling for on this market, the pure-bred cattle which made these prices possible ought to sell high in the auction ring.

Mr. Paddock is also offering for sale a fine lot of pure-bred Chester White hogs and Poland-Chinas of his own breeding. These he will quote prices upon to anyone who may write him at his farm. His pure-bred pigs are of the class that produce hogs which top the market. Address, Gaius Paddock, R. F. D. 1, Moro, Ill.

TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed. Early to mature, economical feeders and unsurpassed as range hogs. Boars, sows and Pigs not akin from best strains. None better. Prices reasonable. My herd won over 100 ribbons at four State Fairs this year. A few choice Pigs from imported stock; sire and dam winners at Royal Show, England, 1907.
CHAS. FORD, Mortonsville, Woodford County, Kentucky.

STALLIONS AND JACKS.
25 for sale at $300 to $1,000.
WALKER BROS., 1221 East 7th St., Oklahoma City, Okla.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell).
Nashville, Tenn., Sta. B, R. F. D. No. 7.

Tamworth Swine Herd is headed by the Sweepstakes Boar at the leading Fairs in U. S. in 1907 and 1908. I handle more Tamworths than any two breeders in America. The hog to cross on your pony built pigs to increase size, vigor and quality.
W. WARREN MORTON, Russellville, Ky.

ABSORBINE FOR DEW POISON.

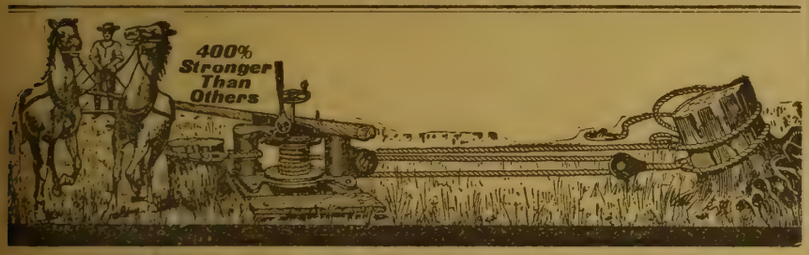
Quoting from a letter recently received from L. C. Anderson, of Maysville, Ky.: "I have used your Absorbine for several years and have received quite a lot of benefit from same. I cured one very badly dew-poisoned ankle, and restored new hair to an old scar by using Absorbine." This is an excellent preparation for bog spavins, thoroughpin, capped hock, big knee, and swellings of all kinds. Absorbine at druggists, $2.00 a bottle, or sent express prepaid upon receipt of price. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

LORD MAR—Guernsey bull. Exhibited by W. W. Marsh, of Waterloo, Iowa. Champion at the Iowa State Fair and grand champion Guernsey bull at the National Dairy Show of 1909. At the latter show, ten splendid Guernsey herds competed for honors, and it was pronounced one of the best exhibits of this breed ever seen in a show ring.

COUGHS and DISTEMPER

are prevalent in the changeable fall weather. Especially to those Young Colts on pasture. Three to six doses **FRAZIER'S DISTEMPER CURE** placed in ground feed or oats will prevent all cases. One bottle guaranteed to cure all forms of Distemper, Coughs and Influenza. $1 bottle holds three times the quantity of the 50c. size. Sold by all druggists. Write for **"A Treatise on the Horse."** This booklet is free.

BINKLEY MEDICAL CO., Sole Owners, (81) Nappanee, Ind.



PULLING STUMPS BY ALL-STEEL TRIPLE-POWER STUMP PULLER.

Around this time the farmer with a stumpy field can put in some mighty profitable days pulling out the stumps. There are such efficient and inexpensive devices for clearing fields now that there is no excuse for suffering the loss that a stumpy field represents. Many farmers blast the stumps with dynamite, but this method has not been very satisfactory. It breaks the stump but leaves the roots in the ground.

One of the most satisfactory methods of pulling stumps that has come to our attention is with the Hercules All-Steel Triple-Power Stump Puller. This machine (illustrated above) is made entirely of steel and is claimed by the manufacturers to have 400 per cent. more strength than any other puller made. Being all steel, it is lighter and less cumbersome than others.

You will be interested in reading the catalogue and other printed matter which the Hercules Manufacturing Company, 140 17th street, Centerville, Iowa, will be glad to send you upon receipt of a postal from you. They will send you diagram, showing the relative strength of All-Steel construction as against other metals. And they have a special proposition to make to first buyers in each locality where they have no agent. Write them a postal at once to be sure of getting their offer.

MY CHOICE—Aberdeen-Angus steer. Champion fat steer at the Iowa and Nebraska State Fairs of 1909; also champion grade Aberdeen-Angus steer at the American Royal Show. MY CHOICE is a two-year-old. Exhibited by W. J. Miller, of Newton, Iowa.

For Good Roads.

Mr. B. F. Yoakum, Chairman of the Executive Committee of the Rock Island-Frisco Lines, has opened up an immense territory in the interests of the farmers and takes the position that to expedite wagon traffic is one way to assist in creating tonnage for railroads to haul. It is somewhat unexpected to find a railroad manager booming the good-roads movement, but Mr. Yoakum has handled the subject in a practical manner.

We learn from one of the New York dailies that during the month of September Mr. Yoakum gave a party of Presidents of Farmers' Unions from Texas, Arkansas, Louisiana and Oklahoma an automobile ride over the good roads of New Jersey, New Hampshire, Rhode Island, Massachusetts, Connecticut and New York, to show them what sort of roads they ought to have in their native states. The automobile trip started from the Bellevue-Stratford Hotel at Philadelphia, under the auspices of Frederick Gilkyson, Chairman of the New Jersey Highway Commission, and ended at New Haven. The State Highway Commissioner and a corps of engineers accompanied the party to explain the roads. Mr. Yoakum accompanied the party on the New Jersey trip. Governor Draper, of Massachusetts, was tendered a dinner by the good-roads party and members of the State Highway Commission in Boston.

This was a practical demonstration of far-reaching effect. One of the Texas papers, commenting upon the trip, said:

"There is no need in this connection to attribute to Mr. Yoakum any extraordinary altruism or philanthropy in what he has done.

"It is a practical business affair between business associates or partners, as he said at Tulsa, Oklahoma.

"Of ocurse, the farmers adjacent to his roads will get their products to the stations somehow over any kind of wagon road; but Mr. Yoakum knows that first-class wagon roads stand for better farming, and for putting every available acre under the plow, for ease and facility in moving a crop encourages and stimulates the growing of more and better crops.

"The same section with good wagon roads will give the railroad more traffic out and in than with bad wagon roads.

"What builds up the country and utilizes its lands and resources to the best advantage also builds up the farmers' business, and no man knows this better than B. F. Yoakum.

"He advances the railroad's interests if he can help in advancing the farmers' interests.

"That's what he said in his notable address, and that is what he is trying to bring out in a sensible and practical way."

The attitude of the executive head of a great railway system is significant and should serve as a new impetus to so important a movement.

The Sales at the International.

We are unable to mention the grand list of consignors at the great auction sales to be held at the Chicago International Show. The advertisement on page 16 gives the names and addresses of the Secretaries of each division of the sale, and the entire list of stock on sale can be had from them. The cattle include fifty each Shorthorns, Herefords, Aberdeen-Angus and Galloways; 100 Shetland ponies, and consignments of Shropsire, Hampshire and Rambouillet sheep. These offerings include superb animals in every class.

PILES Quickly Cured

Instant Relief, Permanent Cure—Trial Package Mailed Free to All in Plain Wrapper.

We want every man and woman suffering from the excruciating torture of piles to just send their names and address to us and get by return mail a free trial package of the most effective and positive cure ever known for this disease. Pyramid Pile Cure.

The way to prove what this great remedy will do in your own case, is to just fill out free coupon and send to us and you will get by return mail a free trial treatment of Pyramid Pile Cure.

Then after you have proven to yourself what it can do, you will go to the druggist and get a 50-cent box.

Don't undergo an operation. Operations are rarely a success and often lead to terrible consequences. Pyramid Pile Cure reduces all inflammation, makes congestion, irritation, itching, sores and ulcers disappear—and the piles simply quit.

For sale at all drug stores at 50 cents a box.

FREE PACKAGE COUPON

Fill out the blank lines below with your name and address, cut out coupon and mail to the PYRAMID DRUG COMPANY, 154 Pyramid Bldg., Marshall, Mich. A trial package of the great Pyramid Pile Cure will then be sent you at once by mail, FREE, in plain wrapper.

Name.....

Street.....

City and State.....

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

For Sixty Cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.**

For One Dollar we will send The National Farmer and Stock Grower for three years and a copy of the **Cement Workers' Handbook.** Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

DAN PATCH—Champion Shire stallion at the Iowa and Illinois State Fairs of 1909. This is not the pacing, light-harness, grand champion DAN PATCH, but a powerful, masculine, two-thousand-pound horse of the famous English draft breed. DAN PATCH headed the prize-winning and unexcelled display exhibited by Trumans' Pioneer Stud Farm of Bushnell, Ill.

Have Patience With Young Horses.

In the matter of handling young horses in a proper manner, Farm and Home of London says very truly that a young horse's temper may easily be spoiled during the time of first handling them, especially when brought into the stable, if roughly treated, and adds: "Fillies, it may be mentioned, are generally particularly nervous or timid and therefore require more considerate treatment than geldings, which usually have a more equable temperament, and take things more calmly. A point to which special attention may be called is that care should be exercised in leading young horses through the doorway of the stable. They very frequently evince some aversion to passing through it at first, and if they are punished for hanging back, being forced to go on with the whip, or otherwise roughly treated in these circumstances, they sometimes take a permanent dislike to entering doorways, first hanging back and then suddenly rushing through them, which is most disconcerting and may cause them to injure their hips. This trick is a great nuisance, and, once acquired, it is difficult to eradicate. Further, when a young horse which hangs back at a doorway is hustled through it in a rough manner, it is apt to throw up its head and bang it against the top. This mishap may easily cause it to become shy of entering a doorway in future, quite apart from the fact that a blow on the head brought about in this fashion may give rise to the injury known as poll-evil. Whenever young horses show any reluctance to pass through the doorway, they should be coaxed to go on by cajoling and gentling them. One should refrain from adopting any forceful or rough treatment, and with a little patience they can easily be induced to overcome their trepidation and to go through quite willingly."

WRYDELAND'S SUNSHINE—Champion Shire mare at the Iowa and Illinois State Fairs of 1909. Exhibited by Trumans' Pioneer Stud Farm, of Bushnell, Ill. At the Illinois Show in particular the Truman entries represented the finest lot of Shire horses exhibited under one ownership.

The Price of Top Drafters.

At Chicago, October 11th, in the auction ring, Mr. R. B. Ogilvie purchased three top drafters for the Union Stock Yard and Transit Company's stables for $985. The animals comprised an elegantly-matched pair of gray Percherons and a superb brown Clydesdale, the latter being selected to match a fine draft animal already in the stable. Mr. Ogilvie was particularly pleased with the brown gelding that with its mate easily landed a load of 4,500 pounds of corn, hauling the heavy truck up a steep grade. The Union Stock Yard and Transit Company have collected one of the finest stables of extreme weight draft horses in the world, several of the animals being entered to compete in the harness draft classes at the 1909 International Live Stock Exposition, where they are expected to divide the honors with the champions of the previous Expositions. Mr. Ogilvie selected the horses for both industrial and show qualities, and they represent the highest type of commercial draft animals.

Whiteside County Draft Horses.

The Chicago Drovers' Journal of October 11th said: "Among the substantial shippers at the Chicago market is W. S. Dunn, of Walnut, Ill., who arrived with a consignment of heavy drafters and choice commercial chunks. In the consignment were three elegant draft horses purchased from a farmer near Tampico, Ill., for $700, the highest price ever paid one farmer for three draft horses of his own raising in Whiteside county. Mr. Dunn purchased the consignment on a special order for a Pennsylvania dealer. He reports farmers raising more and better draft horses in Illinois than five years ago, with the demand so great that the surplus is only of moderate volume."

Horses Regaining Popularity.

The Chicago Drovers' Journal says: "The horse is recovering his popularity and prestige for pleasure use, if an observer will note that on the boulevards and parkways of Chicago there are more elegant turnouts drawn by horses than a year ago, and more of the leisure class are to be seen in the parks on horseback. The demand for gaited saddlers is much more urgent than a year ago, and well-mannered saddle horses are moving at $300 to $1,000."

Horse and Mule Notes.

Chitwood, sire of a famous pair of pacers, Hedgewood Boy and Lady Maud C., is reported by The Horseman as having died recently at the farm of J. C. Henry, near Taylorville, Ill., at the age of twenty-four years.

The great race horse sire, Imp. Ben Strome, owned at the Dixiana Farm, Lexington, Ky., died recently. He was the sire of Highball, Roseben and other famous turf stars. He was bred by the Duke of Westminster in 1882. In 1903 Ben Strome headed the list of winning sires with twenty-four winners of a total amount of $107,000.

At this time of the year about 300 mules a day are being sold at the St. Louis National Stock Yards. They are all grades, but the principal demand at the present time is for good, fat cotton mules, and miners are also selling freely. Big, heavy mules are moving less readily, but it is only a question of price.

Great California Ranch Sold.

It is reported that a property called the Lankershim Ranch, 48,000 acres, has been sold at about $52 an acre, bringing in all $2,500,000. It has been purchased by a local syndicate, and it will be subdivided and sold in small parcels. This is reported as being the most notable real estate transaction ever negotiated in Southern California. The ranch is the largest undivided piece of property in Los Angeles county, having a length of fifteen miles and a width of more than six and one half miles.

Our purpose in mentioning this transaction is to show what the next crop of farmers will have to pay for land in the near future. This ranch will not be split up at less than $100 an acre, and this is but the beginning. The forty-acre farm that cost $4,000 will require buildings to make it inhabitable and special planting to make it productive. California is a great fruit country, and naturally these are fruit lands, and there is no doubt that in time every foot of it will be sold, and, under the circumstances existing, be worth the money.

We are already past the period of free lands, but we have not yet passed the day of cheap lands. But the cheap lands are fast disappearing. The railroad managers are seeing to this. Wherever lands are cheap and the railroads are running trains through them they enter into a campaign to fill them up. On a train, the other day, the writer shook hands with nine men who were going South to buy land; they were going to pay $15 an acre for lands which ten years ago could have been bought for $3.00 an acre, and which in ten years from now will sell for $30 to $40 an acre. Most of them were Northern farmers and land owners; they rode in Pullman cars; they were well posted; they were not immigrants. They were all actuated by the same motives: "Land is going up. Let us get in before it is too late. Let us buy cheap lands before we sell our high-priced lands." That is what they all thought. One of them said: "If this land is what it is cracked up to be, we will surely buy some."

Save the Straw-piles.

Good wheat straw sells readily for $5.00 to $6.00 a ton on city markets, yet on many grain farms it is allowed to rot down in the pile, or is even burned. We are buying too much high-priced, balanced feed. Why not buy what is really needed and then balance it up by using straw and corn stover? We are continually buying stuff costing from $20 to $25 a ton—concentrated stuff—and then we lose some of it by not bringing in the coarse stuff used on the farm. Some have studied protein so long that they have entirely lost sight of the value of straw for lightening up concentrated feed. Save all the straw. Use it for bedding and get the manure back to the land, and then get out your tables of rations and see how well it will reinforce boughten feeds.—L. C. Brown.

1910 Art Calendar Free.

Cut the front of a 50-cent or $1.00-size carton, that holds the bottle that contains Frazier's Distemper Cure, and mail to Binkley Medical Co., Nappanee, Ind., and you will receive a beautiful Art Calendar for the year 1910. This offer is limited, as we have only 100,000 of these Calendars. If your druggist will not supply you with "Frazier's," send direct to the above firm. They will prepay charges and send you the Calendar.

Ambition Finds No Fences in the Great Southwest

GROCERY STORE, IN A NEW SOUTHWESTERN TOWN.

Less than *four* years ago this place was a stretch of mesquite and cactus. Now it has a hotel equal to that of any average city of 20,000 population; a department store, hardware stores, drug stores and a school house of Pompeiian brick, with capacity for hundreds of children. It is a Southwestern farming town. In no other section of America can new cities be shown of equal development. But men grow so rich in the Southwest so quickly that the best is immediately available for them.

You can buy a ***good*** farm for ***less*** money—you can make ***more out*** of your farm—you can ***operate*** it at a ***lower expense*** and get more ***use*** out of the ***ground*** than in any ***other*** section of America. You're ***midway*** between the ***seaport*** and the ***lakes***, between the ***east*** and the ***west***. You can ***market*** your ***produce***, therefore, at a lower ***aberage*** cost than the communities of ***less central*** states.

A *perfect soil*, so *deep* that *no* plow share will ever be able to reach the *last strata* of its *richness*. For untold *centuries* these soils have been *enriched* by *natural fertilizers*. The weather is practically the *same* during the *whole twelve months* — always *right* for *some* sort of crop. When you can harvest *two* and *three* different *crops* off of the same land in *one* year, one *such* farm is *equal* in *value* to a farm *many times as big* but which lies idle half the time.

If you want to make *more* money and make it while you're *young*, come to the Southwest and *grow rich*. Leave the *thin-soiled* areas.

Get out of the overcrowded communities — out of the belts of hail and snow and winter winds—live in the sunlight, where health and wealth are both at hand.

Find a *fortune* for *yourself* and *found* one for your *children*. See them grow up like the *crops*, strong and big and *normal*.

A *few vigorous years* in the Southwest mean *comfort* and a *bank account*. Plan a *bigger tomorrow* than your *today*. The man who buys farm lands *now* will not only take a *tremendous profit* off every *acre*, but will constantly find the *value* of his land *increasing*.

New railroads are being *extended* in *every* direction. The more stretches of *grazing land* that get under *cultivation*, the more necessity for *traffic development*. Towns follow traffic. All the *great fortunes* of America grew out of the *increase* in *land values*.

You cannot tell but what the fields of corn and cotton and garden truck with which you *begin* your *new* career in the land of *new tomorrows* may at *any* early day lie just on the *outskirts* of a *young metropolis* whose *growth* will bring *your acres* within the *city limits* themselves and be worth *many hundred times* your *investment*.

No Hardships, No Inconveniences, No Discomforts

but ***immediate returns*** and constantly increasing ***profits***. The land of ***limitless chances***, where the ***only*** fences that surround ***ambition*** are ***incompetence*** and ***laziness***. The ***right*** place for ***all*** but the ***wrong*** people.

TOMATOES YIELD $360 AN ACRE IN THE SOUTHWEST.

Mr. F. M. Lawrence, of Nueces County, realized $700 in one season from one crop of tomatoes raised on two acres of land, and had his farm available for another crop immediately after he shipped this splendidly profitable growth. Write to Corpus Christi, Texas, and he'll tell you what he thinks of the Southwest and its possibilities. A business man would tell you that Mr. Lawrence's two acres are worth $7,000 as a ten per cent investment. You can buy land that will do exactly what these two acres did at less than a hundred dollars an acre.

Write *tonight* and learn of the undeveloped sections of Oklahoma, Southern Missouri, Arkansas, Louisiana, Texas and New Mexico. A supply of literature about the section in which you are interested and which will answer the questions which now arise in your mind will be forwarded by mail. If you are a *professional man* or a *merchant*, there are hundreds of towns where you can bring a minimum capital and *make big* money at the *very outset*.

REDUCED FARES ON ALL RAILROADS

SCENE AT THE ST. LOUIS NATIONAL STOCK YARDS.—COL. JAMES H. CAMPBELL on right, selling a load of cattle to MR. WILLIAM CASSELL, buyer for NELSON MORRIS & CO., on the left. This scene is characteristic of the yards. COLONEL CAMPBELL, who commanded the equestrian company of the St. Louis National Stock Yards in the Centennial Parade, is engaged in the usual business of selling cattle as high as he can in the interest of his customer, and MR. CASSELL, on the other hand, is trying to buy them as cheap as he can in the interest of his employer. Sometimes the seller has the upper hand, sometimes the buyer. They represent the best in each class.

His Majesty, the grand champion REPEATER—Champion Hereford bull at the Nebraska State Fair, St. Joseph Interstate Fair, grand champion at the Missouri State Fair, and grand champion at the American Royal Show. REPEATER is a senior yearling and the most distinguished and sensational winner in the show rings of the season of 1909. Exhibited by Overton Harris, of Harris, Mo. REPEATER won the Royal grand championship over the most distinguished lot of Herefords of the present day. He is therefore entitled to be called His Majesty.

DUROCK—Champion Red Polled bull at the Iowa State Fair, 1909. Exhibited by Dan Clark, of Cedar Falls, Iowa. At this show there were Red Polled cattle exhibited from four different states, and it was said by good judges that Red Polls are improving all the time.

Farming Without Live Stock.

With live stock and clover, the problem of conserving soil fertility is not difficult to solve, and with ample stores of plant food within reach maximum crops can be grown. But when we undertake to produce crops without live stock to supply the essentials of crop growth, then we have a proposition which calls for preciseness in methods in order to get results.

Keep in mind that live stock consumes much that would otherwise go to waste, under our present system of farming. If live stock is not to be kept, then crops had best be grown which can be sold to best advantage. It seems manifestly out of place to grow great fields of corn, selling only the grain and then raking and burning the stalks; or, selling timothy hay without manure to supply plant food, is simply carting off large quantities of fertilizing matter.

The trend now in many localities is to raise special crops, those which can be produced with commercial fertilizers, without keeping live stock. Many try to do without both. I know of no system which can indefinitely produce crops without some sort of fertilizing material, and the quicker we rid ourselves of that idea the better.

I have studied this question for several years and have watched the trend of cropping. I have measured the results of both systems. Larger amounts of mineral fertilizers are being sold in Illinois and Indiana every year, and many farmers have brought their fields up to a very high standard of efficiency, from the standpoint of the chemist, but the largest yields of corn and oats that I have observed have been made on ground which had the benefit of manure made by stock kept upon the farm. One may plow under stalks and straw, but this does not supply assimiable plant food as does the same material fed to stock and then the manure spread upon the ground.—L. C. Brown.

That Early-corn Matter.

A correspondent at Reddick, Ill., writes: "I have read your article on early varieties of corn, and your results do not correspond with mine. Two years ago I sent to Central Illinois for some ninety-day corn. It got ripe, but it made ears only six to seven inches long and yielded only about forty bushels per acre."

This correspondent lost the point of my contention. When northern-grown corn is brought down to a much more southern region, say 175 miles from where it was grown, the natural tendency is to grow larger under the longer and warmer growing season; but when a small variety is brought from a more southerly region, its growing season is shortened and it lacks any stimulus for growing larger or even lengthening its usual growing season. In all of my tests I have secured the best results from seed brought from more northerly regions.—L. C. Brown.

FREE DEAFNESS CURE.

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh. Address Dr. G. M. Branaman, 1264 Walnut street, Kansas City, Mo.

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Don't hesitate to write or ship to

James H. Campbell,
National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK — SHIP US YOUR CATTLE, HOGS AND SHEEP.

Quarantine Cattle at St. Louis.

On November 1st, at St Louis. M. D. Proctor, of Welch, Oklahoma, sold thirty-seven steers, 1,279 pounds average, at $6.40 per 100 pounds. They were well-fattened, corn-fed steers. The next highest prices in this division were for 1,165-pound steers at $5.65, and 1,154-pound steers at $5.55. Pretty good grass steers, 840 to 930 pounds, were selling at $4.15 to $4.30. Cows and heifers ranged from $2.65 to $4.00 per 100 pounds.

November Opening Hog Prices.

At St. Louis, November 1st, top hogs, averaging 200 to 228 pounds, sold at $7.90 per 100 pounds; top on heavy hogs was $7.85. The bulk of the good hogs sold at $7.65 to $7.80 per 100 pounds.

Increase in Sheep Receipts.

The St. Louis National Stock Yards received 684,236 sheep during the first ten months of the present year, which is 93,162 head over and above all previous records. It is safe to say that the increase was nearly all lambs.

The Price of Sheep and Lambs.

At the St. Louis market, November 1st, the best price for lambs was $7.00 per 100 pounds; pretty good lambs sold at $6.25 to $6.75; and fair lambs at $5.50 to $6.00; culls at $4.00 to $5.00. Most of the mutton sheep sold at $4.00 to $4.10, with a top at $4.20. Good, young ewes were selling at $3.00 to $3.50; fair stockers at $2.25 to $2.85; fat bucks at $3.00 to $3.25; and others at $2.50 to $2.75 per 100 pounds.

Col. James H. Campbell,

Expert live stock salesman, is at the head of his own organization at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has a competitive market to back him. He is holding his old customers by splendid sales and making new ones all the time. Col. Campbell issues a circular every week of his own composition containing his advice to intending shippers. Write for information to Col. James H. Campbell personally and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Holland, Nugent & Maxwell Bros.

This great commission firm hold horse auction at the National Stock Yards every Monday and Tuesday in the year. They also sell mules every day in the week. On Monday and Tuesday, November 1st and 2d, they had 792 mules and 600 mules on sale and disposed of them to good advantage. They report a splendid trade for finished horses, 1,500 pounds up. Draft horses must be above three years old. Full-made harness horses, 1,150 to 1,200 pounds, sold as high as ever. Plain and common 1,200-pound plug horses, that are without class, sell low. Mr. Holland was particular in advising shippers against anticipating good prices for them. The Southern horses sold all right. Messrs. Holland, Nugent & Maxwell Bros., wil be glad to advise shippers by mail or wire of any change in the market. It is a good firm to ship to.

Horse and Mule Receipts.

During the first ten months of 1909 the St. Louis National Stock Yards received 97,294 horses and mules,exhibiting a gain of 4,861 head over the corresponding period of last year. The horse and mule business is now exhibiting more activity than at any time this year. The Southern trade is now moving rapidly in horses and in mules.

Clay, Robinson & Company.

On page 7 will be found a card by Messrs. Clay, Robinson & Co., live stock commission salesmen at nine markets, including the National Stock Yards, Ill. This is a great organization, highly competent and persevering, fully equipped at all markets in all departments. If you wish to buy feeders, they can give you the benefit of nine markets. No matter which house you ship to, they will study your interest first, last and all the time. Fill out the blank form on page 7 and mail it to Clay, Robinson & Co., National Stock Yards, Ill., or to the market that you intend to ship your stock.

Jos. A. Maxwell Mule Co.

This is the pioneer firm of mule dealers of the St. Louis market, and their specialty is of the better class. Contracts are entered into for any number or grade of commercial mules, and satisfaction is guaranteed. Members of the firm also contract for cavalry, artillery, Cuban or Eastern horses. It is a safe firm to do business with, always upholding the highest traditions of the great market which they have had so large a hand in establishing. Address, Jos. A. Maxwell Mule Co., National Stock Yards, Ill.

Good Horse Book to Have.

Horsemen will obtain something worth having and worth reading if they will take the trouble to ask for a copy of Pratts New Horse Book. It will some time save them a world of trouble. This book is written in the interest of Pratts foods, tonics and regulators, but in doing so they have added features to make it more interesting and instructive. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Horse Book."

Trumans' Pioneer Stud Farm will hold a public sale of eighty imported Shire mares and fillies on December 15th and 16th. Mr. J. H. Truman is just shipping over several of the best Shire mares that he can find in England to make out the grandest lot of offerings ever offered in this country. Send to Trumans' Pioneer Stud Farm, Bushnell, Ill., for catalogue.

HOW THE WORLD'S BIGGEST MAN GOT HIS START.

John D. Rockefeller, the Standard Oil Magnate, started out as a Traveling Map Salesman and has worked his way up to be the wealthiest man in the world. Salesmanship is the best paid, most congenial profession in the world. Thousands of Traveling Salesmen earn from $2,500 to as high as $15,000 or $20,000 a year and expenses. There are over 600,000 employed in the United States and Canada at the present time and the demand for good Salesmen always exceeds the supply. Any man with a common school education and who has tact and perseverance can enter and make a success in this splendid profession. The National Salesman's Training Association issues a little book entitled "A Knight of the Grip," which will be sent free to anyone who will write for it. It gives complete details about how to become a first-class Salesman and secure a position as a Traveling Representative of some prominent firm, also testimonials from men placed in good positions. If you are ambitious and desire to increase your earnings from two to ten times what they are at present, write to the Association to-day at any one of its offices, either at New York, Chicago, Kansas City, Minneapolis or San Francisco. Address letter to Dept. 505, National Salesman's Training Association at Chicago, Ill., or Kansas City, Mo., New York, N. Y., Minneapolis, Minn., or San Francisco, Cal., whichever office is nearest you, and mention The National Farmer and Stock Grower.

On Tuesday, November 2d, Truesdell & Adams, of Clark, Mo., marketed fourteen head of fat 1,462-pound steers that sold to Morris & Co. at $8.00 per 100 pounds. They were good to choice but not fat cattle.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3500 Vista Ave., St. Louis, Mo.

Protecting the Roots of Fruit-bearing Plants.

One is often tempted to begin the cultivation of plants in the fall, for the sake of getting a start over the coming spring. But such cultivation is never safe in the localities where the ground freezes deep even in occasional years.

When cold weather comes, the soil above the roots of trees and fruit-bearing shrubs should be packed as firmly as possible to prevent the frost from penetrating as deeply as it would if the soil were loose on the approach of winter. For this reason a firm sod over the roots of such plants should not be disturbed at this time of year.

About ten years ago we had an exceptionally hard winter all over the Middle West. Many plants and trees were killed and this killing was largely the result of root freezing. Not only did the cultivated trees in the orchards perish in large numbers; the forest trees were also killed where the conditions had been so changed that the frost could go deeper than it had before gone. The writer remembers three magnificent oak trees, each with a trunk over a yard in diameter. They had apparently stood the rigors of a hundred winters while the forest of lesser trees grew around them. But the axe of the clearer took away all but these three trees, which were left to adorn the land. But their cover of soil was loosened and the water table about their feet lowered by draining. When the terrible winter spoken of came these three trees were frozen to their roots and perished. Previously the action of the frost had been limited both by the compactness of the upper soil and the presence of the water table, below whose surface it was not easy for the ground to freeze hard.

In the vicinity of the writer the graperies that had been best cultivated suffered most, while the neglected vineyards came through the winter in good ocndition. This was no argument against cultivation, for some such chance must be taken, but it was an argument against late cultivation in the fall, where such cultivation will help the frost strike deep.

In cold states it pays to cover the roots of all plants so far as this can be conveniently done. Especially is this true of the trees and shrubs that have been set during the past season and around whose roots the soil has not become firmly set.

Occasionally an orchard is badly injured by the owner plowing up the sod in the fall under the impression that he is doing a good thing for the trees, as the sod will rot before spring and thus give the roots of the trees an additional amount of plant food. He may obtain his end if the freezing of the ground does not prove fatal to his trees in the meantime. We never know what a winter will bring forth in the way of severe conditions, and it does not pay to take chances in a matter that may mean the loss of years of effort.

A compact soil, a firm sod, a thick blanket of snow, are all good protectors of the roots of trees and fruit-producing plants generally.

Range-bred Horses.

Farmers need not hesitate to purchase range-bred horses for what they are worth. It is developing that a brand on a horse may be as much a recommendation as a disadvantage. Of course, a brand is a blemish, but unless it is a disfiguring brand it is no longer a mark of poor breeding. Many of the range horses which have been sold at the St. Louis National Stock Yards and worked on farms have come back after a year or two and sold at the top of the domestic sale ring market.

In New York a lightly-branded horse is considered a reliable, long-life worker, and will outlast the soft raised, farm-bred horses of the same weight, that have never the exercise; that is, the inheritance, of the range colt. The Western range is the country to raise them, and the farm is the place to develop them.

Held Onto His Salary.

An amusing incident is connected with the taking over by the Central Leather Company of the plant of Harrington & Co. at Elizabeth, N. J. Mr. Jno. T. George was Manager under contract, and the new owners naturally called for his resignation. The custom is to turn the old Managers out, and Mr. George and his salary were in the way; but having a contract at $15,000 a year that did not expire for nine months, Mr. George decided to hold onto his job. The new owners had to pay the money, but they could control the work, and so they instructed him to report as a leather marker, a position which is paid about $15 a week. This, of course, was the Leather Trust way of humiliating the former Manager; but it was a miscalculation. He went to work and went home again in his automobile, and did the work required of him, and he intends to do his duty in whatever position he is placed and be always careful to draw his full contract pay. This goes to show that the people who have the most money do not always have the most sense. Mr. George, being released from his duties as General Manager and placed at work as a day laborer, is under no obligation to spend his nights working in the interest of the company, and has plenty of time to formulate plans for an independent company that will have the Central Leather Company as a great, big target to shoot at.

Factors Controlling Yield.

Among the wonderful yields reported this season I doubt if any has equaled that of a farmer near Spokane, Washington, who got 22,500 bushels of sixty-two-pound wheat from 400 acres. And enough had been cut from this field for hay to make the actual yield sixty bushels per acre. There is nothing mysterious about that yield. It was made on volcanic-ash soil, characteristic of that region, and there was sufficient moisture to mature the crop naturally. The essentials for producing such a tremedous yield were adequate, and the real controlling factor here was finding standing room for the wheat plants. Dairy cows can be stimulated to greater production by the right kind of feeding. Yields of grain can be made with just as much certainty, providing the plants can be crowded.—L. C. Brown.

BOSTROM'S FARM LEVEL HAS TELESCOPE $15.00

CONGO
NEVER LEAK ROOFING

Our Guarantee

THE advantage in buying Congo Roofing (3-ply) is that you can be **absolutely sure** of getting protection from sun and rain for ten years. There is no guess-work about it. With every roll of 3-ply Congo comes a blank Surety Bond Guarantee numbered and ready for our seal and signature as soon as your roof is laid. The guarantee states that if you need a new roof inside of ten years you will get it free and that the National Surety Company will see to it that you get it (or its equivalent in cash). It is a legally binding and instantly enforceable document—a real contract such as your own lawyer would draw up for you. Every possible contingency is provided for. Every fair protection is given you. It is the only such guarantee that applies to any ready roofing to-day! Other guarantees are mere non-enforceable statements that would prove worthless in a lawsuit. But the Congo guarantee is a real guarantee, and it makes you absolutely sure of the amount of service you will get for your money.

When you buy other roofings you buy roofing material whose probable durability is vague and indefinite. When you buy Congo (3-ply) you buy ten years of assured protection, and the guessing does not begin till after the guarantee term expires.

Why buy a Roofing Riddle when you can (just as cheaply) buy a Congo certainty?

UNITED ROOFING & MFG. CO.

Chicago San Francisco

Missouri State Poultry Show.

This year the Missouri State Poultry Show is to be held at the Coliseum, St. Louis, Mo. The show will open December 6th and continue to the 11th. Mr. T. E. Quisenberry, Secretary of the Missouri State Poultry Board, announces that the business men of St. Louis have subscribed $3,000 to rent the new Coliseum, and the State Poultry Board is back of the show with a $10,000 appropriation. The Coliseum is the largest, best lighted, most modern, convenient show room in any city. The entire show will be on the ground floor.

The premiums will be as large as those paid at any show in America. On pens, first $10; second $5; third $2.50. On singles, first $5; second $3; third $1.50. This season most shows of equal size and importance will pay about half this amount in premiums and charge from $2 to $5 entry fee, but no one ever before heard of such a show being held in such a beautiful show room, in so large a city, with tens of thousands of people to see their birds, with so many specials offered, and an entrance fee of only 50 cents charged. Fifty silver cups will be offered, and the business men of St. Louis will offer hundreds of dollars worth of valuable special prizes, and $100 in cash will be offered for the largest and best displays.

The judges secured so far are W. S. Russell, Chas. H. Rhodes, D. T. Heimlich and Adam Thompson, four of our best and most popular judges. Others will be added. There will be six days of genuine schooling in poultry culture, six evenings of pleasure and profit. One fifth prize here will mean more to a poultry fancier than a half dozen firsts at smaller shows. Keep your eye on Missouri and St. Louis, where the great Poultry Show is to be held.

Chicken Raising For Profit.

The grand total amount of money paid for poultry in the United States is so large that it is almost beyond belief, and yet to the farmer and to the suburban resident and to the professional vegetable grower his poultry business looks small because it is to him or to her an individual matter. The situation is stated in a nutshell when it is said that even when poultry is raised to some extent on a farm, not one family in a hundred appear to be engaged in chicken raising except as a small incident to other productions, whereas in a contest as between a poultry farm of three acres and a grain farm of eighty acres, the chances are that the poultry plant would show the largest profit on the amount invested.

Location has much to do with profits in poultry. One farmer living miles from a railroad has to wait for the wagon to come around, and then has to put up with 12, 14 and 16 cents a dozen for eggs, whereas another one more happily situated near a good town or a railroad shipping station, may have a 25-cent market in sight for his fresher line of goods all the year round, and it is easy to sell a case of fresh eggs whenever it can be assembled, either by a single producer or a co-operative lot of egg shippers.

A careful camparison of market reports one year with another indicates an increase in the market price of eggs of three to five cents a dozen. This is an average gain over seven to ten years ago, and the indications are that the progress will be upward and not downward; indeed, the occasional scarcity of poultry products may develop into a permanent shortage, and then again the New York commission houses will invite the whole world to come in and sell eggs, butter and cheese without paying any duty, as they did a few months ago. We believe the time has come for farmers to profitably increase their egg and chicken output. When the farmer goes into the business no one can beat him at it. He can have a healthy poultry yard, can fence it securely, can feed cheaply, and he can produce eggs faster than he can put fat on a three-year-old steer. The way to make money out of poultry is to start in the business on the commercial basis and to stick to it until it is the best income producer on the farm.

Poultry and Pet Stock.

Mr. D. E. Hale, representing the Reliable Poultry Journal, visited the farm of Mr. W. F. Chamberlain, of Kirkwood, Mo., and found there twenty large colony houses sheltering 1,500 chickens, and the colony houses in the middle of a peach orchard, and every tree was loaded down with fruit. He said: "It is interesting to know that Mr. Chamberlain is the only one in that vicinity who has any peaches this year, and he says it is because the fruit trees are in the poultry yards."

One of the principal poultry raisers in the Eastern States, who uses colony houses, which contain four cockerels and sixty hens to the house, keeps 250 hens to the acre, although the houses are seventy feet from each other and there is 150 feet between the two rows of houses. The houses are fourteen feet square. The egg average last year was 162 eggs per hen. The hens were Leghorns.

Prime beeswax is quoted at 30c. a pound on the St. Louis market.

LOUDON—First-prize two-year-old American-bred Percheron stallion at the Nebraska State Fair. Exhibited by North & Robinson, of Grand Island, Nebraska.

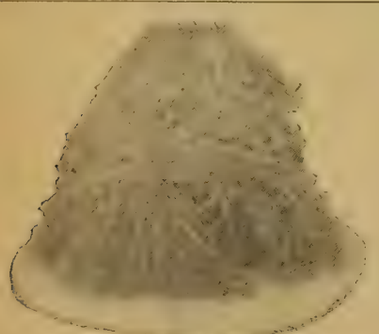
PRIME LAD, 9th—First-prize aged Hereford bull at the American Royal Show of 1909 and champion at Iowa and Illinois State Fairs; also great prize winner in 1908. Exhibited by W. S. Van Natta & Son, of Fowler, Ind.

Her Majesty, the grand champion MARGARET—Champion Hereford female at the Iowa and Illinois State Fairs and grand champion female of the Herefords at the American Royal Show. Exhibited by W. S. Fowler & Son, of Fowler, Indiana. MARGARET is daughter of Prime Lad, the St. Louis World's Fair champion; her dam was Lovey Mary, and she was calved in October, 1905.

Expanding the Arkansas Rice Fields.

The expansion of the Arkansas rice belt has been as remarkable and as unexpected as was the wonderful earlier development of the industry in the Grand Prairie proper. Successes achieved with the 1909 crop in the vicinity of Weiner and Waldenberg, in Poinsett county, have conclusively demonstrated the adaptability of the land and the ability to supply water for irrigation at a minimum cost. The yield of rice in this newly-developed section this year averaged close to 90 bushels per acre. Some fields of Japan rice produced over 100 bushels per acre. Buyers are paying from 90 cents to $1.00 per bushel on board cars at either of these stations.

Lands along the Cotton Belt Line from Jonesboro to Stuttgart have not yet reached a point where they are held too high for profitable investment. Lands which yield an annual net profit of from $50 to $80 per acre each year are really worth much more than any owner or speculator in the Arkansas rice district has dreamed of asking for them. The wonderful thing about it all is that improved and unimproved lands may be bought



ARKANSAS RICE—Fortunes in it. The harvest in the Weiner, Ark., rice district.

at so reasonable a figure. Thousands of acres in Poinsett county, part prairie and part sparsely wooded, are held at from $18.00 to $30.00 per acre. One wonders, when he sees the rapid development going on in all directions, how long this condition will prevail. At Weiner, contracts have been let for wells which will "bring in" close to 10,000 acres of rice land next spring. The crop area the past season was not over 1,000 acres.

A company has been formed at Weiner, with the stock held principally by farmers, to erect a rice mill in time to care for next year's crop. This places Poinsett county prominently on the map and makes certain the development of the rice-growing industry to an extent easily approaching that in the counties to the south.

Some especial advantages are claimed for the district in the vicinity of Weiner. One of these, and an important one it would seem, is, that in the great wells sunk to supply the water for flooding the fields during the growing season, the pumping level is hardly ever more than twenty-five feet below the surface. The wells are sunk to a depth of 95 to 110 feet, but as the elevation of the prairie is not so great as in the sections farther south, the water rises nearer to the surface. It does not require a very careful mathematical calculation to demonstrate the advantage gained. During the hot days and nights of July and August the powerful steam pumps lift from 1,200 to 1,500 gallons per minute. It takes, of course, less power and less fuel to lift water twenty-five feet than it does to lift it thirty-five feet. It is claimed for this Weiner section that a twenty-horse-power engine will do the work which requires a forty or forty-five-horse-power engine in the older field.

But the expansion of the rice industry is not confined to any single district. The area which has been found adapted to rice culture covers over a half million acres. Here and there, as far as the eye can see, are new derricks marking the site of new wells, or smokestacks rising for pump houses. But these only indicate the development of comparatively small tracts. Lands adjoining on all sides await the coming of the man with foresight and capital to improve them.

Returns are quick and absolutely certain. The fact that the water supply is under absolute control, that it may be turned on when wanted and drained off before the harvest, and the further fact that climatic and soil conditions have been proven to be absolutely ideal, virtually insure a full yield. Arkansas fields produce more rice per acre, and a better quality, than any section in the world. These facts have been established by government tests and are vouched for in official reports issued by the Department of Agriculture.

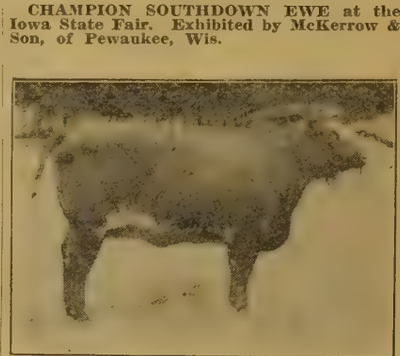
This great industry, new though it may be, has been developed well beyond the stage of experimentation. The investigator need take no man's estimate or prophecy of its possibilities. The record has been written. It is an open book. Fortunes are being made every year in Arkansas. The men who are making them will tell you, if you ask them, just how it is being done.

Further particulars concerning Arkansas rice can be had by addressing E. W. LaBeaume, 1408 Pierce Bldg., St. Louis, Mo.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is the Reliable Poultry Journal. There are other excellent poultry papers, but the one we take home to read and the one family is determined to read is the Reliable Poultry Journal. We have made arrangements whereby we can send The National Farmer and Stock Grower and the Reliable Poultry Journal, both papers, one year, for sixty cents. This is a bargain that is good now, but not for long. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

CHAMPION SOUTHDOWN EWE at the Iowa State Fair. Exhibited by McKerrow & Son, of Pewaukee, Wis.



CHRISTMAS LASSIE—Champion Shorthorn female at the Nebraska State Fair; first-prize two-year-old at the Iowa State Fair, and first-prize winner and reserve senior champion at the American Royal Show. Exhibited by T. K. Tomson & Sons, of Dover, Kansas.

No Stop to Consolidations.

The consolidation of leather companies was not stopped by placing hides on the free list. So far it appears that it has only led to further and larger, world-wide combinations. Americans will soon control the hides of the whole world. People who would buy and consolidate the tanneries of the United States will not stop at buying a few million hides in South America, even if they have to buy the cattle also. The laws which have been enacted for the purpose of regulating large industries have only impeded smaller enterprises. The large corporations thrive under restrictions and the medium-sized ones do not.

LOST OR STRAYED STOCK.

Ear tags on sheep, hogs and cattle often prevent loss of animals. They cost very little. F. S. Burch & Co., Chicago, can supply you.

Three Years For One Dollar, Payable at the End of the First Year.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

Hammond's Handy Atlas of the World.

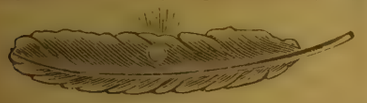
This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

AUTOMOBILE AGENTS

We desire live, responsible dealers to sell **Mitchell Automobiles** in Southern Illinois, Eastern Missouri and Eastern Arkansas, in such towns where we are not represented. **Weber Impt. Co.,415 N. Main St.,St.Louis,Mo.**

UNIVERSAL FEATHER PIN.

This is a daisy of a pin, stylish, rich and beautiful. It is heavily washed with the moon-gold finish, with a little brilliant sparkling like a star. An attractive pin for all purposes. We have adopted this beautiful pin as a premium in connection with the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us 30 cents in nice, new one-cent stamps we will send the **Universal Magazine** for one year and one Universal Feather Pin postpaid. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



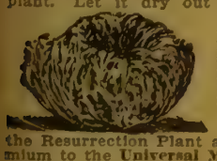
FITS I have cured cases of 20 years standing. Trial package free by mail. **Dr. S. PERKY, Dgls. Park Sta., Chicago, Ill.**

FEED GRINDERS MILLS.

The Bowsher Feed Grinders Mills, made by The L. N. P. Bowsher Company, South Bend, Ind., are leaders in their line. One was shipped recently to the Imperial University in Japan. The Bowsher Company write us nearly every state in the Union in which interest is taken in raising or feeding live stock has purchased one or more of Bowsher Mills for use at their Agricultural Colleges. Of course, The Bowsher Company think such straws should help the intending purchaser to determine the course of the current. For catalogues, address L. N. P. Bowsher, South Bend, Ind.

THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.



We have adopted the Resurrection Plant as a subscription premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Will You Work For Me?

I want a good live man or woman in every community to represent my family magazine. Good pay and big returns can easily be secured. My unique selling plan makes many sales possible, each sale adding additional profit to your income. No experience necessary. No capital needed.

Work is Easy and Pleasant.

This is an unusual opportunity for one party in each community. For information address **E. F. DALCH, Dept. E, 40 W. Kinzie St., Chicago.**

Washing Wool Blankets.

I have known people to begin sleeping between a pair of wool blankets early in fall and use them all winter without a washing. They do not show the soil as do white sheets, but the body wastes are given out in winter as well as in summer, and the blankets absorb and hold them more readily than do the sheets with their smoother surfaces, so even though they show no soil, they require regular airing out of doors and frequently a washing. In place of the weekly washing that is given sheets, the blankets can be hung out on the line in a sunny place. If there is a good breeze, this will do much toward purifying them. But they still require several washings during the season. To do this, take half a tub of tepid water and make a suds. Soak the blanket for half an hour in this, then rub it thoroughly from end to end, remembering that the upper edges and the fold require most rubbing. When rubbed, pass through the wringer and put in water a little warmer than the first water and containing a tablespoonful of ammonia. Rinse through this and then through a bluing water. Hang on a line which has first been cleaned and stretch the blanket into shape when hanging it; do not iron. —Janet Thomas Van Osdel.

The National Farmer Brooch.

This is to interest our lady friends in securing subscriptions for The National Farmer and Stock Grower. The Brooch is richly gold-plated, except the leaf on the right, which has a silver finish. There is a dazzling brilliant in the center of the flower on the left. The Brooch itself is much better than the picture. It is manufactured expressly for us by a first-class jeweler. Money cannot buy any more elegant or beautiful Brooch. It is rich; not cheap or common. Where one is taken we expect to send a dozen. The pin is not sold alone, but we will send The National Farmer and Stock Grower one year to any address and The National Farmer Brooch on receipt of a postoffice money order for 60 cents. If not highly pleased, the money will be refunded. It will make a splendid Christmas present. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Calico That Will Not Fade.

I have seen somewhere about a kind of calico that is made in pretty patterns and will not fade. I can't remember the name. Can you tell me what dress goods they were?
ANXIOUS INQUIRER.

You very likely saw the advertisement in this paper of Simpson-Eddystone Prints, made by the Eddystone Mfg. Co., Philadelphia, and that is undoubtedly to what you refer.

I can say from experience that these goods make extremely stylish dresses. The material is of excellent quality, and it is perfectly true that the colors will not fade, even with repeated washing.

Simpson-Eddystone Prints are supplied by dry goods stores in almost every community.

The Snow Corn Estimate.

Mr. B. W. Snow, crop expert, has considerable reputation as a crop expert, and his statements are looked forward to by people who have large amounts of money invested in grain. On November 2d he estimated a total crop of 2,741,000,000 bushels. Last year's crop was estimated at 2,611,000,000 bushels. Mr. Snow finds the quality of the corn crop is about normal.

To Preserve Flowers.

Cut off the best-formed buds that are about to open, leaving their stalks rather short; then cover the cut with wax. Let the buds dry, wrap each up separately in very dry paper, and put away in a box in a dry place. At any time during the winter you can take them out, clip off the waxed stem, and on dipping them into warm (not hot) water in which has been dissolved a little salt or saltpeter they will bloom.

The Sunshine-and-Shadow Quilt.

While few would care to go into the elaborate patchwork of our grandmothers' times, there are many pleasing patterns that take little time and yet preserve prized pieces. The sunshine-and-shadow quilt has the double merit of being easily pieced on the machine or by a child, and when tastefully arranged it becomes really a thing of beauty.

The secret of success is in having bright colors and extremes in color. The shaded effect is the key to its beauty. "Have lots of blue in it," says one. "Imitate the rainbow," advises another. "And have both sunshine and shadow," say we.

As the man who builds says he never knows how to do it until he has built one house, we may also say, piece one quilt of calico before venturing with silk or other more expensive material.

If you are making it from a collection of wash goods in the house, select those of the brightest colors and with the least conspicuous figures. If buying new material, select plain goods, having a band of dark red, bright red, orange and yellow.

Cut the squares about two inches each way and piece the side strip in regular shading from light to dark and the reverse. It may run this way: Almost white, pink, light red, dark red, black or dark maroon, and then back through medium and light to white, thence a repetition of the previous work; or, if desired, a shaded effect of blue or green can be introduced, and then return to the red shading. Repeat until the desired length is reached. Piece the next strip in the same way, except that you commence with light pink instead of white, and continue as before. The third strip commences with the third color used in the first strip. Thus when the strips are sewed together the squares of a certain color run diagonally across. When you have pieced six strips in this way, reverse the direction of the "streaks" and the result when complete will be zigzag belts of "sunshine and shadow," the beauty of which must be seen to be appreciated.—Bessie L. Putnam.

Had to Be Careful.

A deaf but pious English lady, visiting a small country town in Scotland, went to church armed with an ear trumpet. The elders had never seen one, and viewed it with a suspicion and uneasiness. After a short consultation one of them went up to the lady, just before the opening of the services, and, wagging his finger at her warningly, whispered: "One toot, and ye're oot." — Christian Register.

Kansas lamb feeders for market failing to find supply from the usual source in New Mexico, turned their attention to Old Mexico and bought about 45,000 head, but thereby arose a complication, because the Mexico ranchmen had scab in their flocks and only a few thousand were permitted to enter this country, even after they were dipped.

Cures Constipation Without Medicine

For The Benefit of Our Readers, We Are Pleased to Publish Prof. Midgley's Wonderful, Clean, Straight Talk, on How You Can Cure Constipation Without Pills or Medicine.

I can and do cure the worst cases of chronic constipation—cure them to stay cured, and restore the patient to a state of health and happiness such as they had never known before. I can cure constipation, no matter how bad it is. I can show you how to cure yourself right in your own home without the use of drugs. Constipation is cured for all time when cured my way.

"You Simply Can't Cure Constipation with Pills, Powders or Potions. Force is Folly. I Tell You How to Cure Yourself Permanently at Home by the 'Midgley Way' Without Medicines."

Don't delay a moment. It matters not how many doctors have tinkered on your case, or how many pill propositions have discouraged you, my past record of success is sufficient to quickly prove that I can do what I claim. Fill out free coupon herewith and mail today.

Most Diseases Caused by Constipation, Sewage of the Brain.

"When there is a blocking-up in the bowels the poison is soaked up by the little cappillaries on the inside lining of the bowels and all this poison is rushed right through the blood."

"It goes to the brain naturally, and to every part of the body, every organ being fed on this polluted blood, or sewerage. It goes to your face in the form of pimple poison and breaks out on the skin. It goes to your head and gives you headache and dizziness, it goes to your brain and makes you drowsy, it weakens the stomach and causes dyspepsia, and bad breath, it goes to the liver and causes biliousness, it goes to the kidneys and eventually gives rise to Bright's Disease, it goes to the heart and makes it thump, it goes to the eyes and they lose their lustre, it makes your nerves flabby and weak and out-o'-sorts, and this is the advance agent of all kinds of disease, which you couldn't get at all if there was pure, rich, red blood flowing in your veins and your whole body was in prime condition."

Free Coupon

Fill in your name and address on dotted lines below and mail to Prof. T. H. Midgley, 2603 Midgley Block, Kalamazoo, Mich., and by return mail he will send you free his 60-page illustrated book, showing the simple way of curing constipation permanently without medicine. Write plainly.

Changes of Crops Important.

In Livingston, Grundy and Winnebago counties, Illinois, white grubs and ants have caused serious injury to corn again this season. In Livingston county, in regions where the grub was troublesome last season, ants have caused serious losses this season. Corn growers should profit by the experience of market gardeners, who shift from one crop to another before pests attack any one crop. Growers of onions know that it will not do to grow onions more than two years in succession on the same piece of ground, for maggots and fungous diseases become dominant with the third or fourth crop. The plan is to grow onions for two years and then intervene with potatoes or beets. But corn growers stick to corn until actually driven from it. In Livingston county only a small per cent. of the corn acreage has been attacked by ants and grubs, and for this reason right now is the best time to combat them. A change of crop will break up the breeding grounds of these pests.—L. C. Brown.

The Congo Guarantee.

Tired of having people suspect that every guarantee was simply an advertising dodge, the makers of Congo Roofing recently set to work to devise a guarantee for their roofing which would be legally binding and easily enforceable. It was not an easy task to devise such a guarantee, but one finally was produced in which the best lawyers could see no loophole or chance of escape for the company in case Congo Roofing failed to make good.

The guarantee involves the issuance with every roll of Congo Roofing of an Insurance Bond of the National Surety Company of New York. After the roofing is laid the buyer fills out the blanks and sends in the bond for registration, and after that he has absolute protection. Congo three-ply is guaranteed for ten years, and the makers will gladly send on request to anyone who is interested, booklet telling all about the bond, and a free sample of the roofing itself. Address the United Roofing & Mfg. Co., Philadelphia, Chicago, San Francisco.

Trumans' Illinois Winnings.

On returning home from the Illinois State Fair, Trumans' Pioneer Stud Farm of Bushnell, Ill., reported as follows:

"Our horses arrived home in good condition from the Illinois State Fair, at which place we were very successful, more especially in the Shire and Hackney classes. In the aged Shire class Dan Patch was again placed first and later champion Shire of the show. Hepworth Conqueror first in three-year-olds. The Swell first in two-year-olds; and Williams Moulton Temple first in yearlings. Wrydeland's Sunshine first in aged mare class and later champion Shire mare of the show. Prickwillow Connaught again kept up his reputation of first in aged class and champion Hackney of the show. Heacham Nobleshot first in three-year-olds. Queen of Diamonds first in aged class and champion Hackney mare. In addition to the regular prizes we won four medals and two silver cups. This, we believe, is a record and equals our success at the Iowa State Fair this year. In the three-year-old Shire class our entries numbered eleven and several veteran importers standing around the ring remarked that they were the greatest bunch of three-year-old Shire horses they had ever seen. Our trade is as good as any other year and the inquiries for first-class stallions, we believe, is better than heretofore."

Wild Mustard Spreading.

Wild mustard is one of the most persistent weed pests we have to fight now in Northern Illinois. It is spreading at an alarming pace in Iroquois and DeKalb counties. In Iroquois county there were many oat fields so dominated by wild mustard that the oats could not be seen a few rods distant. The mustard seed was brought down from Wisconsin in seed oats. For three years Southern Wisconsin has supplied the bulk of the seed oats for Illinois and Indiana farmers. Southern Wisconsin is a notorious region for mustard, although it must be said that grain growers up there are doing their best to kill it out. It is a pest to be feared. The seeds are small, and frequently recleaned oats will carry thousands of the mustard seeds lodged in the oat hulls. It looks hardly possible that some of these Iroquois county fields were sown unwittingly this season with mustard in the seed oats. There is too much mustard for that. But the mustard is there, and the problem now is to get rid of it. Every one of these plants should have been cut before the seeds matured. When the matured plants have been cut with the oats, better not take any chances on that oat for seed next spring.

Another pest is seen altogether too frequently on good farms in Central Illinois. It is buckhorn. A Livingston county farmer tells me his experience with it. Last spring he bought some cheap clover seed. He knew that it contained buckhorn, but inasmuch as he intended to turn the clover under this fall he presumed that the buckhorn would be destroyed. He is an uncommonly good farmer. His fields are usually clean; his grain and hay crops are of good quality; but for a difference in price of $2.00 a bushel he has sown a twenty-acre field so thick with buckhorn that it will take several years to clean it out. It is always a big risk to sow weed seeds. The difference in the price of clean seed and the dirty seed sown on this field would amount to, say $8.00, and I would not take the job of cleaning that field of buckhorn for $100.—L. C. Brown.

Of Value to Horsemen.

Do you turn your horses out for the winter? If so, we want to call your attention to a very important matter. Horses which have been used steadily at work, either on the farm or road, have quite likely had some strains whereby lameness or enlargements have been caused. Or perhaps new life is needed to be infused into their legs. Gombault's Caustic Balsam applied as per directions, just as you are turning the horse out, will be of great benefit, and this is the time when it can be used very successfully. One great advantage in using this remedy is that after it is applied it needs no care or attention, but does its work well and at a time when the horse is having a rest. Of course it can be used with equal success while horses are in the stable, but many people in turning their horses out would use Caustic Balsam if they were reminded of it, and this article is given as a reminder.

She Could Not Find It.

Mrs. Hen, having performed her function of laying an egg, took a constitutional around the yard. Returning to her nest she found it empty and clucked angrily.

"What's the trouble, ma'am?" asked the rooster.

"It's mighty funny," she grumbled, "that I can never find things where I lay them!"—Boston Transcript.

IN justice to *your* rifle get UMC cartridges. You may prefer a Remington, a Marlin, a Winchester, a Savage, or a Stevens rifle. Everyone of them shoots better with UMC cartridges. The UMC cartridge specialists do nothing but make and test cartridges for rifles of every make. If *your* rifle could speak, it would ask for UMC cartridges to shoot—they are made for it.

You don't come home with the disappointment of a misfire and lost game when you take UMC cartridges with you

Not a patent medicine or "dope" mixture, but a **course** of several **different** medicines prescribed to meet the complications and **special** needs of your **individual** case. Write to-day. Send **no money.**

GERMAN-AMERICAN INSTITUTE.
834 Grand Ave. Kansas City, Mo.

Fortune beckons you

in Arkansas and Eastern Texas. They want hustling, energetic men down there who can appreciate and make the most of rich, virgin soil, a long growing season and splendid climate. If you are renting a farm now, your rent money will pay for a *clear title* to fertile acres there. If you own a northern farm, one acre will buy several acres of *better land* in the Southwest. Wheat, corn, oats, hay, rice—almost every crop brings bigger returns than you get up north on high priced lands.

In Arkansas and East Texas

you can often grow two or three crops a season and work outdoors practically all year. There are no long winters to contend with, no costly shelter needed for stock, no long feeding periods—there is grazing all year. 30 to 40 inches of rainfall. Pure water for home and stock. Good churches, splendid schools and all the social advantages. And *land can be had there now* at $5 to $25 per acre. Isn't that the place for you?

COTTON BELT ROUTE

You will never know how big the opportunities really are until you investigate. Send for free copies of our books about Arkansas and Eastern Texas. Post yourself on conditions. Take advantage of the low fares offered twice each month by the Cotton Belt Route. Make a trip down there to look around. It will be a start on the road to prosperity. Write today—tomorrow you may forget.

The Too-intelligent Hen.

The following story of the conscientious hen was found by us in the perfectly reliable Egg Reporter and is as follows:

"Talk about the intelligence and the supersensitiveness of the hen! The following, which is the experience of a lawyer, and must, therefore, be truthful, is given as the real hen story of the season:

"I maintain that hens think and feel the same as humans. Maybe not all of them, but now and then you find a bird that has reasoning faculties and feelings, and emotions, the same as you or I. They have their love and their sorrows. Now here is the proof.

"I had a fine Black Minorca who was a master layer. When the other hens were taking their vacation she was tending strictly to business and laying eggs. One day she came out cackling and I went in to get the egg. It appears that while she was telling me about it one of the boys took the egg and put a hard-boiled egg in its place. It was for a joke on me, you know. I noticed that the egg looked a little queer and broke it open. Well, say, if you ever saw a hen look dumfounded! She thought she had laid it.

"I thought nothing about it till I looked down, and hanged if that hen wasn't crying. Big tears were rolling down her furrowed cheeks. I tried to tell her that she was all right, and that it was some horse play by the boys. But she uttered a deep human-like sigh and walked slowly away. The next day she didn't lay, but just moped around the chicken yard, kind of homesick-like. Well, it went on for a week, and still not an egg.

"Then I noticed she was quitting the feed I was giving her, and trying to pick up a living. She had a conscience, you see, and wouldn't eat the food I had bought unless she could repay me in the right kind of eggs. That Black Minorca knew she wasn't expected to lay hard-boiled eggs, as she evidently thought she had done. One morning, as I was feeding the rest of the chickens, I noticed her examining the blade of the lawn mower, and also the desperate look in her eyes, but thought nothing of it at the time. I tried to cheer her up and get her to partake of some of the food, but it was of no use.

"The next day I found her dead in the barn. She had dragged her neck across the blade of the lawn mower, cutting her throat.

"Over in one corner was an egg just left to show me that she intended to do what was right. But it was a clear case of suicide. Killed herself from remorse. That is why I think hens have reasoning powers and use them just the same as we do."

Cotton Growing on Trees.

The cotton grower of the United States need not be any more alarmed over the competition of the cotton-growing tree of Mexico than the North American baker is over the South American bread plant that also grows on trees. India and South America have both their cotton trees, but they do not, and it is doubtful if they ever will, produce a satisfactory staple in quantity that will compare with the cotton plant annually grown from seed. Mexico produces a cotton crop every year, but it does not grow on trees.

Story on Discretion.

Discretion is a beautiful thing, and here is a story about an Irish tailor who had a heap of it.

One morning Mrs. Murphy, a customer, came into the shop and found him busy with pencil and paper. She asked him what he was doing.

"Oi'm makin' a lisht av the min in this town who Oi kin lick."

"Hev yez got Murphy's name down?" asked she.

"Murphy heads me lisht."

Home flew Mrs. Murphy and broke the news to her man. He was in the tailor's shop in a jiffy.

"Me woman tells me that ye're afther making a memorial tablet uv the min that yez can lick, and that ye've got me at the head of it. Is that true?"

"Shure and it's true. What of it?" said the tailor.

"Ye good-for-nothin' little grasshopper, I could commit suicide on yez with me little finger. I could wipe up the flure wid yez wid me hands tied behind me."

"Are ye shure of that?" asked the tailor.

"Shure? I'm shure about it."

"Well, then," said the tailor, "if ye're shure of it I'll scratch ye off the lisht."

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet,** postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Universal Magazine Bracelet.

SHROPSHIRE EWE—American-bred champion at the Iowa State Fair. She was a lamb, but female champion of the breed. Shropshires are so far advanced in numbers in Iowa that they made up a majority of the sheep entries at the Iowa State Fair. This lamb was exhibited by Chandler Bros., of Chariton, Iowa.

ERIC, 7th, OF KEILLOR PARK—Grand champion Aberdeen-Angus bull, and **INGA'S GIRL,** senior and grand champion Aberdeen-Angus cow at the Illinois State Fair, 1909. Exhibited by A. A. Armstrong, of Camargo, Ill. At this great Fair there were four herds exhibited, all of them averaging high in quality.

PRINCEPS LASSIE—Champion Hereford cow in Iowa class, Iowa State Fair; also grand champion at the Sioux City Interstate Show. She is a full aged cow and highly representative of the breed. Exhibited by O. S. Gibbons & Sons, of Early, Iowa.

WRITE TO THIS WOMAN

If You Want to Stop a Man From Drink.

She cured her husband, her brother and several of her friends, and now she generously offers to tell you of the simple, inexpensive remedy that she so successfully used. The remedy can be given to the patient unnoticed so there is no publicity of your private affairs. She is anxious to help others so we earnestly advise every one of our readers who has a dear one who drinks to drop her a line today. She makes no charge for this help, she has nothing to sell (she asks for no money and accepts none) so there is no reason why you should not write her at once. Of course, she expects that you are yourself personally interested in curing one who drinks, and are not writing out of mere curiosity. Send your letter in confidence to her home. Simply write your name and full address plainly in the coupon below and send it to her.

MRS. MARGARET ANDERSON,
837 Home Avenue, Hillburn, N. Y.

Please tell me about the remedy you used to cure your husband, as I am personally interested in one who drinks.

THE UNIVERSAL PREMIUM BROOCH.

This is the sweetest, prettiest, most beautiful brooch we ever saw. No exceptions. It is delicate and refined. It is richly washed with old gold and will stand all kinds of tests and examination. The brooch was selected by us from a thousand brooches. The richest lady in the land can wear it and it will appear equal to any she has on. It is suitable for a child and rich enough for a grown woman. We have adopted the Universal Brooch as a subscription premium to the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one Universal Brooch as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Pratts New Poultry Book.

Pratts New Poultry Book is worth having as a gift, and many that we have to buy are not as good. It is written in the interest of Pratts Poultry Regulator, and that is good reading also. It is the farmer who can make the most money out of poultry, and this book is a manual of information concerning the raising of poultry for profit. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Poultry Book."

What the Fireless Cooker Will Do.

The fireless cooker will not cook without fire, but is called "fireless" because once food has been started to boiling it will retain the heat and continue the process of cooking.

It cooks soups, meats, cereals, vegetables, boiled puddings and many other articles of food more perfectly than it is possible to do on an ordinary coal or flame stove.

It will roast meat and bake bread, cakes, etc., in the same length of time as an ordinary stove. This is made possible by the roasting attachment, which consists of two heavy metal radiators. They are heated and placed one beneath the pail and the other on the rack above the food.

By retaining all the juices, it renders cheap cuts of meats nutritious and palatable, insures digestion, and, on account of the many delightful boiled and steamed dishes to which it is so well adapted, it has a tendency to create an appetite for wholesome food.

As a fuel-saver it is an economy which the woman in moderate circumstances cannot afford to ignore.

It saves the time, patience and strength of the housekeeper, thereby promoting the welfare of the entire family.

It reduces the work of "washing up" after meals to the minimum, since there are no smoked nor burned utensils to clean.

It enables the housekeeper to have a clean, cool kitchen, without the muss and confusion incident to cooking on a hot stove.

By its use one can always have hot water for sickness or emergencies.

Where members of a family cannot all come to their meals at the same time it is invaluable, since food may be kept warm without drying out or geting overdone.—An Expert Cook.

The Age of Eggs.

In answer to a corresopndent, the Petaluma Poultry Journal says:

"The age of an egg can be determined by the size of its air-space, which can easily be seen through the shell by exposing the egg to the light in a dark room. In a newly-laid egg the air-space is very small, but as the egg gets older the air-space enlarges. Thus, at three weeks old it will occupy one-eighth of the contents of the eggs. This process of testing is adopted by many of the large dairies and egg houses of the land, thus being able to insure none but fresh eggs to customers. It is useful also in artificial incubation or in setting hens, as the fresh eggs can thus be detected from the staler ones."

A chicken fancier in Maine claims to have built up a 240 egg strain of Barred Plymouth Rocks from which he had twenty-five hens that paid him a profit of $4.00 per hen per year. He claims to have a pullet that lay 209 eggs in 231 days.

It appears from the New York market reports that eggs placed in cold storage in April begin to sell in October. This is practically a six-months' storage. It also appears from the Egg Reporter correspondents that there are 15 per cent. more storage eggs in store than there was at this time a year ago.

Better Quality of Hay.

A Black Hawk county (Iowa) farmer sends me samples of hay grown in his meadows and asks what I think about them.

I have answered this correspondent by letter, but there are some things about this hay business which I wish to answer again through this paper. There is too much mixed hay to bring the top prices on any city market, especially on any Northern market. This Iowa hay was timothy and clover and timothy and red top. This hay is grown especially for city trade, yet because of the mixtures it will not sell within ten dollars a ton of straight timothy. Then another cause of serious loss is baling in all the weather-beaten stuff. When baling is done out of stacks, the sides had best be cut down and only the bright part of the stack baled. Nine-tenths of a stack may be bright, but if the whole stack is used just as it comes, the bales show up badly and grade accordingly. Many farmers are making a business of shipping hay. If more attention was paid to producing nice, straight grades, and then bale it while it is a nice green color, much better prices will result.—L. C. Brown.

Good Price For Broom Corn.

It seems strange that a first-class ton of hay will sell for $17 on the market, and a ton of broom corn will bring $230. It goes to prove that broom corn used to be very cheap.

Double Saving till Nov. 15th

Vehicle bargains in our Special "KEEP BUSY" Sale.

Even at regular prices you will save money if you buy now. Because leather, rubber and other materials are rapidly advancing in cost—and next year's prices will be higher.

A MOST BEAUTIFUL PICTURE—"THE WOOING."

This is a most elegant and beautiful picture. The colors are delightful. It is the refinement of elegance in the treatment of the "Story of Love." This represents the companion picture to another picture entitled "Playing Two Games at Once." In order to hurry up old subscribers, to encourage new subscribers and to do something we are proud of, we are offering these two elegant 16x20-inch pictures to anyone who will send direct to us a postoffice money order for 50 cents to pay for one-year's subscription to The National Farmer and Stock Grower. This is a good farm paper. Read it over and you will find it to be interesting and instructive, and you will be delighted with the pictures; if not, we will refund the money.

SUBSCRIPTION BLANK—Cut It Out and Mail to Us.

The Causes and Cures of EYE AND EAR Troubles

Every person should possess a general knowledge of the formation of the eye and ear and understand how to treat and care for them.

Eyesight and hearing are God's greatest gift to man. You should learn how to protect the eye and ear, to prevent disease from destroying these wonderful organs, for when once destroyed no artificial aid or device can ever replace them. Hence, learn now at no expense to yourself how to care for your eyesight and hearing.

Here Is My Great Book—I Want You to Have It

This Book Explains All Practical Tests and Illustrates the Delicate and Intricate Parts of the Eye and Ear. Anatomically and Scientifically Accurate.

Every sufferer should be given an opportunity to know that there is hope even though the sightless eyes cannot distinguish the beautiful sunlight from darkness and the earth's splendid sounds can no longer be heard. It is to spread this joyful news that I have taken time from my duties to write this book.

This book is based upon result of researches that have taken years of study and experimenting. I have written this book with but one object in mind, and that is to relate actual facts, to tell what I have accomplished in the light of my past experience and what I expect to accomplish in the future. I have written this book as plainly and as clearly as I know how. It may give you a light that will illuminate your path to the recovery of the divine gift, which you may be in danger of losing. With this confidence and hope that I have given to the world, something that may aid those who are afflicted and prevent others from falling into the ways that may injure, it is my desire, therefore, that you send for this book and get from it all the benefit towards the means of saving either your sight or hearing.

One of the Greatest Books Ever Published

Full from Cover to Cover with Information Concerning the Treatment and Care of the Eye and Ear. Send for It at Once—Use the Coupon.

I have been informed by learned people who know, that this is the greatest book for free distribution ever published on eye and ear diseases. It is written in plain, simple language and is easily understood by any average person. The book tells how to test, treat and care for the eye and ear. A splendidly illustrated chart of the eye is shown, and several methods for testing the eye are given. There are many chapters devoted to the different forms of disease the eye is heir to; also the proper information for the care and cure of eye diseases is carefully suggested. Each part of the ear is illustrated with life-like pictures, and described so that anybody may understand. The causes and forms of deafness are clearly explained and remedies suggested. You will find a chapter instructing you how to test the hearing, how to know whether you are suffering from any trouble with the ear, or may be threatened with such trouble. Thus you will find instructions in the use of a series of tests which will enable you, if you have ear troubles to decide the amount and location of the defect in your hearing, and can therefore take proper measures for relief and cure.

I Believe I Have Prepared a Book that Will Benefit Any Sufferer Who Accepts This Opportunity to Know Its Contents.

It is full from cover to cover with information concerning the treatment and cure of diseases of the eye and ear; something every person should know. You should learn how to treat the diseases these organs are heir to and prevent as far as possible any injury to them. The organs of sight and hearing are of the most delicate construction, and are easily injured, especially the eye-sight. It is so easy to strain the nerves of the eye and cause injury that may be hard to remedy. If you will study my book I am sure you will find simple lessons that will teach you how to care for the eye and ear.

Help a Friend—If You are Well and Strong

If You Know of a Friend or Relative Who is Afflicted with Eye or Ear Troubles, Tell Them About this Book or Send for It for Them, So They May be Benefited by the Information It Contains.

Space will not permit me to say in detail in this announcement all that this great book contains for those who would be benefited by knowing its contents. I can only say that I have succeeded in writing a book—a treatise that is valuable as a reference book, that the doctor can refer to for information or the sufferer for advice. The facts which I have presented are the result of personal contact with thousands of the most complex derangements of the eye, ear, nose and throat. While I shall indulge in no immodest self praise, my heart, affections and skill are wrapped up in my work. You who are well and strong pause a moment. Reflect upon possible and probable consequences before you throw any stumbling block in the way of a sufferer who is seeking relief. If you know of a friend or relative who is afflicted in any way with eye, ear, nose or throat trouble recommend that they send for my book. It is not to be supposed that the well can fully sympathize with the sick. They would have to feel every pain of mind and body which the sick endure, but the well can and should do their part in aiding those who are afflicted. **Send for my book today for yourself or a friend.**

I Have Only a Limited Edition. Get Your Book at Once.

I want my book to go as far as possible in spreading the glad news that there is help for those threatened with blindness and deafness, and the knowledge contained in my book, if imparted to those so afflicted, may be the means of restoring them to healthful sight and hearing. I impose no obligations on this information; I ask no favors from anybody. I simply want interested people to get my book. It is free for the asking. Write for it today.

I make it very simple for you to get this book without any expense or obligation to yourself. All that is necessary is to fill out the coupon attached to this announcement, cut it out and mail it to me. Write your name and address as carefully and plainly as possible so there will be no possibility of the book going astray, as I want every one of these books to reach the hands of those who are in need of them. Cut out the coupon at once and send it without delay, as I will send the books to those who act promptly, and send them as long as they last. **Remember, I only have a limited edition—get your book now.**

The **Universal Magazine** is a nice, clean, interesting, thirty-two-page, three-column monthly paper, and it will please everyone. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

School Again.

The necessity for putting up the school lunch is in many households a signal for additional baking; for there must be pie and cake and cookies constantly at hand to tempt the appetite of the child. This means extra work for the already over-burdened mother. But a still worse feature is that it means a perverted appetite that will soon need more than ordinary cooking to tempt it. Plain, wholesome fare that is easily arranged for in the farm home is much better than fancy cooking.

Avoid the paper pail, which cannot be thoroughly scalded and cleansed. If you do not feel like buying a regular lunch pail with compartments for the various things, get a plain tin pail with a close fitting cover. If time is valuable, save the trouble of washing and ironing school napkins by substituting paper ones. These are cheap, neat, and a fresh one can be afforded every day. If there is no can with the pail for drink, a small one with screw top, such as originally contained canned goods of some sort will be found a most convenient receptacle.

Avoid cultivating the use of tea or coffee. If the child does not care for milk, a little lemon juice, with or without sugar, will supply the nucleus for a nice drink of lemonade. If the water is poor the juice alone added to it will be more satisfying than if sugar were added. It quenches the thirst better, and takes away the longing for too oft repeated drinks. Besides, it serves to prevent any bad effects from change in water.

The sandwich should be the main part of the lunch, varied daily to suit the taste. Whole wheat bread and brown bread may be alternated, the filling being each day a little different. Children like a change; they also like little surprises in the way of food; and if some dainty wholly unexpected can be slipped into the pail the attention will be fully appreciated. A bit of cold chicken, or ham left from dinner may serve as the basis of the filling. Slice or chop, place between thin slices of buttered bread, and wrap napkin to keep it from becoming dry. Plain bread and butter with a stalk of celery may be furnished another day. cottage cheese will serve as a filler on the third day. Lettuce leaves with mayonnaise are another attractive bite.

Mayonnaise serves well in many ways. Provide a small bottle of it for the child to carry, to be served with potatoes or cabbage at the noon tide hour. These salads are appetizing, and in hot weather a most valuable addition to the lunch. And by keeping the dressing on hand, one may with little trouble provide a salad every day. Beets, eaten with vinegar or with butter, are a pleasing dish enjoyed by most little folks. Pickles and spiced fruits are helpful as allayers of thirst, and may be used sparingly.

While slavery to pie and cake is to be avoided, the lunch should always contain dessert in some form. The stomach wants the sprightly flavor of fruit to brush off the load of heavy foods. Or a bit of sweet will counterbalance the meats. A cup custard or rice pudding is at once nourishing and delicious. The same may be said of corn starch pudding. Shredded wheat biscuit with sugar and cream and a bit of fresh or canned fruit make a dessert fit for a princess. The cream should be carried in a separate bottle, and applied only when ready to eat. Baked sweet apple with cream is another acceptable dish. A piece of plain cake or a cookie with the fruit occasionally is permissible. A banana, a bunch of grapes, or a piece of melon, the latter to be eaten with salt to prevent ill effect. And the apple is always wholesome.

Votes For Women in Denver.

"It was a decided mistake to give women the right of the ballot," says a woman politician of Denver in Woman's Home Companion for November. "But now that they have it, in my belief it is as much the duty of a woman to exercise that right as it is for her to observe her religious duties or to take proper care of her home. The average woman is better than the average man. At least that is my observation. The average woman politician is as bad as the average man politician—only she is worse! If the rank and file of women would join in one concerted movement to unseat both the professional man and the professional woman politician, then the right of franchise vested in women would prove a boon of inestimable value.

"Like many another woman, I entered politics with the idea of purifying the political atmosphere. Since then it has been a constant struggle on my part to keep my skirts clean. It is much the same thing as a woman marrying a man to reform him. In nine cases out of ten he draws her down to his own level instead of being lifted to hers.

"Women, generally speaking, vote to please the men. There are those who will take issue with this statement, but it is nevertheless true. Perhaps it may be different after the women are better educated in political affairs, if that time should ever come, but under existing conditions the women vote as the men suggest. Left to themselves and uninfluenced by the men, the woman vote would be chaotic. We wouldn't know where we stood in an election till after the votes were all in, because women are influenced by all manner of things the ordinary mortal would not reckon with. By way of example, a really handsome man is a strong asset for any political ticket in Colorado!

"Women are by nature of a trusting disposition in everything save love affairs. It is therefore an easy task for the men to control their votes. For that reason in planning a campaign we decide upon candidates and principles that will appeal to the men and then leave it to them to win their wives, mothers, sisters or sweethearts over to their views."

One Way of Doing Business.

Billy Emerson, the minstrel, took a company of black-face artists to Australia in the old days, and had hard luck. On the way back he landed at Shanghai and gave a show.

Emerson saw there was a good house. "Doing pretty well," he said to the box-office man.

"Fine," that official replied; "we've got in $400 in money and $1,400 in chits."

"In what?" gasped Emerson.

"In chits."

"What are chits?"

"Why, promises to pay. Everybody uses chits here. Give a chit and settle at the end of the month."

"Do you mean to tell me that you have let $1,400 worth of seats go for them chits, as you call them?"

"Sure; why not?"

"And those people just signed their names and didn't pay cash?"

"Certainly."

"What a business I could do in the states!" groaned Emerson.—Saturday Evening Post.

LET US TAN YOUR HIDE.

Mr. Stockman, what difference does it make to you when you send your hides away to be tanned and made up into coats, robes and rugs, whether the distance is less or more, so long as **"Crosby pays the freight"** both ways when three or more cow, steer or horse hides are sent in one shipment?

Why not send them to the oldest and largest establishment of the kind, where you will be sure of good results? In that way you can get better and cheaper fur goods than you can buy.

Figure on it and get our illustrated catalog, which gives prices and a lot of other useful information. Address

The Crosby Frisian Fur Company, Rochester, N. Y.

Please mention Nat. Farmer and Stock Grower.

An Old Picture Revived.

"It is always interesting to me," said a veteran, as he lingered lovingly in a lobster palace, "to note how youngsters who are making their freshman dash into nocturnal Broadway duplicate exactly the methods used a generation ago—by their fathers, for example—in seeking to impress those about them as 'men of the world.' They really believe they are conducting themselves in a manner developed exclusively by the Twentieth Century.

"A minor illustration may be seen in the youngster who, as soon as seated in a place like this, and before ordering anything, ostentatiously lights a paper cigarette, blows the smoke across the table into the face of his girl companion, and casts an eye around as though to remark: 'Do you see me? Guess I'm up to date all right—eh?'

"Of course, he's an ass—anyone is that smokes a cigarette just before his oysters or soup. But the point is that in this and other asinine things he prides himself on up-to-dateness; whereas he's only an old picture in a new frame."—New York Globe.

The Hands in Winter.

It has been said that many colds in the head are due to cold, bare hands and wrists, as the blood in the hand becomes thoroughly chilled and is returned in an icy state to the lungs, and if the hands are kept warm and dry when exposed to the cold and wind, you may avoid serious trouble from this cause.

If your hands have a tendency to roughness, avoid all kinds of cloth gloves. Chamois, undressed kid and similar kinds are pleasant and protective, and woolen gloves or mittens may be worn over the kid ones in winter, if wished.

The manner of washing and drying one's hands has much to do with the general condition and even with the chaps of the finger tips, and a few minutes devoted to the care of the hands every night before going to bed will work wonders.

When gloves are used for sleeping in, it is better to slit down the center of the palm, or even cut it away entirely.

To keep the hands soft and the skin firm, so it will not chap as easily, keep a bottle of borax water on your table and use a little in the water every time you wash your hands. This solution is prepared by adding a heaping tablespoonful of powdered borax to a quart of hot water, and when dissolved it is ready for use; and an excellent cream to use at night is made by mixing well together 10 cents' worth of glycerine, the juice of two lemons and one tablespoonful of powdered borax, and this must be rubbed well into the skin after washing with the borax water.

It is not at all difficult to accustom one'self to wear old gloves for outside work and all sorts of housework, and they save the hands wonderfully.

Every child should have two or three pairs of gloves for every-day use, so they can be exchanged whenever they become wet, and especially in the snowball season, as the gloves soon become wet, then the chill strikes the wrists and a cold follows as a natural result, and their gloves should be made of some material that can easily be washed and kept soft and clean. Use only the best soap, and always dry the hands thoroughly, and especially if you are going out in the cold or wind.—M. A. Y.

Remedy For Fleas.

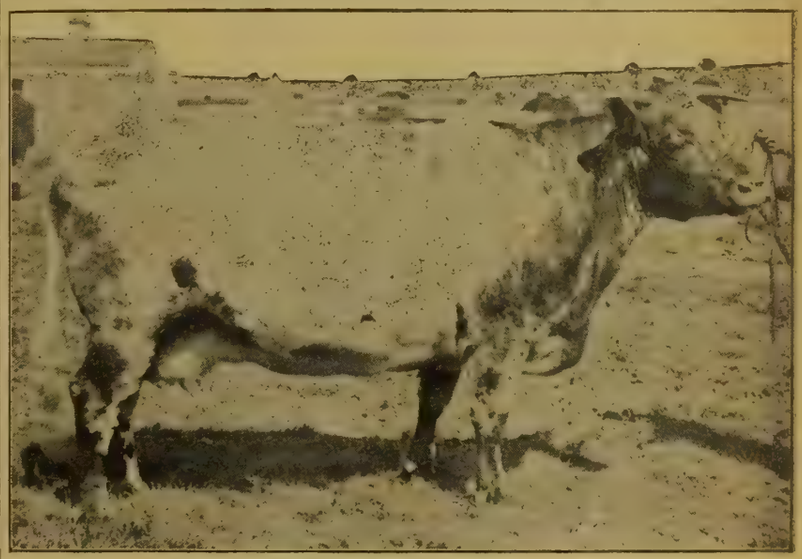
"The best remedy for fleas in a house," says State Zoologist H. A. Surface, of the Pennsylvania Department of Agriculture, in reply to a number of letters seeking information on the subject, "is fumigation with hydrocyanic acid gas, the same as for all other household pests. This will, of course, destroy flies, roaches, etc., as well as the fleas. This, however, must be done with considerable care, because the gas is deadly, and, besides, rather expensive. One of the simple and less expensive but slower methods of ridding a house of fleas is to do it by means of sticky fly paper. If the fly paper is placed beneath chairs, tables and stands where it will not be in the way of anyone walking, it will be all right. I should warn you, however, that if a cat happened to get on such a paper, it would cause a lively time and quite a mussed-up animal. It has been said that if pieces of meat that are lean are placed in the middle of the floor the fleas will jump toward them. However, the janitor of a certain seminary cleaned the parlors of fleas by wrapping sticky fly paper around his rubber boots, with the sticky side outwards, and walking slowly through the rooms.

"The nature of the flea is to jump toward, instead of away from, a moving object. Perhaps the drawing of paper slowly across the carpet a number of times would kill many of them. The chief thing is to remove the fundamental cause of the plague of fleas, which is generally due to infested cats or dogs. Have the animals sleep on a cloth or carpet in a box outdoors, and at least every other morning remove the carpet and beat it on the ground some distance from the house. The larva of the flea lives in dust, and all cracks should be thoroughly cleansed and washed with a four per cent. creolin in water; or, in other words, a solution of water and creolin, containing one part of creolin in twenty-five parts of water, and then the cracks should be filled with a mixture of melted beeswax and resin.

"If carpets are discarded and rugs used instead, it will help to get rid of both fleas and carpet beetles. The rugs or carpets should be taken out frequently and the floor scrubbed with the creolin solution."

Just at present the top price for wool on the St. Louis market is 30 cents a pound.

ROLAND—Best American-bred aged Percheron stallion at the Illinois State Fair of 1909. Exhibited by D. Augustin, of Carlock, Ill. At this show there was a very creditable exhibit of American-raised pure-bred Percherons, several first-class herds competing.



LADY FRAGRANT—First-prize aged Shorthorn cow at the Nebraska State Fair. Exhibited by Owen Kane, of Wisner, Nebraska. At this Fair about 175 elegant Shorthorns were exhibited, including some of the best herds from Iowa.

PRINCE OF WHITEHOUSE—First-prize three-year-old Clydesdale stallion at the Iowa and Illinois State Fairs and reserve champion in Iowa. Exhibited by John Leitch, of Lafayette, Ill.

DON'T GET COLD FEET.

Among the many things that go to help the modern farmer live more comfortably in the winter time is the Clark Carriage Heater. These foot warmers are made in various styles and are sold at such low prices that anyone who does riding at all in winter should have one. The offer made by the Chicago Flexible Shaft Company on another page to supply one of these foot warmers and a dozen bricks of fuel for them at only $1.50 is certainly an attractive one.

Don't get cold feet on your drives this winter when you can get one of these little comfort makers for so small an amount. Write for catalogue to Chicago Flexible Shaft Company, 682 LaSalle street, Chicago, Illinois.

NOT QUALIFIED.

The two men were getting warm over a simple difference of opinion.

They turned to the third man.

"Isn't a home-made strawberry shortcake better than a cherry pie?" demanded one of them.

"Isn't a home-made cherry pie better than any shortcake?" inquired the other.

The third man shook his head.

"I don't know," he said. "I board."

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No women need any longer dread the pains of childbirth, or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. Dye, 248 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write today.

For Those Who Wear Glasses.

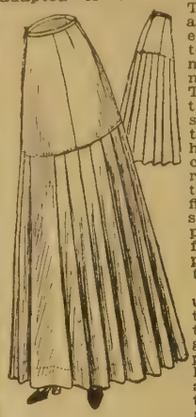
To prevent steam from settling on your eye-glasses when out of doors, rub both sides of the lenses with soap, rub off with a soft cloth and polish with tissue paper.—Woman's Home Companion for November.

MAY MANTON PATTERNS.

This is the very best pattern service, and we are very much pleased to obtain it for our friends and patrons. Every pattern is new and original.

Plaited Skirt With Five-gored Upper Portion.

No. 6471.—The skirt that is smooth and plain over the hips and plaited below is a favorite one just now, and is peculiarly well adapted to wear with fashionable coats.



This one will be found available for almost every seasonable material, while also it makes an admirable model for re-making. The gored upper portion requires only a small amount of material, and this often has been left over, or can be obtained in the re-cutting. In the illustration, broadcloth is finished with tailor stitching. The lower portion provides comfortable flare, yet the plaits are pressed flat to give long lines.

The skirt consists of upper and plaited portions. The upper portion is cut in five gores and is fitted with perfect smoothness. The lower portion is gored and laid in backward-turning plaits. It is seamed to the plain portion and is stitched flat above the edge.

The quantity of material required for the medium size is 7¼ yards 24 or 27, 4¼ yards 44 or 52 inches wide; the width of the skirt at lower edge is 4½ yards.

The Pattern 6471 is cut in sizes for a 22, 24, 26, 28 and 30-inch waist measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Misses' Straight-plaited Yoke Skirt.

No. 6472.—The straight-plaited skirt attached to a yoke is exceedingly fashionable and is being much worn by young girls. This one can be utilized with a waist to match, with the new college blouse that is long and loose and completely covers the yoke, or with a coat, making a street suit. In this instance it is made of plaid woolen material combining green with blue, but it is adapted to a great many different ones. It can be utilized for suitings and for the lighter-weight materials with equal success, and there is a long list of new and pretty fabrics; but cashmere and the new silk-and-wool crepe must be remembered as being especially smart among those of lighter weight.

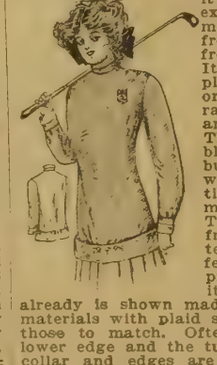
The skirt consists of yoke and plaited portion. The yoke is circular and smoothly fitted. The skirt is plaited and pressed flat to give long and slender lines.

The quantity of material required for the sixteen-year size is 5¾ yards 27, 3¾ yards 44, or 2¾ yards 52 inches wide.

The Pattern 6472 is cut in sizes for girls of fourteen and sixteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

College Girl's Blouse.

No. 6465.—Such a blouse as this one belongs in every girl's wardrobe, whether she attends college or does not. It is simple and girlish; it is useful and practical, and it is smart in the extreme. It can be made from serge or from broadcloth, or from similar material. It can be worn with a plaited skirt to match, or can be used separately and worn over an odd skirt as liked. This one is made of blue serge with pearl buttons and is finished with turned-over portion of collar and cuffs made from white. These last can be made from silk or the material, however, if preferred. The model promises to be a favorite of the season and already is shown made from plain colored materials with plaid skirts as well as with those to match. Often the facing at the lower edge and the turned-over portions of collar and edges are made to match the skirt.



The blouse is made with front and back portions with under-arm gores. The lower edge is finished with a facing and is turned up and buttoned into place. The sleeves are in one piece each, of moderate fullness and gathered into straight cuffs. A standing collar finishes the neck.

The quantity of material required for the sixteen-year size is 3½ yards 27, 2⅞ yards 32, or 1⅞ yards 44 inches wide, with ⅜ yard 27 inches wide for turned-over portions of collar and cuffs, ⅜ yard 27, ¼ yard 44, or ⅛ yard 52 inches wide for facing for lower edge.

The Pattern 6465 is cut in sizes for girls of fourteen, sixteen and eighteen years of age, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Morning Jacket With Peplum.

No. 6474.—Such a simple morning jacket as this one always is in demand. It is pretty and becoming as well as comfortable. It can be worn with a skirt to match or an odd one as may be liked. The sleeves can be made as illustrated or extended to the wrists. In this instance dotted challis is trimmed with bands of ribbon, but any trimming that may be liked can be substituted, and there are a great many attractive ones as well as materials. Cashmere with bands of Persian or flowered ribbon would make an extremely attractive jacket. Madras with embroidery would be pretty, and many women prefer washable materials to any others, whatever the season. The separate peplum does away with the fullness over the hips, and the round collar is always satisfactory for morning wear.

The jacket is made with fronts and back. The back is plain, but the fronts are tucked to yoke depth. The peplum is circular, and it is joined to the jacket beneath the belt. The rolled-over collar is seamed to the neck. The sleeves are cut in one piece each, and are finished with cuffs, whatever their length.

The quantity of material required for the medium size is 3¾ yards 24, 3⅛ yards 32, or 2½ yards 44 inches wide, with 9½ yards of banding.

The Pattern 6474 is cut in sizes for a 34, 36, 38, 40, 42 and 44-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Fancy Blouse or Chemisette.

No. 6473.—The pretty dressy blouse that is closed at the front makes one of the novelties of the season. This one also shows new fancy sleeves that are in every way attractive, and the shallow yoke, or chemisette, that marks the latest designs. Messaline is the material illustrated, and the color is the leaf green that is so fashionable with trimming of black satin and yoke of cream-colored lace over white chiffon. The tucks at the front give becoming fullness over the bust, while those at the back tend to a slender effect, and the puffed sleeves are as pretty as they are distinctive. Altogether the blouse is a charming one, for which every seasonable material that can be tucked and puffed is appropriate.

The blouse consists of a fitted lining, fronts and back, with the chemisette. The lining is closed at the center front, the chemisette is hooked into place, and the blouse is closed beneath the tabs or battlements. The sleeves are made over smoothly-fitted linings, which serve to keep the cuffs perfectly in place. They are cut in battlements to match the front, and their shaped edges overlap the puffs.

The quantity of material required for the medium size is 3¾ yards 21 or 24, 3¼ yards 32, or 1⅞ yards 44 inches wide, with ⅝ yard 18 inches wide for the chemisette, ¾ yard for satin for banding.

The Pattern 6473 is cut in sizes for a 32, 34, 36, 38, 40 and 42-inch bust measure, and will be mailed to any address by the Fashion Department of this paper on receipt of 10 cents.

Please send all orders for the above patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

SELECTED POETRY.

THE FISHERMAN'S LAMENT.

I'm weary of working,
I'm tired of play,
I'm sick of the struggle
For glory each day;
I'm weary of loving,
And weary of strife,
I'm tired of money
And sick of my wife.

Excitement annoys me,
And suspense is worse;
I don't like an auto,
I'm scared of a hearse.
Nobody can cheer me—
Or pills—or push!
Why must I keep working
While other men fish?

—Frank W. Taylor, Jr.

HIS FAILING.

To look at him you'd think
He really knew it all,
Whatever turn and twist
However slight and small,
He seemed so very wise,
A Solomon, you'd say,
Until enough time elapsed
He gives himself away.

An eye that's most severe,
A beard of formal cut
That hides a mouth austere—
When he can keep it shut;
A rather pompous port,
He makes a great display,
But still of sense he's short,
He gives himself away.

A pity 'tis, indeed,
That fellow isn't dumb,
He then might well succeed
In fooling people some.
But in the lion's skin
The ass is bound to bray,
And when he wags his chin
He gives himself away.

—Chicago News.

THE SOLITARY REAPER.

Behold her, single in the field,
Yon solitary Highland lass!
Reaping and singing by herself;
Stop here, or gently pass!
Alone she cuts and binds the grain
And sings a melancholy strain;
Oh, listen! for the vale profound
Is overowing with the sound.

No nightingale did ever chant
More welcome notes to weary bands
Of travelers in some shady haunt,
Among Arabian sands;
A voice so thrilling ne'er was heard
In springtime from the cuckoo bird,
Breaking the silence of the seas
Among the farthest Hebrides.

Will no one tell me what she sings,
Perhaps the plaintive numbers flow
For old, unhappy, far-off things,
And battles long ago;
Or is it some mere humble lay,
Familiar matter of to-day?
Some natural sorrow, loss or pain,
That has been and may be again?

Whate'er the theme, the maiden sang
As if the song could have no ending;
I saw her singing at her work,
And o'er the sickle bending;
I listen'd motionless and still,
And, as I mounted up the hill,
The music in my heart I bore
Long after it was heard no more.

—William Wordsworth.

THE BELOVED.

"Go in," they said, "and you will find her there,
In her own room, that lies abaft the stair."
Then by the garden-way, so thick with scent
Of long-belated honeysuckles, in I went.
The door creaked softly in my careful hand,
The polished stairs were silent 'neath the feet, like sand.

One met me as I turned the passage there,
Bowered with wan palms, beyond the empty stair;
She drew her skirt aside, and bowed her head,
But took my hand in passing * * *
Brazen-red
The sun flamed in through the tall pointed pane,
And lett upon the snow-white sheets one slender purple stain.

So white, at first I did not know her there,
And I stood frozen as the winter sapling stands,
And once, like voices from far vanished lands,
I heard the sound of voices at the stair: *
"How beautiful she looks!" I marveled there
The while I gazed upon the smooth, soft bands
Of parted hair upon her peaceful brows, the folded hands,
The mouth that would not tremble at my kiss.
"How beautiful!" I wondered long at this,
For none of them but I had found her fair.

So long I stood, as one the hours were;
Slow dusk made way for night, and night for dawn
That stole in soft across the silvered lawn;
And then at last they came to take here
With swift and silent feet, and soft commands,
But I stood frozen as the winter sapling stands;
And heard no more till on the tingling air
Broke sobbing and the awful words of prayer.

—James E. Richardson, in Everybody's.

THE UNATTAINABLE.

Bill Biffins yearned to satisfy
The men who criticise.
When he resolved that he would try
To make a name and rise
They said he was too young as yet.
A few years onward rolled
And then with courteous regret
They said he was too old.

He once was slender as the limb
That grows upon a tree;
Then broader outlines came to him,
Quite comforting to see.
Approval still he fails to win;
His friends assure him that
While once he may have been too thin
At present he's too fat.

He eats too much or not enough;
He's oversad or gay;
His language is a bit too rough
Or too ornate, they say.

No wonder that his frame of mind
Grows steadily more glum.
How can he ever hope to find
The happy medium?

—Washington Star.

A CHANGE OF MIND.

I used to call him "Rube" and scoff
At him with merry quip and jest;
I'd say: "Your chin needs wiping off,"
And tell him to pull down his vest.
And that—yes, brother, that was when
I did not dream of this remorse—
Yet I was walking idly then;
He drove behind a trotting horse.

I used to say that it was sad
Because he would not live in town,
Where things were always bright and glad
And care an easy thing to drown.
And even then he had a phone
To chat with neighbors far or near;
My slugs into the slot were thrown—
A hired receiver at my ear.

Yet, none the less, I pitied him—
You see, I judged him on the stage
Where he was shown all lank and slim,
With whiskers like the wind-tossed sage.
Well, when I'd got a horse to drive,
It gave me something of a jar
To have him whizz past in his "five,"
With six guests in the roomy car.

And so I hold my head and think
Of all the jokes I used to make,
Of how I'd nod my head and wink
And speak of him as "Country Jake;"
Why, when I've saved my scanty dimes
And bought an auto—'tis in vain
To dream upon those coming times,
For then he'll have an aeroplane!

So, here's to you, my farmer friend—
There never was a "Rube" or "Si."
We've just begun to comprehend
That it is you who whizzes by
In the disturbing cloud of dust
That mocks and overwhelms us thus,
Though in our little jokes discussed,
You've always kept ahead of us.

—Chicago Post.

FREE 39 PIECE DINNER SETS FREE

I want to give one of these beautiful American Beauty Rose Dinner Sets to every Lady Reader of this Paper ABSOLUTELY FREE.

Making A Good Impression

A Person With Bad Breath Invariably Impresses People Unfavorably.

Every one desires to make a good impression with other people with whom they come in contact, whether in a business or social way.

No matter how well dressed a person may be, or how well educated or accomplished, if he or she has an offensive breath, every other consideration and good quality is likely to be overlooked, and the impression made is likely to be an unfavorable one.

The employer in selecting an employe is almost certain to reject the applicant whose breath is offensive, even though he may seem a good acquisition in every other way.

No merchant cares to employ a clerk whose breath is foul, to wait on his customers; he would probably drive trade away. Neither does an official desire to have such a person employed in his office.

Many a person making an application for a position has been rejected by a prospective employer on account of this undesirable possession, which proves so disagreeable to other persons, and often the applicant hasn't the slightest idea as to why he was "turned down," since he seemed to fill the requirements of the position in all particulars.

Every one who is so unfortunate to possess bad breath, whether caused by disordered stomach, decayed teeth or nasal catarrh, should use STUART'S CHARCOAL LOZENGES, which afford immediate relief from this trouble.

Charcoal is a powerful absorbent of foul gases, and quickly oxidizes and purifies bad breath. The charcoal from which these lozenges are made is the best that money can buy, and possess a higher power of absorption not present in other and minor brands.

Bad breath from any cause cannot exist for a moment when they are used, and all persons who are subject to foul and offensive breath should rid themselves of what amounts to a positive nuisance by using these powerful absorbing lozenges.

Use them freely before going in company, or to church, or the theater; in fact, to any place where you will be brought into close contact with other people.

Before visiting your dentist, or your physician, or your barber, purify your breath, and take a box of Stuart's Charcoal Lozenges with you, and keep your breath pure and free from taint.

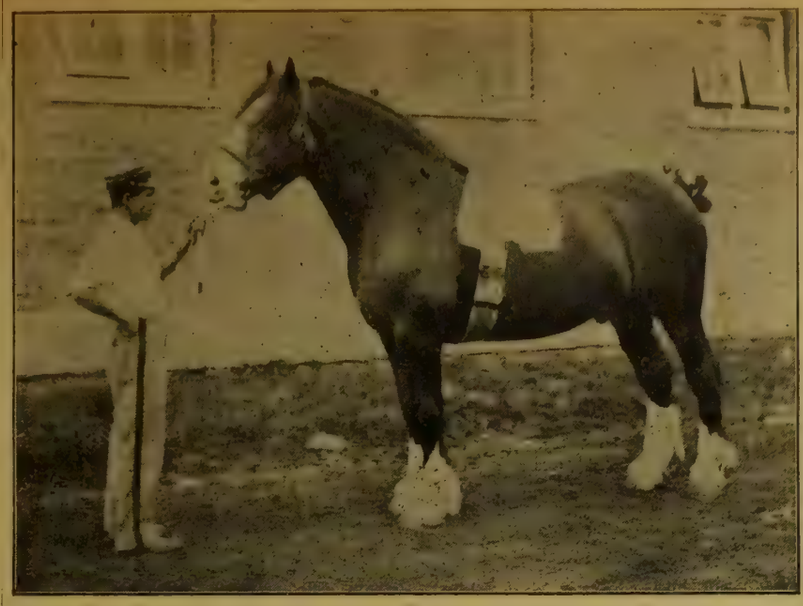
These lozenges surpass all others in their marvelous powers of absorption, as it has been proved again and again that they will absorb one hundred times their own volume in gases.

Every druggist has them in stock, price 25c. per box. A free sample package will be sent to you, if you will forward your name and address to the F. A. Stuart Co., 200 Stuart Bldg., Marshall, Mich.

The Missouri Wheat Crop.

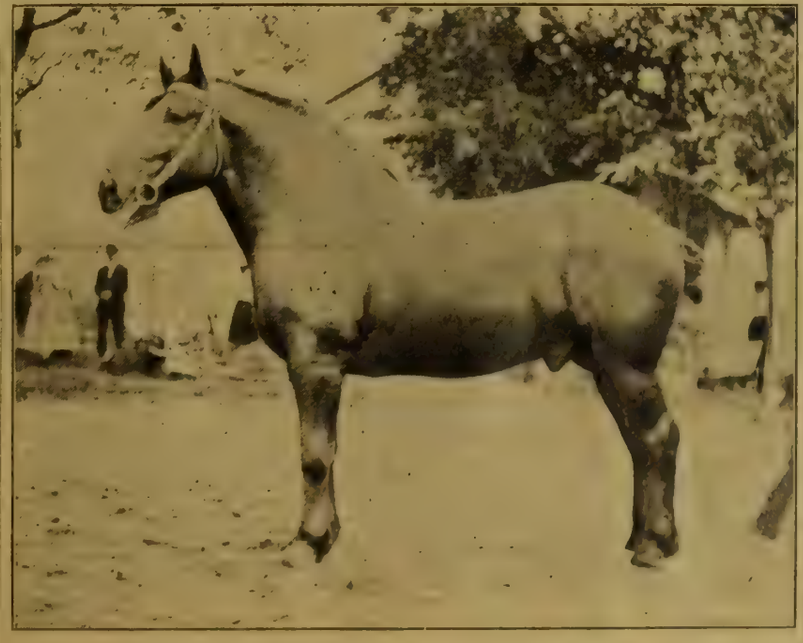
The total wheat crop of Missouri in 1909 is 27,502,871 bushels on 1,800,005 acres, an average of about 18½ bushels per acre. In the year 1908 the yield was 20,684,819 bushels on 1,927,728 acres. The banner wheat county is Franklin. This year with 67,243 acres sown the yield was 1,008,645 bushels.

This is the day of the draft horse. The market is calling for them every day in the week, and prices average high. This applies to horses weighing 1,300 to 1,600 pounds.



BARON CLIFTON—First-prize aged stallion and champion Clydesdale stallion at the Iowa State Fair of 1909. Exhibited by W. V. Hixson, of Marengo, Iowa. BARON CLIFTON was an easy winner, being very close to the conformation of the ideal Clydesdale.

COUNT ABBOTT—Senior champion Shorthorn bull, Iowa class, Iowa State Fair. COUNT ABBOTT was first-prize winner in the two-year-old class. Iowa is a great Shorthorn cattle state and only first-class animals are shown. COUNT ABBOTT was exhibited by C. S. McLellan, of Lowden, Iowa.



CUYON—Champion Percheron stallion at the Nebraska State Fair. Exhibited by Maasdam & Wheeler, of Fairfield, Iowa. At this Fair Percherons made a great showing, as many as twenty-four colts were exhibited in one class. CUYON is a massive but active aged stallion.

I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated on. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you.

Fill out the coupon below and mail it to me today.

Free Rupture-Cure Coupon

CAPT. W. A. COLLINGS,
Box 234, Watertown, N. Y.

Dear Sir:—Please send me free of all cost your New Discovery for the Cure of Rupture.

CANCER CAN BE CURED.

Scores of testimonials, from persons who gladly write to those now suffering, all tell of perfect cures. My Mild Combination Treatment destroys growth and eliminates the disease from the system. **Free book, "Cancer and Its Cure," and 125-page book of testimonials from cured patients in every State in the Union. No matter how serious your case, how many operations you have had, or what treatment you have taken, don't give up hope, but write at once for my books.**

DR. JOHNSON REMEDY CO.,
1233 Grand Ave., Suite 103, Kansas City, Mo.

UNIVERSAL PALMISTRY BOOK.

This is by the famous Elmo Jean La Seer, President of the National Institute of Palmistry. It is an illustrated book of ninety pages. There are twenty-six chapters, all intensely interesting and instructive. We have adopted this book as a subscription premium in connection with the **Universal Magazine**. The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 30 cents we will send the **Universal Magazine** for one year and one copy of the book "Palmistry" by mail postpaid. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Earn Stevens Rifle

I Have a Genuine 22 Caliber Stevens Rifle for Every Boy Who Will Write to Me.

This is a 22 caliber Stevens hunting rifle. It is not a toy but a real rifle shooting long or short cartridges. It has a well rifled barrel, fine sights, walnut stock. It is more than three feet long and is in every way a dandy gun. Just what every boy wants to hunt with and for target practice. It is a gun you will be proud to show your friends and I know you will be delighted with it. You know what a splendid gun the Stevens is, the best known rifle in the world. I want to give you this splendid rifle and all I want in return is a little easy work. Write me today and I will tell you all about the gun and just how you can get it.

Des Moines, Iowa

(From the Chicago Inter-Ocean.)

All readers of The National Farmer and Stock Grower who have sick friends, suffering from rheumatism or kidney trouble, will be interested:

FINDS NEW KIDNEY CURE

Dr. T. Frank Lynott, New York Specialist, discovers remarkable remedy.

At last a perfectly harmless and positive cure appears to have been found. Dr. T. Frank Lynott, formerly of the New York University, New York, later of the famous Bellevue hospital, and now a celebrated specialist in Chicago, has a very quick acting formula which has been approved by the best doctors.

The editor of The National Farmer and Stock Grower saw the above clipping from the Inter-Ocean and wanted to know of this new formula for curing kidney trouble.

Arrangements were then made by which Dr. Lynott offers National Farmer and Stock Grower readers a **free treatment**. Dr. Lynott, however, says that he proposes to give the free treatment only for a limited time to convince the public in every part of the United States of the positive wonderful efficacy of his treatment.

Furthermore, Dr. Lynott wants to make it clear that he has no "cure-all." He is a specialist in kidney and bladder diseases and rheumatism, so please do not write to him unless you have one of these diseases. If you write at once, both the medical advice and the medicine are entirely free.

The editor of this paper, The National Farmer and Stock Grower, feels that with such a free offer, anybody who stays sick with kidney trouble or rheumatism deserves to be sick.

I know that a good many free offers have been advertised where the public had to send money, **but this free offer really IS A FREE OFFER.** And remember that instead of getting an ordinary physician, you get the medical advice free direct from America's greatest of all specialists on these diseases. See Free treatment certificate at bottom of this page and get relief **right now.**

STOP!

Stop that back breaking, twisting, terrible, terrible unbearable agony! Oh, that awful, awful digging soreness --the back all bent--the joints stiff, the heart-wringing pain—*stop that pain RIGHT NOW!*

Yes, Write For the Free Treatment—

a **REAL Free Treatment** that will give you relief—relief at once—not next week, not tomorrow, but relief AT ONCE—**immediately** after starting the treatment. It is so **simple**, so mild, yet so scientific and so **sure**—this treatment for rheumatism, kidney and bladder trouble. Write now, today.

See the Free Treatment Certificate below—sign it and send it today. **No money—no obligation. At last you** can get relief, and, if you write at once, you get the treatment absolutely free. Just think—a genuine **free** treatment by America's and Europe's **leading** specialist—absolutely free—really and genuinely free **to convince the public.**

If you have Kidney Trouble, or Rheumatism (the cause of those pains), then **it's your loss** if you suffer any longer. When Dr. Lynott says free, he means free—not one cent to pay; and it is "up to you" whether you want the best medical advice and medicine all without a cent of cost. Don't miss this wonderful liberal offer. See the Free Trial Certificate at the bottom of this page.

Look at these poor sufferers all bent with nerve-racking pain — they are victims of kindey trouble; they think it is a rheumatic twitch. Friends say they grumble, but considering their awful pain, they bear up most bravely.

Oh, it is terrible that there should be such suffering, when you can be relieved so quickly, so surely, so simply, and right now, free of charge.

Writing of Dr. T. Frank Lynott, who gives the medical advice free, a brother specialist writes as follows:

"I have for years been considered an authority on urinary diseases, but I must confess my respect, my profound sense of esteem, for Dr. Lynott, whose wonderful success in treating urinary diseases has surprised us all. Dr. Lynott, by the way, is making a most remarkable free offer—the most genuine and generous offer ever made by a high grade physician. It seems to me the medical world ought not to be jealous of his success, but should praise him for what he has done and is doing for humanity."

Dr. T. Frank Lynott

whose photo is printed here, is, as you perhaps know, the world's greatest authority on kidney and bladder trouble and rheumatism. Never before has a physician of such high standing offered to treat patients by mail. But Dr. Lynott *wants* the people to get the benefit of this free treatment.

His cures have stirred America and Europe. In fact, Dr. Lynott received a special diploma on urinary diseases from the great New York University—of which the famous Bellevue Hospital, New York is now an honored part.

WATCH These Symptoms!

Trouble in the kidneys begins slowly, slowly. It creeps upon the unsuspecting patient like a thief in the night. Slowly, slowly, those stinging, racking pains foist themselves upon the sufferer; gradually, gradually the pains increase into a daily, nightly, constant, endless torture. Watch the symptoms, and cure yourself. Here are the principal symptoms of uric acid disease:

The Symptoms

1—Pain in the back.
2—Too frequent desire to urinate.
3—Burning or obstruction of urine.
4—Pain or soreness in the bladder.
5—Prostatic Trouble.
6—Gas or pain in the stomach.
7—General debility, weakness, dizziness.
8—Constipation or liver trouble.
9—Pain or soreness under right ribs.
10—Swelling in any part of the body.
11—Palpitation or pain around the heart
12—Pain in the hip joint.
13—Pain in the neck or head.
14—Pain or soreness in the kidneys.
15—Pain or swelling of the joints.
16—Pain and swelling of the muscles.
17—Pain and soreness in nerves.
18—Acute or chronic rheumatism.

NOW THEN, This Certificate Is FREE

You get the treatment, the medicine and Dr. Lynott's personal attention absolutely free, if you write at once. Instant Relief for those terrorizing pains!

Send no money—read the certificate, note that it puts you under no obligation. Dr. Lynott is glad to see a sufferer cured—write at once and get the free treatment.

JUST

Your Name and Address and the Symptoms

of your disease given by number. That is all Dr. Lynott wants. Read the free treatment certificate; read how it puts you under **no obligations** whatever; how it says specially and distinctly that you are not now nor later under any obligations whatever.

SEND NO MONEY—just write for the free treatment

REMEMBER:—This free treatment offer is LIMITED. Only a certain number will be taken, all under Dr. Lynott's personal care. If you answer this offer the first time you see it you are GUARANTEED the FREE treatment. So better send the free treatment certificate today, at once, and remember, you need INSTANT, IMMEDIATE relief from those awful pains.

DR. T. FRANK LYNOTT, 2909 Occidental Bldg. CHICAGO

If you have a friend suffering with kidney or bladder trouble or other uric acid disease, such as rheumatism, don't you feel that you owe it to your friend to tell him or her of this free offer?

Free Treatment Certificate

What is Your Name?.....
State plainly, Mr., Mrs. or Miss.

Your Address?.....

What Symptoms Have You?.....
Give numbers from table above—that is all

What is Your Age?..... *Married?*.....

Just fill out the above—nothing to sign, you see. Just answer the questions and be sure to give your name and address. You are under no obligations whatever. The **FREE** treatment will then be sent at **once, prepaid.** Cut out this certificate (or write a letter describing your symptoms) and **get INSTANT relief from those racking, rocking pains.** Address personally

THE GRAND CHAMPION EARS OF CORN at the National Corn Show of 1907. Grown and exhibited by Mr. L. B. Clore, of Franklin, Indiana. Mr. Clore is Premium Corn Grower of the World. At the St. Louis World's Fair, at the National Corn Show of 1907, and at the National Corn Show of 1908 he won championship honors. It is white corn grown by Mr. Clore that we offer in our premium awards.

WHAT A SCHOOL BOY DID IN GEORGIA.

He received a pound of Clore's Grand Sweepstakes White Corn as a subscription premium to The National Farmer and Stock Grower, and from this very seed he raised a good crop from which he selected ten ears that, being exhibited at the Georgia State Fair, won the first prize of $50 in the Agricultural Department in class for the best ten ears of corn in the exhibit open for school children. In addition to the State Fair Prize he also won $25.00 awarded by The National Farmer and Stock Grower to the winner of a first prize at any State Fair, providing the corn was grown from premium seed furnished from this office. Attention is invited to pages 26 and 27 of this edition, where our premium offers will be found.

"PLAYING TWO GAMES AT ONCE" AND "THE WOOING."

We wish also to invite attention to two pictures advertised on page 24, which we will send as a premium to anyone sending 50 cents to pay for The National Farmer and Stock Grower for one year. These are beautiful pictures, rich in color, interesting and pleasing subjects, suitable for Christmas presents. Don't neglect them; they will please you.

and Stock GROWER

Planting Northern-grown Corn.

A Gilman, Ill., corrsondent asks: "How would it do to bring corn from farther north for seed?"

Four years ago I brought some "Silver King" seed corn down from Central Wisconsin and planted it in Northern Illinois. The first season it matured very early—about September 1—and the ears were only about the ordinary size of the sort when grown 180 miles farther north. I selected, for seed the following year, the biggest ears and those really which were the latest in maturing. The second season I increased the length of ears at least one inch, and the yield per acre was correspondingly increased. The third year I followed the same course in selecting seed ears, with the result that in three years I increased the length of ears to nine to ten inches, and the yield is equal with larger varieties.

I believe bringing seed corn from a reasonable distance north is much safer than bringing it from the same distance south, and there is not so much difference in the matter of yield as one would suppose. Such varieties as Silver King, Clark's Yellow Dent and Murdock, all called ninety-day sorts, are grown all through Southern Wisconsin. One will not make a mistake in planting them in Northern Illinois. All of these varieties mature and produce a larger amount of grain to stalk than our big Central Illinois sorts. They are good varieties to husk or for cutting up.

A big ear of well-bred corn is a pretty thing to look at, but we must revise our ideas about such corn being suited to Northern Illinois. Southern Wisconsin and Northern Illinois grow fine corn, but we cannot do it from Boone County White or Reid's Yellow Dent seed.—L. C. Brown.

What the Trolley Does For the Farm.

Many a farmer, shy from the previous experience of himself, or of friends in dealing with railroads, strenously objects to giving right of way to a trolley road through his premises. He may stick for heavy damages, thinking of how his horses will scare every time he drives to town, and a dozen other reasons why the track should not be laid.

The fact is, as he will find out later, his farm is increased in value by the plan. Many a farmer who looked with doubt upon the new feautre now asks and commands a thousand dollars more for his farm than before the advent of the trolley.

Unless the railroad station is near, the advantages of the road are to the farmer nil; the disadvantages may be many. But the trolley which stops wherever signaled (and this is the only one of special benefit to the farmer) has a number of advantages over the steam car.

It runs much more frequently. It never starts a bonfire by reason of sparks. It is much less likely to kill stock if they chance to break.

Of course, in making a contract with the company one must use care, for a corporation is not a nice thing to deal with if you happen to let them get the advantage; at least not always. But if care is taken in making the contract, all will go well.

As a financial investment, you can afford to offer some inducements in them to come your way. Supposing you have butter to market in harvest time. The horses are busy. It gets very warm before you can drive to town. But put it on the car and it is whisked away and reaches its destination almost as firm as when started, while the cost is not half so much as that of taking a horse. Milk and eggs can be marketed in a neighboring city with the same ease. Perishable fruit that formerly decayed under the trees because you were too busy to haul it to a distant market and the local one was glutted may be disposed of at paying rates. The same is true of vegetables. In short, the farmer near a trolley finds it cheaper to save his horses for farm use and let the trolley do his marketing, unless it be a heavy load.

The chief drawback of farm life has been the lack of social and intellectual advantages. The trolley changes all this. The farmer and his wife may enjoy the evening lecture or concert in company with their city friends. They may wear just as good clothes, for there is no danger of getting them soiled in the long drive or caring for a team.

Along the trolley line there is room for consolidation of schools without the expense of the van, the car transporting children at half rates, which makes it much more economical than running the proverbial country school of "three little girls taught by another little girl," besides giving the superior advantages of larger classes, better equipment for teaching, and the better teachers which the average town affords.

It places the farmer in better financial condition by giving him easy communication with the outside world. It raises him socially by opening a rapid and easy transit, and he may have as many of his city friends as he has time to entertain in his suburban home; friends who appreciate the delightfulness of the country, yet who are glad to open their own doors in return. The farmer is no longer the servant, but the nabob of the land. He has its fruit at his disposal, yet he is in close touch with the luxuries of trade and eventually many of them are added to his home. The trolley helps him to make the best use of his possessions and of himself.—Bessie L. Putnam.

Selling Straw.

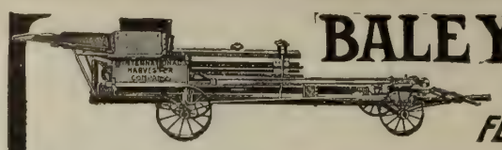
A Stephenson county, Illinois, farmer tells me the biggest money-maker on his farm this year, in the way of a by-product, is his rye straw. Oat and rye straw is selling in Chicago now at record-breaking prices—oat straw at $6.00 to $7.00 a ton, and good, straight rye at $8.00 to $9.00 a ton. Not much oat straw comes to market, for stockmen have found that oat straw is pretty good stuff to keep at home and feed. Dairymen and stockmen are feeding much concentrated feed, and this needs some coarse material to give bulk to the daily ration. For the last four years I have traveled extensively through Illinois, observing crops and methods. Never have I seen so much corn cut for feeding as I have this fall, and never have I seen straw thought so much of. Most straw-stacks are well finished and really given as good care as the hay-stacks. Even with the high prices offered, farmers are keeping their straw and lower grades of hay for carrying stock through the winter, and are selling the better grades of hay.—L. C. Brown.

FARMERS' WEEK AT COLUMBIA.

Noted Speakers to Be Present and a Profitable Week Promised For All Visitors.

A number of very able speakers have been secured for the program for Farmers' Week, to be held at Columbia, Mo., December 28-31, inclusive, and satisfactory progress is being made with the arrangements for the meeting. Professor A. M. Ten Eyck, of Kansas, has consented to address the meeting on the subject of crop improvement; Dr. G. I. Christie, of the Agricultural Experiment Station of Indiana, will lecture on "New Methods in Agricultural Education" and on "Recent Experiments in Corn Improvement;" S. A. Knapp, of the Department of Agriculture, Washington, D. C., will talk on "How to Increase the Profits of the Farm" (a general talk on farm management); and F. W. Howe, of the Federal Department of Education, will take up the subject of the improvement of rural schools. A number of other lecturers of national reputation will be on the program. In addition, a regular short course of instruction has been provided for by Dean Mumford, including a course in dairying, poultry raising, farm crops, soils, horticulture, live stock and domestic science.

The apple crop of Nova Scotia for 1909 is estimated at 700,000 barrels. Having no markets at home, and the fruit being of superior quality, it is nearly all shipped to England. One shipment on record of 30,000 barrels was sent to Africa.



BALE YOUR HAY
WHETHER YOU FEED IT OR SELL IT

THE only way to avoid wasting your hay is to bale it. It's the only way to feed it economically. It's the only way to be sure of having a market for it. It's the only way you can get top market price.

Bale your hay and get 100 per cent value out of the crop

You **know**, of course, that the market demand is for baled hay—and for baled hay only. Perhaps you are not going to sell your hay—but are going to feed it to your own stock. It really doesn't matter—the reasons are all in favor of baling.

You know how much of the tops and sides of stacks are spoiled by the weather. Baling stops all that waste. You know how dusty and musty loose hay becomes. Baling keeps out the dust and it **really preserves** the hay, because it retains so much of the sweet hay odor that your stock relishes. There's a freshness and appetizing quality and a feed value in baled hay that is never found in loose hay, to say nothing of more economical feeding, and avoiding weather waste.

BALE YOUR HAY WITH AN I. H. C. PULL-POWER PRESS

There are two styles of these presses—a one-horse and a two-horse press. They are just the machines to enable you to do the work with your own force at odd times and avoid the expense and delays of the contract baler. The pressure on I. H. C. hay presses is applied by a pull instead of a push. They are not horse killers. They are so designed that they give greater pressure with the same amount of power than any other hay press of equal size. The one-horse press bales 8 to 10 tons a day. The two-horse press bales 9 to 12 tons a day. Bales are solid and shapely and several different sizes are provided for.

Our local agents will furnish catalogue and particulars. Or, you can address us for catalogue and further information.

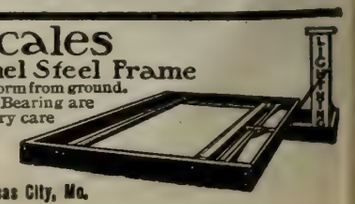
New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This Scale will last a life time with ordinary care Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.



KANSAS CITY HAY PRESS CO., 425 Mill St. Kansas City, Mo.

The Favorite Corn Husker.

This Corn Husker is more largely sold than any other on the market. We have therefore selected it as a reasonable subscription premium. It is made for the right hand. The hook sets at any angle to prevent glancing. Opening or closing the small end of the plate adjusts a fit to any size hand and prevents chafing. The improver shape of the plate and leather makes this hook the favorite.

We will send The National Farmer and Stock Grower for one year and one Favorite Corn Husker for fifty-five cents. It takes five cents for mailing and the Corn Husker is a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Shipping Baled Hay.

All grades of hay and straw are in demand, but frequently sellers do not market their product to the best advantage because shabby work is done in making the bales, or weather-beaten, damaged hay is mixed all through the bales, spoiling the appearance of the car. When this is done the shipment will be graded really lower than it ought to. In order to have shipments grade high and sell to the best advantage, make the bales as nearly uniform as possible; throw out badly-colored or otherwise damaged hay, and be sure that the bales are clean and of uniform color all the way through. If one has hay of different grades, better bale it separately and ship in different cars. My attention was called last week to this very thing. An Iowa shipper sent a mixed car of prairie and timothy to Chicago. It sold as prairie hay. Not often can split cars be sold to advantage, so it is much better to grade your shipments when you load.—L. C. Brown.

Large Single Acre Corn Yields.

It is reported that Mr. J. F. Batts, a North Carolina planter, produced 266⅔ bushels of corn per acre this year in a contest in that state. It is not the first time that a Southern planter has made a reputation in a corn contest. In the American Agriculturist competition, held in 1889, Zachariah Jordan Drake, of Marlboro County, South Carolina, produced 255 bushels of corn on one acre. He was in a contest with corn growers all over the United States.

Oats on Sweet Corn Ground.

A correspondent at Chenoa, Ill., writes: "Would it be all right to sow oats or fall wheat on ground which has been in sweet corn for three years?"

This ground would be all right for oats; in fact, in some regions where several thousand acres of corn are grown for canning purposes, this practice of sowing oats every alternate year has become quite common. But for sowing fall wheat the proposition is different. While removing the crop early for canning and then cutting the stalks with a harvester would be an advantage in getting the seed-bed ready for early seeding, yet sweet corn uses up more plant food than ordinary corn, and this ground would not be strong enough to produce a maximum crop of wheat. If some fertilizer was used with the wheat crop, then the ground, thoroughly disced, would be all right for fall wheat. The trouble with most of this ground, where sweet corn is grown for several years in succession is, it is kept in corn and only feebly fertilized, and is not fit for crops that require plenty of available plant food.—L. C. Brown.

Why Clover Helps Solis.

A Champaign county, Illinois, correspondent writes: "Is it a fact that clover removes from the ground more nitrogen and phosphorus than most any other crop? If that is a fact, how is that clover sod is the richest ground that we have?"

This is a case where we can eat our cake and have it, too. True, a crop of clover will remove from the soil much more of both nitrogen and phosphorus than almost any crop, but the acquisitions of these elements through growth of roots, shedding of leaves, with the millions of nodules on the clover roots at work gathering nitrogen from the air, all tend to fix more of these elements than have been removed by the crop. Because of just these things it is best to always get as heavy growth of clover roots as possible before the sod is turned; and for this reason the roots of a seed crop of clover are much more valuable than the roots of a hay crop.—L. C. Brown.

A Question About Wheat.

A Randolph county, Illinois, correspondent writes: "For two or three years I have noticed that wheat has done better in some sections in this part of the state than it did previously. Some of us have not used any fertilizers, yet get pretty fine crops of wheat where we got only a few bushels per acre a few years ago."

This is nothing strange. The seasons may have had some favorable influence on the crop, and no doubt other crops have been grown which may have brought the soil into fit condition again to produce wheat. I had an experience of this kind in Iowa several years ago. When our land was new we raised from twenty-five to thirty bushels of wheat per acre. But after ten or twelve years this ground would not grow wheat, and we gave up the crop and no wheat was sown for five years. We then tried a winter sort, and was astounded at the result. The wheat yield went up to twenty-two to twenty-five bushels per acre. But what had we done in the meantime? We had burned the straw of two oat crops and raked and burned the stalks of two corn crops. These things no doubt helped to put that soil into condition for wheat again.—L. C. Brown.

Potato Blight Precautions.

The Victorian (Australia) Department of Agriculture has issued the following advice to potato growers: Plant this season's crop on land which was not used for potatoes last year; use no seed unless you know where it has been grown; before cutting, place all seed potatoes in a bag and soak for two hours in a solution of formalin, one pound, and water thirty-two gallons; cut all seed and look for any small patches on the surface which are slightly depressed, or which are softer than the rest of the potato, and cut through them, when, if discolored in any way, the potato should be rejected as seed, and boiled before feeding to the pigs.

Tomatoes sold at St. Louis are bringing 50 to 75 cents a bushel.

Tillage Versus Fertilizer.

I have recently observed, in DuPage county, Illinois, the result of heroic tillage as compared with liberal use of fertilizers. Since help has become a difficult factor in crop production in Illinois, many have looked about for some means to produce crops without so much labor. This has led to an extensive use of fertilizers, with the belief that the soil if abundantly supplied with plant food, will grow the crop without the help of so much work. This is an error, and a very grave one at that. In all of my experience and observations I have never seen an instance where fertilization took the place of tillage.

On one of these DuPage county farms only scant supplies of manure are made, and no other fertilizers have ever been supplied to the soil. Yet after more than forty years of cropping this farm is still in good-enough heart and strength to produce seventy-five to eighty bushels of corn per acre and eighty to ninety bushels of oats per acre. I have never seen ground so incessantly cultivated, and whatever the crop may be, the ground is always in the very pink of condition. I have trod over those fields several times and I have never seen clods bigger than one's fist. The corn fields here are cultivated four to six times. The stubble ground is disced at once after harvest and the spring-plowed ground is disced before the plows start. The one idea here is to keep the soil well fined and clean.

On the other farm, fertilizers, in one form or another, have been used for several years. But this soil, through lack of proper cultivation, has become sodden and the stores of plant food have become difficult. The soil, naturally, is good, but injudicious handling and cropping have put it out of the best condition. I have observed this very thing on many farms in Northern Illinois, and invariably crop yields are measured by sensible tillage. All the teachings of science and practice demonstrate that best results are obtained when sufficient tillage is done to give the plants a comfortable feeding ground, and then by surrounding them with essential plant food.—L. C. Brown.

Handling Sandy Soils.

A correspondent of Valparaiso, Ind., writes: "Which is the best for improving the condition of sandy soil—manure, or clover plowed under?"

The trouble with sandy soil is it dries out quickly and plant food leaches out. The object then should be to incorporate in this soil as much humus as possible, and this may be supplied by manure or by green stuff plowed under. Horse manure is good, but sufficient quantities are not always available, and for this reason clover is quite generally used. However, there is one phase of green clover manuring which is not clearly understood. In a dry season it would be hurtful to the crop; and when it is used the ground should be amply supplied with phosphorus, potash and lime, else the green stuff would be a disadvantage. When manure is used all these elements are supplied in limited quantities.

Feeding Soft Corn.

A Henry county, Ill., correspondent writes: "Do you think it a good thing to feed soft corn?"

If corn has passed the milk stage and becomes well dented before frost strikes it, it may be fed during the winter to good advantage. The Iowa Station made a test of this several years ago, and found that soft corn gave nearly as good results, when fed to cattle, as mature corn. When that test was made soft corn could be bought for 30 cents a bushel, while sound corn was worth 50 cents. Beef was produced from the soft corn at around 3 cents a pound less than from the sound, 50-cent corn. These tests showed that soft corn contains more moisture than sound corn, but it is not chemically different. In a season like the present one the danger in soft corn lies in its moulding. Of course, it must be understood, that to get satisfactory results, it must be sweet and clean. Nothing will so quickly throw cattle off their feed as soft corn which has become ever so slightly acid.

Immense Retail Meat Margins.

We have no quarrel with the retailer; he is a necessary institution; he is entitled to all the traffic will bear, but there is no good reason why he should not also have the publicity he is entitled to. The Secretary of Agriculture has investigated this subject, and the result appears in his annual report. The people complain because a great packer, in operations extending over a year, accumulates a fractional daily profit of one-tenth of one per cent until, in 350 days, it reaches 35 per cent on his capital stock for the year, whereas the meat retailer makes a profit of 15 to 18 per cent in one day, allowing that one-half of his selling margin is profit. The Secretary of Agriculture says: "The consumer pays 38 per cent above wholesale. For 50 cities the total retail cost charged to customers above the wholesale cost paid by the retailers is 38 per cent. In 5 cities the rate of increase is 20 per cent or under; in 10 cities, 21 to 30 per cent; in 12 cities, 31 to 40 per cent; in 12 cities, 41 to 50 per cent; and in 11 cities over 50 per cent.

"The average retail price exceeded the average wholesale price by 31.4 per cent in the North Atlantic States; by 38 per cent in the South Atlantic States; by 38 per cent in the North Central; 39.4 per cent in the Western; and the highest increase was found in the South Central States, 54 per cent.

A gross profit of 20 per cent was found in New York City and in Philadelphia; 28 per cent in Buffalo, N. Y.; 36 per cent in Boston, Mass.; 17 per cent in Baltimore, Md.; 42 per cent in Washington, D. C.; 46 per cent in Chicago, Ill.; 25 per cent in Cincinnati, Ohio; 23 per cent in Omaha, Nebr.; 28 per cent in Kansas City, Mo.; 27 and 35 per cent in Minneapolis and St. Paul; 40 per cent in Milwaukee, Wis., and Detroit, Mich.; 39 per cent in St. Louis, Mo.; 64 per cent in Mobile, Ala.; 39 per cent in San Francisco; 24 per cent in Seattle, and 37 per cent in Denver, Colo.

"The lower the grade of beef the greater the percentage of gross profit. In Boston, for illustration, the rate of gross profit is nearly twice as great for beef costing 8 cents at wholesale as for beef costing 11 and 11½ cents. Low-priced beef is marked up nearly twice as much relatively as high-priced beef. In other words, perhaps, it is a safe inference that the poor people pay nearly twice the profit as the well-to-do-people pay."

The Secretary explains that the retail business is overdone, and so it is, but he shows clearly that in the big cities the profits are less than in the smaller centers.

Get Our Three Little Books On "More Corn" and the NEW DEERE Corn No. 9 Planter

Just write a postal with your name and address so we can put you on the "Deere" Free Mailing List. Then you'll keep informed on all the latest improvements and values in farm implements.

Right here is the New Deere No. 9 Edge Drop Corn Planter. You ought to know all about it. It's the most famous double-row combination check-row planter or drill of today.

Most Progressive Farmers and Planters won't have any other. Best informed dealers refuse to consider handling any other. Investigate the time-saving and profitable reasons why.

Checks Corn or Beans in Rows Both Ways—Or Drills

Deere genuine edge selection of corn gives highest accuracy of drop attainable and it has been repeatedly proven that accuracy of planting means big increase in yield. Main seed shaft driven directly by traction wheels instead of by check-row wire like many others. That does away with all side draft and besides saves wire and machine. Change from hill to drill made instantly without leaving seat.

Comes Complete Ready to Plant With

We make plates for all kinds of corn and furnish any five sets wanted without extra charge. Eighty rods annealed steel check wire with automatic reel. Any distance between buttons from 3 ft. to 4 ft. if so ordered. All these and many other points fully explained and shown in our free booklets. Ask for "More Corn Book" No. 97.

The Air and Plant Growth.

One comes but slowly to comprehend the significance of the air in relation to agricultural production. It is easy enough to realize that animals and plants must have air by which to breathe, but very few recognize the fact that much of the substance we see around us is the product solely of the air.

The air is such a light, invisible thing that we can hardly conceive it as being changed into material things around us. The coal in the ground and the wood of trees growing upon the ground are made mostly from the products of the air. In all agricultural products, far more comes from the air than from the soil. Look at the trunk and limbs of that great oak tree, and remember that by far the larger part of its substance was once invisible air.

There is one gas in air called carbon. It is of very great importance, for it is taken by the leaves of plants and is utilized largely. In a past age of the world there were growing several varieties of trees that had great power for absorbing this gas. They absorbed it in such quantities that they became very hard, and when they fell, did not readily decay, but were changed into coal, and we dig and use it to-day. All the carbon in coal was once free carbon in the air. The particular varieties of trees that had the power of taking up such vast quantities of this gas gave rise to the term, the "carboniferous age," or the age in which these trees flourished and laid the foundation of our great beds of coal.

This gas called carbon has always been absorbed by plants and makes up most of the burnable portion of our plants. It is a mistake to suppose that the great mass of wood annually produced is mostly the production of the soil. It is mostly the product of the air, and of carbon at that.

But there is another gas in the mixture of gases called air, and that is hydrogen. It has great heat-producing power and some of it is mixed in the coal we burn. There is more of it in soft coal than in hard coal. One pound of this hydrogen in coal has four times the heat-producing power of the carbon in the coal, and this is always figured on in making tests as to the thermal values of different kinds of coal. But it was a part of the air before it was a part of the coal and was taken into the tree that made the coal at the same time the carbon was taken in.

Oxygen is a third gas in the air and enters into the make-up of all plants that are alive and to a lesser extent into dead and dried plants. It enters largely into the processes of growth. These three gases in the air simply mix together. They do not form a combination of a chemical nature. That is not done till they are taken in by plants and are subjected to growth processes which bring them into close relations with other gases like nitrogen, which is also an air gas. But plants have the power of drawing these gases out of the air and combining them with phosphorus and potash and some less important substances and making all sorts of combinations. Some of these combinations are a healthful food and some are a deadly poison, but both kinds are made by simply combining things that are harmless in themselves.

These facts enormously increase the possibilities of agriculture, for they show that we are not only farming the soil but also the air.

The best hogs arriving on the Fort Worth market in four months averaged 258 pounds, were shipped by Henry Caulk, of Binger, Oklahoma, and sold at $8.05 per 100 pounds. Binger is in Caddo county, on the Rock Island-'Frisco Route, in a splendid stock-raising country.

Springfield Army Rifles.

The Springfield Rifles advertised on page 16 are splendid material and first-class, big-game weapons, also a fine armament for home protection. These are the guns which carry so far that the Indian says: "Shoot to-day and hit to-morrow." These are army rifles which are superseded by some other pattern, and they are sold for a tenth of what they cost. They are absolutely reliable in every respect. Send orders or for catalogue to Cal. Hirsch & Sons, Dept. 101, St. Louis, Mo.

Three Big Papers, 65 Cents.

The National Farmer and Stock Grower; Twice-a-Week Republic of St. Louis, the oldest, biggest and best semi-weekly in the Southwest; and Farm Progress, the biggest semi-monthly farm paper printed, sent to any address a full year for only 65 cents. The subscription price of all these papers, if taken separately, would be $1.25. Take this big combination and get all the reading matter you need the coming year. Send orders to the St. Louis Republic, St. Louis, Mo.

Corn Moulding in Cribs.

Cribbing soft corn is hazardous almost any season, but when the cribbing is done during warm weather, such as we have had through November, there is more than the ordinary risk. All market centers are complaining about such an unusual percentage of soft corn this season, and it is giving all kinds of grief. When it is necessary to crib soft corn provision should be made for thorough ventilation.

The crib now most commonly built is the double form, with drive-way between. The objection to this is that usually the cribs are sunk from two to four feet below the level of the drive-way, and this part of the crib has no ventilation whatever. Then these cribs are made too wide to be easily ventilated, and they are nearly tight. A water-proof roof is essential, but aside from that the more open the crib is the better—either for keeping sound or soft corn. It is a fact, frequently commented upon, that corn stored in rail pens, such as may still be seen on many old farms, keeps better than when stored in modern mice-proof, almost air-proof buildings.

The thing to do is to ventilate, and the softer the corn the more ventilation becomes necessary. Narrower cribs are preferable; and, by all means put the soft corn in open cribs Two years ago I saw shellers using a pick on corn stored in a tight crib, while the same kind of corn piled up on the ground fed out in pretty fair condition during the winter. While I do not recommend that practice of storing corn, yet I do say, come as near to it as possible. Put the corn under a good cover, and then ventilate.

St. Louis Honey Quotations.

Saving Seed Potatoes.

A LaPorte county, Indiana, correspondent writes: "I am sending you, by mail, a sample of some potatoes which I am thinking about keeping for seed. Can you tell me what variety they are, and do you think they will be all right for seed?"

The variety, as near as I can judge, is "Carmen No. 3." But I would not think of using such stock for seed. The sample is scabby, and, while such seed might be treated, I should not keep a bushel of those potatoes on the farm, nor should I plant my next crop upon the same ground where these were grown. Better start in fresh. Get clean, Northern-grown seed, without any fungus, and then give them a clean piece of ground. It is the gravest kind of a mistake to use affected potatoes for seed. In fact, only the most perfect and smoothest ones should go into the seed supply.—L. C. Brown.

Wheat After Cowpeas.

A Randolph county, Illinois, correspondent writes: "How would it do to sow wheat down here after cowpeas, or in corn stubble?"

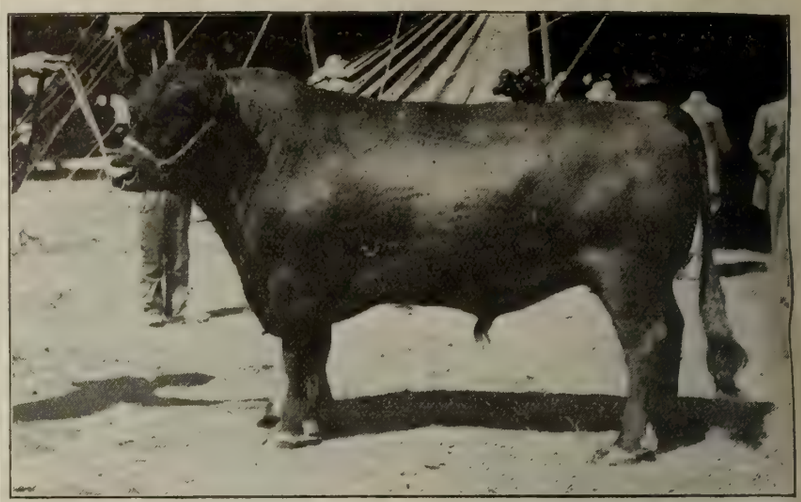
I believe a much larger acreage of winter wheat has been sown in Southern Illinois this fall than for many years. And I notice that the practice of sowing among corn stubble and after cowpeas is becoming quite the thing. I have recommended sowing fall wheat in corn or in corn stubble, for I believe it is the safest in all sections of Illinois. However, in order to make sure of getting a fair yield of wheat in Southern Illinois, at least 200 pounds of good fertilizer should be sown with the wheat. Many fields in this region which were not fertilized last year yielded only from eight to twelve bushels per acre, while fields upon which were used 200 pounds of fertilizer yielded twenty to twenty-five bushels per acre. Cowpeas leave the ground down here in good condition, but this soil needs pretty heavy reinforcements to bring it up to its maximum crop-producing capacity.—L. C. Brown.

Poor Seed and Poor Land.

About the worst combination that I could imagine would be planting poor seed upon poor soil. Sometimes good, wholesome soil will overcome the handicap of poor seed; but even then it is a shame to scourge the land. All we have to do is to just look around us, to notice what results good farmers get, and then compare them with poor farming. We will find here and there a man who thinks that the Creator made the soil, and that He does not need any help from man. These same men think that any seed is good enough. But look at the result. No one would call that sensible farming, nor would any one dare to say that farming did not pay because that man who used poor seed upon poor, ill-kept soil failed to produce profitable crops. It takes certain elements to make bone and muscle of animals, and it takes certain elements to produce grains and straw. The man who undertakes to fatten animals without food or undertakes to grow crops without plant food, must fail.—L. C. Brown.

Docking Light-weight Wheat.

Indiana millers and other wheat buyers are endeavoring to bring about a reform by grading each lot of wheat as it is brought in. Small mills, for grading, have been put in, and a sample of each lot is thoroughly screened and fanned and then tested. The price is based upon quality No. 2, and poor stuff ic cut sufficient to cover all loss to bring it up to grade No. 2. Besides cutting for foreign matter, many are cutting one cent a bushel for each pound the sample tests under sixty pounds, and in cases of very light samples (fifty-two to fifty-five pounds) the price is cut 10 cents a bushel. It is hoped that these grading regulations will induce growers to pay more attention to their seed stock. There is urgent need of this, for it is estimated that fully three-fourths of the present year's crop in Ohio, Indiana and Illinois will grade below No. 2, and some of this wheat will test only fifty to fifty-two pounds per bushel.—L. C. Brown.



PETER STERLING—Aberdeen-Angus bull. Picture taken at the Sioux City Interstate Fair, where he was first-prize winner in class for two-year-olds. PETER STERLING was also first in class and reserve senior champion bull at the American Royal Show. Exhibited by A. C. Binnie & Son, of Alta, Iowa.

Manure From Feeding Roots.

Our Winnebago county, Illinois, correspondent writes: "I notice what you say about feeding roots. I do not put much dependence in roots outside of the question of palatability. We must make every pound of feed count up on the manure pile, and I do not consider the manure from root-fed stock very valuable."

Our correspondent is merely guessing. That is not a safe thing to do in feeding matters. English stockmen are sticklers for roots, both on account of the enormous bulk secured per acre, and because they can be fed with the coarse stuff about the farm. In an English experiment to determine this very question of manure, in general feeding practice, it was found that a given amount of manure could be produced from straw and roots at about one-fifth of what it would cost from feeding hay, meal and other high-priced food. True, the straw-root manure was not as rich as the other, but further tests showed that the poorer manure, when reinforced by commercial fertilizers, until it was practically as efficient as the other, cost only about two-fifths as much.—L. C. Brown.

Buckwheat After Oats.

An Edgar county correspondent writes: "Is it a good plan to sow buckwheat on the stubble after the oats have been cut?"

This practice is followed in some instances in Southern Illinois, where early varieties of oats are sown. It is well known that oats thrive on poorer soil than will do for corn, and buckwheat will thrive in soil where oats would starve to death. When this practice is followed, of sowing buckwheat on oat stubble, it is simply for the purpose of bleeding the soil, urging it to produce more during the one season, and one crop is not grown to make good the waste of the previous one. I do not believe that it is a safe practice to grow any two crops upon a piece of ground and remove both of them from the ground without compensating amounts of fertilizers are returned to the soil. Buckwheat is frequently sown after oats and plowed under. That is all right. But this practice of eternally bleeding soils to the point of starvation should be stopped speedily.—L. C. Brown.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For One Dollar paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit three-years' subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

The Farm Census.

There will be 45,000 enumerators to take the farm census. There will be 9,000,000 blank forms printed for the purpose of collecting the information. It is also estimated that there are 7,000,000 separate farms in the country, as against 5,739,657 in the year 1909; 4,564,641 in 1890; and 4,008,907 in 1880.

CREDIT Subscriptions.

◆ ◆ ◆

Three Years For One Dollar, Payable at the End of the First Year.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of hand premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

The Curly-coated Pigs.

Last September the Department of Animal Husbandry of the Ohio College of Agriculture received from Lincolnshire, England, five Lincolnshire curly-coated pigs. These included a boar pig, a yearling sow and three March barrows. These are the first pigs of this breed to have been brought to America. They were a gift to the Ohio State University through the interest of Mr. Chas. Ed Williams, Secretary of the Lincolnshire Curly-coated Pig Association. The three barrows are to be shown at the International Live Stock Exposition at Chicago, and two of them will be placed in the carcass test. This is an old English breed, white in color, known mostly in Lincolnshire, England. During the past two years it has been quite successfully shown in England. Good specimens of the breed have a very curly white coat of hair. The head is similar to that of the Chester White, although the ears are somewhat larger and more pendant. Lincolnshire breeders regard it both as a "general-purpose" and also a very superior bacon breed. —C. S. Plumb.

EXPERT TESTIMONY ON COCA-COLA.

The readers of this paper will be interested in the following letters from expert chemists who have made careful analyses of COCA-COLA syrup from which the popular temperance drink is prepared. Our object in publishing these letters is to correct an erroneous impression which has been fostered by some of our unscrupulous competitors to the effect that COCA-COLA contains injurious material. We believe that intelligent, fair-minded, christian people everywhere are interested in knowing the TRUTH about COCA-COLA, and we feel sure that when they know the truth they will silence the scandal-mongers. We have numerous letters from professional chemists, but space limits us to giving only a few samples below.

Write to the Coca-Cola Co., at Atlanta, Ga., for a copy of their new book, setting forth scientific record of analysis of Coca-Cola and giving much other valuable information.

University of Texas,
Austin, Texas, January 16th, 1905.

Mr. J. S. Newcomb, Manager Coca-Cola Bottling Co.,
San Antonio, Texas.

Dear Sir: In accordance with your request of the 12th instant, I secured, in the open market, a quart of COCA-COLA syrup and carefully analyzed same for the presence of cocaine. The sample contained no cocaine.

Yours truly, O. H. PALM,
Assistant Chemist to the University of Texas.

REPORT OF GEORGIA CHEMIST.

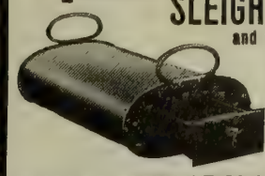
I have purchased in the open market a sample of COCA-COLA syrup and subjected same to chemical analysis. I find therein no trace of the alkaloid cocoaine, for which I made special search, and nothing of a nature any more injurious than would be derived from drinking an ordinary cup of tea or coffee. Yours truly, JNO. M. McCANDLESS,
State Chemist of Georgia.

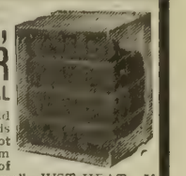
A Great Hog-raising Country.

Elk City, Oklahoma, has put in a claim to being the largest hog-shipping town in the United States on a record of 405 car-loads shipped to market in the year from October 1st, 1908, to October 1st, 1909. The hogs run 99 to 100 to the car, making a total of about 40,000 hogs shipped out during the year. It may be that there are other shipping towns in older farming sections, but Elk City is a station on the Rock Island Route in a new country which did not contain a domestic hog-raising establishment, or a railroad either, a few years ago. This is a section of the rich country in which the Rock Island Railway management is trying to induce farmers to settle on cheap lands. The particulars of the same can be had by addressing Jno. Sebastian, 90 LaSalle Street Station, Chicago, or 90 'Frisco Building, St. Louis, Mo.

$1.50 for this CLARK WAGON, CARRIAGE, SLEIGH OR AUTOMOBILE HEATER

and 1 doz. Bricks of the Famous CLARK "ABC" COAL





Don't get cold feet; don't shiver and freeze on cold weather drives. Be warm and cozy and happy. This 12-inch metal heater is strong and durable. If not perfectly satisfied and pleased, money will be refunded. SEND TODAY or write for our big, new catalogue.

THIS OFFER IS $3.00 VALUE FOR ONLY $1.50.

CHICAGO FLEXIBLE SHAFT COMPANY, 682 LA SALLE AVE., CHICAGO

Make Your Crop Fit Your Soil.

A correspondent in Southern Illinois, whose soil is mostly white clay, asks what element of fertilizer should be used on this soil, for corn.

This question opens up a matter which is of vital importance to every land owner who attempts to grow any certain crop upon land which heretofore has not produced that crop profitably. Many get the impression that all one has to do to produce a certain crop of grain is to supply the soil with elements of that plant growth. While that, of course, is an essential, yet mechanical condition of the soil as well as climatic conditions really have more to do towards making the crop than anything else. It is a well-known fact that some soils will produce one crop abundantly, where another crop of a different nature would utterly fail, and no amount of reinforcement of that soil would help matters. The first essential is that a given region shall be the natural habitat of the crop grown; and the next essential, of scarcely less importance, is that soil conditions, both physical and mechanical, shall meet the needs of the crop. Without these no amount of fertilizers would help the crop.—L. C. Brown.

Selecting Seed Ears.

A correspondent asks: "Do you think that well-covered-over ears of sorn are as heavy yielders as those which do not fill out so well?"

While all score cards call for well-filled ears, and while ears of standard length, when so covered, will outweigh ears not so completely filled, yet I must admit the biggest crops of corn that I have ever seen were not made up of those well-filled ears. These fancy, tipped-over ears are not plentiful in any field, although it is a characteristic which undoubtedly may be bred and intensified. I have in mind one Illinois corn breeder who has worked for this feature for several years. He does get score-card ears, but I have never known him to get more than sixty bushels per acre. I have in mind also another grower who selects big, lusty ears, and he thinks he does not get much of a crop unless he gets from eighty to ninety bushels per acre.—L.C.Brown.

"The Loco Weed Disease," by C. Dwight Marsh, of the Bureau of Plant Industry, is the title of one of the recent bulletins issued by the United States Department of Agriculture.

WITTE ENGINES

USE GAS, GASOLINE OR KEROSENE

Are known by a superior standard of construction. 25 years of service has demonstrated their worth. Does work at lowest cost and is always ready to saw, grind, pump, shell or do any farm or shop work.

Mortality of Farmers.

The law of averages is involved in considering the mortality statistics issued by the Census Bureau, and although the subject is not a cheerful one, it is certainly important and interesting, especially in the consideration of preventable diseases which cause so many premature deaths.

Bright's disease is a preventable disease. It is brought about by rich diets, exposure and other causes. It can be prevented. Taking the figure 100 as representing the average of each age mentioned, at the ages of 25 to 34 years the mortality of farmers and farm laborers averaged 77.5; at ages of 35 to 44 years, 63.1; at ages of 45 to 54 years, 62.8; and at 55 to 64 years, 76.5. At each age the farm deaths were below the average of the country.

Typhoid fever is another cause of death, and the farm showing is very bad. Typhoid fever is caused by unsanitary conditions, impure water, etc. Taking 100 as the average death rate at each age, the mortality of farmers and farm laborers at 25 to 34 years represents 128.8 per cent.; at 35 to 44 years, 138.7 per cent.; at 45 to 54 years, 156.3 per cent.; and at 55 to 64 years, 142.9 per cent. This is a terrible showing, and the prevention of typhoid fever on farms looks to us as being a matter of the utmost immediate importance.

The showing, so far as tuberculosis of the lungs is concerned, is in favor of the outdoor life of the farmer. With 100 as the average at ages from 25 to 34 years, the farmers' mortality represents 82.8; at 35 to 44 years it is 77; at 45 to 54 years it is 81.3; and at 55 to 64 years the farmers' mortality from tuberculosis is 88.2. This shows that farmers do not all die of tuberculosis from drinking milk and eating meats raised on their own farms.

In regard to pneumonia, the farm average mortality is less than the United States average, except at the ages from 35 to 44 years. Taking the figure 100 as the average at the ages from 25 to 34 years, farm mortality from pneumonia represents 86.1; at 35 to 44 years it reaches 108.1; at 45 to 54 years it is 94.3; and at 55 to 64 years it is 89.7

Suicide as cause of death is represented with statistics not creditable to the farmer and farm laborer. At ages of 25 to 34 years, compared with 100 as an average of the United States, the farm average is 107.9; at 35 to 44 years the farm average is exactly 100; at 45 to 54 years the farm average is 113.2; and at 55 to 64 years the farm average is 104.

It is quite surprising also that mortality amongst farmers and farm laborers caused by accident and violence is above the average in other occupations. With 100 as the measuring basis, at the ages of 25 to 34 years farm mortality represents 103.4; at 35 to 44 years it represents 110.0; at 45 to 54 years it represents 105.0; and at 55 to 64 years the farm mortality represents 96.8.

In deaths from heart disease young farmers make a better showing than their elders. With a United States average of 100, the 25 to 34-year-old farmers get off with 85.1; at 35 to 44 years the average is 93.2; at 45 to 54 years the farm average is 107.3; and at 55 to 64 years the average is 106.6.

Other causes of death could be enumerated, but this is enough for the present. The country mortality statistics are hard to obtain correctly, but we have ample faith in the Census Bureau, and there is no better authority.

American Breeders' Association.

During the National Corn Exposition at Omaha, which opens Dec. 6 and closes Dec. 18, the American Breeders' Association will hold a meeting Dec. 8, 9 and 10th. This is the association of which Hon. James Wilson, Secretary of Agriculture, is President.

On Wednesday, Dec. 8, at Hotel Rome, the session will be mainly devoted to Animal Breeding; Thursday session, at the Corn Exposition, will be devoted to general committee reports, heredity, and the Friday session, also at the Exposition, will be devoted to plant-breeding. Motion picture talks will be a feature at this meeting. All live stock and plant breeders should become members of this association.

REMEMBER THE INTERNATIONAL

THE CHICAGO INTERNATIONAL LIVE STOCK EXPOSITION IS OPEN AND REMAINS OPEN DAY AND NIGHT TO DECEMBER 10th. THIS IS THE TENTH AND GREATEST LIVE STOCK EXPOSITION AND HORSE SHOW EVER HELD, SURPASSING ALL PREVIOUS RECORDS. IF THERE IS YET TIME, DO JUSTICE TO YOURSELF AND ATTEND THE SHOW.

Mr. J. W. Murfee, of Okalona,Miss., writing to the edtior of the National Farmer and Stock Grower, said:

"We are making strenuous efforts to get the Texas cattle tick eradicated from our state, and when this is done we will have a state second to none for growing cattle and other live stock. Five counties of the state will have the government quarantine lifted this winter, and our people in those counties will have the right to ship cattle to the open markets of he North. This is going to revolutionize the farming industry in this section of the South, as it will encourage us to raise a better class of stock that when bred by us can be fattened and finished for market in the corn states."

Elsewhere in this issue will be found the advertisement of Mr. E. L. John, proprietor of Broadway Stock Farm, the place to buy stock and poultry at live-and-let-live prices. Mr. John has a few choice Large English Berkshire gilts of March farrow to spare, also two good Shropshire rams, and a choice lot of Barred Plymouth Rock cockerels for sale. Write to Mr. E. L. John, Broadway, Mo., for special prices.

Mr. John McLaughlin, of Marmaduke, Ark., breeder of Poland-China swine, wishes us to remind our readers that he has one of the finest Poland-China herds in the South. His herd is composed largely of prize winners, and he has paid $50 to $100 each for his fine sows from which he is offering pigs for sale. His great herd boar is a $500 hog, and they are worthy of investigation. We are very glad that Arkansas is coming to the front with splendid farms devoted to raising pure-bred stock.

FARM AND RANCH LANDS.

WANTED.—Improved Stock Ranch worth $10,000 to $15,000 in exchange for income property, of equal value in Philadelphia. Address, **G. F. S.**, 711 Pike St., Seattle, Wash.

ARKANSAS.—Fortunes in Rice Growing. An industry that originated seven years ago is making the prairie lands of Arkansas produce splendid incomes. Write for free booklet entitled "Arkansas Rice." Address, **E. W. LaBEAUME, 1408 Pierce Building, St. Louis, Mo.**

GEORGIA.—FRUIT LANDS IN SOUTH GEORGIA. Ask us for our Maps, Plats and Illustrated Circular regarding the Fruitland Colony Company's truck garden, fruit farm and pecan lands in South Georgia. Good town on railroad. Sell you 10 acres (grows four crops a year—plenty of rainfall) and give you a lot in town free, long time payment. Lots average $10.00 to $50.00 each. Our literature is instructive. If you don't want to buy, it will tell you things you never heard of before and only costs the asking. Let us send it to you.
Fruitland Colony Company, Desk B,
167 Adams Street, Chicago,
or **Land Dept., Desk B,**
Ga. So. & Fla. R., R., Macon, Ga.

MEXICO.

For Sale: Timber, agricultural and grazing lands in Western Mexico, States of Michoacan, Sinaloa and Tepic. Fine timber. Soil of the best. Grows abundant crops. Plenty water. Climate excellent. Lands now cheap. $1.50 up, but upon completion of Southern Pacific R. R. now building will advance steadily.
For particulars address,
J. H. Cavanaugh & Co.,
Acaponeta, Tepic, Mexico,
or **J. H. Cavanaugh & Co.,**
P. O. Box 76,
Guanajuato, Mexico.

MISSISSIPPI. — ALFALFA LANDS IN NORTHEAST MISSISSIPPI.—Our lands grow from three to six tons of Alfalfa per acre, and the hay sells for $15 to $20 per ton. Prices from $10 to $40 per acre. "Do you want to be shown?" Write to **J. W. Murfee,** Okolona, Mississippi.

MISSOURI.—For Sale: Finest 1,500-acre farm in Jackson county, Missouri; improvements worth $65,000; ten miles Kansas City, Mo., by rock road; R. R. station on farm; land, improvements in good condition; 2,580 acres well fenced, cross fenced; four good houses; eight splendid barns; rich corn land, finely watered; all good corn land or fine blue grass land; 1,500 acres blue grass; $40 acre; one-third cash, balance long time, 5 per cent.; other high-class farms in Western Missouri and Eastern Kansas. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI.—Central Missouri Farms. For farms that will prove profitable and satisfactory as homes and investments, write for new list. Farms described and priced. Very productive grain, stock and blue grass farms. **Hamilton Realty Co., Fulton,Missouri.**

MISSOURI.—For Sale: 800-acre farm; note what I say—it's a great bargain; improvements worth $15,000; abundance of fruit; will grow 60 to 80 bushels corn acre; did grow 32,000 bushels corn on 400 acres in one year; grows red clover, timothy and blue grass the best; high-class Lafayette county, Missouri, farm; two hours from Kansas City; eight St. Louis; twelve Chicago; practically all good corn land; farms adjoining held $100 to $125; price, $75 acre; easy terms. After January 1st, 1910, the price of this land will be $100 per acre. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

MINNESOTA.—If you want a quarter or half section of good land at a low price, for dairying or agriculture, in Northern Minnesota, write to **J. J. Coffey,** Mentor, Polk county, Minn.

OKLAHOMA. — FARMERS OF SMALL MEANS. Oklahoma is to sell 2,000,000 acres of school land on 40-years' time in November and December, giving every man a chance to own his own home; also big opening of 3,000,000 acres Indian land on 4-years' time; 25 cents gets booklet telling all about it. **M. N. Due,** Pub'r, Dept. 31, Okeene, Okla.

OKLAHOMA.—Million acres Osage Indian Reservation opening. Send quarter for information. **Osage Development Co.,** Tulsa, Oklahoma.

TENNESSEE.—Send for booklet on farming and full description and prices of lands for sale in the valley of East Tennessee, the healthiest climate and best lands in the country. Address, **East Tennessee Real Estate Company,** Morristown, Tenn.

TEXAS.—One Thousand Acres; 75 per cent. agricultural, the balance grazing, with an inexhaustible supply of excellent water. Price, $15.00 per acre; half cash; deferred payments to suit the purchaser. Situated 10½ miles from Sabinal. Also **Twenty-six Hundred Acres,** 11 miles from Sabinal; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. **Fourteen Hundred Acres** grazing land, watered by springs. $3.50 per acre. All in Uvalde county, Texas. Address, **Albert D. Evans,** North Fort Worth, Texas.

TEXAS-MEXICAN LANDS.

There have been put into my hands for prompt sale the following bodies of land:
In Mexico, state of Coahuila, 45,000 acres of fine grazing land, with fifteen miles frontage on the Rio Grande. Also a big lake inland from the river. Excellent mesquite and other grasses. Stock fatten upon it for market. Situated about midway between C. Porfirir Diaz and Nuevo Laredo.
Also, adjacent to the foregoing, 30,000 acres of very choice land for stock or agriculture; 8,000 acres can be irrigated from the Rio Grande, on which it has a frontage of six miles. There are also two creeks. Wells yield abundant water at 26 feet.
Either or both of the above tracts, with or without mineral rights.
In Texas, Maverick county, 3,600 acres, with frontage on the Rio Grande of 2½ miles. Upward of 2,000 acres can be irrigated. No better land in Texas.
Full particulars given on request. Principals or agents of undoubted responsibility only need apply, and who mean business. Highest references given and required.
Joseph De Bona, Eagle Pass, Texas.

LAND DRAWING!

The beautiful Jaritas Valley opening now for settlement. Drawing occurs on January 6, 1910.
4000 acres of fine, smooth, irrigated land; every acre within four miles of El Paso & Southwestern Railway. Deep, loamy soil; abundant water; fine climate; reasonable price; easy terms. Water for 1910 crop.
The Jaritas Valley lies in New Mexico and between the Colorado and Oklahoma State lines.
Write today for FREE particulars, map, rates, etc., to
THE JARITAS VALLEY LAND BOARD,
Midland Building, Kansas City, Mo.

RAILROAD LANDS VERY CHEAP

TO quickly build up population along the Washington & Choctaw Railroad, in new reservation just thrown open, we will sell a little of our 100,000 acres of $25 and $50 lands for $17.50 per acre. Magnificent opportunity for settlers, investors and speculators. **Very easy terms,** as low as $1 per month; long time. Any size tract from ten acres up. Gulf Coast land the most productive in the world; ten acres will yield an income of $5,000 a year. Don't buy lands anywhere until you investigate this. Send us your name, a postal card will do, and we will send you complete details.

AGENTS are offered great inducements to sell our lands anywhere. Write for special terms.
WASHINGTON & CHOCTAW LAND CO.,
6155 Times Bldg., St. Louis, Mo.

CASH FOR YOUR FARM OR BUSINESS,

No matter where you live. Write me today if you want to buy or sell any kind of Real Estate or business. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

WESTERN CANADA

What Governor Deneen, of Illinois, Says About It:

Governor Deneen, of Illinois, owns a section of land in Saskatchewan, Canada. He has said in an interview:
"As an American I am delighted to see the remarkable progress of Western Canada. Our people are flocking across the boundary in thousands, and I have not yet met one who admitted he had made a mistake. They are all doing well. There is scarcely a community in the Middle or Western States that has not a representative in Manitoba, Saskatchewan or Alberta."

125 Million Bushels of Wheat in 1909

Western Canada field crops for 1909 will easily bring **$170,000,000.00** in cash.
Free Homesteads of 160 acres, and pre-emption of 160 acres at $3.00 an acre. Railway and Land Companies have land for sale at reasonable prices. **Many farmers have paid for their land out of the proceeds of one crop. Splendid climate, good schools, excellent railway accommodation, low freight rates, wood, water and lumber easily obtainable.**
For pamphlet "Last Best West," particulars as to suitable location and low settlers' rate, apply to Sup't of Immigration, Ottawa, Can., or to the Canadian Government Agent. (5)
J. S. Crawford, 125 W. 9th St., Kansas City, Mo.; C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

GULF COAST
Texas Land

$2 Per Acre Cash balance easy monthly payments, buys a fruit and truck farm in the gulf coast country of Texas. No interest, no taxes. Possession when first payment is made. Five acres of this ground intelligently handled can be made to produce as much actual cash as 50 acres of northern or eastern land.
FREE Our publication "The Homefinder" sent free for six months to land buyers and farmers. It is full of carefully compiled information about gulf coast land, cost of fencing, plowing, farm implements, etc., what and when to plant. Be sure to send us your name before you buy land. A post card will do. Write Today.
PROVIDENT LAND CO., Dept 102, KANSAS CITY, MO.

The Grand Champion Steer.

Although the Chicago International Live Stock Show is open and will continue to be open until December 10, we are enabled on December 1 to report that the grand champion steer is the two-year-old King Ellsworth exhibited by the Kansas Agricultural College.

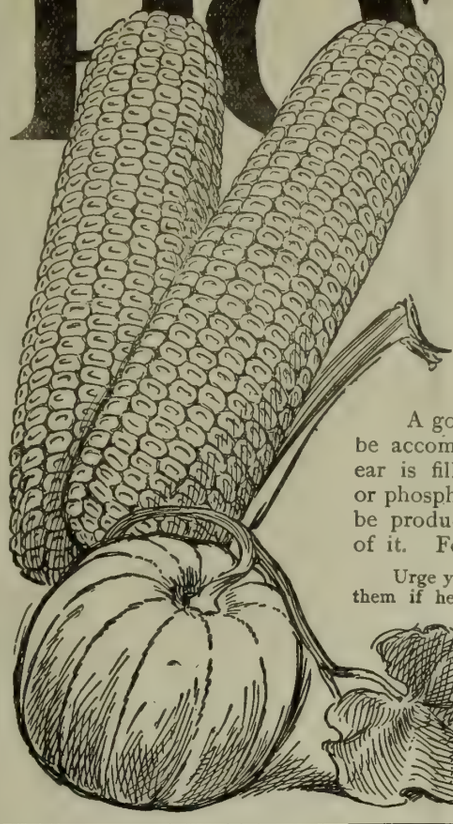
King Ellsworth 102185, the grand champion steer of the tenth International, is a pure-bred Aberdeen-Angus. He was calved Sept. 9, 1906. His sire was Fivy's Forester 78630, and his dam Queen Etta Viola 42938. The Kansas Agricultural College purchased this steer last year after the International Show, where he had won second prize as a yearling. He was then exhibited by Lantz & Mitchell, of Danvers, Ill. The steer was fed on corn, bran and alfalfa, principally alfalfa, and given no especial care nor expensive feeds. He was shown at the Kansas City Royal Show this fall and won the championship. Great credit must be given Prof. R. J. Kinzer, head of the Animal Husbandry Department of the Kansas school, for his ability to pick out a good steer, as well as for feeding him for grand champion honors.

A Most Useful Premium.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screwdriver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

POTASH



THE Corn Show exhibits the results of corn breeding, *but* the farmer who bought the best bred seed grown, and planted it on thin land soon learned that corn must be *fed* as well as *bred*. At the Corn Show you see thousands of beautiful ears of corn. In your corn crib, you find too many imperfect ears with pointed ends and with badly filled kernels. This is as often the result of starvation as of poor breeding.

A good ear must have plenty of starch in every kernel, and this can only be accomplished by having enough Potash in available form at the time the ear is filling. Balance the other plant food, whether it be clover, manures or phosphate, with 25 to 50 pounds of Muriate Potash per acre, and you will be producing seed corn instead of nubbins. Don't let anybody talk you out of it. Feed up your corn and see the results.

Urge your fertilizer dealer to carry Potash Salts in stock. He will have no trouble in buying them if he will write to us about it. Details for fertilizing corn will be found in the Farmers' Note Book, which will be sent free on addressing.

GERMAN KALI WORKS, Monadnock Block, CHICAGO

New York: 93 Nassau St. Atlanta, Ga.: Candler Bldg.

Land Matters.

Very important land interests are advertised by J. H. Cavanaugh & Co. in Old Mexico. Some object to go to Old Mexico, but for the right kind of men—cattle ranchmen, for instance—Mexico presents a field that can and does make splendid investments. The advertisement appears on the eighth page.

Very fine lands on the Georgia Southern and Florida Railroad are advertised in this issue on page 8. These are fruit and nut-growing lands and altogether fine stock and dairy lands also. A town lot free is included in a purchase. Write to Desk B, Fruitland Colony Company, 167 Adams street, Chicago, Ill., and obtain further particulars.

People who live in hopes of owning sufficient land to support themselves and families had better do it now. A few years ago all the advertising and all the pulling and hauling would not force any great number of farmers to go into the cotton states. Now it is hard to keep them out. A few days ago a South Carolina farm of 649 acres in extent was sold at auction for $45 an acre that six years ago was sold at $12.50 per acre. Land is going up everywhere except where from the productive standpoint it is already too high.

The Necessity For Cleaned Seed.

Needless losses are sustained every year because seed is not cleaned or graded before sowing. Grass seed in particular is the cause of low grade hay when it is mixed with weed seeds. It is the same with larger seeds; without grading, the seed has not the uniformity that is necessary to bring up a good stand in the field. There was a time when a good excuse could be given, but there is none now. A fanning mill used only to get the dust out of the seed, but the ingenuity of the mechanic has brought about a different situation. The famous Chatham Fanning Mill is a seed grader and cleaner, and is on the market on such terms that to be without one is not excusable.

This mill is made by the Manson Campbell Co., of Detroit, Mich., and is a marvel of efficiency. It cleans and grades all kinds of seeds or grains from corn and beans to timothy, alfalfa, etc.; is remarkably easy to operate and will give a man a lifetime of service.

As a matter of fact, seeing an unusually liberal offer on this mill is what suggested this article. The manufacturers seem determined that every farmer shall have one, or try one at least, because they offer to pay the freight on one in advance to anybody, anywhere and give a free trial of 30 days without asking money down or deposit in advance. Also Mr. Campbell offers to let a buyer have a year in which to pay for it. As this firm sells direct from the factory, it is possible for them to make low prices, and it goes without saying that anything from the Manson Campbell factory is as good as it can be made.

All farmers will find it to their advantage to write to Manson Campbell Co., of Detroit, Mich., and ask for free book No. 118. It is the fanning mill, and contains a most liberal offer.

Turnips weighing five pounds each and an estimate of possibility of raising six thousand bushels of turnips to the acre is the story that comes from Greensboro, N. C. Any story causing farmers to raise turnips is good. It is one of the greatest crops in England and one of the most neglected in the United States.

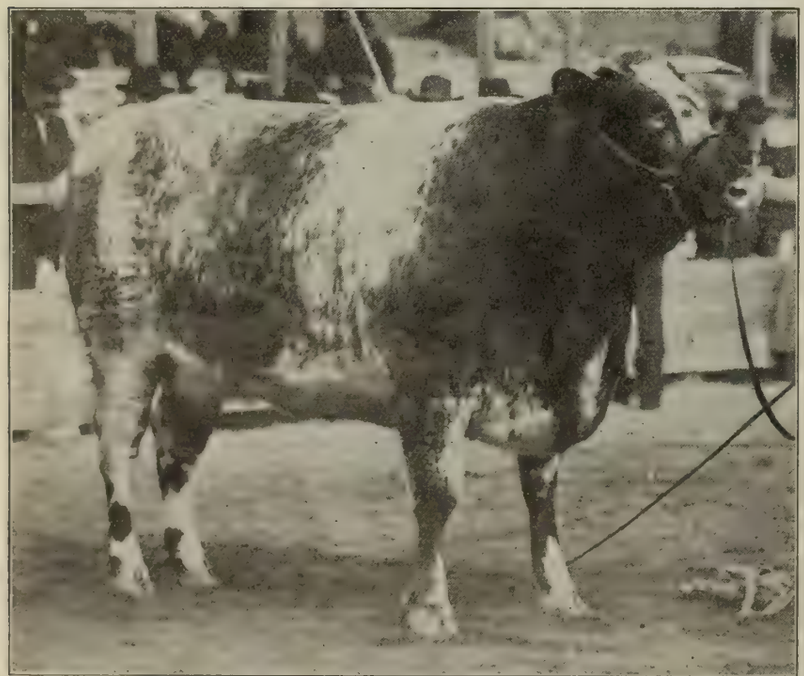
[Please mention National Farmer and Stock Grower.]

Butter and Oleo Combination.

According to the New York Produce Review, large quantities of adulterated butter are being sold in the market which is in fact creamery butter largely adulterated with oleomargarine. This generally comes under the class of adulterated butter and the tax thereon is three-fourths of a cent a pound. If it was in reality oleomargarine largely adulterated with creamery butter and artificially colored, it would class as oleomargarine and be taxed ten cents a pound. Here we have a first-class Sugar Trust opportunity for the corruption of government inspectors.



Her Majesty, the grand champion Shorthorn cow DOROTHEA, 2d—Exhibited by C. E. Clarke, of St. Cloud, Minn. She was the senior and grand champion Shorthorn cow in her own state; also at others, including Missouri; also senior and grand champion at the American Royal Show in the greatest contest in the history of that great Exposition.

New Market For Skim-milk Solids.

The American Raw Products Company of New York City is advertising that it controls by patents the right to manufacture and sell the soids of milk in an uncooled state. The company is now engaged in utilizing skim-milk solids only, but the campaign in regard to whole milk is to come later. Inasmuch as there is an ordinance against the sale of skim milk in New York City, and the company appears to be in the country market for skim milk for manufacturing purposes, it would appear to be a good thing, for farmers especially, if the company can furnish a separator for solids not fat and so save the transportation of the water. The dairyman who can separate and sell his cream on the one hand, and who can separate and sell his non-fatty solids from the skim milk on the other and leave the water on the farm, will have an easy time dairying when compared with the old regime of buttermaking on the farm. The products of the company so far announced are oils, toilet soaps, toilet powders, milk chocolate, etc. The three principal articles already on the market consist of a malted-milk chocolate, a raw-milk toilet soap and a raw cooking milk. The company claims to have the right to evaporate raw milk or to sell milk solids in an uncooked state, but does not claim to have any right which farmers as farmers need contest; therefore all the contests can be safely left to those who are interested —the makers of pasteurizers, for instance—because the manager of the new company calls by inference pasteurized milk cooked dead milk.

How to Keep Milk.

At a meeting held in Boston in the interest of pure milk, nine good rules for the care of milk by housekeepers were given by P.M.Harwood.

1. Take in milk and cream as soon as possible after being left at your door and place it in the refrigerator.
2. Keep milk and cream cold until ready for use. The bottom of the refrigerator is colder than the ice container above.
3. If ice cannot be had, wrap the bottle in a wet cloth and stand it in a dish of water by an open window, out of the sun; evaporation of the water will cool the milk.
4. Keep milk or cream covered until wanted, and in the bottle in which it is delivered. If placed in open bowls or pitchers milk will absorb odors from other food and collect flies and dust.
5. Pour from the bottle only what milk or cream is needed for immediate use.
6. Milk or cream that has become warm should never be poured back into the bottle of cold milk.
7. Utensils used for milk should be first cleansed with cold water and then with boiling water, thoroughly drained and allowed to become cold before being filled with milk.
8. Wash and return all milk or cream bottles daily.
9. Have a separate quart of milk for the baby; and what he or she does not use others may have.

New York Milk Prices.

During the month of November the price of milk at New York was put up to four cents a quart net to the farmers, which made the wholesale price, freight added, $1.91 per can of forty quarts, which is actually 4.77 cents per quart. On this basis the New York City milk manufacturers—Borden and others—put up the retail price to nine cents a quart. There you have it in a nutshell—the farmer receives sixteen cents a gallon and it is retailed at thirty-six cents a gallon.

Avoid Ashes With Manure.

Farmers need to be cautioned generally against the use of wood ashes and lime with manure. The ashes and lime produce an alkaline condition resulting in the loss of the ammonia which carries off the nitrogen. This point has not been sufficiently emphasized, and many well-meaning farmers have used ashes and lime with manure to disadvantage. The lime and ashes, if needed by the soil, should be put on in other years than those in which farm manure is applied.—Press Bulletin Wisconsin Experiment Station.

Rye flour is selling at $4.00 to $4.30 per barrel in the St. Louis market.

Better Farming
A John Deere Book
—*Just Out*
A Farmer Can Get It Free

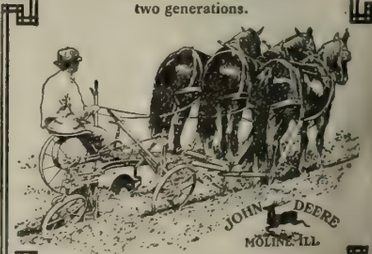
IF interested in farming, get our FREE book called "BETTER FARMING." It tells all about—

Alfalfa	*Making Hay*
Dairying	*Fighting Frost*
Seed Wheat	*Silos*
Corn Crops	*Cultivation*
Stock Feeding	*Cotton Crops*
Art of Plowing	*Soil Fertility*
Boll Weevil	*Gasolene Engines*
Controlling Weeds	*Adjusting Plows*

Hired Help Costs Big Money

Your land is high priced and hired help expensive. There is only one way to make big money—use implements that cut down the cost of your crops. Isn't it true that when you break something on a plow it is nearly always a cast part? Wherever strain comes on a John Deere Plow there you will find steel—tool steel. Take any plow that has had hard work for five years, put it along side of a John Deere which has been in service that long—and see the difference. Then there is no paint to cover up poor material. You can see the wear and the defects. The John Deere will be solid, staunch and ready for the hardest job. Then you begin to know that quality counts.

You can take pride in owning a John Deere—the standard plow of the world for two generations.



We will send you the 80-page, illustrated book free if you write and ask for

Package No. **7.**

Mention the package number *sure*, then you will get exactly the right stuff.

DEERE & COMPANY, MOLINE, ILL.

ANOTHER DAIRY RECORD.

Dolly Dimple, Guernsey Cow, 3½ Years Old, Completes Record, Making Highest Milk Record For the Breed, 18,458.8 Pounds; Highest Butter-fat Record For the Breed, 906.89 Pounds, Equivalent to 1,058 Pounds Butter.

This remarkable cow as a two-year-old made an official year's record of 14,099.1 pounds milk, 703.36 pounds butter-fat, which was the best record for a cow of that age. At the conclusion of her year's work she was two months with calf.

When she freshened for the second time in October she started her second year's work and has just completed same with an official year's record of 18,458.80 pounds milk; 906.89 pounds butter-fat. (Record from October 14, 1908, to October 14, 1909.) Supervised by the Massachusetts Agricultural Experiment Station.

Months.	Pounds Milk.	Per Cent. Butter-fat.	Pounds Butter-fat.
October	927.10	4.49	41.63
November. ..	1,898.60	4.49	85.25
December ..	1,909.60	4.81	91.85
January.. ..	1,807.40	4.90	88.56
February. .	1,505.80	4.53	68.21
March.. ...	1,663.10	4.66	77.50
April.	1,569.90	4.96	77.87
May..	1,531.30	5.13	78.56
June.	1,439.20	5.45	78.44
July..	1,371.10	4.97	68.14
August.. ...	1,270.01	5.54	70.36
September ..	1,105.10	5.14	56.80
October. ...	460.50	5.15	23.72
Total....	18,458.80	4.91	906.89

Dolly Dimple was dropped January 21, 1905, making her three years and nine months old at the beginning of her last record.

She calved October 9th and commenced her record October 14, 1908. She was served August 4, 1909.

During this time she made the following seven-day record, which is the largest made by any cow of like age:

Days.	Pounds Milk.	Pounds Butter-fat.
December 8.....	62.4	3.202
" 9.....	63.0	2.907
" 10.....	65.8	3.288
" 11.....	63.3	2.852
" 12.....	66.4	3.625
" 13.....	64.2	3.427
" 14.....	59.7	2.733
Total.....	444.8	22.034

She also has to her credit the following records for shorter periods, which are the best for the breed, and, so far as known, there is no other so remarkable a producing cow of like age in the world.

One Day—64.4 pounds milk; 3.625 pounds butter-fat.

One Month—30 days, 1,960.4 pounds milk; 89.99 pounds butter-fat.

Three Months — 5,614.6 pounds milk; 265.62 pounds butter-fat.

Six Months—182 days (3½ years old), 10,390.2 pounds milk; 486.66 pounds butter-fat.

Average for two consecutive periods, 16,233.96 pounds milk; 805.13 pounds butter-fat.

Dolly Dimple is owned at Langwater Farms, North Easton, Mass., the property of Mr. F. Lothrop Ames.

Economical Milk Producers.

The Department of Animal Husbandry of the Ohio State University College of Agriculture has recently received from Washington Farm, Elm Grove, West Virginia, five head of Kerry cattle, a generous gift from Mr. Oglesbay, the proprietor. While in Ireland and England Mr. Oglesbay became interested in this Irish breed of dairy cattle, and imported a number of them to his beautiful estate in West Virginia. The gift to the Ohio State University consists of the imported bull Sir Gilbert, Jr., the imported cow Westerville Violet, a bull calf and two yearling heifers. This little black breed of dairy cattle is one of the most economical producers of milk known. Instances are on record of cows of the breed producing nearly 10,000 pounds of milk in a year. Fair specimens of the mature cows will produce enough milk to yield seven to ten pounds of butter a week at the churn. The cow Westerville Violet sent the University was the reserve cow at the Dublin Show in 1905, and is a very fine specimen of the breed, showing splendid dairy form, with a very shapely, capacious udder.—C. S. Plumb.

Dairy and Creamery Notes.

The Milk Producers' Association of Missouri and Illinois will hold the next meeting at St. Louis on Monday, December 27th.

At Lake Mills, Wis., at a sale of Holstein cattle conducted by Frank B. Fargo and Wm. Everson & Sons, 202 head of pure-bred stock were sold at an average of $155 per head. They were all ages, males and females. The prices ranged from $65 to $700.

A Colorado dairyman estimates the value of a good sire as worth $43.85 in the life of each heifer up to the sixth year of her usefulness. If you can make sure of the sire being the right kind, this is not an overestimate.

A very good bulletin entitled "The Production of Clean and Sanitary Milk," has been issued by the Virginia Agricultural Experiment Station at Blacksburg, Va. It gives a very good idea of sanitary and unsanitary stables, methods and utensils.

A Farmers' Bulletin issued by the New Hampshire Experiment Station, which is entitled "A Study of Farm Buttermaking," indicates that making butter on the farm is increasing instead of decreasing. Ninety farms investigated averaged 58½ pounds of butter a week per farm, the smallest weekly amount made being seven pounds and the largest 500 pounds. The butter averaged about 28½ cents a pound. A good farm dairy for twenty to thirty cows was estimated to cost $500 for building and $307 for equipment, although the average equipment cost was $175.

In New York state a number of persons were found to be selling cows that they claimed had been tuberculin tested and free from disease, when they had not been tested at all. The consequence was, when they are caught at it they have to pay $100 fine, which is the law in that state. A veterinarian who lends himself to any such fraud has his license cancelled in addition to the fine.

The butter market, which bid fair to become very strong, has had a considerable struggle to maintain itself. In fashionable neighborhoods in Eastern cities, where butter habitually retails ten to fifteen cents above the wholesale price, the consumption fell off just as fast as the advance was put on. Furthermore, the advance left the opening for oleomargarine to pay a profit and brought the forgotten fruit butters to the front again. It is the extravagant charges of the retailer that makes trouble in the market, even when the farmer is barely getting a fair price for his product.

NATIONAL DAIRY SHOW
DE LAVAL
BUTTER AWARD TRIUMPH AS USUAL

The great NATIONAL DAIRY SHOW was held at Milwaukee, Wis., October 15–24, and in keeping with the invariable result since "ALPHA-DISC" DE LAVAL CREAM SEPARATORS went into use all the HIGHEST BUTTER and CREAM awards went to DE LAVAL users, in this latest representative contest, which included the exhibits of nearly one thousand of the best butter and cream producers throughout the country.

The three highest awards in the CREAMERY BUTTER class—all to DE LAVAL users—were as follows:

A. J. ANDERSON, Otisco, Minn., . Score 97
THOR. MOE, Winthrop, Minn., . . Score 96½
A. L. OESTRICH, Watertown, Wisc., Score 96

The highest award on DAIRY BUTTER was to P. Daingaard, Camp Point, Ill.—Score 94½—a DE LAVAL user.

The highest award in the CERTIFIED CREAM contest was to G. Van B. Roberts, Highland, N. Y.—Score 99—a DE LAVAL user.

As has been said before, the separator does not of itself insure the making of the best butter, but the superior mechanical and sanitary bowl construction and low speed of the DE LAVAL separator indisputably enable the production of better cream and better butter under the same conditions than can possibly be made in any other way.

This is something that even the most enterprising and resourceful of those who seek profit through the manufacture and sale of would-be competing separators never attempt to explain or deny—that practically all the best butter, as evidenced by the highest awards in all representative butter contests, is and has for more than twenty years been made by users of DE LAVAL cream separators.

Hence the great advantage to every DE LAVAL user in having the separator that not only makes the MOST but the BEST cream and butter, is the simplest and easiest machine to use and lasts an average of twenty years against from two to five years in the case of all others,

A DE LAVAL catalogue helps to make plain the reasons for DE LAVAL superiority in good buttermaking and other respects, and is to be had for the asking.

Three very fine full-blooded, but not eligible to registration, Bull Calves, for sale at $10.00 each. These are bargains, as they are from heavy producing dams. Write for more information regarding sire and dams.
ALBERT S. ENNIS,
712-21 Missouri Trust Bldg., St. Louis, Mo.

MILK PRODUCERS' ASSOCIATION.

Report of November Meeting and Price of Milk.

The weather interfered somewhat with the meeting of the Milk Producers' Association of Missouri and Illinois, which took place on Monday, November 22nd, and, owing to the small attendance, it was thought best to postpone the annual election of officers to Monday, December 27th, at 1 p. m., the members to assemble at the office of Mr. Wm. A. Fischer, Secretary, 409 Franklin avenue, St. Louis, Mo.

Hon. D. I. Furbeck, President of the association, who has acted as Milk Committee during the past year, made his usual report, which was ordered printed and sent out to all members in good standing, also to all members for the last time to whom bills for dues have been sent and who have not paid up. This is the report:

"The principal dairies of St. Louis have practically agreed to pay 16 cents per gallon for uncontracted milk delivered in the month of November by members of the Milk Producers' Association."

Although many bills for dues were sent out during the month of November, the responses were few. Chris Ebeling of Bunker Hill, Ill., sent in his dues by letter, also G. W. Goza of Silica, Mo., and Fred Henties, Marine, Ill. Mr. Joseph Hogan, delegate from Edwardsville, paid over dues on account of Ed. Tiek and Martin Welsh of Edwardsville, Ill., making up a total of twenty in good standing from that shipping district.

Mr. W. S. Prickett of R. R. 1, Sorrento, Ill., who ships over the Clover Leaf Route, was present and addressed the meeting.

During the month of November the President of the association paid a visit to the shippers on the Burlington Route at Winfield, Mo. He found them well organized from a local standpoint, and is in hopes that they will join the association in a body. There are 33 milk producers at Winfield.

The President did not read his annual report, reserving it for next meeting.

For information of all who have received bills for dues, it is proper to state that unless they pay up they will be dropped from the rolls as defaulters, and no further information in regard to the association will be furnished. Out of 141 bills for back dues, amounting in all to $360, only $6.30 was received by the treasurer; whereas there are debts to pay amounting to about $65, for expense of railroad fares and for printing circulars, by-laws, postage stamps, etc., also a balance due on account of expense when a delegate was sent to Chicago to appear before the courts in the interest of the association.

A number of faithful members who pay up regularly and do their duty by the association are entitled to full credit, and there are others who are not. Two-thirds of the members have not paid their dues for one, two or three years, consequently they cannot expect to have matters attended to. The city dealers are organizing a Milk Exchange to look after the interests of the city milk distributing companies. This association ought to be equally strong in its representation on the market. Railroads are changing their tariffs, and one especial raise in transportation rates is going into effect without protest simply because no funds are in the treasury.

Mr. Joseph Hogan of Edwardsville, who was enabled to make an advantageous contract for his shippers, estimates the value the association has been to him at $6 per month in the sale of his milk.

The dues that should be paid by a shipper to St. Louis are $2 per year, and those who sell at the dump stations pay $1.25 a year. In addition to the other benefits derived from the association the dues entitle the member to a subscription to The National Farmer and Stock Grower, the official reporter of the association.

In concluding this report, it is urgently requested that the December meeting will be attended by at least one member representing each railroad milk shipping point centering on St. Louis, or at least one delegate from each route.

For the good of the association the present officers invite a full attendance, that their succesors in office be properly elected and represent the majority of the members. Remember the date—December 27th, at 1 p. m.

D. I. FURBECK, President.
WM. FISCHER, Secretary,
409 Franklin Ave., St. Louis, Mo.

Could Not Go Higher.

Passerby—"Here, boy, your dog has bitten me on the ankle."

Dog Owner—"Well, that's as high as he could reach. You wouldn't expect a little pup like him to bite your neck, would you?" — Pearson's Weekly.

A FINE KIDNEY REMEDY.

Mr. A. S. Hitchcock (clothing dealer), 890 Carrier Building, East Hampton, Conn., says if any reader afflicted with a kidney or bladder trouble will write to him he will direct them to the splendid home remedy he so successfully used. He is glad to do this and does not wish you to send him money.

Secretary Wilson on the Chicago Stock Show.

The Honorable James Wilson, Secretary of Agriculture, in speaking of the International Live Stock Exposition, which is to be held this year from November 27th to December 10th, said:

"The International Live Stock Exposition as an educational factor has carved a niche for itself.

"Producers are confronted with the problem of increased cost of every commodity that they use, greatly enhancing their expenditure.

"Obviously this necessitates rigid economy, and the man who reduces cost of production to a minimum insures maximum profits and his own survival where others fail.

"The International is teaching its valuable lesson to the country at an opportune moment.

"During the period of cheap feed and feed lot extravagance such education was not valued, because its benefits were not realized at the time.

"Under new conditions, the man who produces beef, pork and mutton cannot afford the use of inferior machinery in his business.

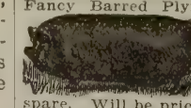
"Economy requires that he handle the very best types of the most improved breeding; and these lessons can be obtained at the International Live Stock Exposition, which is acknowledged to be an educational institution of the highest order in its line."

Used Twelve Years With Marvelous Results.

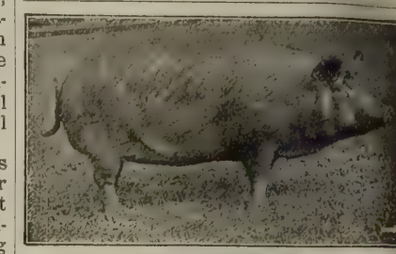
I am a very staunch supporter of Gombault's Caustic Balsam, thinking it is one of the very greatest medicines I have ever used, and have used it for the last twelve years with marvelous results.—W. H. TAGGART, Hughesville, Pa.

BROADWAY STOCK FARM.

The place to buy Large English Berkshires, Shorthorn Cattle, Shropshire Sheep and Fancy Barred Plymouth Rock Poultry. A few B. P. Rock Cockerels for sale at $1.50 to $3.00 each. Some nice Berkshire Gilts of March, 1909, farrow. Two fine Shropshire Rams to spare. Will be priced right during December and January. Write



E. L. JOHN, Broadway, Maries County, Mo.



TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed. Early to mature, economical feeders and unsurpassed as range hogs. Boars, sows and Pigs not akin from best strains. None better. Prices reasonable. My herd won over 100 ribbons at four State Fairs this year. A few choice Pigs from imported stock; sire and dam winners at Royal Show, England, 1907.
CHAS. FORD,
Mortonsville, Woodford County, Kentucky.

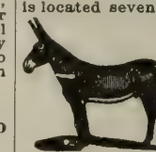
5,000 FERRETS for sale. Write for Price List. It's free. De Kleine Bros., Box 13, Jamestown, Michigan.

DRAFT STALLIONS.

We will sell eleven Stallions at auction at Enid, Okla., December 17 and 18, 1909.
WALKER BROS. & CO.,
Oklahoma City, Okla.

Mill Creek Stock Farm,

The home of the noted Starlight family of Jacks and Jennets for the past thirty years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks, Jennets and Stallions, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.



THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

Tamworth Swine Herd is headed by the Sweepstakes Boar at the leading Fairs in U. S. in 1907 and 1908. I handle more Tamworths than any two breeders in America. The hog to cross on your pony built pigs to increase size, vigor and quality.
W. WARREN MORTON, Russellville, Ky.

Painting Farm Buildings.

Most farm buildings are painted by the men that own them and are repainted by them. It takes an amateur a long time to find out some of the little things that go to make the work effective.

The writer has had enough experience as an amateur painter to be willing to give some of his points to others. It is cheaper to learn from others than by experience, though the lesson is not always so impressive.

The writer has concluded that it pays better to buy the ready-mixed paints than it does to buy the materials and do the mixing. The mixed paints are mixed in the factory where they are made, and the proportions are by absolute rule, which rule is the result of years of experience. Such paints are of a consistency that enables the painter to spread them easily and perfectly. If he tries to mix them himself he will find it exceedingly difficult to get the right thickness to the paint. If too thin, the paint will drop from the brush and constantly spatter parts of another color; while if too thick, the work is dauby and cannot be made smooth.

The ready-mixed paints can best be used without oil being added to them. Some amateur painters try to save money by mixing oil with the ready-prepared paint, this mixing increasing the volume of the paint and making it go farther. But this is poor economy, as it increases the work and decreases the thickness of the covering, thereby lessening the protection given the wood. The protection of the wood is the main thing, and we should not cheat ourselves by lessening the thickness of the paint layer. Besides, the thinner the coat the sooner will the repainting have to be done.

One man known to the writer bought white lead and linseed oil and mixed them himself. He had read that white lead and oil combine into the best possible paint. But he purchased unboiled oil. The result was that his paint wore off with great celerity. It had not the staying power he expected to find in it. His work was largely wasted because of this mistake. Boiled oil has the power of sticking and hardening, which the unboiled oil does not possess.

If a good job of painting is to be done, it does not pay to use cheap, coarse brushes. A little economy in this way will immensely increase the labor of getting on a smooth coat of paint. The brush should be fine enough so that it will spread out easily and without resistance and leave the coat of paint even and smooth behind it. The brushes, too, should not be too large, if good work is desired. A large brush gives a thick coat in one part and a thin coat under another part, and this necessitates going over the same surface several times. Frequently a brush one and a half inches wide or two inches wide will enable the amateur to do more rapid work than will a larger brush.

Where the sun shines on the buildings most of the paint goes fastest, and this loss of paint is followed by cracking of the wood. These parts require more attention than the parts not getting the direct rays of the sun. Sunshine is a great paint destroyer. Keep the wood well covered with paint wherever the rays fall.

It is reported that the Jacob Dold Packing Company of Buffalo, N. Y., contemplate opening a branch packing house on the Fort Worth (Texas) live stock market.

We publish from our Chicago office (but covering all markets) a paper which you ought to read regularly. It will add to your bank account to do so.

FOR FIFTY CENTS

(To cover actual cost of postage) we will send you for one year our weekly paper

The Live Stock Report

MONEY BACK IF YOU DON'T LIKE IT

The "Live Stock Report" is a 12-page weekly illustrated paper devoted to the markets, live stock, and agriculture generally. It is pithy, pointed and practical. You pay 50 cents to cover actual postage for a year and we will do the rest. If after receiving three issues of the Report you think it is not worth 50 cents per year to you, notify our Chicago office and your money will be refunded without question.

Three Unsolicited Opinions

We have received thousands of unsolicited letters like these:

A. BARTHOLF, Mt. Vernon, Ill.: "Every page of the REPORT is rich with news and information."

J. C. COBB, President of the Bank of Odessa, Mo.: "I hand you $1.00 for two-years' subscription. I would feel lost without the REPORT."

S. LEE, Aledo, Ill.: "Enclosed please find 50c. for a subscription. I consider the REPORT pre-eminently the best thing in this line."

Every person accepting this offer will receive free our splendid 1910 Calendar, equal to any costing 25c. at the stores. Our Calendar will be mailed on or before January 1, 1910.

A NICE LITTLE PRESENT FREE

As an incentive to send in your subscription at once, we will send you free and postpaid a very convenient vest pocket slate memorandum book and pencil, handy for the farmer, housewife, school boy or girl, provided your subscription reaches us within fifteen days from the time you receive paper containing this adv. Act immediately. There is no reason to hesitate, as our "money back" offer eliminates all risk.

Rochester, N. Y.
Please mention Nat. Farmer and Stock Grower

Hackney Horse and Pony Winnings.

The following is by Mr. Gurney C. Gue, Secretary of the American Hackney Horse Society: "Heavy harness horses and ponies of Hackney breeding achieved a greater triumph at the National Horse Show of 1909 than was ever before credited to the English breed, or to any other breed of carriage horses. In competition with trotting-bred high-steppers and horses of French Coach, Morgan and unknown blood, the Hackneys won eighty-eight ribbons to fifty-seven for all other breeds combined. Their percentage of first prizes was quite unprecedented, thirty-one blue ribbons and championships having been won by Hackneys, while only twelve went to horses of other breeds. Of the twelve ribbons awarded in the championship classes, nine were borne away by Hackney high-steppers and three by trotting-bred carriage horses, the Hackneys having won four of the six championships and five of the six reserve championships. Eight times in the course of the week at the Garden the Hackneys made a clean sweep by winning every ribbon awarded in eight open harness classes. Excepting in the classes for four-in-hands and the runabout class, in which no Hackneys were shown, the horses of other breeds did not once sweep the boards. The Hackneys, on the other hand, were not once unplaced in any class in which they competed, and in only four classes, exclusive of the championships, were they beaten for first honors when they started."

Hamburg Belle's Early Decease.

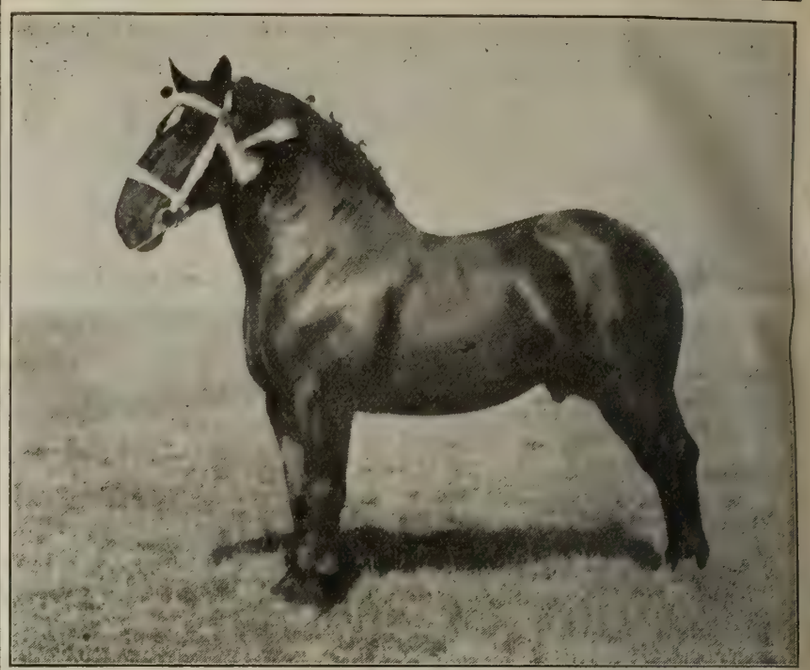
It is with great regret that horsemen throughout the country heard of the death of the great trotting mare, Hamburg Belle, 2:01¼. Her two record heats in 2:01¼ and 2:01¾ were still the topic in trotting circles when her career was ended, and horsemen feel that they suffer a personal loss, and they extend sincere sympathy to her recent owner, Mr. H. M. Hanna, of Cleveland, Ohio. She died of a cold caught on the way from the Northern tracks to her winter quarters in Georgia.

Hamburg Belle was foaled in 1902 and was bred by E. T. Bedford, of Brooklyn, N. Y. She was sired by Axworthy, 2:15½, and her dam was Sally Simmons, by Simmons, 2:28, making her an inbred Wilkes trotter.

It is believed and gravely asserted by some horsemen that her second match with the great gelding Uhlan, in which she was defeated, was the actual cause of her death; that she lost form gradually and was an easy prey to pneumonia, when under happier circumstances she would have resisted the attack.

No More Cavalry Grays.

Buyers of horses for army purposes have received instructions to discontinue the purchase of gray horses. This is because the tendency of military life is to render all operations obscure. The gray horse can be seen where the bay, the black, the brown or the sorrel can escape observation. Although this will be to the disadvantage of some few gray horses in the market, there are other uses for the grays, because they are very showy, and, as a matter of fact, gray horses are just as serviceable and usually attract more attention than any other color. As bays, blacks and browns are favored by the judges of horse shows, the popular vote turns strongly to the grays. In the time when a charge of cavalry was likely to change the tide of battle, the grays had their day. In reviews of troops, when large bodies of horsemen would pass the reviewing stand without any special enthusiasm the grays would always bring forth a burst of admiration. Napoleon the Great on the field of Waterloo paid a compliment to the gray horse that was intended as well for the rider. He who had seen and led brilliant charges of cavalry by the continental armies had never before seen the British Army in grand action, and when the Scottish Dragoon Regiment came rushing through his lines he said, in dismay: "How terribly those gray horses ride!" Had old war conditions remained with us, the gray horse would not be displaced. The shining mark is no longer desired for military uses, and the gray horse is relegated to the rear.



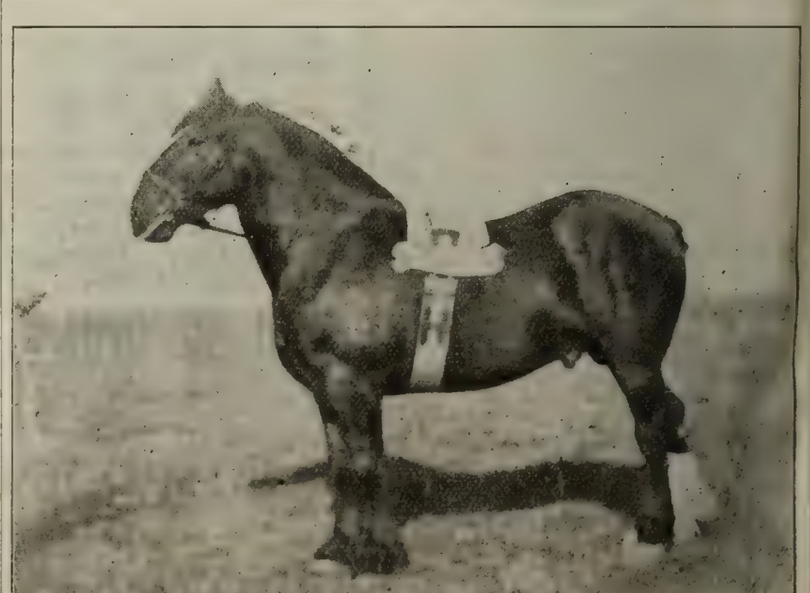
CARNOT—Champion Percheron stallion at Paris, France; also at the State Fairs of Indiana and Illinois. At the Illinois State Fair the contest was between the pick of ten of the finest herds in the country. CARNOT was imported and exhibited by J. Crouch & Son, of Lafayette, Ind.

Death of Directum, 2:05¼.

The champion four-year-old trotter died on November 12th at the International Stock Food Farm, Minneapolis, Minn., the property of Mr. M. W. Savage. His death was caused by blood poisoning from a slight injury. He was foaled in 1889 and his record was taken at Nashville, Tenn., October 18th, 1893. As a sire, Directum to the close of the present season is credited with thirty trotters and eleven pacers; four sons the sires of several trotters and one pacer, and one daughter that had produced one trotter. His best trotter was Ethel's Pride, 2:06¾, the winner of the Transylvania. Directum's fame is safe in the future performances of his get.

McMillan Percheron Sale.

At Sioux City, Iowa, November 16 and 17, Mr. H. G. McMillan sold Percheron horses of his own raising. The offering included many sons and daughters of the renowned Calypso, who has sired more champions and grand champions and first-prize winners than any other stallion, living or dead. The top price was reached on the stallion Lazelle, which sold to H. R. Sanders, Worthington, S. D., for $1,105, while the next highest price was $1,050, at which price H. H. Milley, Elmont, S. D., took the two-year-old stallion Gladiator. The top price for mares was $730, paid by A. H. White, of Bottineau, N. D. The average of 121 head was $440.40; the average of seventy-three mares $400.40; and the average for forty-eight stallions $500.60.



ALEXANDER BAKEWELL—Champion Clydesdale stallion at the Illinois State Fair of 1909. He is a massive dark-brown horse, easily weighing 2,000 pounds. Exhibited by Alex. Galbraith & Son, of DeKalb, Ill.

Don't Have a Blind One

"VISIO"

Wonderful Discovery

DISEASES of the EYE successfully treated with this NEW REMEDY.

AN ABSOLUTE CURE

for Moon Blindness, (Ophthalmia), Conjunctivitis and Cataract, Shying horses all suffer from diseased eyes. "YOU PAY FOR RESULTS ONLY." $2.00 per bottle, postpaid on receipt of price. Visio Remedy Ass'n., Dept. C, 1933 Wabash Ave., Chicago, Ill.

The Date Book History of Live Stock and Agriculture.

The editor of The National Farmer and Stock Grower has collected historical items relating to agriculture and live stock raising and arranged them in the order in which the incidents happened. It is a record which is intensely interesting to all earnest farmers and progressive stockmen. The events recorded include much that is ancient and is brought down through the ages of progress to about the year 1906. This material is all arranged in a handy booklet of 100 pages; it is nicely illustrated and is a handy, useful publication. We will be glad to send a copy, postage paid, to any of our readers on receipt of 25 cents, or we will credit one-year's subscription to The National Farmer and Stock Grower for 50 cents and we will send a copy of the Date Book History of Live Stock and Agriculture as a free premium. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Practical Barn Plans.

This is the name of the best book out. Every farmer needs it. It contains drawings, pictures, plans, specifications and everything necessary and up-to-date for a barn, stock shed, wagon shed, corn barn, smoke house, ice house, silo, dairy barn, or any other conceivable outbuilding on the farm. Not only one plan of each, but many of each are shown with all the latest inventions and contrivances for saving time, money and labor.

Each and every plan in the book is accompanied by a lengthy written description, explaining and giving the details of the drawings, and so worded and arranged, numbered and indexed, that it must be readily understood by anyone who reads it.

The price of this book is One Dollar, and we include one-year's subscription to The National Farmer and Stock Grower Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Auction Sales of Percheron Horses.

Percheron horses do not appear to be losing any popularity in the auction ring. At the sale by W. S. Corsa, of Whitehall, Ill., held on November 11th, an average of $637 per head was the result. The offerings consisted of three stallions and forty-four mares. The stallions sold from $605 to $1,150, and the females at $360 to $985. The top-price stallion was Valarmo, a Wisconsin-bred three-year-old grey horse of strong build and good substance, bought by G. C. Rippy, of Virden, Ill. The top-price female was the American-bred six-year-old gray Lottie, a prize-winning mare, that was bought by Lee Serven, of Prairie City, Ill.

Another noted sale was by J. C. Robison, of Towanda, Kansas, on November 9th. The result was an average of $600.50 for forty-one mares and $744.30 for twenty-one stallions, and a general average of sixty-two head of $649.20. In this sale four stallions were sold above $1,000, and the top price was $1,750 for the black two-year-old Navarin, a son of the famous Casino. He was bought by Jno. D. Schmidt, of Tipton, Kansas. Three mares also sold above $1,000 each, the top price being $1,650, also paid by Mr. Schmidt for the gray mare Delia, foaled in 1903, and a prize winner at the Fairs.

Other Percheron sales held recently were by Wm. Souers, Huntingdon, Ind.; thirty head averaged $561; Champlin Bros., Clinton, Iowa; twenty-one head $586; E. J. Heisel, Fremont, Iowa; twenty-seven head at $646; and at the Pabst Stock Farm, Oconomowoc, Iowa, although others sold at a less price, twenty-four head averaged $573. These transactions indicate that there is considerable stability in draft-horse prices.

Another Truman Importation.

Mr. J. G. Truman, Manager of Trumans' Pioneer Stud Farm, Bushnell, Ill., writes us under date of November 15th as follows:

"I have arrived at Bushnell this morning with another importation of horses, which includes fifty-one Shire mares, which will be included in our sale of eighty imported Shire mares December 15th. I think, without fear of contradiction, that they are the best lot of young draft mares that has ever crossed the water; at least, I know they are the best lot of Shire mares. The shipment contained several sensational mares, noted prize winners, that have been imported by us regardless of price for exhibition at the International Show, where we expect to make the largest exhibit of Shire horses ever made by any firm in America.

"I am pleased to say that inquiry for strictly first-class stallions and mares is very brisk, and we shall be pleased to mail one of our sale catalogues to any of your readers who will write us, stating that they saw our advertisement in your paper. We also have a picture of our farm that will also be mailed for the asking."

Penalties For Delayed Registration.

The Percheron Society of America, H. C. McMillan, President; George W. Stubblefield, Secretary, with offices at Union Stock Yards, Chicago, has issued a circular to cause breeders to keep up their records. For recording imported animals belonging to members, if the record is made within three months of arrival, the charge is $5.00; and if it is delayed more than three months after arrival the charge is $15. Non-members pay $10 to record an imported animal within three months, and $20 thereafter. For recording American-bred animals before September 1st of the year following the date of foaling, members pay $2.00 and non-members $5.00; if there is delay beyond September 1st, members are to pay $9.00 and non-members $14. It appears from this that breeders having stock worth registering will find it to their interest to attend to the business without delay. There is another provision, that all delayed applications have to be passed upon by a Pedigree Committee, and that causes additional delay. A membership in this association costs $10, and appears to be worth the money.

Good Horse Book to Have.

Horsemen will obtain something worth having and worth reading if they will take the trouble to ask for a copy of Pratts New Horse Book. It will some time save them a world of trouble. The book is written in the interest of Pratts foods, tonics and regulators, but in doing so they have added features to make it more interesting and instructive. Write to Pratt Food Co., Dept. F, Philadelphia, Pa., and ask for a free copy of "Pratts New Horse Book."

We Like a Mule Because

He is the most tireless worker on the farm.

He eats less than a horse, but does more work.

He is always as good as cash in the bank.

He never falls through a hole in a bridge and generally keeps out of danger.

He is an excellent saddle animal if you know how to saddle him.

His feet stand hard roads better than those of a horse.

He is more intelligent than a horse.

He is never in love, but attends strictly to business all the time.

He is never sick but once, and then he dies. But whoever saw a dead mule since the war?

He never stops to fight flies as a horse does, because his hide is much tougher.

He is just as gentle as a horse if he has not been spoiled in breaking.

His age cuts little figure in a sale. Nobody cares much now how old a mule is.

He will bring from $150 to $250 when he is full grown, if he is big and smooth and strong.—Colman's Rural World.

Draft Horses in New York.

In reporting one of Fiss, Doerr & Carroll's New York sales, the New York Herald of November 21st said in regard to draft horses that the best prices of the year resulted. For a pair of blue roans weighing close to two tons, a down-town trucking concern paid $800, the top price of the day. A pair of black geldings that tipped the beam at 3,800 pounds went to one of the big brewers for $775, while a pair of bays with a little less weight but quite as much quality brought $750, the buyer being a coal dealer who uses the best class of horses on his wagons.

Draft Stallions at Enid.

At Enid, Oklahoma, December 17th and 18th, Messrs. Walker Bros. & Co. will sell eleven draft stallions at auction, including some first-prize winners at the State Fair. This firm has horses for sale which are worthy to head the best horse farms in the country.

Covering Alfalfa For Winter.

A correspondent asks whether it will be necessary to top-dress alfalfa which was sown this last fall.

If the alfalfa has been clipped so that the leaves, together with weed tops, have fallen around the plant, or if the plant has made considerable growth so that the leaves fall about the crowns, that will be all the protection needed. But if the plants have but scant growth and the crowns are not well covered, then I should scatter a thin coating of coarse manure, using a spreader. A neighbor asked me this question a while ago, saying he was thinking of using hay or straw. I would by all means top-dress with coarse manure. That will help the young plant next spring, and, besides, you will have no trouble then from hay or straw when you come to harvest your alfalfa next season.—L. C. Brown.

Having done so well last year, the Southwest Texas Truck Growers' Growers' Association will increase the cultivated acreage by 25 per cent. This is expected to increase the crop from 3,000 cars in 1909 to 3,750 cars in 1910. Onion growing appears to be a certainty in Southwest Texas.

The International Live Stock Show is open, but will not be over until December 10th. It is a good idea to take the train to Chicago at once.

Rich, Virgin Soil

That is the *big* advantage of farming in Arkansas and Eastern Texas. Your land there is not worn out by years of crop-growing. The soil doesn't need constant cultivation and fertilizing to make it produce. It grows bigger crops of almost everything than farms in older sections and yet fertile land can be had there *now* at from $5 to $25 per acre. Farmers there do not take years to pay for their land. Often a single season's crops pays the entire cost of the farm, for

in Arkansas and East Texas

you not only get bigger yields and often more than one crop, but your income is not eaten up by long costly Winters. Stock can graze all year and never needs costly shelter, for the Winters are short and very mild. You get the highest prices for your products at near-by markets and your family has good schools and churches to go to. Is it any wonder that thousands of farmers are going down there to better themselves? Why don't *you.*

COTTON BELT ROUTE

You will never know how big the opportunities really are until you investigate. Send for free copies of our books about Arkansas and Eastern Texas. Post yourself on conditions. Take advantage of the low fares offered twice each month by the Cotton Belt Route. Make a trip down there to look around. It will be a start on the road to prosperity. Write today—tomorrow you may forget.

Milk Cattle at St. Louis.

The following quotations represent milk cows and calves selling together, the commonest to the best: Common milkers, $18.00 to $27.50; medium class, $30.00 to $37.50; good average milkers, $40.00 to $50.00, and fancy milkers, $55.00 to $65.00. Springers are sold by the hundred pounds, according to appearance, condition and quality, and are weighed up on the market.

$25 SPRINGFIELD RIFLE FOR $1.95

We purchased all the regulation Springfield Rifles from the U. S. Government War Department and now offer them for sale at a tremendous sacrifice.

Every Rifle made under the supervision of the U. S. Government Inspectors, and guaranteed to be **In Perfect Working Order.** Never again as long as you live will such a Rifle Bargain come your way. These rifles cost the U. S. Government $18 a piece to manufacture. **Just the thing for Big Game.** With a Springfield Rifle you can bring down a deer at 300 yds. The accuracy of the sight makes it possible to draw a bead as fine as a hair. **Excellent Shot Gun.** Every gun is well oiled, bright and free from rust. Sent by express on receipt of **$1.95. Ammunition** 45-70 Caliber Catridges, ball 40c; scattered shot, 50c, packed 20 in a box. Write for Catalog illustrating hundreds of money saving government goods bargains.

The Springfield Rifle is a marvel of accuracy. Every Rifle has a long range adjustable sight and is equipped with bayonet and cleaning rod. Shoots a 45-70 caliber catridge.

Col. Hirsch & Sons Iron & Rail Co., U. S. Dept. 101 St. Louis, Mo.

LOAD OF HOGS THAT OBTAINED A NEW TOP ON THE MARKET.

The picture herewith represents a load of hogs shipped by John A. Adams, of Warrensburg, Mo., to the St. Louis market. There were fifty-two head, averaging 289 pounds, and sold at $8.25 per 100 pounds by CLAY, ROBINSON & CO., live stock commission agents. This was on November 18th, and the price paid was not only the top of the market for the day, but the highest price paid for a straight load of market hogs for forty-four days. CLAY, ROBINSON & CO. were the first firm to obtain this price on the market. See their card on page 13.

Corn Market and Prices.

In the speculative grain market at Chicago on June 30th, December corn closed at 58¼ cents; on July 31st December corn closed at 55 cents; on August 31st December corn closed at 56¼ cents; on September 30th December corn closed at 58 cents; on October 30th December corn closed at 59¼ cents, and on November 30th December corn closed at 58¼ cents. This looks like even trading, because six months' trading began and ended in the same notch.

May corn of 1910 was quoted as closing at 55⅝ cents; on August 31st the quotation was 57⅛ cents, and on November 30th the closing quotation was 61½ cents. Here we have the traders' views. Corn will be plentiful to December 31st and then begin to get scarcer. The quotation for July, however, was 60⅞ cents at the close of September. The traders appear to believe that corn is a large crop, but not excessive. Last year on a short crop, July corn was closed out at 68⅛ cents a bushel. The corn situation from an up-to-date standard of judgment looks like a commercial basis without a speculative feature in it.

The Speculative Wheat Situation.

The speculative grain trade evidently considers that the wheat crop is not any larger than it ought to be. The December option was quoted in Chicago June 30th at $1.09 per bushel; July 31st at $1.02¼; August 31st at 94¼ cents; September 30th at 99⅞ cents; October 30th at $1.05⅛ and November 30th at $1.06¼. Here we have a six months' range with a decline and a restoration. The May, 1910 quotation was $1.05⅞ on July 31st, and closed on November 30th at $1.06¼. It was quoted at 98 1-3 cents on August 31st. The trade expects December wheat to jog along to and after December 31st and if there is any flurry, it will be in the May option after the turn of the year.

Cash Paid For St. Louis Grain.

On November 30th cash No. 2 wheat sold at $1.20 to $1.25, local delivery, and $1.19 to $1.19½. No. 3 red at $1.14 to $1.21 local; No. 4 red, $1.05 to $1.16; No. 2 hard Nebraska, $1.08 to $1.10; No. 3 hard, $1.05 and $1.08; No. 4 hard at 95 cents to $1.04½ a bushel.

No. 2 corn sold at 60 cents; No. 3 at 57½ to 58½ cents; No. 4 at 56 to 57 cents. A fancy car of No. 2 white sold at 61 cents and some cob corn sold at 60 to 61 cents.

No. 2 oats sold at 41 cents; No. 3 at 40½; No. 4 at 39 and 39½ cents. A special car of No. 2 white oats sold at 43 cents and No. 3 rye sold at 75 to 77 cents a bushel.

The cash grain market at St. Louis appears to be independent of Chicago trading—this is mainly because Chicago is a hard wheat market and St. Louis deals more largely in red soft wheat, which goes direct to millers for home consumption. The figures given herewith indicate clearly to farmers that on the market a No. 4 wheat does not grade as No. 2.

Horse Auctions Monday and Tuesday.

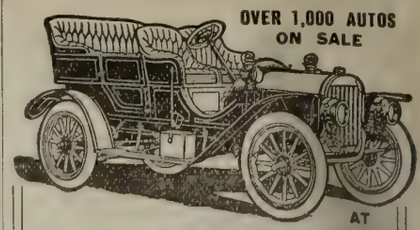
The commission firm of Holland, Nugent & Maxwell Bros. hold auction on every Monday and Tuesday at the St. Louis National Stock Yards throughout the year. They are very successful salesmen and handle large numbers of horses. Their last auction in November was a great success. All good, big horses sold readily at strong prices. Good Southerners sold well; old smooth-mouth stuff and common horses sold for all they were worth, but did not sell at prices paid for better horses. Their last circular concludes by saying: "Get your horses fat, good ages and sound, and your mules fat, good ages and sound, and they will sell all right. We are having plenty of buyers and they will pay fair prices for quality, but it is hard to sell bad things to make money. Wire us what you will have for next week."

Stock Sheep at St. Louis.

On November 30th a very common lot of 72-pound stock ewes sold at $1.50 per 100 pounds; some a little better sold at $2.00 to $2.75 per 100 pounds, and the better class of stock ewes sold at $3.00 to $3.65 per 100 pounds.

Stock Cattle and Feeder Prices.

On the St. Louis market November 30th 22 head of native feeding steers 1,055 pounds average sold at $5.15 per 100 pounds; 23 head 942-pound steers at $4.30, 65 head 881 pounds at $4.10. 16 steers 798 pounds at $4.10 and 18 head 560-pound steers at $4.00 per 100 pounds. Stock steer calves were selling at $3.50 to $4.75; medium stock heifers $2.50 to $2.85, good stock heifers $3.00 to $3.50, inferior to decent stock steers $3.00 to $4.00, good to choice stock steers $3.75 to $4.25, medium to good feeders $3.75 to $4.25, good to choice feeders $4.25 to $4.90, fancy feeders $5.00 to $5.50 per 100 pounds.



AT

BARGAIN PRICES.

HIGH GRADE USED CARS

ARE SUPERIOR TO CHEAP NEW CARS AND COST LESS—THEY ARE MADE OF SOUND MATERIAL, BUILT TO LAST—AND IT IS A PROVEN FACT THAT HIGH GRADE CARS ARE BETTER AFTER RUNNING A YEAR THAN WHEN NEW.

We buy constantly, all over the country, good cars (with spot cash and quick deal as an inducement for low figures) from owners getting new cars of advance season models, and thoroughly overhaul them in our own works. We also buy in enormous quantities

FROM OVERSTOCKED MANUFACTURERS

NEW and "traded in" cars which by our method of prompt deal and spot cash we get at unbelievably low figures.

ALL THESE CARS WE PLACE **ON SALE** at our four big houses, New York, Chicago, St. Louis, Kansas City, **AT MARVELOUSLY LOW PRICES.**

As

The Largest Dealers in the World in New and Second Hand Cars

We can afford to accept small profits on individual sales and rely on the enormous volume of our business to make a fair profit.

A LIST OF OUR BARGAINS ON HAND

would require pages to print, so we will ask you to send for our Bulletin containing an immense array of

THE MOST POPULAR AND RELIABLE CARS.

We have constantly on hand

LARGE and SMALL RUNABOUTS and ROADSTERS from $100 to $1,200.
SMALL TOURING CARS, $250 to $1,150.

Southern horses, common, $50 to $65; fair to good $75 to $120; choice to tops, $125 to $155. Plugs of no class sell at $25 to $45.

OUR REFERENCE IS EVERYBODY WHO HAS EVER SHIPPED US A CONSIGNMENT — OUR GOOD WORK IS OUR REFERENCE.

JAMES H. CAMPBELL,

Veteran Commission Salesman,
General Manager of the

Campbell Commission Company

NATIONAL STOCK YARDS, ILL.

Ship to the Best Market and the Best Firm on that Market. There is more competition at St. Louis for Native and Southern Cattle than at any other Market on the continent. The St. Louis Hog Market continues to grow, and is habitually 10 to 25 cents a hundred pounds higher than the Missouri River Markets. Sheep and Lambs sell at St. Louis to the advantage of the shipper.

WE KNOW THIS MARKET AND RECOMMEND IT ABOVE ALL OTHERS.

Don't hesitate to write or ship to

JAMES H. CAMPBELL,
National Stock Yards, Ill.

EXPERT SERVICE IN EVERY CLASS OF STOCK—SHIP US YOUR CATTLE, HOGS AND SHEEP.

COLONEL JAMES H. CAMPBELL, veteran commission salesman at the St. Louis National Stock Yards. This picture was taken in the Texas cattle pens. COLONEL CAMPBELL is in the prime of life and usefulness, gaining friends by the magnificent service performed in selling live stock for his constituents on the best live stock market.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockment to take notice that the company has special buyers who select and buy stock and feeding cattle for their patrons. Address, Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

St. Louis Mule Quotations.

On the St. Louis market mules sell in such large numbers that quotations represent car lots, as follows: 14 hands, $75 to $145; 14½ hands, $95 to $160; 15 hands, $120 to $195; 15½ hands, $135 to $225; and 16 hands, $150 to $275. Selected animals, matched teams and high quality always command a special price.

Lamb Prices at St. Louis.

On November 30th the lambs varied from inferior to choice, the best averaging 72 pounds, shipped by C. P. Nuckles, sold at $7.75 per 100 pounds; the bulk of the lambs at $6.00 to $7.50 per 100 pounds, and the poorest at $4.50 to $5.75. The November market closed strong for lambs.

Gains in All Departments.

At the St. Louis National Stock Yards during the month of November the receipts were 137,960 cattle, 241,077 hogs, 45,155 sheep and 14,944 horses and mules. These receipts show all round gains in every class of stock.

Head of the Mule Trade.

The pioneer firm of the mule trade is the Joseph A. Maxwell Mule Company, doing business at the St. Louis National Stock Yards. It is composed of Mr. Joseph A. Maxwell and his two sons, Geo. W. and Frank Maxwell. This firm buy and sell on the market, keeping several hundred select mules on feed every day in the year and ready to make deliveries promptly. Whether it be a pair of fancy draft mules, a load of miners or any other class or number, they will enter into contract of sale. Mr. Maxwell has been in business thirty-five years, and his reference is any one who has ever bought of him. For information as to price of mules, address Joseph A. Maxwell Mule Company, National Stock Yards, Ill.

Col. James H. Campbell,

Expert live stock salesman, is at the head of his own organization at the St. Louis market. He is one of the active men in the trade—an enthusiastic worker, knowing that he has a competitive market to back him. He is holding his old customers by splendid sales and making new ones all the time. Col. Campbell issues a circular every week of his own composition containing his advice to tending shippers. Write for information to Col. James H. Campbell personally and consign cattle, hogs and sheep to Campbell Commission Company, National Stock Yards, Ill.

Closing November Hog Values.

On November 30th at the St. Louis market the best hogs averaging 253 pounds sold at $8.40 per 100 pounds—and the bulk of the good hogs sold at $8.05 to $8.25 per 100 pounds. The best price for light butcher hogs, 190 pounds average, was $8.25, and a good many light weight mixed hogs sold at $7.75 to $8.00 per 100 pounds.

Sheep and Yearlings at St. Louis.

On November 30th, at St. Louis, the sales included 259 head of Western yearlings, 88 pounds average, at $6.50 per 100 pounds; the native yearlings sold at $5.50 to $6.60; Southwest sheep sold at $4.25 to $4.75, and natives at $4.60 to $6.50. Sales also included a string of 61-pound Colorado ewes at $4.85 per 100 pounds.

Expert Mule Salesmen.

In shipping mules to the National Stock Yards, remember the enterprising firm of Holland, Nugent & Maxwell Bros. The mule salesmen are Ed Conway and Lan Morris. Both are experts of a high order and natural born judges of mules, men and markets. For information as to the market by letter or wire, address Holland, Nugent & Maxwell Bros., National Stock Yards, Ill.

JOS. A. MAXWELL MULE CO.,

Postoffice, National Stock Yards, Ill.

DEALERS IN ALL KINDS OF

MULES

Especially the Better Class.

Large Mules and Miners.

MR. JOSEPH A. MAXWELL, Pioneer Mule Dealer of America, founder, and formerly of MAXWELL & CROUCH, has now associated with him his sons, GEORGE W. MAXWELL and FRANK MAXWELL

A large, select stock of all classes always on hand. Our guarantee will ever remain as it has during the many years of our existence—GILT-EDGED. Information concerning the market cheerfully given.

Our References: Anyone who has ever bought of us.

NATIONAL STOCK YARDS, ILL.

Representative Native Cattle Sales.

On November 30th at St. Louis the top of the cattle market in the native division was $8.50 per 100 pounds for 30 steers, 1,462 pounds average, which were shipped in by Albert Harrison, of Audrain county, Mo. On the same day 16 head 1,379-pound steers sold at $7.75, 47 head steers 1,251 pounds at $6.75, 71 steers 1,396 pounds average at $6.35, 31 head 1,148-pound steers at $5.80, 25 head 909-pound steers at $5.15, 15 steers 633 pounds at $4.85 and 43 steers 758 pounds at $3.75. These are representative sales giving a fair idea of the market.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company

Box 68,
NATIONAL STOCK YARDS, ILL.

FARM BLACKSMITHING.

Here is a book for the farmer. The book was written by A. J. Drew. It is a complete treatise on blacksmithing from the farm standpoint. This book teaches how to profitably spend stormy days. Many thousands of farmers will find it to their interest to own a copy. There are 100 pages. It is nicely and clearly illustrated and bound in cloth. We credit one-year's subscription to The National Farmer and Stock Grower and send one copy of this book by mail for 65 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

THE SAN JOSE SCALE.

It Can Be Controlled By Thorough Methods, But Not By Half Measures.

Prof. H. A. Surface, State Zoologist of Pennsylvania, wrote to another scientist as follows:

"Replying to your recent letter asking if the San Jose scale is being controlled in this state, I beg to say that this depends upon the man behind the spray rod. We have many striking examples of men who are controlling it in an eminently satisfactory manner, as well as examples of persons who have not controlled it. It is true that where no spraying is being done for it, or where the wrong material, such as soluble oils, or too greatly diluted commercial preparations of any kind, are being used, or where the spraying is not done thoroughly, it is not being controlled. But this does not discourage our progressive fruit growers who know by experience that the San Jose scale problem in Pennsylvania is solved by the application of the boiled lime-sulphur wash, home-boiled or in the form of the commercial preparation. The latter should not as a rule be diluted more than one to eight, instead of one to eleven as the manufacturers almost universally recommend. Our fruit growers have found this year, above all others, that absolute thoroughness is the keynote to success, and that not a spot or speck of the bark from the most remote twig to the base of the trunk must be left unsprayed.

"The fact that it is being controlled in an eminently successful manner is indicated by the very expensive planting that is now going on in all the fruit-growing sections of this state. Our fruit growers are taking renewed courage, and there never has been a year when nursery stock has been so completely bought up."

Fall Spraying and Pruning.

A number of requests for information in regard to fall spraying and fall pruning reached Prof. H. A. Surface, State Zoologist of Pennsylvania, recently. The following reply to one of the letters received will be of interest to owners of orchards everywhere:

"Replying to your letter asking if you must spray this fall for scale insects, I beg to say that it is not necessary to spray in the fall, but if your trees are much infested, it is better to spray both fall and spring. If my trees were not badly infested, I should spray only in the spring, when the buds are swelling. I consider this the best time of the year to spray, and, of course, the boiled lime-sulphur wash, either commercial or home-made, is my choice of material.

"In regard to fall pruning I can say that this is as good as spring pruning, the pruning being done at any time when the leaves are off. If you will prune your trees this fall, you can then spray them at any time during the fall, winter or spring, and have good results in killing the scale. Thoroughness of spraying is necessary, and it will be easier for you to do a complete job after the trees are pruned than before. Also, pruning helps to put vigor into that part of the tree which remains."

THE STRAWBERRY CULTURIST.

This is a handy little jewel of a book. It is by Andrew S. Fuller, one of the greatest of horticulturists. It contains all the necessary information to enable everybody to raise their own strawberries. It is fully illustrated; bound in flexible cloth; is 5x7 inches. The strawberry crop is equal to all the other small fruit crops combined. This little book contains that which a beginner should have to start on and an expert needs to rely on. We will send a copy of the Strawberry Culturist post free by mail and The National Farmer and Stock Grower for one year for Fifty-five Cents. This is a splendid opportunity to get a good book for the cost of postage. An average crop of strawberries is 1,701 quarts to the acre. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

From Stiff Clay to Light Garden Soil.

The owner of stiff clay soil may have obstacles with which to contend before a satisfactory garden can be established; yet he should never lose sight of the fact that it can be done; and during the process there comes as a consolation prize the fact even less commonly recognized that land brought up from this state to that of high cultivation proves of greater permanency than the rich loam.

There are a number of efficient agencies in securing results, but most of them may be summed up in fertilization and disintegration, the latter being as much a form of the former as of mere mechanical process.

Clay soil dries out slowly, and if spring plowing is practiced, it cannot be done until the ground is dry. If the man with clay land tries to ape his neighbor of gravel soil as to date of plowing the result will be a lot of hard lumps which even the hammer will with difficulty reduce to available form. There is no gain in trying to plow when the soil is wet unless the work is done early enough in the season for the frost to pulverize the lumps.
